Computers with magnetic tape facilities essentially imply a serial approach to E.D.P. problems. Information to be processed is first sorted to an order corresponding to that of the master information against which it is to be matched. Under this system, the master information is accessible throughout the entire run. The speed of the process reduces the time between a transaction taking place and the updating of the relevant file. For obvious reasons, the shortness of this delay improves the change of detecting errors and fraud. In addition, the need to review the master information anyway at frequent intervals permits the imposition of sophisticated random and feasibility checks without adding greatly to the procedure requirements.

Many of the techniques commonly employed by the computer programmes can also be made use of by the auditor. Typical are dumping (printing out the contents of the stores – either completely or dynamically) and tracing (following the path of an operand through the various programme steps by printing out every change of sequence). The essential point is to check that the necessary programme steps to initiate either or both of these procedures are readily available. Again, use of these techniques is greatly facilitated by the availability of magnetic tape.

Restarting is another area in which the auditor has much to gain from modern programming practice. A restart is the automatic cycling back to a fixed point in the programme in case of failure. Where the programme incorporates provision for restarts, the auditor need have little

compunction about introducing data at random, which he knows will fail some existing limit or editing check and thereby initiate a restart. The object is to test the continued effectiveness of these checks. Considerations of derailing the programme (otherwise an expensive luxury) need not concern the auditor armed with an effective restart procedure.

# **Tape Handling**

Advantages of speed of magnetic tape cannot always be fully exploited due to loss of time caused by the need to rewind, although current research may soon eliminate this snag. For the present, where the equipment can read tape backwards, the auditor should give serious consideration to the incorporation of some of his test routines at this stage. Most equipment rewinds faster than it reads backwards. Accepting the need for the auditing routines involved, it will generally be more economical to rewind and to read simultaneously during a single - albeit slower - run than to incur the penalty of two rewind operations. The exact balance of advantage will, of course, vary with the individual circumstances.

The conventional flowchart for magnetic tape operation depicts a two-tape input (one old master tape and one current transaction tape) and a one-tape output (new updated master tape). It is not commonly appreciated that retention intact of the information on the old master tape (i.e. as it was before the current run) has important implications for both auditors and operators.

First of all, retention of the 'father' and 'son' hierarchy of tapes effectively guards against possible malfunctioning of the equipment. Unless the 'father' tape is available, re-runs may be difficult, if not impossible. Secondly, restart routines can be accommodated by back-spacing (or partly rewinding) both 'father' and 'son' tapes. The ability to take additional copies of the tape, even during an operational run, is limited only by the availability of extra tape decks. The advantages of this facility to the auditor are too obvious to need further emphasis. It is difficult to see how similar features could be achieved with any system not incorporating provision for magnetic tapes, save at the cost of voluminous extra programming, additional specialized runs (which fail some of the basic requirements of auditing), or the provision of relatively expensive duplicating equipment.

It is costly to immobilize many reels of magnetic

tape for longer than absolutely necessary. The capital tied up in magnetic tapes can be minimized by rotating the reels in use. To avoid inadvertent erasure of important data, it is essential that a careful check be maintained at all times on the hierarchies in use and that a logical system of application of successive reels be rigidly applied.

### Conclusion

Like all new technical development, magnetic tape presents a challenge to those striving to use it to best advantage. Magnetic tape makes many sophisticated techniques economic for the first time. Indeed, the provision of facilities for magnetic tape operation opens up new worlds for the systems designer and for the accountant. Not unexpectedly, this sophistication imposes the

need for large and complicated equipment. Despite obvious disadvantages, this very complexity can ease the job of the auditor in that it complicates the efforts of fraudulent employees to cover up any defalcations to such an extent that they become almost impossible to carry out without detection.

The great versatility offered by magnetic tape facilities faces the auditor with an equally wide range of points to guard. At the same time, magnetic tape equipment offers unrivalled possibilities for the incorporation of a wide range of checks and safeguards at low cost. Yet, in the last resort, the successful application and auditing of this new medium rely on common sense, sagacity and capacity for taking pains over detail which still remain the hall-mark of the good auditor.

# Weekly Notes

# RATE-DEFICIENCY GRANTS

about 1,200 of the 1,530 local authorities in England and Wales because their resources, as measured in terms of the per capita penny rate product, are below the national average. The effect of this system of grant aid is that the Exchequer stands in as a ratepayer to all authorities with below average resources, to the extent necessary to bring them up to the average. This rate-deficiency grant, introduced in 1948 as the Exchequer Equalization Grant, has since undergone minor changes as the result of periodic reviews by the Minister of Local Government and representatives of the local authorities.

The latest review which has now to be considered, by the local authorities has recommended further modifications<sup>1</sup>. In particular, the mode of payment is to be simplified. At present, on the basis of a preliminary estimate of expenditure for the coming financial year, a 90 per cent payment is made. About six months later a further review of current outlays is made and this enables a further payment to be made which usually offsets the deficiency arising from the first payment. Some time later when the audited and certified expenditure of the local authorities is known, a final assessment of the grant position is made. The Working Party proposes that the first calculation should be accompanied by a full grant payment at

the beginning of the financial year; thereafter no further calculation should be made until the final audited accounts are available. This would avoid both over- and under-payments with the need for recovery at a later date. From the viewpoint of the local authorities this arrangement would save considerable work.

Among other points made in the report were the rejection of a plea by the health and pleasure resorts VER £100 million annually is distributed to that in estimating the rateable value per head, their summer populations rather than the resident population should be used.

# MORE OFFICIAL FINANCIAL STATISTICS

REVIEW of the work done so far on financial Astatistics for this country is given in the latest issue of Economic Trends.1

The intention is to provide annual returns of the financial assets and liabilities (including a classification of public sector debt), quarterly returns of purchases and sales of various kinds of financial assets (including a classification by maturity of public sector debt), and monthly returns for the banking sector and for certain short-term indicators. A wide range of institutions and bodies are to be covered by the new figures.

The new statistics follow from recommendations made in the Radcliffe report. The new figures are being integrated into the comprehensive national income accounts already published. They will be linked together through the 'Savings' headings in the national incomes figures. Each sector of industry and public activity in the national income figure has a residual item which is carried forward into a summary account called 'The Financing of Investment' as in Table 48 in the National Income Blue Book, 1962. The new financial statistics will be used to analyse the

<sup>&</sup>lt;sup>1</sup> Report of the Working Party appointed to investigate the working of the rate deficiency grants in England and Wales. H.M.S.O. Price 1s 3d.

<sup>1</sup> H.M.S.O. Price 5s.

corresponding fixed capital formation and the value of physical increase in stocks shown in this account.

The sectors to be used for the classification of assets cover three headings in the public sector, a company sector with three sub-headings and the personal sector which will include unincorporated businesses. The basic classification of financial assets will be under twelve headings ranging from cash to mortgages.

# APPRECIATING THE COST ACCOUNTANT

THE latest in the Take Home Book series in the Employee-information Subscription Service<sup>1</sup> is called *Counting the Cost*. Written by an accountant, it is a survey in simple language for the layman of the place and importance of the cost accountant in

industry.

This offers a simple, readable account of the importance of cost control in industry. Like all oversimplifications it errs, if anything, on the side of readability and, therefore, some of its statements may fall a little bluntly on professional ears. Such a one is: 'Should demand decrease, the business's expensive machinery . . . is not fully occupied - not earning its cost'. The pamphlet also gets off to a slightly indeterminate start by talking about the personnel manager and the chief engineer rather than the cost accountant. Both these turn up again later in the pamphlet also in a slightly disconcerting way, as though the author is trying to differentiate the func tions of these in the lay reader's mind. It is perhaps not without significance that in many companies the accountant has most difficulty in explaining his point of view to those who, on the one hand, deal with human relations and those on the other who are concerned with engineering problems.

# CONSTITUTIONAL ASPECTS OF THE COMMON MARKET

THROUGHOUT the long controversy on the establishment of the European Common Market and this country's relationship to it, a debate which has run now from the middle of the 1950s, there has been remarkably little authoritative comment on its constitutional aspects. It is doubtful if even the signatories to the Treaty of Rome are at all clear as to the implications of the Treaty on national sovereignty. There are those who would work towards a complete fusion of national organizations into a single comprehensive western European nation. There are those who remain jealous of national institutions among whom towers the President of France.

The impact of such an instrument as the Treaty of Rome on the position of the Queen in Parliament in this country could be a fundamental issue. Last week Lord Dilhorne, the Lord Chancellor, spoke on this matter before an audience at Bristol. He said that

he saw no insuperable objection to Britain's agreeing to the surrender of the sovereignty of Parliament in limited respects if it entered the European Common Market. He said he could not see anything in the Treaty of Rome which in the least degree affected the position of the Queen. The sovereignty of Parliament was affected in two ways. It could not, without breach of the Treaty, exercise any control over the regulations made by the Council and the Commission. Secondly, it could not, without breach of the Treaty, fail to pass legislation to achieve the objects stated in the directives. He said he had no hesitation in saying that those branches of law most affecting daily conduct of the affairs of ordinary people will not be subject to community regulations.

This gives an authoritative start to a public debate. It is perhaps a pity that the constitutional implications of entry into the E.C.M. had not been aired at

an earlier date.

# SIXTH INTER-AMERICAN ACCOUNTING CONFERENCE

THE sixth Inter-American Accounting Conference was held in New York from September 26th-29th, and ran concurrently with the last two days of the Eighth International Congress. Nine hundred accountants, representing twenty-two countries, attended. The programme was a comprehensive one and included four plenary sessions and a variety of social ats for members and their ladies.

Wilkinson, of the United States, President of the Conference, said there were numerous unifying factors in the Western Hemisphere which would help accountants in working towards the advancement and improvement of accounting and auditing. He went on to mention economic links, geographical relationships, and historical background among these unifying factors.

Among reports considered by the Conference's permanent subcommittees were 'Auditing', 'Interchange', 'Standard procedures', 'Terminology', and 'Fluctuation of purchasing power'. Dealing with the first of these, the committee urged that the promulgation of rules, standards and guides in professional practice 'should originate in the professional organizations of the respective countries'. It also urged an interchange of ideas among countries in order that 'the best procedures, innovations and advancement' can be adopted in each country. On the subject of 'Interchanges', measures for the increased exchange of students and professors, the standardization of terminology, and the unification of standards, particularly in auditing were recommended.

"The role of the public accountant in the economic development of Western Hemisphere countries' was the theme of a technical session. Speakers from Brazil, Costa Rica, and Argentina delivered addresses on "The accountant as a public or private official', "The accountant in independent practice' and "The

<sup>1</sup> Newman Neame Ltd, published fortnightly, 1s 6d post

accountant in research and training'. At the final plenary session, bye-laws for a possible permanent organization were discussed, and Mr Robert E. Witschey, C.P.A., newly-elected President of the American Institute of Certified Public Accountants, addressed the conference.

# ROCHDALE REPORT ON THE DOCKS

THE Rochdale Committee's report on this country's docks includes a recommendation for the establishment of a non-operational National Ports Authority to supervise the development of a dock system. It should have eight to twelve members appointed by the Ministry of Transport on a part-time basis, supported by a permanent staff. This authority would approve capital expenditure above a certain figure, consider appeals on port charges, and

prepare schemes for amalgamation of docks. The committee considers it urgent to achieve a greater degree of decasualization of dock labour.

The general background of the report is that world trade is increasing rapidly and that British ports suffer from lack of capital, old-fashioned equipment and out-of-date management-labour relationships.

In developing a dock system the report sees particularly an increase in European trade and great emphasis is put on the need to expand the potential of Southampton as a cargo port and to further develop the London docks despite the present congestion.

Recommendations on the Clyde, the Mersey and the Forth are mainly organizational. The committee see little opportunity for further expanding the facilities along the Manchester Ship Canal. The Government is now studying the report and calling for comments from organizations in the industry.

# This is My Life . . .

by An Industrious Accountant

CHAPTER 140

ARTHUR was one of our assistant accountants; a slim, pale young man with a shy aloof He was a dreamer, apparently devoid of initial e, and painfully, pinkly tongue-tied with the brisk young ladies who handled the company's records. We wrote him off early as being short of dynamic management potential. Not altogether on character, of course, nor even on ability. He had plenty of that, as evidenced by his qualification, not to mention his casual knack of solving *The Times* crosswords or chess problems at practically first glance. It was just that he seemed so negative, so un-impact-making.

Then one day I found myself beside him at the snack-counter in the staff canteen. How were things going, I asked casually, regrettably more interested in my correct bun then my innion

in my current-bun than my junior.

He sat gazing vacantly out the window for a moment, his mind clearly miles away. Then he exclaimed suddenly. 'I'm sick of all those silly gabbling customers. Who wants to tot up sales of drapery? I want something bigger. Look!'

He spread a sheaf of pamphlets on the counter... 'permanent commissions in the secretarial branch for qualified male accountants'... a note of reverence made his voice suddenly husky. 'I'm going to join the R.A.F.'

Mind you, it's a career I know little enough about, that of accountant in the Services; the leaflets held a peculiar fascination. He could start right away as pilot officer and be promoted to flying officer after three months, Arthur explained. He brought out a huge and impressively curved pipe which I'd never

seen previously, and filled it thoughtfully; he'd be a flight lieutenant in three years or so. He became suddenly alert; his eyes gleamed compellingly. He was eligible for special credits for his qualification as well as for his accountancy experience; the prospects were inspiring.

As he stood up briskly. His chin was up, his shoulders braced; he was a new man. 'This leaflet says that we assess and disseminate intelligence reports, and use codes and ciphers', he said gaily. 'I'll probably report direct to the Prime Minister on toplevel stuff'

In my mind's eye, I saw him hunched over the mysterious cryptogram in the small back room; tense, hawk-eyed, his chest ablaze with decorations, his forehead seamed with an ancient scar. Beside him the Minister of War plucked nervously at his collar, the chiefs of staff gnawed their nether lips. At his feet, Mata Hari crouched sobbing in repentant adoration.

'I've a chance of ending up as air commodore; the baton in every knapsack, you know', said Arthur. 'About £3,000 a year, plus extras, and long leave, of course. After all, I used to be quite good at making those little model aircraft'. He doodled rapidly on the menu, something that looked like a Martian octopus. 'Mere civilians really don't appreciate the progress we're making in the R.A.F.'

I felt rather dazed under his flow of eloquence; it seemed unworthy to point out that as a bachelor, he'd miss the marriage allowance; he wouldn't be paid all that well. Arthur shrugged off the thought. Better change that right away', he said enigmatically. He almost saluted as he left; he looked like my boyhood hero, Lawrence of Arabia.

I heard later that two other of our junior accountants propose to join him, and three blushing typists want extra-special leave of absence. It's nice to see the glamourized side of the profession bringing out the latent personality of a man like that.

# Eighth International Congress of Accountants

NEW YORK, SEPTEMBER 23rd-27th

# Message to the Congress from President Kennedy

I am very pleased to extend greetings and warm best wishes to the delegates and their families attending the Eighth International Congress of Accountants. I especially welcome those from other nations of the world and wish them a pleasant visit to the United States.

Your Congress, meeting at the invitation of the American Institute of Certified Public Accountants, offers an excellent opportunity for the exchange of information and ideas. As we gain confidence in each other's policies of economic disclosure, accounting can, indeed, become an international language of business. As a result, capital will flow more freely, and the international exchange of goods and services will increase more rapidly. Many of the problems with which you will concern yourselves during your meeting will, I feel sure, bear directly on the ability of all of us to strengthen the spirit of international economic confidence.

With all good wishes to those attending the Eighth International Congress of Accountants for a successful and constructive meeting.

JOHN F. KENNEDY.

THIS message from the President of the United States was read at the opening plenary session of the Eighth International Congress on September 24th. The message was conveyed by the Congress President, Mr Arthur B. Foye, c.p.a., who welcomed the assembled representatives of 124 accountancy bodies from 62 countries. With him on the platform were Mr Joseph Campbell, Comptroller-General of the United States, Sir Harold Howitt and Mr Jacob Kraayenhof, Presidents of the Sixth and Seventh Congresses held respectively in London and Amsterdam, together with Mr Arthur K. Watson, President of the I.B.M. World Trade Corporation, and Mr P. F. S. Otten, Chairman of the Board and Delegated Director of N.V. Philips' Gloeilampenfabrieken, each of whom were to address the Congress. Also on the platform were the Presidents of the nine American sponsoring organizations and the other Congress officers: Mr J. Harold Stewart, Vice-President, Mr Harold R. Caffyn, Treasurer, Mr Thomas D. Flynn, Assistant Treasurer, and Mr John L. Carey, Secretary.

Mr Arthur B. Foye

The famous New York skyline with which many visitors to the Congress will now be familiar.

# MR JOSEPH CAMPBELL

Addressing the Congress, Mr Joseph Campbell, c.p.A., Comptroller-General of the United States, said:

You are gathered here from many lands for one of

Mr J. Campbell

the major episodes in the history of a great profession. Your presence is impressive evidence of the importance of accounting in our modern life and the wide-spread interest in it.

Fostering in all countries a better understanding of the aims and purposes of accounting and of the contributions that it can make to better management of public and private functions should be an important accomplishment of this meeting.

Accounting has been described as an ancient art. It developed and grew concurrently with the development and growth of the concepts of ownership and exchange of wealth and property, of private business ventures, and of levying and collecting taxes. Accounting finds its roots in a nation's culture and in its political and economic concepts. Its philosophies and aims vary in different countries. You will learn here at first hand about some of these differences. The knowledge you take away should help in understanding such differences and in forwarding the art in all countries.

An important responsibility of the accounting profession is to promote the communication of financial information about the operations of public and private enterprises. I know that progress will be made during this meeting in encouraging greater emphasis on this important responsibility.

# Government Accounting

In my position as Comptroller-General of the United States, I have as one of my concerns the accounting of the Government of a great nation. Our national legislature has prescribed in law high standards of accounting to be observed by the component agencies of our Government. By law, the objectives of accounting for the agencies of our Government are to provide full disclosure of the Government's financial operations, adequate information necessary for the management of its operations, and effective control and accountability of its resources.

One of the duties of my office is, in the light of these overall standards and objectives, to prescribe for all agencies the basic principles to be followed in accounting for their affairs. It is because of this kind of responsibility that I have an abiding interest in the proceedings of this International Congress.

It is my sincere belief that, in a free society such as ours, where the people are the masters and the Government is the servant, sound public decisions can be reached only on the basis of sound information. As in private business, Government managers have the responsibility for reporting fully to the people on their stewardship of the resources which the people have entrusted to them. This reporting must necessarily

have as its basis a good system of accounting supported by a strong and effective system of managerial control.

I understand that auditing will also be discussed at some length during your meeting. This subject is also of great interest to me because, in addition to concern with accounting, my office has the further responsibility of auditing the operations of our national Government.

The size and scope of these operations are great and varied and they make the carrying out of this responsibility a heavy one. But it is a truly important one and I shall look forward with special interest to your discussion of this function during the Congress.

Our auditing work is carried out through a staff of over 2,000 professional accountants and auditors. Over 400 of these are certified public accountants.

We are completely independent of the agencies whose affairs we examine. This independence – so vital to the effectiveness of auditors everywhere – is the key to the effectiveness of our operations.

The financial affairs of many national Governments now extend far beyond their own borders. The United States, for example, is spending or investing billions of dollars abroad every year. Other nations, in turn, have a stake in our economy – and in the economy of other countries. Because of this flow of both public and private funds, we have mutual interests in understanding how things are done in other countries and in knowing something about the concepts and functioning in all countries of such important activities as accounting and auditing.

I do not underestimate the difficulties in achieving such understanding but this Congress is a good place

It is encouraging to see you here – some of you from great distances – many of you at a great sacrifice. I wish you every success, and I trust that you will return safely to your homelands to continue the important work which will go forward at this meeting. (Applause.)

### SIR HAROLD HOWITT

Speaking as President of the Sixth International Congress held in London in 1952, Sir Harold Howitt, G.B.E., D.S.O., M.C., D.C.L., F.C.A., said:

Sir Harold Howitt

My first thought is naturally to express thanks for the honour you do me, along with Mr Kraayenhof, in inviting us to reply on behalf of all your guests to the President's welcome. It is a great privilege to be here in this famous city and to feel once again the pulse of your mighty nation mighty in its strength and, even more important, mighty in its power for good in the world.

It is not for me at this stage to thank you, Mr

President, for all you have prepared for our enjoyment – intellectual and recreational. As public accountants we are not allowed to indulge in prophecy, but even

Our job in essence is to hold the balance fairly as between man and man so that they may make their decisions and if possible settle their disputes. The time will probably never be reached when excessive demand is avoided whether in claims for wages, salaries, or other emoluments, or for profit margins, but we are at last coming to the realization that it is only out of increased production that these can be effectively increased, that the consumer at the same time is entitled to consideration in the matter of prices, and that contributions to emergent and other countries overseas can only in the long run be met from home production.

# Improving Efficiency

The deeper one delves into the repercussions of these modern economic problems - on the national balance of payments, on the value of the currency, etc. - the more one comes back to these simple economic truths. As accountants our chief contact with this issue is in helping in all forms of efficiency and in profit ascertainment. Our work and responsibility in both these spheres will, I am sure, greatly increase. More and more are we being called on by management for help or actually to join their ranks. Profits, of course, along with costs, have to be covered in the price of goods and services sold and their effect thereon, and accordingly on the general price level, is considerable. Increasingly for these reasons are profits and prices coming to be required to be justified to Governments, to Courts and to the public. Increasingly is it important to be able to justify how far business extensions may fairly be financed out of profits, and therefore out of the consumer, rather than from the capital market.

As accountants we must admit that we have not yet reached unanimity amongst ourselves on certain matters within our province. I imagine the chief among these is the proper method of providing for depreciation or renewal of capital assets in days of deteriorating currency values. We are often blamed for this lack of decision by sectional interests who have differing objectives in mind, whether the saving of taxation, or the provision of further finance for develo ment. It is well, however, to remember that the blame should not be laid at the door o profession but at the door of inflati really prepared to scotch inflatig pay lip service to the desiral problem would not arise. It to press unreasonable. complain about the The claimant but don't the peril hall so

# MR J. KRAAYENHOF

Mr J. Kraayenhof, of the Nederlands Instituut van Accountants, and President of the Seventh International Congress, held in Amsterdam in 1957, also

replying to Mr Foye's address of welcome, said in the course of his address:

Being the second speaker invited to respond to the President's kind words of welcome, I believe that nobody will expect me to try to surpass Sir Harold Howitt in his excellent speech in the name of all the guests from abroad and I shall therefore restrict myself to a few remarks in general terms.

Mr J. Kraayenhof

In the first place I want to refer to the seventy-five years' jubilee of our host, the American Institute of Certified Public Accountants. On behalf of all the representatives from abroad I would like to express a tribute to the American Institute for its excellent work in the field of accounting, not only in America, but also to the benefit of many other countries of the free world. May I invite all the guests in this room to rise and join together in warm applause to you, Mr President, as the first representative of your Institute. (Applause.)

In 1952, in London, our colleagues in Great Britain and Ireland organized the first post-war international congress. It was a very good re-start to the series of

meetings. In 1957, in Amsterdam, we undoubtedly came vet closer together, favoured, too, by the more moderate dimensions of the city. My Dutch colleagues and I are still much impressed by the friendship and co-operation that continues to be shown to us by so many accountant colleagues and their wives whom we met in 1957. I am convinced, Mr President, that you and your committee nembers will receive the same enjoyable dividends rom the time you have devoted to the 1962 congress. considerable and encouraging increase, second post-war congress, in the abroad: London had about

ooth figures including the understand there are om countries other dication that

y felt in

my Institute could hardly have me on the mat if I certified on the basis of your programme that your traditional American hospitality is determined to overwhelm us with kindness.

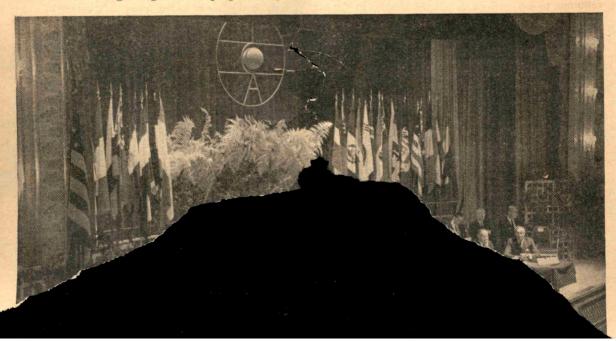

I suppose I am a bit of a patriarch at these international congresses. This is the fifth I have attended. I have read papers at two of them - in London in 1933 and in Berlin in 1938. I was President in London in 1952 when you honoured us with no less than nine presidents of the American Institute and many of its members. And twice I have been privileged to take part in the opening addresses - in Amsterdam in 1957 and now here today. Perhaps, therefore, I may be allowed to reminisce quite briefly and compare the form of these different duties. In terms of hard work and anxiety it is hard to choose between reading a paper and being president, though the former is not so continuous, and the latter I am sure you will find, sir, a most rewarding and delightful experience enormously helped, as I was, by the labours of your committees and secretariat. To respond to the address of welcome, though onerous in one sense, is a position of 'greater freedom and less responsibility' and I can thoroughly recommend it.

# Responsibilities of the Profession

Accountancy is a comparatively young profession and these congresses must therefore be invaluable as a means of stimulating thought and helping to bring the level of all professional work up towards the level of the highest, wherever it is to be found. We have also our responsibilities to train and to help the young accountants in the less developed countries of the world. The shrinkage of the world due to travel facilities, the closer integration of financial, industrial and political contacts between nations – of which the latest is the Common European Market – must place heavy responsibilities on the accountancy profession. We must accordingly in our dealings between nations, no less than internally, have an understanding of each other's conceptions in presenting that which in my country we call the 'true and fair view'.

A great responsibility rests upon us in this context. Most disputes, even those which lead to wars and rumours of wars originate out of economic and financial affairs, and ours largely is the responsibility for laying the foundation from which facts may be compiled on a comparable basis, and on which agreement may be reached if the will to do so be there.

Most of our work is, of course, internal to our respective countries and here, even more, our handiwork is the basis on which the financial structure rests. The tax revenues of our Governments could not be collected if we were not both skilled and trusted; the flow of money in all its channels could not be maintained without proper accountancy control and presentation; nor could the appropriate decisions be taken by management, either in regard to past results or future planning.

General view ox opening session.

Apart from an important and fruitful growth in individual international contacts, I find a still scarce but increasing number of contributions from authors from other countries to the national professional journals, and more lectures given by speakers from abroad.

Besides, on this side of the Atlantic Ocean there are already regular Inter-American conferences, as there will be one after our congress. In the Far East, congresses are held by the Asian and Australian accountancy bodies, and last but not least – said by me as a European, with proper modesty – next year, in September, the first all-European congress will be organized in Edinburgh, Scotland, the cradle of the organized accountancy profession. Undoubtedly the international congresses have largely contributed to prepare the ground for this event which, to my opinion, can be of historical value for the development of the profession in Europe.

Progress is surely being made, but world events move so rapidly that we must make even faster progress to meet our professional responsibilities fully. In my opinion there are three crucial areas in which international co-operation is needed:

Firstly, in the education, training and examination of new recruits, which must be seen to be of the greatest importance in view of the steady increase in the profession's international scope. It was therefore with great pleasure that I learned of the international group that will come together on the subject of accounting education next week at the University of Illinois.

Secondly, on the need for uniformity in accounting

principles, and to this end the necessary systematic international research on the differences and their significance, in order to investigate the possibility of developing a broad set of accepted principles. I am happy to learn that serious consideration is being given to this problem by the American Institute's Committee on Long-range Objectives.

Thirdly, on the necessary uniformity of auditing standards and procedures. While increasing international contacts have made a start toward the acceptance of one philosophy and similar standards, many differences remain. Here, too, an organized, systematic approach would speed up progress.

It is, Mr President, a fact that the present congress, in its broad subject of accounting and auditing in the world, invites a conscientious study of and an open discussion on the problems referred to in my second and third points. The great number of technical papers to be presented here will undoubtedly contribute much to our understanding of present practices throughout the world. May I express the sincere hope that internationally co-ordinated research, study and discussion may soon be organized. If the discussions here should encourage such a step, this Congress, with its overwhelming attendance, will be seen as a landmark in the march towards more uniformity in the accounting field.

Concluding, may I, Mr President, to this end urge all participants of this Congress to co-operate by giving their best efforts for the success of both the business meetings and the social events, in an atmosphere of good friendship. (*Applause*.) 426

### MR ARTHUR K. WATSON

Mr Arthur K. Watson, President of the I.B.M. World Trade Corporation, in the course of his address said that the world had lived a long time with imperfection and lax controls, but he foresaw the day when systems in business and Government would calculate to the last detail. Then, he said, a business budget could come out to the penny and tax systems, monitored by computers, could collect every franc, lira and dollar they were designed to raise. On balance, these could be great improvements. But, he warned, we must not allow the new, perfected systems to stifle initiative in business, nor, in the name of orderliness will we want to pervert the new technology into a kind of automated

nosy neighbour. People, he said, not only need elbow room, they must have it. To see that this was guaranteed was the responsibility of mature, professional people in control.

Another major point of Mr Watson's address was his assertion that if private enterprise is to flourish in the free world, and if the developing nations are to get the massive infusions of money they must have, then the world-wide flow of capital has to increase immediately. He said the accounting profession, more than any other, must help make this increased flow possible by finding ways for the business man in one nation and the investor in another to communicate with each other.

# PUBLIC FINANCIAL REPORTING

Drs. P. F. S. Otten, Chairman of N.V. Philips' Gloeilampenfabrieken (Eindhoven, Netherlands), then ad-

dressed the Congress on the subject of 'Public financial reporting', in the course of which he said:

ancial r
course of
Not

Drs. P. F. S. Otten

Not being a member of your profession but an industrialist, I am pleased that you have extended your choice of speakers for the opening session to that section of the business community which may be described as 'the business-leaders'. In so doing you demonstrate that you as accountants are aware of your function in a 'world economy', a function

which you accomplish mainly with and through the business community. From the reports of the proceedings of previous congresses I have learned that those congresses dealt with subjects of importance to accountants in all countries. I would like to congratulate the Council of this congress for having decided to stress the international character this time by giving a central place to world economy, which I appreciate you as accountants will approach under the headings of 'accounting', 'auditing' and 'financial reporting'.

who does not understand that an auditor must give an independent opinion should neither give an assignment to a public accountant nor appoint an internal auditor.

I want to emphasize that I consider the auditing function of essential importance for public financial reporting. As far as I am concerned an annual report is not complete without an auditor's certificate. But I also believe that the advisory function of the auditor, in relation to public financial reporting, is at least as important as his pure auditing function. The responsibility for financial reporting rests primarily with the management of the enterprise and by making use of he advice of experts the management can act in the most effective manner in accordance with that responsibility. Prevention is better than cure. The management of the enterprise should organize its reporting as well as possible, which implies that it should aim at preventing the auditor's comments or criticisms afterwards. It can achieve this by soliciting the auditor's previous advice. That the audit may then lead to a clean certificate without prior comments or criticisms does not decrease the significance of the audit work, on the contrary I should say: This is the reason why the auditor's advice has always been welcome to me.

The auditors, with whom I have been co-operating for many years, maintain that I am 'audit-minded'. That is right, but not because of the auditors – sometimes they can be extremely difficult – but because I regard auditing as an indispensable element in the organization of an enterprise.

# Auditor's Role

First I would like to give my views on the auditor. I am aware of the fact that an auditor is somebody with a certain professional skill and that he applies this skill in his auditing function in order to arrive at an independent personal opinion. In some cases the purpose of this opinion is to give the public additional assurance with regard to the published financial statements of an enterprise; in other cases this opinion only gives assurance to the party requesting it. I also know that in the practice of your profession the advisory capacity plays an important role.

Independence in forming the opinion is to me an essential element of the audit function. It is a necessary complement of professional skill. So firmly do I believe in this that I am of the opinion that an industrialist

### World Economy

After these general observations regarding the auditor, I would like to proceed with my subject proper. In the first place 'world economy' demands our attention. You will agree that this subject has so many aspects and is of such importance that your entire congress could be dedicated to this, and even then it would certainly not have been dealt with exhaustively. Therefore I must severely restrict myself, and this I can afford to do because my subject is limited to financial reporting in relation to world economy.

When speaking of world economy we find that the free world is composed of a number of countries which, it is true, have achieved a certain degree of economic co-operation, but in which national economies continue to hold a dominating position. Fortunately there is a growing awareness that a closer co-operation must be

achieved. We can observe with satisfaction that in several parts of the world - notably Europe - efforts which have been made in this direction are encouraging. It is of the utmost importance that all free countries should realize that the ultimate goal is the unity of the entire free world. I believe that only in this way can we create a position on which we can take a stand against communism in a positive way. Destructive criticism will not save the free world from the communist danger; demonstration of the unity of the free world and the favourable results of our co-operative endeavours is the appropriate weapon.

In my opinion there is no reason to doubt the fundamental rightness of our economic system. The continuous improvement of productivity made possible by the dynamic technical development in our society leads to a continuous rise in the standard of living and we may feel confident that this improvement, contrary to what happened in past years, will be attained without major cyclical set-backs, although there may be minor incidental interruptions in our progress. On the one hand we have learned more about the nature of business cycles and their effect, while on the other hand the structure of our economy has been strengthened with a number of 'built-in stabilizers' among which I would like to mention specifically improved social security, such as unemployment benefits.

# Free Enterprise

After these observations on some general aspects of the world economy, in which I hope I have left no doubts as to what we in the free world should be striving for, I now come, when reflecting on my sub ject of financial reporting, to the free enterprise of which the economy of the free world is mainly based. The spectacular economic progress in the free world during the past hundred years is due to a large extent to the rise of the large industrial enterprise. The rapid technical and social evolution has been attended by a fundamental change in the ideas regarding the objective of the enterprise. Formerly this was considered to be the pure striving for profits to which everything else was subordinated more or less. In the development of the economy it has become abundantly clear that our efforts should be directed not at maximum short-term profits but rather at the most appropriate profit applicable to the continuity of the undertaking. The evolution in the social field shown in the continuous improvement in terms of employment and in social relationships within the enterprise, has caused the social aspect to become an important element in the policy considerations of management with regard to that continuity.

The effect of the emphasis on continuity is that financial reporting should not be restricted to a particular period, but should be suitable to the concept of continuity. One should also take into account that the report is intended for various groups of interested parties, whose interests, again seen in the continuity of the enterprise, should be weighed against each other in drafting the report. Thus the report should not only serve as an accounting to shareholders, but also as information for all those who play a part, either directly or indirectly, in the continuity of the undertaking, that is to say the capital markets, employees, customers, suppliers and the Government.

Another development plays a part in financial reporting, namely that investors, in selecting investments, increasingly seek the advice of experts, who in forming their opinion, rely principally on published information. In this context the annual report holds the predominant position, although we should not overlook the importance of quarterly reports, press conferences and incidental information published as and when deemed necessary.

Thus there are a number of considerations which a management, and in particular the management of a large enterprise, will have to take into account in their financial reporting to meet the requirements imposed by this evolution. If a reasonable solution to the problems connected with reporting at this level is to be found, a profound knowledge of business economics will be required both on the part of the experts within the organization itself and on the part of the advisers

of the enterprise, especially the auditors.

I would like to pay separate attention to the effect of the development of world economy on financial reporting. Enterprises increasingly call on foreign capital markets, investors operate on them and there is a tendency for enterprises to participate more actively in the industrial life of other countries. In these cases there is a need for certainty as to the meaning of the information which is embodied in the reporting. Moreover, I hope that I have succeeded in demonstrating that from pure motives of self-interest it is the duty of all of us to make the maximum contribution to stimulate co-operation and unification of the free world. Therefore I am of the opinion that the development of world economy places on those who are responsible for financial reporting the obligation of attaining the greatest possible uniformity in contents and presentation. Only when this is achieved will the national boundaries in the field of reporting disappear and will it be possible for everyone to draw his conclusions from reports of any enterprise located in any country with understanding and confidence. Only then will readers place the same reliance on the auditor's certificate included therein.

### Changing Price Levels

The need for uniformity - I would like to stress this does not only relate to accounting but it also concerns the economics of the enterprise. Problems of the highest order are involved. I would like to mention for example the effect of changing price levels on the calculation of profits and capital; in the Netherlands the application of the replacement value theory is, at least for management, an important aid in arriving at economically justified and therefore also comparable results. In our own enterprise we only consider as profit the surplus remaining after the purchasing power of the capital invested has been maintained. Also I would draw your attention to the rates of exchange, which in times of inflation require a lot more attention than a mere glance at the quotations to arrive at a justified calculation of capital and profit. In conclusion I would like to mention the importance of the tax problem, arising from the differences between tax regulations and economic principles. It would certainly be a great step forward if all tax authorities were to accept the economic principles.

The striving after uniformity in public financial reporting in my opinion should only concern itself with principles and not with details. If one were to go further it would lead to a rigidity which would be too

restrictive for both management and auditors.

In financial reporting I perceive four areas in which uniformity is of essential importance, namely:

(1) the function of the annual report;

(2) the reconciliation of the annual report with the internal information for management;

(3) the principles of the calculation of capital and profit and the demonstration thereof in the annual report;

(4) the meaning of the auditor's certificate.

The function of the annual report should not only be for management to render an account in respect of a past period, but management should be aware of the concept of continuity in the drafting of its reporting. I would like to say that reporting should be 'dynamic', that is: the period to which the report directly relates should be placed in the right perspective: the past, the present and the future.

The reconciliation of the annual report with the internal information for management implies that capital and profit will have to be the same in either case. I am firmly convinced that there should not be different concepts of capital and profit for internal and external purposes. Of course one will have to take into account the extent and the nature of the needs in each case which

means that in public reporting many details, and such information which when disclosed might be prejudicial to the interests of the enterprise, have to be omitted.

The principles of the calculation of capital and profit and the demonstration thereof in the annual report should not differ in their concept from country to country, nor need they differ if the right economic principles are accepted. I know that the hosts of this congress have already achieved much in this respect by way of their accounting principles, and that in other countries also rules and recommendations are in existence, but from the arguments I have expressed it will be obvious that I would like to see more. This is not the appropriate time for me to go further into this very important point nor would I venture to do so.

In closing I hope that I have succeeded in demonstrating that from the management's point of view it will be necessary to strive after greater uniformity in the fields in which you are specific experts. I firmly believe that in this way financial reporting can contribute significantly to the universal acceptance of our system of free enterprise which is of the greatest importance for a satisfactory development of the world

economy.

# Technical Programme

On Monday afternoon fifteen simultaneous technical sessions were held at each of which a paper was presented on each of the three Congress discussion topics – accounting, auditing, and financial reporting in relation to the world economy. Brief summaries follow of the forty-five papers presented; a number of the papers will be reproduced in full in forthcoming issues of *The Accountant*.

## Session 'A'

Chairman: Mr John W. Queenan, Past President of the American Institute of Certified Public Accountants. Vice-Chairman: Mr James G. Duncan, Canadian Institute of Chartered Accountants.

Subject: 'Some aspects of auditing in the international field'.

Speaker: Mr H. de Leeuw (Nederlands Instituut van Accountants). Partner in an accounting firm in Amsterdam. Has been a Vice-President of the Netherlands Institute; a member of the committee for advice on professional affairs, an examiner on methods and systems of accounting and auditing, a member of the examining board and other committees.

Summary: The growth of the world economy is correlated with the growth in the international flow of capital. The accountant plays the double role of adviser and auditor in these developments.

In the international business world there is a need to know on what accounting principles financial reports are based and what auditing standards have been applied by the auditor. Auditing standards still vary widely. The auditor who addresses his report to foreign parties must be aware that they are entitled to expect adherence by the foreign auditor to at least their own auditing standards. Greater uniformity is not only desirable but will become necessary with further expansion of international (capital) movements.

In the Netherlands accountants hold the view that they must satisfy themselves about the existence of assets by taking inventory stock themselves.

In regard to co-operation between public accountants in international audits, the paper makes the point that the Netherlands Institute requires that a Dutch accountant using a foreign report must be stisfied that it has been issued by a practising public accountant; he also has to mention in his own report that proper care has been taken in selecting that foreign accountant.

Subject: 'Statutory influences on accounting in Australia'.

Speaker: Professor L. A. Braddock (Australian Society of Accountants). Head of Department of Accountancy at the South Australian Institute of Technology in Adelaide, a Federal Vice-President of the Australian Society.

Summary: The differences in accounting standards which have developed in the free world because of geographic, economic and legal factors, hinder the flow of trade, movement of capital and the transfer of managerial techniques.

The use of taxation as an economic and social measure will remove taxation determination of incomes still further away from results determined on accounting standards. The effect of the statutes on managerial decisions is considered to be of great importance especially in influencing the capital structure of enterprises and the formation of holding and subsidiary companies.

In Australia much confusion has been caused by the existence of six different statutes covering the operation of limited companies. Accounting practice has run ahead of statutory regulation and has had strong influence on the proposed new Uniform Companies Act, especially in regard to disclosure requirements.

Before international accounting standards can be imposed, it is necessary to develop an internationally acceptable theory of accounting itself. Once this has been achieved, the national accounting organizations

will be able to express this theory in standards which have a bearing on accounting practice.

Subject: 'Financial statements and economic development'.

Speaker: Professor Federico Rioseco (Mexican Institute of Public Accountants). Has filled a number of positions in the Mexican Institute and, since 1958, has been a professor of Corporation Finance at the National University of Mexico.

Summary: The social trend of accountancy is a fact. Just as corporation management utilizes historical financial reports to forecast future operations, so do statesmen and economists require information on economic phenomena and activity to set targets and

prepare programmes.

Unfortunately, with few exceptions, economists lack the techniques, accuracy and speed needed for quantifying and processing data, and accountants lack the background in social and political sciences. Conventional financial statements do not satisfy the requirements of economic analysis. With this purpose in mind, it is essential to review accounting principles. For instance, at the Amsterdam Congress in 1957, theories on profit seemed to be getting farther and farther apart.

Perhaps the legal and fiscal bases of certain accounting postulates should be discarded in favour of economic principles. The traditional balance sheet must be restructured if it is to serve the needs of reporting the state of national economies. Profit and loss statements must also be revised so that they may serve as a first step towards the statement of national

income.

Production costs and operating expenses will require new presentations in conformity with economic

thought on input-output and added values.

When accountants and economists are able to work together in measuring and reporting of data needed-for the planning of economic development, it may be said that 'macro-accounting' has been born.

#### Session 'B'

Chairman: Mr Louis H. Pilié, Past President of the American Institute of Certified Public Accountants. Vice-Chairman: Dr Ernst Knorr, Institut der Wirtschaftsprüfer in Deutschland.

Subject: "The purpose and principles of accounting'.

Speaker: Mr J. E. Harris (The Association of Certified and Corporate Accountants). Managing

Mr J. E. Harris

director of an engineering company as well as a partner in a firm of public accountants. Graduate of London School of Economics of London University. Was national President of The Association of Certified and Corporate Accountants in 1960-61.

Summary: One of the primary purposes of the accountant is to determine income. Although it can be shown that accounting conventions have theoretical defi-

ciencies, it is inadvisable to depart from these conventions until the profession can be sure that their replacement would produce significantly more meaningful results and can be applied with equal facility in large and small enterprises. The conclusion is that this is not yet the case.

According to economic theory, income is the amount that can be distributed to stockholders while leaving the market value of the equity unimpaired. According to current accounting conventions on the other hand income is the difference between the revenue from sales, less the expenditure incurred while making those sales, while leaving the balance of expenditure not so charged to be attributed to future periods. Whereas the accountant recognizes profit only when a sale has been made, the economist recognizes the process of accrual and treats all gains alike.

The accounting convention demanding exclusion of capital gains and losses from being treated as part of income is more difficult to defend than all others, if the gains or losses are realized. It certainly is desirable that they should be segregated and shown as a separate category of income. But if accountants ceased to define income purely as a money concept, because the purchasing power of money is always changing, any other method adopted would be a mere approximation, too. Why, then, depart from a simple convention if its substitute would be more complicated and still be a fiction?

Subject: 'A Netherlands view on auditing standards'.

Speaker: Drs. A. C. J. Jonkers (Vereniging van Academisch Gevormde). Practises in Rotterdam. Obtained doctorate from the Netherlands School of Conomics in 1931 and has lectured in accountancy at the School.

Summary: In its introductory chapter, the paper makes the points that economic progress is the fruit of private enterprise and that there exists some correlation between the development of a country's economy and the level at which the accounting profession is practised.

Although nationally there is a wide range of agreement in respect of auditing, there are still important differences as regards the bases and minimum requirements for measurement and information. Even in the United States, which has taken the lead, there are still many shortcomings in these conventions. Among the various countries, there are great discrepancies in intrinsic value of accountants' reports, but they have not prevented the process of economic integration from running its course.

In regard to the significance of the Dutch auditor's report, the paper discusses the form of the report, accounting principles, auditing procedures and standards, and the measure of disclosure practised. The Dutch auditor's report refers to 'generally accepted' accounting principles, but acceptable practice varies in accordance with the needs of particular sections of business life. There is, however, a noticeable trend towards uniformity, and a set of rules recommended in 1955 by a group of entrepreneurs, bankers, accountants and financial editors has been wholeheartedly endorsed by the accounting profession in the Netherlands.

The Dutch accountant, the author concludes, has little power but much influence.

430

Subject: 'Finnish accountancy and increasing capital movements'.

Speaker: Mr Börje Forsström (H.Y.T. Föreningen C.G.R. (Finland)). In public practice in Helsinki. President of H.Y.T. Föreningen in 1956–57. An associate member of the Institute of Internal Auditors (Scandinavian Chapter).

Summary: Finland's law of 1945 circumscribes the freedom of valuing assets and liabilities carried in balance sheets of companies; assets must be carried at historical cost or market level, whichever is lower; liabilities, on the other hand, must be carried at the higher level. Since the tax laws make no provision for corrections of inflationary development, the only possibility for adjustment left is in the flexible valuation of inventories. Tax authorities do accept, within certain limits, undervaluing of inventories. Because of the inflationary economy, profits are being ploughed back into inventories, and hidden reserves are thus built up.

As in Sweden, the Finnish external auditor usually acts as an adviser to management before the books are closed. Internationally, the author thinks, it would be disastrous to prescribe uniform rules on the closing of the books. The feasible thing is to give freedom of choice as to method, but to insist on the supplying of additional information needed for a full understanding of the financial position of the company audited. He cites the example of the Philips organization where the management supplies additional information in the form of footnotes.

#### Session 'C'

Chairman: Mr J. S. Seidman, Past President of the American Institute of Certified Public Accountants.

Vice-Chairman: Mr G. P. Morgan-Jones, Institute of Chartered Accountants in England and Wales.

Subject: 'The economic approach to accounting'.

Speaker: Drs. I. Kleerekoper (Nederlands Instituut van Accountants). Practitioner in Amsterdam; obtained his Doctor of Economics degree from the University of Amsterdam in 1937. A member of the Netherlands Institute since 1948, he is president of its Examining Board.

Summary: In the Netherlands, the problems of accounting have for decades been approached scientifically in close conjunction with, and on the basis of, the development of a normative—i.e. directive—theory of business economics. This approach may have partly been stimulated by the relative absence of legal regulations concerning the profession. The Dutch definition of accounting is: "The systematic recording, processing and supplying of information for the management and operation of an entity and for the reports that have to be submitted thereon."

What is needed is international agreement on the correct concept of profit and the notions of value and cost underlying it. Accountants should not be captives of current practices, but should rather look at what ought to be done. Only such an approach can lead to normative conclusions. The foundation for accounting must be economic science, and the accountant should have a thorough grasp of business economics. The current preoccupation with the social functions of business tends to obscure the fact that, in the long run, the objective of business must be the making of profit.

Rejecting the concept of 'historical cost', the author submits that 'cost' should be the 'replacement value' of goods and services casually required for economically efficient production. Historical cost is only feasible in exceptional cases where continuity of production is about to end. Large enterprises need continual value recording, with the value differences specifically set aside.

Subject: 'Auditors in a developing economy'.

Speaker: Dr Washington Sycip (Philippine Institute of Certified Public Accountants). Graduated from the University of Santo Tomas in 1940 and obtained a Ph.D. from Columbia University in 1942. President of the Philippine Institute in 1951.

Summary: Procedures used and standards observed by the profession in the Philippines follow closely those in the United States. Organized in 1929, the Philippine Institute of Certified Public Accountants has a current membership of 2,300 certified public accountants. Its 1949 statement on 'Auditing standards' is fairly similar to that of the American Institute.

In the past few years, many Philippine auditors have begun to insist on attaching fairly extensive notes to financial statements to explain or clarify various items. The practice has been welcomed by banks and credit institutions.

The auditor's role in a developing economy includes much more than that of merely providing auditing services. Advice is part of his services. He has to be familiar with changes and problems facing the business community, and he must be active in a variety of civic fields. To help the under-developed areas, members of the international auditing community should: Assist in-training auditors in countries where the profession is just starting; take a more active part in correcting the defects of our competitive system; better educate the public on some of the underlying assumptions of present-day accounting practices; develop more uniform auditing standards; further study possibilities of extending the present financial audit to a 'management audit'; make more readable the financial statements accompanying the auditor's report.

Subject: 'Financial reporting and the world economy, with particular reference to outsiders'.

Speaker: Mr R. O. A. Keel (The Institute of Char-

Mr R. O. A. Keel

tered Accountants in England and Wales). Managing director of a publishing company, he has been active in professional affairs for many years and has published articles on accounting.

Summary: The objectives of financial reporting are to improve the use of resources, to encourage the flow of trade and to illustrate the performance achieved. The author deals with events and situations that should be reported, past, present and future,

and the trend. Financial reports are read by investors, creditors, Government, customers, suppliers, Press and

accountants, and the author refers to the varying aspects of the reports in which they are interested.

He reviews the background of financial reporting in Great Britain, i.e. company legislation, particularly the Companies Act of 1948, contemplates a new amending Act and comments on the role of the accounting profession.

He goes on to refer to the types of report and their content: occasional and periodic reports; annual reports and accounts; and to the statistical uses of financial reports: studies of income and assets and of sources and uses of funds.

On the future, the author concludes that we are living and are going to live in a world where the international boundaries are going to fade fastcertainly in terms of knowledge and standards of practice in the accountancy profession.

#### Session 'D'

Chairman: Mr Alden C. Smith, Member, Congress Organizing Committee.

Vice-Chairman: Mr Nils Karlgren, Föreningen Auktoriserade Revisorer (Sweden).

Subject: 'Auditing and the world economy'.

Speaker: Mr T. A. M. Hutchison (The Canadian Institute of Chartered Accountants). Has served as Treasurer of the Canadian Institute and as chairman of its Accounting and Auditing Research Committee. Has also served as a Governor of the Canadian Tax Foundation.

Summary: In Canada, financial statements are regarded as being the responsibility of management, as in effect an account rendered by management. The independent accountant is responsible for determining that there is adequate and fair disclosure of information in the financial statements.

Corporation financial statements are governed by the requirements of the particular Companies Act under which it was incorporated. Where the Companies Act is silent on the matter, the Canadian Institute of Chartered Accountants has recommended a formula for the accountant to express his opinion. This includes reference to fair presentation in accordance with generally accepted accounting principles, and the auditor is expected to qualify his statement if he finds a deviation from these principles. If there is a deviation from principles applied in the preceding period, the auditor is required to see to it that adequate disclosure of this change in principles is made.

The Canadian Institute has issued nineteen bulletins in the last sixteen years on the application of accounting principles. Because of the strong flow of capital from the United States into Canada, accounting principles applied in the United States have had a strong influence on Canadian practice.

Subject: 'Financial reporting and the world economy'. Speaker: Dr H. Ratsch (Institut der 'Wirtschaftsprüfer'). A member of the German Institute's principal research committee, graduated from the Oberrealschule Berlin-Steglitz with a B.A. degree in 1924. Also holds an honorary degree of Doctor of Economic Sciences from the West Berlin Technical University.

Summary: The paper discusses the influence of German corporation legislation on the form and content of financial reports. It notes that this influence has been decisive. A new law not only grants stockolders more rights, it also imposes heavier responsi-

One of the fifteen technical sessions in progress on Monday afternoon.

Mr P. F. Carpenter with Mrs Carpenter (left) talking with Mr and Mrs Walter J. Hoffman, of Los Angeles, at the Congress reception on Sunday evening.

bilities on them. It will be up to the stockholders to decide on how much of the profits should be reinvested. The new law provides for a greater measure of disclosure. Changes in accounting method must be reported in the annual report; but the management is under no legal obligation to state whether these changes had a favourable or unfavourable effect on the year's earnings.

The mandatory examination by a public accountant covers that part of the annual report which comment on the financial statements. The auditor's report includes a statement to the effect that the annual accounts and annual report examined by him comply with statutory requirements.

The author further examines the influence exerted on financial reports by stock exchanges and the tax authorities. The new German corporation law has in several respects been inspired by the United States Securities and Exchange Commission.

In the age of progressive economic integration it is held imperative for all to speak the same language as far as figures and their presentation are concerned. This uniformity should include an internationally accepted accountant's report. The accounting profession should take proper heed of the growing integration of the Western world.

Subject: 'Communications: problems facing the practising accountant as a financial reporter'.

Speaker: Professor D. S. Anderson (The Institute of Chartered Accountants of Scotland). Partner in firm of chartered accountants in Edinburgh. Professor of Accounting and Business Methods at Edinburgh University.

Summary: The profession has not very adequately met the challenge of developing the art of financial reporting. Not nearly enough has been done to meet the needs of increasing numbers of stockholders. There is no agreement as to the exact meaning of some of the more important and elementary terms employed by the profession; terms such as 'depreciation', 'profit', and 'book value of the fixed assets'. Balance sheets are produced which the great majority of readers believe

to depict the year-end value of the business but which do no such thing. And the profession does not make an effort to dispel the public's wrong impressions.

Though the professor does not believe in standardization of accounting techniques, he does believe in the professional obligation to make reports comprehensible so as to avoid erroneous interpretations.

The problem of communication on a generally acceptable basis is perhaps the most serious one facing the practising accountant. There is an immense need for an internationally accepted dictionary of accounting terms and the professional bodies should give attention to this important matter.

The U.E.C. (Union Europeene Contable) has made a commendable beginning by producing a lexicon of accounting terms in French, German, American-English, Spanish and Dutch. It is not known, however, how far the definitions presented have been accepted by the accounting professions of the countries concerned.

#### Session 'E'

Chairman: Mr J. Harold Stewart, Congress Vice-President.

Vice-Chairman: Mr S. N. Desai, Institute of Chartered Accountants of India.

Subject: 'Auditing and the world economy'.

Speaker: Mr Henry A. Benson, C.B.E. (The Institute of Chartered Accountants in England and Wales). A member of the Institute since 1932, and a member

of the Council since 1956, he has served on number of Government Committees. He received the C.B.E. in 1946.

Summary: Main objective of auditors in the United Kingdom is to report to shareholders whether or not the accounts presented to them at the general meeting present a true and fair view of the state of affairs and the profit or loss of the company. "True and fair' may be compared to American usage of 'present fairly'.

Mr H. A. Benson

British company legislation does not define 'true and fair'; the meaning of the phrase has been built up over the years by the standards of presentation specifically required by the Companies Act. This includes disclosure of the basis used to arrive at the amounts at which fixed assets are stated. Depreciation must be written off year after year on a consistent basis; current assets must be stated at the lower of cost or realizable value; there must be no 'secret reserves' concealed among the liabilities; full provision must be made for expected losses; changes in the basis of preparing accounts must be reported.

Reciprocity rights for accountants of all countries are desirable, provided these accountants have had the proper training and have all the needed qualifications for doing a competent job. The Council of the English Institute has gone on record as favouring the principle of reciprocity.

At the Congress reception. (Left to right): Mr William Bishop, Mrs Bishop and Mr Derek du Pré.

Subject: 'The auditor and financial reporting'.

Speaker: Professor A. Goudeket (Nederlands Instituut van Accountants). Chief internal auditor of Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Member of the Netherlands Institute since 1929. Also serves as part-time professor at the Rotterdam University.

Summary: Main problem areas in the accounting profession are basically the same in all countries. If the profession wants to make as positive a contribution internationally as has been made on the national level in many countries, the achievement of international agreement is a matter of great importance and

With regard to auditing, a distinction must be made between the advisory function and the pure audit function. For an auditor to practice his profession properly, he must, as a result of his observations made in the course of his audit, give his client the full advantage of his advice.

In Holland, where, in general, there is no compulsory auditor's examination and where there are no specific rules governing the form and content of the annual accounts, this involves the risk of a clash of interests. The entrepreneur may at times accuse the auditor of letting the interests of the business community prevail over the interests of the company. But it should be realized that the long-range interests of the business community and of the company coincide.

The function of the annual report is twofold: accounting for the company's management during the period under review, and supplying information from which interested parties may draw inferences as to the future of the company.

According to the 'Rules for professional activities' (Art. 14) of the Netherlands Institute, certification by the public accountant should cover not only the factual data of the financial statement but also the explanations relating to these data. The author favours a 'dynamic' rather than 'static' certificate.

Subject: 'Accounting and utilization of resources'. Speaker: Professor W. A. Paton (American Accounting Association). Professor Emeritus of Accounting and Economics at the University of Michigan School of Business Administration. Has been a visiting professor at the Universities of Chicago and California and Harvard.

Summary: It is the central objective of economic effort to maximize output through utilization of available resources - human and material. Accounting plays an important role by providing financial measurement, analysis and reports. There is no sharp line dividing internal from external accounting: all phases of financial measurement are more or less related.

Accountants should be participants in decisionmaking, not mere advisers to those in authority. The current stress on 'independence' and service to the 'public' by the accounting profession should be shifted to an image of competence, integrity and thorough devotion to the interests of the client.

The paper discusses in detail three areas in which improvement of prevailing accounting practices is needed - statement of assets, measurement of earning power, and segregation of non-productive costs. The widespread policy of understating assets is rejected. Proper decisions can be made only on the basis of realistic, accurate measurement. Various areas in which understatement is traditional are subjected to a critical review. Earning power can find meaningful expression only in a fraction with earnings presenting the numerator and assets employed presenting the denominator.

#### SESSION 'F'

Chairman: Mr Harold R. Caffyn, Congress Treasurer. Vice-Chairman: Mr Rollo Ellis McClure, Institute of Chartered Accountants in Ireland.

biect: 'Changes in the purchasing power of money'. Speaker: Mr W. E. Parker, C.B.E. (The Institute of

artered Accountants in England and Wales). Member of the Council of the English Institute; was chairman of Committee on Education and Training. From 1941 till 1945 he served as an Assistant Secretary of the Board of Trade. Is currently President of the Chartered Accountant Students' Society of London.

Summary: The problem is whether accounting should take cognizance of changes in the purchasing power of the money invested in com-

Mr W. E. Parker

mercial activities, and if so, how best to reflect in accounts the effects and consequences of such changes.

But the choice between 'current cost' and 'historical cost' confronts accountants, whether the value of money changes or not. Even if the value of money remained constant, individual prices would constantly fluctuate. The 'current cost' method of accounting is designed to take account of these particular changes.

Under the pressure of events, a number of Governments have from time to time been forced to move in the direction of recognizing changes in the purchasing power of money as a factor of which account must be

The paper contains as discussion points a set of

propositions which the author believes for the present to represent the best practicable solution from the standpoint of the equity stockholder. He does not regard as serious the objection that there is an absence of universally accepted criteria for adjustments in the value of money.

The author submits that, if adopted, the proposals he puts forward would simplify many of the problems now being encountered in producing accounts in one currency of transactions which have taken place in

countries with different currencies.

Subject: 'Statutory financial reporting'.

Speaker: Mr Ebbe Rybeck (Foreningen Auktoriserade Revisorer, Sweden). Member of the Swedish professional organization since 1931. From 1944 till 1949 he served as its President. Graduated from the University of Stockholm with a Bachelor of Commerce degree and completed his law studies there in 1927. Member of the Central Board for Accountants of the Swedish Chambers of Commerce, and is active in civic affairs.

Summary: The Swedish Corporations Act of 1944, as amended in 1950, acknowledges the public interest in the steady development of stock companies. Not only should the interests of stockholders and creditors be considered, but also those of employees and workers.

In its annual report, management has to include an account of its managerial methods and procedures, in addition to the traditional balance sheet and income statement. The auditor's report covers the three sections. The management account must contain a breakdown of payroll expenses and financial remunerations for employees and workers, for management for the directors. Valuation of assets at a level high than original cost must be explained, too. Swed in practice is one of undervaluing. It is considered good business practice.

The auditor must sign the balance sheet and the profit and loss statement, and go on record as to whether or not he has any criticism of the annual report, the corporation's book-keeping methods, is verification of assets, its management, its justification

for higher valuation, etc.

In practice, the auditor's statement seldom voices objections to management's past performance. If he finds questionable practices, he usually settles the matter before issuing his report. If the matter cannot be resolved, it is usual procedure for the management to mention it themselves in their directors' report.

International standards, in English, the author observes, should be set for financial reports and terms, and, he adds, perhaps the time is ripe for an inter-

national accountancy secretariat.

Subject: 'Differences between United States and foreign

reporting policies and practices'.

Speaker: Mr D. E. Browne (Financial Executives Institute (U.S.A.)). Group Vice-President (Finance and Administration) Lockheed Aircraft Corporation. Member of the American Institute and has been active for many years in the Financial Executives Institute. Also a member of the American Accounting Association and the California Society of Certified Public Accountants.

Summary: Mr Browne has had many opportunities of comparing United States and foreign accounting practices. His company has dealings with companies

in six foreign nations, regarding the manufacture under licence of airplanes within the framework of a two-billion dollar programme.

The speaker hopes the Common Market of Western European nations will not promote the hardening in that area of accounting practices which are basically different from the Anglo-American ones. It might be a good idea for universities to include courses in comparative accounting in their curricula.

General goals in international accounting should be: improved comparability of information supplied, greater disclosure, better understanding of practices

adopted by other countries.

Most American corporations want their accountants to do planning, in addition to keeping historical records. This planning consists roughly in developing:

- (a) A master plan a long range projection, usually ten years into the future. The corporation's major decisions are guided by it. It is a combination financial forecast-market survey. If necessary the master plan is updated every two or three years.
- (b) A series of operating forecasts. These extend five years into the future.
- (c) A management budget for the coming year. The first year of the operating forecast for each enterprise becomes the management budget for that enterprise. These budgets contain detailed schedules by month for the same items as do the monthly financial statements. Checks on progress are maintained through comparison with corresponding periods in the past.

#### SESSION 'G'

Chairman: Mr T. Dwight Williams, Past President of the American Institute of Certified Public Accountants.

Vice-Chairman: Mr Arnon R. Rojansky, Association of Certified Public Accountants in Israel.

Subject: 'The need for special reports'.

Speaker: Mr Ian T. Morrow (The Institute of Cost and Works Accountants, England). Fellow and Past

Summary: It is on the basis of ad hoc reports, rather than routine reports, that many of the most important managerial and policy decisions are made. These special reports are much more detailed than are the

Mr Ian T. Morrow

routine reports and cover a narrower field. They may include non-accounting information in addition to accounting data. Experience seems to indicate that it is better for all reports – even purely non-accounting ones – to be scrutinized by the accountant before being presented to management.

The paper discusses types of ad hoc reports frequently called for by management; such as:

Direct costs: The danger of hidden costs lies in

under-utilization of production facilities.

Costs of wages: Incentive schemes should be thoroughly tested from time to time to determine their effectiveness in maintaining a high rate of production.

Overheads: It is part of the normal growth pattern of a healthy company that some blood-letting should

occur from time to time.

Cost of keeping stock: Much research is still needed in this field. There is a general tendency in business to keep stocks larger than actually necessary.

Cost of paper work: Many ad hoc reports tend to become part of the regular reporting system, unless

there is a constant check.

Other reports discussed are those on cost of quality control; cost of sales; cost of research, design and development; cost of communications; analysis of profits; market research and analysis of competitors' performance; and forecasts.

Subject: 'Internal auditing and the world economy'.

Speaker: Mr Cedric C. Slain (Institute of Internal Auditors, U.S.A.). Mr Cedric C. Slain is manager of internal auditing for the International Harvester Co of Chicago. Has just completed a year as President of the Institute of Internal Auditors – one of the sponsoring bodies of the Congress.

Summary: Internal auditing is an arm of management. Its scope will be what the company's management wants it to be. Beyond the checking of forms an approvals, the internal auditor must review the policies procedures and plans reflected in the records.

Modern internal auditing has a responsibility to help management by determining whether executives are adequately informed on progress of their plans; whether policies are being complied with; whether management has the means of appraising performance of those to whom authority has been delegated.

Internal auditors operate in much the same way whether they be in the United Kingdom, Japan, Canada or the United States. This is reflected in the international character of the Institute of Internal Auditors, about 25 per cent of the membership of which is in branches or chapters outside the United States.

Subject: 'Legislation on corporation audits in many

countries needs to be amended'.

Speaker: Dr W. L. Chapman (Federacion Argentina de Colegios de Graduados en Ciencias Economicas, Argentina). Dr Chapman is a partner in a large accounting firm in Buenos Aires as well as being Vice-

Rector of the University of Buenos Aires.

Summary: Many continental European and Latin-American countries refer in their company or corporation laws to 'commissaries', who have broad control over the performance of the board of directors. Yet most of these 'commissaries' need no special accounting qualifications. This is a major weakness of the continental European system. In contrast to this, the Anglo-Saxon system provides no supervisory body or functionary to advise stockholders on the efficiency of the performance of management. The management is directly responsible to the stockholders. Its performance is judged in the light of audits performed by

Mr A. L. de Bruyne (Netherlands Institute) (centre) in conversation at the Congress Reception.

qualified accountants. The development of accounting has been slow in the continental countries and Latin America partly due to the shortcomings of legislation

relating to company audits.

The paper urges the raising of accounting and auditing standards in those countries; the setting up of professional accounting organizations; promoting in business and professional circles the desirability of fair financial reporting; pressing for redrafting of company legislation.

#### SESSION 'H'

Chairman: Mr L. H. Penney, Past President of the American Institute of Certified Public Accountants.

Vice-Chairman: Mr William P. Henson, Australian Society of Accountants.

Subject: 'Published accounts in the Republic of Ireland'.

Speaker: Mr H. W. Robinson (The Institute of Chartered Accountants in Ireland). Holds B.A., LL.B. and B.Com. degrees from Dublin University, and is a member of Council of the Irish Institute.

Summary: Accounting methods practised in Ireland are markedly old-fashioned in their approach. Legislation regulating the conduct of companies in Ireland is English in origin. In essence the English Companies Act, 1908, still applies. According to this Act, there is no obligation on the part of the company to accompany the balance sheet by a profit and loss statement. The auditor's report still uses the 'true and correct' phrase.

A Government Committee on Company Law Reform reported in 1958 that 'under the existing law there is no obligation on a company or on its directors to keep proper accounts . . .'. The Committee has recommended that a new Companies Act should lay down minimum requirements of information to be disclosed by financial statements.

Stock exchange requirements do not relate to the form or content of a company's published accounts. There is therefore great variety in the quality of reporting by companies.

It is expected that a new Companies Act to be

enacted in the near future will incorporate the Committee's recommendations. This hope is reinforced by the fact that the current Minister of Justice, Mr C. J. Haughey, is a member of the Irish Institute of Chartered Accountants.

Subject: 'Accounting in the Federal Government of the U.S.A.'.

Speaker: Mr L. H. Noble (Federal Government Accountants' Association (U.S.A.)). Mr Noble is Deputy Assistant Postmaster-General and Controller of the United States Post Office Department. Member of the American Institute of Certified Public Accountants, the American Accounting Association and the National Association of Accountants. Formerly Controller of the United States Atomic Energy Commission and Comptroller of the Panama Canal Co.

Summary: The Federal Budget of the United States has grown from 517 million dollars in 1903 to 92,537 million dollars projected for 1963. In keeping with the constitutional provision that 'No money shall be drawn from the Treasury but in consequence of appropriations made by law', financial obligations can be incurred – and expenditures made – only after authorizing legislation has been enacted by Congress. Each appropriation made by Congress must be accounted for as a separate fund.

These legislative requirements have had a major effect on United States Government accounting. Actually, the Government prescribed standards of accounting and financial disclosure for private enterprise some years before it undertook in a comprehensive way to bring its own accounting practices up to such standards.

Reform was started with the Government Corporation Control Act of 1945. Accounts had to be audited by the General Accounting Office. Five years later, the Budget and Accounting Procedures Act provided for modernization of accounting and auditing in departments and non-corporate agencies of the Government.

However, since it has been necessary to continue accounting for obligations in one form or another, some agencies continue their accounting primarily in obligations and cash expenditures and convert to accrued costs only at year-end for reporting purposes; others do the reverse, using accrued costs in day-to-day financial operations and converting only to total obligations at period intervals.

There are more than 2,000 certified public accountants in Government service; the Institute has a standing committee on relations with Government agencies. The Federal Government Accountants' Association is very active in holding technical meetings and seminars.

Subject: 'Accountants' reports to management'.

Speaker: Mr Reider Røsjø (Statsautoriserte Revisorers Forening (Norway)). Practises in Oslo. Holds economics degree of Treiders Handelsskole. Member of auditing standards committee of the Norwegian body and also member of its committee on continuing education.

Summary: The paper discusses, first, the role of internal auditors in Norwegian enterprises; secondly, the role of independent auditors and, thirdly, the working relationship of internal and independent auditors.

The section on internal auditors discusses their role in appraising operating controls and ascertaining the standards of compliance of established policies and procedures; their checking on the safeguarding and accounting for assets; their opinions on reliability of company accounting data; the extent of their responsibility in appraising performance of employees.

Activities of the independent auditor are discussed in terms of his opinion of management's adherence to accounting principles; his role in preparing tax statements and reports to regulatory agencies; his passing on adequacy of disclosure and fairness of presentation of financial statements; the extent of his obligation to supply advisory services to management; his observance of a body of auditing standards and procedures.

The relationship between internal and external auditors is discussed in terms of interdependence in the performance of their assigned tasks.

#### SESSION 'I'

Chairman: Mr Thomas D. Flynn, Congress Assistant Treasurer.

Vice-Chairman: Mr T. G. Hull, New Zealand Society of Accountants.

Subject: 'Financial reporting (with special reference to India)'.

Speaker: Mr N. R. Mody (The Institute of Chartered Accountants of India). Senior partner of a leading Indian accounting firm. Holds Bachelor of Commerce degrees from the University of Bombay and the University of London. Former member of the Accounting Board of the Indian Government; currently a nember of the Local Board of the Reserve Bank of India. Also a member of The Institute of Chartered Accountants in England and Wales.

Summary: The Indian Companies Act of 1913 was revised in 1936, and extensively amended in 1956 and 1960. In its successive stages, the Act has striven to assure a greater measure of disclosure and to widen the scope of information given to shareholders. The emphasis has shifted from the balance sheet to the profit and loss statement, to enable shareholders specifically to assess the progress achieved during the year

Requirements are embodied in the form of a schedule which lays down a net form of balance sheet, and minimum disclosure requirements for the profit and loss statement. Though the form has the advantage of ease of interpretation, it has been devised to meet the needs of the banking and insurance concerns. Upon application to the Government, companies may receive permission to depart from the set form. But most balance sheets do conform to it.

There is a tendency to supplement the information given in the balance sheet and the profit and loss statement with the help of appended notes. Another tendency, developed mainly through the influence of American corporations, is of including statistical information on important aspects such as history of earnings, dividends and expenditures under various heads per unit of currency.

Subject: 'The use of standard costs and budgets in the United States'.

Speaker: Mr I. Wayne Keller (National Association of Accountants (U.S.A.)). Holds Bachelor of Science degree and honorary degree of Doctor of Commercial Sciences from Elizabethtown College. Author of several works on cost and management accounting.

Summary: Management accounting in the United States has developed rapidly and is used extensively. The chief accounting officer of a United States company participates in the planning process and is responsible for evaluating, recording and reporting the planned and actual results. This has come to be designated as 'management accounting'. In practice, most companies treat standard cost procedures and budgetary control procedures as complementary. However, there are successful companies which keep planning, measurement and control functions separate from the financial accounting functions.

For direct material usage and direct labour, the standard allowances may be computed on the basis of production units and recorded and summarized simultaneously with the actuals - especially with

machine accounting.

Experience is usually the major determining factor in building expense budgets. Many items of expense cannot be established by scientific measurement.

Until recent years, it was general practice to apply expense to production and thus carry it into inventory values. This is known as absorption costing. Now, many companies have switched to direct costing, particularly for internal reports to management. Standard product costs are developed by the standard direct material, standard direct labour and standard expense rates for each operation through which the product passes. This provides a standard cost for a product at the completion of each product operation. The operating budget provides the principal control device for top management.

Subject: 'Some aspects of the effects of legislation on accounting procedures in the Federation of Rhodesia and Nyasaland'

Speaker: Mr R. G. Wuth (Rhodesia Society of Accountants). Vice-President of the Rhodesia Society of Accountants. He is also a member of English and South African accounting bodies. Partner in an

accounting firm in Salisbury.

Summary: The comparative youth of the Rhodesia Society of Accountants and of the country in which its members practice means that they do not have as much experience as their colleagues in older countries. where legislation is more complex and companies larger. However, many public accountants and senior accountants in business life are members of recognized overseas professional bodies, and many international firms of public accountants are established in Rhodesia.

Shortage of personnel and the limited size of companies are factors holding back the trend toward adoption of all procedures accepted as good current practice in older countries. The Southern Rhodesia Companies Act follows the provisions of the United Kingdom Companies Act, 1948. Rhodesian accountants are greatly influenced by current thinking of the profession in the United Kingdom.

One undesirable outcome of current legislation is that companies tend to limit their disclosure so as to comply only with the minimum requirements of the law. The paper discusses legislative requirements in regard to taxation and their implications for financial

reporting.

At the Congress reception on Sunday evening.

The Fifth Avenue façade of the Metropolitan Museum of Art where there was a special showing for Congress members of the American Wing, Great Hall and Renaissance Collection on Tuesday evening.

#### Session 'J'

Chairman: Mr Perciva Brundage, Past President of the American Astitute of Certified Public Accountants.

Vice-Chairman: Mr Anselmo T. del Rosar Philippine Institute of Certified Public Accountants.

Subject: 'Accounting and the world economy'.

Speaker: Mrs Helene M. A. Ramanauskas (American Women's Society of Certified Public Accountants). Holds M.A. degree from the Technical University of Munich. Also holds the degree of Master of Business Administration from Northwestern University. Became a certified public accountant in 1958. Associate Professor of Accounting at De Pauw University of Chicago.

Summary: Accounting is the forceful instrument available for organizing, expressing and evaluating business and economic facts. It is the quantitative means for disclosure of information essential to the successful conduct of national market economies and for appraising the overall performance of free enterprise societies. It is obvious that with industries operating at high levels of output and distributing in highly competitive markets, cost planning and control are the most vital tasks of modern management. Successful attempts have been made to overcome the weaknesses of the conventional static reporting methods by incorporating means for measuring performance and by developing supplementary reports, special analyses and break-even charts. The new costing philosophy, known as direct or marginal costing, focuses attention on the distinction between variable and fixed costs.

The present-day lack of a co-ordinated system of postulates, principles and rules was caused by the past concern for solutions to immediate problems. Very

little fundamental research was done. To overcome this weakness the American Institute has established an Accounting Principles Board. The founding of a research committee for the study of broad accounting principles to be based on basic postulates is one of the most revolutionary steps in the history of accounting and places the discipline on the threshold of becoming a true science. We now need a permanent international forum to develop a framework of international accounting postulates and principles. This might be done under the auspices of the United Nations World Economics Commission.

Subject: 'Financial reporting in New Zealand: an outline of services available'.

Speaker: Mr D. S. Cox (New Zealand Society of Accountants). Vice-President of the New Zealand Society. Holder of Master of Commerce degree from Auckland University. President of the Auckland Chamber of Commerce, 1955–56.

Summary: The paper describes the organization of the profession in New Zealand, commercial legislation related to the subject and New Zealand practices and standards. The general objective of the paper is to supply the overseas investor with background information he may need when considering investment in that country.

In regard to practise in New Zealand by foreign accountants, the paper states: "The New Zealand Society has reciprocal arrangements with a number of overseas firms practising in New Zealand. If a member of an overseas body wishes to obtain the right to do company audits in New Zealand through membership of the Society, and he wishes to call himself a public accountant, he must reside in New Zealand. He has no difficulty in being admitted to membership provided he is a member of a body with which the Society has reciprocal arrangements and provided he is ordinarily

resident in the country. However, he loses this right if he leaves the country. Furthermore, he cannot practise in the name of an overseas firm but must practise in New Zealand in his own name, or in the name of a partner or former partner who is, or was, a member of the New Zealand Society. The effect of this is that if an international company establishes an office in New Zealand and registers under the New Zealand Act either as an overseas company or through a New Zealand subsidiary, any auditor it appoints in New Zealand must be a member of the New Zealand Society.' There are some exceptions to this rule.

Subject: 'Auditing and the world economy: a contribution from an auditor in South Africa'.

Speaker: Mr W. D. Danks (Transvaal Society of Accountants). A Vice-President of the Transvaal

Society. Member of the Scottish Institute.

Summary: The Republic of South Africa is a country with a comparatively small number of very large industrial undertakings in which public investment is held, and a large number of privately-owned businesses of medium and small size. The profession is regulated by the Public Accountants' and Auditors' Act of 1951 and additional legislation.

The law does not lay down accounting principles, although it does prescribe certain information to be given in accounts. There is no legal requirement, nor is it the custom, for financial statements to disclose total value of sales and cost. From time to time, there has been criticism, though perhaps not always well-founded, that published annual accounts do not make it possible to appraise business activities fully.

South Africa does not yet have a council on auditing standards and procedures. But practise does not show fundamental differences with American standards. However, verification of accounts receivable is frequently rejected as imposing too heavy an administrative burden on the enterprise. Nor does the auditor expect to be consulted on matters of business policy.

The auditor does have an obligation to notify the management if he has reason to believe that material irregularities have taken place or are taking place in the business concern he is auditing. Legislation other than the Companies Act places additional duties upon the auditor, who is generally held to owe a duty not only to his client but also to the public.

#### SESSION 'K'

Chairman: Mr J. William Hope, Past President of the American Institute of Certified Public Accountants.

Vice-Chairman: Mr K. G. Jensen, Föreningen af Statsautoriserede Revisorer (Denmark).

Subject Fluctuating price levels and accounts'.

Speaker: M F. M. Richard (presented a paper written by M Robert Mazars), (L'Ordre des Experts Comptables et des Comptables Agréés (France)).

Summary: Apart from the fact that the total of assets equals the total of liabilities, there is nothing that can be qualified as accurate in a balance sheet, despite its appearance of exactness and finality. Even in the hypothesis of absolute stability in price levels, matters such as depreciation, inventory valuation, accrued liabilities, provisions and reserves are largely matters of opinion. Two things must be emphasized:

(a) Replacement costs in most cases are the result

of subjective valuations, especially in regard to fixed assets, and the effect of inflation varies in intensity depending upon the speed and extent of the fluctuation of prices.

(b) The real profit of a firm still consists in the positive difference between the amount of sales

and the actual cost of goods sold.

Fiscal legislation is the real reason why in every country where corporate taxes exist, and particularly in countries where steep inflation appears regularly, the problem of limitation of profits subject to taxation has been discussed at length. In many cases it certainly would be useful to have two balance sheets – one for fiscal and one for management purposes.

Subject: 'The annual financial report: some comments and criticisms'.

Speaker: Mr G. C. Tootell (The Institute of Chartered Accountants of Australia). President of the Australian Institute. Graduate of the University of Melbourne. Partner in a Melbourne accounting firm.

Summary: In Australia, the influence of regulating bodies has been to establish minimum standards of reporting and disclosure. The stock exchanges have also exerted considerable influence. But there is no Australian equivalent of the Board of Trade in the United Kingdom or the Securities and Exchange Commission in the U.S.A. This means that there is no body that can exercise discretionary power of permitting variations from legislative enactments. The states of Australia have now agreed to enact uniform company legislation.

The law is not specific as to requirements to be met the narrative report by the directors. These reports vary greatly in quality, but it is doubtful whether laws could be framed to determine in all cases the information which a directors' report should contain.

Accountants are faced with the duty of determining what in general circumstances and what in particular cases should be the content of a report which will provide the most useful and important facts for the information of investors within the limits that ensure clarity, simplicity and ease of understanding. This duty cannot be discharged by mere compliance with minimum standards determined by law or regulation.

Subject: 'How accounting firms can help small busi-

nesses through auditing'

Speaker: Mr James P. Ould, Jr. (American Institute of Certified Public Accountants). Partner of an accounting firm in Lynchburg, Virginia; member of the Board of Managers, Professional Development Division of the American Institute of Certified Public Accountants; Member of the Virginia State Bar. Bachelor of Science in Business Administration; attended the Law School in Richmond, Virginia.

Summary: Management of a small business enterprise frequently finds out first from the public accountant what the financial position and business results are. In such cases, the preparation and presentation of audited financial statements are of prime importance to the management itself. The audit of a small business gives the auditor an insight into its operations which will enable him to help management with advice. The management of a small business often cannot afford the services of marketing specialists and other consultants, and therefore has to depend on the advice of the auditor. The auditor can assist in setting up subsidiary records

of fixed assets which will show necessary facts such as cost, date of purchase, location in plant, estimated life,

Another area in which the independent auditor can help his small-business client is financing. He can also help in analysing sales accounts and can show the determining factors for changes in unit costs. Important management information can be contained in a management letter, added to the audit report, which explains and interprets his findings.

#### SESSION 'L'

Chairman: Mr R. Kirk Batzer, Member Congress Organizing Committee.

Vice-Chairman: Mr Mikio Kawai, Shadan Hojin Nippon Koninkaikeishi Kyokai.

Subject: 'Accounting in the public sector'.

Speaker: Mr Norman Doodson (The Institute of Municipal Treasurers and Accountants). County

Mr N. Doodson

Treasurer of Lancashire County Council. President of The Institute of Municipal Treasurers and Accountants. Past President, Association of Local Government Financial Officers. He is also a member of the English Institute.

Summary: This paper is concerned with accounting and financia administration in public sector, the Government and local government bodies and public finance organiza-

tions established by Government action or under Government jurisdiction. Although accounting fundamentals are the same for all types of organizations, there are significant differences in the purposes of accounting in the public as opposed to the private sector of the economy.

The four main purposes of accounting in the public sector are: to give account of stewardship; to aid the formulation and execution of policy; to allow assessment of the economy of operation; and to provide information for the compilation and interpretation of financial statistics. The aspect of accountability to the general public is usually reflected in the statutes establishing public bodies and in regulations imposed by the Government.

A finance officer's responsibility is normally to the body which appoints him, but in the United Kingdom come local government treasurers have a common law ponsibility direct to the taxpayer; this precludes them from disclaiming responsibility for illegal payments by pleading that they were acting in accordance with instructions.

Subject: 'Auditing and bank credits'.

Speaker: Mr Lewis E. Rossiter (American Institute of Certified Public Accountants). Partner in Chicago accounting firm. Holds a B.A. degree from Cornell University and M.S. in Business Administration from Washington University in St Louis. Chairman of American Institute of Certified Public Accountants

Committees on Relations with Bankers and on Specialized Audits.

Summary: There is no larger or more vitally concerned group of third parties interested in the work of the American accountant as an auditor than that comprising the banking fraternity.

In sophisticated banking circles audited financial statements are virtually a necessity for proper credit analysis. Under ideal conditions, all bankers would insist on such reports, and all Certified Public Accountants would render them. However, this cannot always be the case, because of the variety in size, skills, and levels of competence found in banking personnel and

in special client-banker relationships.

Over the years, as the accounting profession has grown in the United States, broadening its concepts and developing and refining its standards, it has been important that the business and financial communities and other groups be informed of these changing concepts and standards, and that certain of these groups be educated in them to the degree necessary for their full understanding of the auditor's functions. With the banking group this educational process has been very important. There is effective and continuing liaison between the accounting profession and banking group. Co-operation has included an analytical survey of audit reports in bank files. It was conducted by the American Institute's Committee on Auditing Procedure, with the co-operation of thirty State societies and 300 banks. The object: to educate both sides to the need for high reporting standards for financial statements submitted in support of loan applications.

Subject: 'Accounting - the soul of free economy'.

Speaker: Dr Juan Rodriguez Lopez (Colegio de Doctores en Ciencias Económicas y Contadores de Uruguay). Graduate of the Escuela Superior de Comercio: has taught accounting at the University of Montevideo. Received his Doctorate in Economics from that university in 1940.

Summary: As Blough has said, since the beginning of this century 'there has been more progress in the development of accounting principles than there had been during several centuries previously'. That is why it is believed that this congress will provide an opportunity to establish an approach to accounting principles.

Accounting was born from practice; only later did the need for principles develop, on the basis of practice. There is no reason for accounting to be different from other sciences, which are nothing but explanations and descriptions of reality. Principles cannot be imposed

by regulatory authority.

As early as 1833, the Frenchman Coffy stated that accounting is genuinely economic in nature. It is much more than mere recording. Postulates on which the edifice should rest have been stated as: quantification, exchange, entities, time period, unity of measure. Add to these: continuity, objectivity, consistency, stable unit, disclosure.

Care should be taken to distinguish between principles and standards. Standards, or rules of procedure can change; principles have a degree of stability. As Kraayenhof has said, they should be based on economically and theoretically sound valuation and profit concepts. Legislation cannot change them. The cause of accounting would be helped if an international committee on accounting principles were created, to coordinate the work done by several national committees.

#### SESSION 'M'

Chairman: Mr John H. Zebley, Jr., Past President of the American Institute of Certified Public Accountants.

Vice-Chairman: Mr Gerald Maxfield, Colegio Nacional de Tecnicos en Contabilidad (Venezuela).

Subject: 'Historical background of accounting postulates and principles in Japan'.

Speaker: Mr Touru Takezaki (Shadan Hojin Nippon Koninkaikeishi Kyokai). A director of the Japanese Institute of Certified Public Accountants; heads own accounting firm in Tokyo. Holds a Bachelor of Commerce degree from the Tokyo University of Commerce.

Summary: The Author sought to clarify the significance of accounting postulates from a historical point of view; it dealt with the historical emergence of accounting principles in Japan and gave an outline of accounting practices and the role of certified public accountants in present-day Japan.

The first step towards a fully developed accounting system was made after the War, with the publication by occupation headquarters in May 1948, of instructions on the preparation of financial statements. Within the framework of occupation policies, the instructions aimed at creating uniformity in form and contents of financial statements.

Further improvement and standardization of accounting methods are urgently needed to encourage investment of foreign capital, democratization of investment policies and rationalization of business enterprises in Japan.

Along with the growing economic democratization of the country, the need for audits of financial statements arose, to assure protection of the investing public. Certified public accountants were made the sole future attesting auditors of financial statements, but public accountants already established in 1948, when the law was adopted, may continue to exercise the attest function.

Subject: 'Financial reporting for small businesses'.

Speaker: Mr W. P. Hutchison (American Institute of Certified Public Accountants). Member of the

Institute's Council and of its Executive Committee; also chairman of Certified Public Accountants Consultation Service Committee and a past Vice-President. Also a member of the National Association of Accountants. Holds a B.A. degree from the University of Oregon.

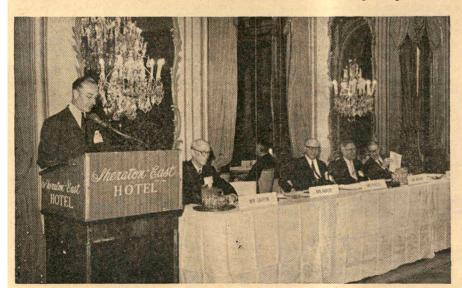

Summary: Proper financial reporting is the lifeline of small business. Unfortunately, there are still too many examples of poor financial reporting. Particularly in periods of prosperity, some small business managements tend to be lax in this respect.

The first responsibility of the independent accountant is to see that management receives timely and comprehensive financial statements which serve as a basis for key decisions. The accountant must interpret the data with management, so that trends are observed, costs analysed, and production controlled. His next obligation is to see that an adequate budget is prepared. This budget should be regularly compared and adjusted as operating results are determined. Regular working capital and cash flow projections should be made on a long-term basis.

Other areas in which the independent accountant can assist management are personnel requirements, pension and profit-sharing plans, as well as on matters concerning corporate structure, estate planning, financing, etc. But the company accountant has prime responsibility for internal reporting. Examples showing the importance of internal financial information are given. They include: expansion of facilities, employee benefits, diversification of production and elimination of unprofitable product lines, automation of accounting systems. These internal financial statements take the of budgets, forecasts, projections; the cash flow statement; daily reports on cash, accounts receivable, accounts payable, production, inventories; interim monthly financial statements etc.

Subject: 'The utility of normalization for accountancy and auditing'.

Speaker: Professor J. Loore (College National des Experts Comptables de Belgique). Graduated in Commercial and Financial Sciences from the Institut Technique Superieur du Commerce in 1949. Has been

Mr W. E. Parker presenting his paper at one of the technical sessions.

442

practising as an auditor since 1955 and is Professor of Commercial Documentation and Financial Mathematics at the Institute of Commercial Sciences in Brussels.

Summary: The Congress would fail to live up to its tasks if the opportunity to work for more perfectly standardized principles and procedures of accounting were not used to advantage. The present tendency in the world is toward establishment of a common language in numerous spheres of activity. Why shouldn't the accounting profession be one of them? Accountants, who are not only controllers but also organizers, cannot afford to lag in this respect.

They have to agree on a set of minimum rules to be applied not only on the national scale but internationally as well. The advantages would be, in the economic and financial spheres: a return to healthier concepts of competition; a fairer distribution of governmental aid to enterprises; better protection of the interests of third persons – equity owners, creditors, clients; fairer and more efficient taxation; easier price-control operation in case of an emergency; better co-ordination of laws on transportation, customs, economic unification.

Social advantages would be: better understanding of economic realities on the part of labour; higher productivity on the management and accounting levels.

#### SESSION 'N'

Chairman: Mr John J. Deering, Member Congress Organizing Committee.

Vice-Chairman: Mr Uno Lönnqvist, KHT-YHdistys:

Föreningen C.G.R. (Finland).

Subject: 'German accountants' approach to safeguarding investors' and creditors' interests'.

Speaker: Mr Johannes Semler, Jr. (Institut der Wirtschaftsprüfer). A graduate of the University of Hamburg, has been a practising lawyer since 1953, and a practising auditor since 1955.

Summary: Most accounting principles are recognized internationally. However, German accounting differs when it comes to the treatment of contingencies or distribution of profits. On the other hand, these differences may well be greater in theory than in practice.

In contrast to the U.S.A. (and, generally, also to Great Britain) it is legally permissible and generally accepted to make provisions, within a limited sphere and in a particular manner, against future risks by creating secret reserves through deliberate undervaluation of assets.

As a practical matter, the possibility of building secret reserves is limited to providing for excessive depreciation, excessive writing down of stock, and excessive allowances for bad debts. The whole question of secret reserves is now a subject of intense discussion in Germany. This discussion should be focused on the question whether it is proper to sanction management's right to understate income in profitable years through the creation of hidden reserves and to overstate income in less profitable or unprofitable years through the liquidation of those reserves. In the revision of the German company law currently under consideration, the margin for allowable hidden reserves is expected to be narrowed.

What is needed is identification of important problems requiring internationally uniform treatment. Once this is done, the problems should be brought to the attention of the national professional organizations and Governments for action. Subject: 'Capital budgeting in a manufacturing company'.

Speaker: Mr Roger Wellington (American Institute of Certified Public Accountants). Treasurer of the American Institute of Certified Public Accountants. Also chairman of the Institute's Committee on By-Laws and a member of the Editorial Board. Is a Harvard graduate, with B.A. and M.B.A. degrees.

Summary: It seems incongruous that such a small proportion of the effort of managements of most companies goes into investment decisions, although these decisions are of vital importance to the long-range success of enterprises. In a well-balanced system of financial management, provisions should be made for sound procedures for capital budgeting, as a necessary complement to those for operating expense control.

The author describes current routine capital investment procedures and concludes that they fail to deal with certain very important aspects of capital budgeting. Accrual accounting is useful, but only incidental, in the process of capital budgeting.

The selection of the type of capital investment, and the amount thereof, always involves a choice of various alternatives. Methods now in use for developing criteria against which to measure prospective profitability include the 'Return on investment' method, the 'Pay-out' method, the 'Present value' method and finally the 'Discounted cash flow' method. The latter method, not yet widely in use, consists of tabulating and then reducing or discounting to their present values the cash outgoings and cash incomes of each proposed investment project for each of its future years. That rate of interest or discount which, when applied to the cash flows, each year over the life of the project, will make the total amount of the discounted cash income flows equal to the total amount of the discounted cash outgo flows is the rate of return on the investment.

Subject: 'Auditing in Chile and its influence on the economy'.

Speaker: Mr Leslie Nicol (Sociedad Nacional de Contadores de Chile). Graduate of the Catholic University of Valparaiso, Chile. Partner of an accounting firm in Santiago. President of the Santiago Chapter of his professional organization.

Summary: The independent accountant has had to extend the scope of his activities to include assistance to management in a number of areas. These areas include the design of systems, internal audit programmes, systems of budgetary control, etc. The independent accountant must also continue to contribute towards the general understanding of the capitalist system and the causes of changes in the system. The authoritarian systems which have arisen in the last fifty years will never accept the functions of the independent accountant.

The auditor's activities must continue to be directed towards encouragement of investment of small savings in the economy. Auditors can play a useful role by providing efficient services in behalf of expansion of the economies of Latin America's under-developed countries.

Unfortunately, auditing and its purposes are little known to the man in the street in Latin America. Two factors have so far hindered the growth of the professions: companies do not have to submit financial statements audited by independent accountants; and

auditors are not engaged by the stockholders, but by the directors.

So long as auditing is not considered an essential prerequisite, auditors will not be able to make their full contribution to the development of the economy. Auditing standards and procedures should not be adopted just on a national basis. Only internationally accepted standards and procedures will create the climate of confidence that will allow Latin American countries to develop their economies.

#### SESSION 'O'

Chairman: Mr William P. Stowe, Member Congress Organizing Committee.

Vice-Chairman: Mr A. Underwood, Southern Rhodesia Society of Accountants.

Subject: 'Development of management services in the practices of American Certified Public Accountants'.

Speaker: Mr Kenneth Axelson (American Institute of Certified Public Accountants). Holds a B.A. degree from the University of Chicago. Partner in prominent accounting firm and has responsibility for his firm's management controls practice in the United States. Has had experience as a controller in industry and with a national firm of management consultants. Member of American Institute of Certified Public Accountants' Committee on Management Services.

Summary: Both among the large accounting firms and the small practitioners, management service work is becoming a more and more important part of their practice. It is the most interesting post-war development in American public accounting.

Management services are all aimed at helping management do a better job. From the keeping of accounts and the auditing of accounts, it is only a step to designing accounting systems. American public accountants were doing such work as long ago as the turn of the century. In the period between the two world wars, however, public accountants lost some of their early identification with the advisory aspect of their work, when tax problems and helping companies to meet the requirements of the Securities Exchange Commission absorbed much of their energy.

After World War II, Certified Public Accountant firms with established management service staffs greatly expanded the scope of their work; other Certified Public Accountant firms established such staffs. In 1953 the American Institute of Certified Public Accountants established a committee to help the smaller firms in finding ways to extend management services to their clients, and in 1958 the American Institute inaugurated a series of research bulletins destined further to assist the smaller firms in their field.

Subject: 'Internal Control as it effects the independent public accountant'.

Speaker: Mr F. S. Somekh (Association of Certified Public Accountants in Israel). Senior partner in an accounting firm in Tel Aviv. Vice-President of his Association and a member of the English Association of Certified and Corporate Accountants and The Institute of Cost and Works Accountants.

Summary: The scope of this paper was limited to a study of internal control as it affects the independent public accountant in the planning and performance of ordinary examinations. The position taken in the United States and the United Kingdom applies sub-

The author's two main purposes were (a) to highlight the fact that the study of internal control is the

Ladies' Celebrity Luncheon at *The Americana Hotel*. Mrs Alvin R. Jennings, Chairman of the Ladies' Committee presided, and the speakers were women prominent in business and commerce.

concern of independent public accountants in all countries, and (b) to stimulate the international adoption of generally accepted auditing standards and procedures having the evaluation of internal control as a base, in view of the increasing interdependence of independent public accountants of most countries in the carrying out of audit engagements of enterprises with geographically dispersed branches or subsidiaries.

Subject: 'Financial reporting for local government'.

Speaker: Mr Richard J. McConnell (Municipal Finance Officers' Association (U.S.A.)). Graduate of Duquesne University. Executive Vice-President of the Philadelphia Industrial Development Corporation and President of the Food Distribution Center. Former Director of Finance of the City of Philadelphia. Member of the American Institute of Certified Public Accountants' Committees on Local Governmental

Accounting and on Government Participation.

Summary: The magnitude and character of present-day government demand the same standards in management and fiscal administration as those applied in private enterprise. Behind a long-range physical plan

there must be a long-range fiscal plan.

Where legal provisions and generally accepted governmental accounting principles conflict, legal provisions take, of course, precedence. The report will necessarily indicate where legal provisions cause such deviations from standards. Implicit in governmental accounting is the 'fund' concept – a separate fiscal and accounting entity. Four basic statements included in a financial statement on a general fund are a balance sheet, a statement analysing changes in fund balance a statement comparing actual with estimated reveal, and a statement comparing authorizations with expenditures and encumbrances (commitments).

The very nature of government demands certain types of management reports, such as budget status reports and cash forecasts. Well conceived programme budgets are meaningless without an accounting and statistical recording system which lends itself to timely, accurate and meaningful reports for performance measurement.

#### ENTERTAINMENT

The day concluded on Monday with three types of entertainment specially arranged for Congress members: at Carnegie Hall, a concert by the Philadelphia Orchestra conducted by Eugene Ormandy; at the Town Hall, a concert by Duke Ellington and his orchestra; a motion picture and stage show at the famous Radio City Music Hall.

#### **GROUP DISCUSSIONS**

On Tuesday morning the Congress divided into about 140 small discussion groups, each of fifteen to twenty-five participants, the groups being accommodated in the conference or board rooms of companies and corporations throughout New York City.

#### OFFICIAL DELEGATES' DINNER

A dinner for the official delegates of the participating bodies was held on Tuesday evening at the Hotel Pierre. The Congress President, Mr Arthur Foye, was in the chair and the principal guest speaker was Mr Harold F. Linder, President and Chairman of The Export-Import Bank of Washington. There were also brief remarks by the following regional representatives: Don Roberto Casas Alatriste, of Mexico, for the Western Hemisphere area; Shri Naval R. Mody, of India, for the Asian-Pacific area; Mr Percy F. Carpenter, of the United Kingdom, for the European-African area.

#### CLOSING PLENARY SESSION

The Congress came to a conclusion – except for a grand ball in the evening – on Thursday morning, September 27th. Mr Arthur Foye, presiding, expressed his pleasure and appreciation of the whole-hearted participation of members in all the proceedings of the Congress – technical and social. As to the ninth congress, presumably to be held in 1967, he said invitations had been received from Canada, Mexico, India, Australia, France and Spain. The question would be discussed with all the participating bodies and an announcement made as soon as possible in order to give the selected country ample time for planning and organization. Mr Foye then invited Mr Paul Grady to summarize the technical programme of the Congress.

Mr Grady said that during the course of the Congress some fifty papers had been presented or summarized in technical sessions, with further consideration of the

subjects at the discussion group meetings.

It seemed fair to say, he said, that a profession may be judged by the extent to which it objectively appraises its own strengths and weaknesses and seeks ways and means to improve its usefulness in the performance of its proper functions. Analysis of the papers presented and of the tenor of the discussion meetings clearly demonstrated that, in terms of this criteria, the accounting profession of the free world was in exceedingly sound health. It was all the more pleasing

to report that the evidence of constructive robustness came not only from members engaged in independent public accounting, but from members who were serving as officers of industrial and financial enterprises and in various echelons of government.

Mr Grady then went on to give 'a few impressions' of the technical papers which he considered to be

significant.

#### **Need for International Standards**

Many of the papers presented to the Congress, continued Mr Grady, urged that steps should be taken to hasten the further development, understanding and acceptance of standards of auditing, accounting and reporting on an international basis. This theme had been inherent to an increasing degree in the successive congresses. All of the papers recognized that the key to progress was organized research by the profession, both at the national and international levels. The theme of the technical programme of the present Congress might be briefly stated in three interrelated premises:

(1) The world economy is dependent on flow of capital, international trade and management skilled in the organization of personnel and use of tools to produce goods and services wanted by the people.

- (2) The flow of capital is stimulated by opportunity of profit and confidence in the political and economic stability of the countries comprising the free world.
- (3) The primary function of the independent public accountant in the economy, whether world or national, is the part he plays in maintenance of the mutual confidence which is necessary in business relationships.

If they were in agreement on these premises, it would be difficult to see how there could be disagreement on the necessity for international standards of auditing, accounting and reporting as a means of improving the mutual confidence in business relationships which is our particular responsibility. It had been the concensus of the discussion meetings that agreement on auditing standards should not be a very difficult undertaking since this was entirely a professional matter. In the case of accounting and reporting standards considerably greater difficulties were presented and it would be necessary, through research efforts, to

reach a clearer status nationally as a condition precedent to the development of international standards.

It was certain that the excellent technical papers and stimulating discussions heard during this International Congress would contribute substantially to the attainment of these objectives, but it would be a mistake to let the problem rest on this generality. In conclusion, therefore, he wished to convey to the official delegates from the sixty-two nations attending the Congress an important mandate from the discussion meetings. The mandate was that each delegation specifically charge itself with the responsibility of initiating the necessary research work to develop clear-cut statements of their own national auditing, accounting and reporting standards and that this work be completed in advance of the Ninth International Congress in 1967. Out of this foundation material it would be possible for the profession, on an international basis, to continue the evolutionary process of promoting the highest and soundest of these standards whenever they may exist.

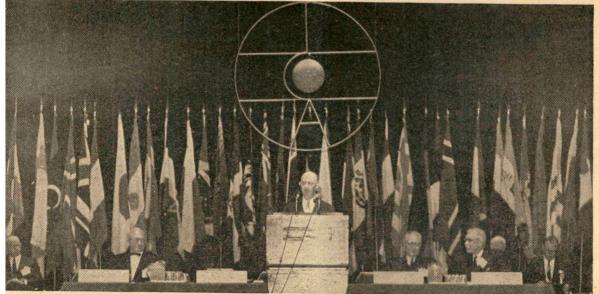

### THE WORLD-WIDE CORPORATION IN A MODERN ECONOMY

Speaking on 'The world-wide corporation in a modern economy', Mr Frederic G. Donner, chairman of General Motors, said in the course of his address:

The growing complexity of business and commerce and the increasingly urgent need for prompt and accurate accounting data have presented the accounting profession with a major challenge. That challenge is being met. The progress you are making in solving problems and in simplifying the complex and the technical speaks eloquently for your professional skill. Accountants directly employed by business as well as those in public practice are today not only concerned with reports to stockholders, creditors and the public but are also supplying management with better data and more useful analyses than ever before.

Accounting is the language of business. In order to serve successfully in the field of international business, accounting must, of course, become more nearly an international language. This Congress and its predecessors have provided a forum for discussing accounting principles and practices as well as differences in auditing standards. I am sure that we all share the hope that, out of these discussions, will come, over the years, the improved understanding that is fundamental to the advancement of international commercial relations.

It is my conviction that the international industrial corporation performs an important service that should be encouraged. Advantages accrue to all countries in which it operates no matter where the parent organization may reside.

Mr Foye speaking at the closing session. Seated on the platform (left to right) Mr Paul Grady, Mr Frederic G. Donner and Mr J. C. Stewart.

From the standpoint of the countries in which subsidiary operations are set up, the result is an investment of capital that in many instances would not be available locally. Technical and managerial skills that, in many cases, could not be otherwise obtained and centres for teaching these skills are also supplied.

Foreign investments bring together human and material resources in the recipient countries. They create good jobs for people who might otherwise be less productively employed and produce goods which might otherwise not be available. Our own experience demonstrates that the development of a managerial group staffed by that country's citizens is often a byproduct of great value. These companies also create new demand for materials, components, supplies and services, and produce tax revenues for local and national Governments. And they increase the capacity to export from the countries in which the investments are made.

From the standpoint of the investing country, once a manufacturing operation is established abroad, a part of the investment is often spent for capital goods and services in the home country. Additional exports from the investing country are also generated in the form of materials, parts and services required to support the new activity. And, most important, the increased level of economic activity in the recipient country supports

and requires a higher level of imports.

The facilities to make possible wider ownership participation in international corporations already exist in varying stages of development in many countries and these should be able to be expanded as the opportunities warrant. Throughout the Free World there are over one hundred organized markets for the purchase and sale of corporate securities.

However, the existence of these facilities does not mean that the goal of true world-wide ownership is easy of achievement. There still exist many obstacles, both economic and political, and I would like this morning to call attention to a few of the more important

economic ones.

A paramount consideration today is the tax barriers that exist – both in the investor's own country and in the home country of the corporation. In many countries there are restrictions on trading in foreign securities. These restrictions, of course, act as a barrier to the free flow of capital and prevent local investors from acquiring securities of foreign companies.

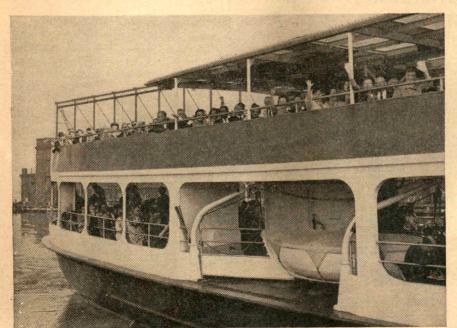

A major obstacle to investment in foreign companies is lack of information about their securities. Many investors hesitate to purchase shares in a company based outside their own country, about whose operations they have little information. And their uncertainty may be increased when the stock certificate itself is written in a language and valued in a currency different

from their own.

Wouldn't it also be possible to make some relatively simple mechanical changes? For example, present practice is to have all the shares of the international corporation printed in the same language. Is there any reason why these shares could not be printed in the language of each country in which the corporation operates? A change such as this is undoubtedly an unnecessary one for the sophisticated investor but, if our goal is to extend and broaden the base of stock ownership, even such a minor change could be helpful. And, towards the same end, the publication of corporate annual reports in a number of languages would appear to be most worth while.

To offer one further suggestion which is in quite a different area but which might further this goal, perhaps international corporations could give more attention to the possibilities of placing stock in the hands of local employees through savings or supplemental compensation or other benefit plans.

Dealing with the problem more fundamentally, could we begin to come to grips with some of the tangible economic obstacles that stand in the way of world-wide ownership of international corporations? What are the possibilities, for example, for having dividends paid directly to the local stockholder in a

Boat trip round Manhattan Island. This was one of the many interesting and varied tours held on the Wednesday -a'free day' for the Congress.

world-wide corporation out of funds made available through the operation of the local subsidiary, in local currency and in amounts equivalent to the parent

corporation's dividends?

If the corporation were to become able to move more effectively in these directions, some relaxation of the many restrictions preventing local security markets from trading in the shares of the international corporation would be required. However, moves which stimulate stock ownership through clarifying the relation of

the international corporation to the local economy, might in themselves encourage a relaxation.

By making possible a broader base of ownership participation in international corporations, the flow of investment funds generally would be stimulated and directed to those countries where they can be of greater use, thereby contributing most effectively to the economic growth we so earnestly seek. It is a natural complement to the rapidly widening acceptance of free world trade.

#### THE FUTURE OF THE ACCOUNTING PROFESSION

The closing address was given by Mr J. C. Stewart, C.A., President of The Institute of Chartered Accountants of Scotland, in the course of which he said:

I have been asked to say something this morning about the future of the accountancy profession as I see it. This is possibly because the Scottish Institute has the longest past and, therefore, if time be regarded as finite rather than infinite, presumably, the shortest and most easily foreseeable future of all the organized bodies of accountants. Even so, so rapid is the rate of technical change that one cannot hope to imagine, much less to describe with any accuracy, the changes

which may yet occur in one's own lifetime.

Accountants have hitherto been criticized, and perhaps justifiably, because their efforts have been thought to be too exclusively directed to ensuring accurate recording of present happenings and then setting out, for the information of others, records of past results. But this was often all that was expected of them by a business community which was then left to draw its own deductions as to the future. The restrictions thus imposed on the services it could render were too readily accepted both by the profession and its clients.

#### Accountants must Look Ahead

Accountants must become more conscious that it is the future that matters, and that their concern with the past must increasingly be only as a basis for forecasting the future. It is interesting to know where we have been, but, unless we are to engage in mere aimless wandering, it is essential to know where we are going or at least aiming to go. Adequate records of where we have been help us to plan where we are going.

Precise records of certain current events and transactions can – and indeed must for obvious control purposes – be maintained. As these records are incorporated into historical accounting statements they tend to lose their quality of precision. There must be constant effort to secure the greatest possible accuracy in all accountancy statements, whether historical or prophetic, but in historical statements designed to serve as a basis for planning the future, it is unnecessary to strive for any greater standard of accuracy than is required to support such forecasting as is possible.

The change in emphasis from past to future may thus be expected to lead to an apparent diminution in the arithmetical precision of accounting statements and to an increase in the importance of skilled judgment and the formation of right opinions. This need not be a matter for dismay. Accountancy, as distinct from book-keeping, never has been an exact science.

. It is the way in which the results produced are

Mr J. C. Stewart speaking at the closing session.

interpreted that is important. The complexity of the data may be increased by the size and scope of a business enterprise, but the fundamental accounting principles are not affected. The principles, however, will be progressively the subject of clearer definition and refinement. Nevertheless, in the future we shall no doubt find as the French say, thus ca change plus c'est la même chose. In spite of the changes in his tools and methods, the functions of the professional accountant as interpreter and independent assessor of financial and economic data will remain his most important functions.

Fluctuations in the value of monetary units have raised many problems both for accountants and economists. The solution of these problems is not made easier by the fact that most accountants know too little about economics and at least some economists seem to know nothing of accountancy at all. This is a matter to which our programmes of professional education must give greater attention as the accountant becomes increasingly concerned with economics and forward planning. Linked with this are problems relating to depreciation and obsolescence and to the proper spread of long-term expenditure. The ever-increasing pace of technical change makes at once more difficult and more necessary the accurate prediction of the

useful life of assets, as affected by wear and tear, by technical change in methods and equipment, and by changes in consumer demand, so that accountants may make a more realistic spread of capital costs.

Many accounting conventions have arisen from the use of accounts purely as a periodic historical report of stewardship to absentee owners, who it seems were presumed to be interested only in the past. Reports and statements based on such conventions may tell them what has been done, though in days of fluctuating monetary value even that is doubtful. Proprietors, absentee or otherwise, should be more interested in what is likely to happen in the future, so that they may take effective action to safeguard their property. There is really no distinction, except perhaps in the extent of detail desirable, between what the shareholder and the manager ought to know. Both wish to know the result of past decisions, the latter in order to adjust his future course, the former to assess how the management, whose decisions have produced the reported results, will react to these results, and what future results that reaction will produce. Both are entitled to look for all the help which a skilled and independent accountant can provide by way of financial reports based on realistic conventions. As a result of growth in the size and complexity of business units, top management is sometimes so remote from the actual day-to-day operations as almost to be called absentee management. If the conventions of the past do not give the absentee proprietor the information he needs, still less do they give this absentee management the information required for the making of right decisions as to future action. It must be one of the continuing tasks of the accounting profession develop new conventions which will more adequately convey the underlying economic facts to those concerned as owners or managers.

#### Difficulties of Communication

It has been a great disadvantage that, for communication involving measurement of values, the only units of measurement hitherto available, the monetary ones, have been elastic units, for as Adam Smith wrote nearly two hundred years ago, 'a commodity which is itself continually varying its own value can never be an accurate measure of the value of other commodities'. Is it too much to hope that with the aid of modern and still developing technical apparatus used under the direction of accountants and economists in collaboration, some more stable unit of measurement of value may be found? There is great scope here for constructive thought by accountants. There must also be standardization of definition, and work on this is going on on an international basis, a notable example being the publication last year of the U.E.C. Lexicon 'Union Europeenne des Experts Comptables, Economiques et Financiers'. This work may be expected to continue, and to diminish progressively the difficulties of communication both between accountants of different countries and between accountants and other users of accounting statements. Standardization of definitions must not, however, be allowed to lead to the formulation of rigidly standardized conventions, codes of procedure and forms of presentation.

The ability to communicate in an intelligent and intelligible manner is, however, not the end of the matter. If the information conveyed is to be of real

value, it must be known to be reliable and not affected by any bias on the part of the reporter. It must also be relevant to the needs of the recipient. There is a distinction between selectivity which stems from the desire to please or to induce a particular reaction, and selectivity directed to the elimination of what is irrelevant to the purpose in hand. The former results from bias, and is a breach of the complete integrity which should be the mark of the professional accountant. The latter is the proper and desirable result of the exercise of the accountant's professional skill. It is thus possible for a professional accountant, without loss of integrity, to present information about the same series of transactions in a variety of forms designed for the service of different users, so long as he makes it clear what he is doing.

#### Future Structure of the Profession

I would like now to consider for a moment or two some observable trends from which some conclusions about the future structure of the profession may be drawn.

First, there is a trend in most countries towards the formation of larger accounting firms by the merger of existing smaller units. The reasons usually advanced for such mergers are that the increasing range of work demands for its proper coverage a firm large enough to embrace partners skilled in all the specialized fields; that the increasing size and spread of client firms requires to be matched by a corresponding increase in the size and spread of the public accountancy firms employed; and that increasing size provides opportunities for better staff training and for the acquisition by partners of a wider range of knowledge and information, thus enabling a better service to be offered to clients. This trend will, I think, I may almost say fear, inevitably continue. It is also true, I think, that as the structure of accountancy practice becomes more complex the more the time of skilled accountants at top level must be devoted to problems of organization and method, leaving less time for the direct exercise of their professional skill. The advantages arising possibly outweigh the disadvantages which result from some loss of personal contact and personal approach because of standardization of methods, but there will, I feel, always remain a role for the really competent individual practitioner, provided he is able as occasion demands to obtain access through the professional Institutes or otherwise to specialized information outwith his normal scope.

The second trend I would note is the extension of the first to the international field, as more and more stocks and shares of companies are quoted on the stock exchanges of countries other than the country in which the company is incorporated; branch manufacturing units are set up by large companies in different countries; and finance is provided for developments in newly industrialized countries.

As a concomitant of the international trend there are movements to provide education in accountancy in the less developed countries. It is important here that what should be provided is education in the fullest sense and not mere technical training. The aim must be to ensure that professional accountants in these new countries share not only our technical skill, but our ethical approach and accept the same moral obligations.

### Finance and Commerce

#### **Two Angles**

ATWO-ANGLED reprint this week sets down the figures of Davy-Ashmore Ltd, a Sheffield company in heavy engineering. Pictures in the annual report show a plant for the production of hydrogen from natural gas built at Maitland, Ontario; blast furnaces built for Colville's Ravencraig works, near Motherwell; and the six-stand finishing train of the 68-inches wide fully continuous hot-strip mill for Richard Thomas & Baldwins in South Wales.

With the annual report to shareholders is a simplified version of the accounts which has been sent to all employees with a few lines of introduction over the signature of one of the directors. This also is included in the reprint, and readers therefore have the two forms of presentation – for shareholders and for employees – to compare, and, maybe, to criticize.

One thing they will notice immediately is the figure of £39,326,000 which opens 'What we earned in 1961-62' in the simplified version of the accounts for employees. It is rather extraordinary to find it there because there is nothing like it in the 'official' accounts provided for the shareholders. It is even more extraordinary in view of what Mr M. A. Fiennes, the chairman, has to say in his statement on the subject of turnover publication.

#### **Next Year's Query**

Mr Fiennes reminds shareholders that 'it is not our practice to publish figures of turnover because, as an indication of activity or of profitability, they can be misleading in a business like Davy-Ashmore and a comparison of one year with another would not necessarily be valid. Due to the relatively long manufacturing time cycle of major contracts, activity may be high and turnover low or vice versa.

Furthermore, turnover may vary without commensurate variation in profit depending on the form of contract undertaken; for instance, Davy and United Engineering Co and The Power-Gas Corporation in particular may supply engineering services with or without the actual supply of plant according to circumstances.

'Nevertheless, it is worth saying this year that the profit shown in the accounts to March 1962 relates to sales of approximately £40 million. It is the result of the work of about nine thousand people putting your investment to constructive use . . .'

Which raises the query: What happens next year? Is the form of 'What we earned in 1961-62' to be

changed because 'it is not our practice to publish figures of turnover' or is it possible 'What we earned' has started something that as the years move forward will be called 'our practice'.

#### City Finance

THE opportunity occurred recently to spend a few minutes with *The City's Finances* a fifty-page booklet issued from the City Treasury of Sheffield, for the year ending March 31st, 1962. It acted as a reminder that it must be quite a long time since there has been any mention of local authority accounts in this column. Municipal accounts are, of course, quite beyond reprint facilities; one can do no more than pick items of interest here and there from the mass of figures.

What really caught the attention was the way the year's work and development in each of the services provided by the city is described alongside or above a summary of the relative figures. It is rather like having in the case of a public company the Notes on the Accounts in the context of the figures and not some pages distant from them.

One item in the preface to this survey prompts a little meditation: 'Many people are finding it increasingly difficult to meet their (rate) account in one payment. The number of requests for payment by instalments has risen sharply.' There was a time when might have been a sign of 'hard times'. Nowath, the whole economy seems to be based on instalments.

#### Explanation

AGOOD word must be given to Stevinson, Hardy & Co Ltd, whose business is indicated by the picture of the tank lorry for fuel and diesel oil on the front cover of the report. This company is putting through resolutions to create capital and to capitalize reserves and to alter the memorandum and to adopt new articles. Matters of this sort are often put before shareholders in brief form apart from the actual resolutions in solid blocks of type in legal style.

This company provides four quarto sheets of reading of which one and one-third carry the legal matter and the two and two-thirds give an explanatory statement that reduces the 'legal' to simple English and explains the reasons why the resolutions are put forward.

Those versed in accounting know it all; not everyone understands – really understands – that what are so often called 'free' shares do not in themselves change a shareholder's interest in a company.

In large measure, the new articles follow the evolution in company law and practice. The existing articles, for instance, were adopted in 1937 in conformity with the 1929 Act. One provision was the dividends should be paid to members registered at the date of declaration. This, it is pointed out, is inconsistent with Stock Exchange practice and no similar provision has been taken into the new articles.

We also had cash overseas and investments amounting to Thus the amounts owed to us and our cash and investments total	Adding this to the Land, Buildings, Plant, Machinery, Furniture and Vehicles we have a total value of

#### Another Look

IT is worth while having another look at the position of Trinidad Sugar Estates Ltd (previously referred to in the issue of March 24th) in the light of subsequent events. The action group has gained its point and is now represented on the board and Mr E. Cassleton Elliott, C.B.E., F.C.A., whose association with Trinidad Sugar goes back forty years, has resigned as chairman but is remaining as a director.

A trust has been set up to acquire and develop the company's land for shareholders' benefit, conducting its operations through a new Port of Spain Development Syndicate. Land required for sugar production is being leased back until wanted for development. And the prospect ahead has been sketched out by an independent professional valuation of the lands. That, of course, was one of the aims of the action group.

The value of the land and buildings is put by the valuers at £3½ million, a figure that compares with the mere £86,426 for land and £67,761 for buildings shown in the accounts which formed the subject of our reprint on March 24th. The new valuation is to be incorporated in the balance sheet at September 30th, 1962, and from the reserve thus created is to be capitalized the amount required for a scrip issue of nine shares for every one held.

The directors remind shareholders that 'a property valuation is evidence of worth of the asset as a whole and is not necessarily the figure at which they would agree to sell'. Well has it been said that land is the greatest of all assets.

#### CITY NOTES

THE downturn in interest rates remains the main point of City comment within the pattern of the Chancellor's longer term plans for economic reexpansion. The release of £80 million of special deposits pointed the way to easier credit conditions, although it is fully appreciated that availability of bank money does not necessarily mean a quick increase in actual bank lending.

Treasury flotation of £100 million of a new short-dated 'tap' stock in the form of a Treasury 4 per cent 1965 issue will provide an early home for special deposit releases. The new 'tap' stock was announced the day following the special deposit announcement.

A further pointer to the anticipated trend of interest rates was provided in the fresh fall in the Treasury bill rate to virtually  $3\frac{5}{8}$  per cent.

Meanwhile the effect of the rising gilt-edged market is seen in the considerable change which has taken place in the pitch of Corporation issues within the space of two weeks. Dunbarton's  $5\frac{1}{2}$  per cent stock offer at 96 was immediately followed by Hendon's  $5\frac{1}{2}$  per cent offer at 97 and, this week, Liverpool has successfully borrowed on a  $5\frac{1}{2}$  per cent stock offered at  $90\frac{1}{2}$ .

There has, therefore, been 4½ points improvement in new issue terms in a fortnight and, although the pace is not expected to be maintained at that rate, there is still a fairly forceful move in that direction.

#### Current Law

#### Hire-purchase Agreements Registrable as Bills of Sale

THE plaintiff in North Central Wagon Finance Co Ltd v. Brailsford and Another ([1962] 1 All E.R. 502) was a hire-purchase finance company and claimed in respect of breaches of a hire-purchase agreement by the first defendant, a haulage contractor with whom the agreement had been made, and the second defendant, to whom the benefit of the agreement had been assigned. The purpose of the agreement was to raise £1,000 on the security of a lorry belonging to the first defendant in order to provide the initial payment for the hire-purchase of another lorry. The transaction involved an invoice from a motor dealer to the plaintiff at a price of  $f_{2,250}$  less a payment of £1,250 by the first defendant, which payment was not made. The agreement was later varied, and subsequently assigned to the second defendant, whose performance of it was in effect guaranteed by the first defendant.

Cairns, J., held that the transaction was a loan on the security of the first lorry, and that the hire-purchase agreement was a bill of sale and was void for non-registration, though the loan was recoverable with reasonable interest (which his lordship held to be 5 per cent per annum) as money had and received. Cairns, J., summarized the following propositions as being relevant in determining whether or not a hire-purchase agreement was in law and in fact a bill of sale:

- (1) if a person deliberately, with a clear understanding of what he is doing and with all appropriate formalities, sells his property to a finance company and then hires it back under a hire-purchase agreement, the agreement is not a bill of sale;
- (2) if the purpose of the transaction is to enable the hirer to dispose of the property to a customer, the Courts will the more readily hold that the agreement is not a bill of sale;
- (3) if the hire-purchase agreement is a mere device to cloak a loan, the document is a bill of sale;
- (4) in considering whether the real transaction is one of loan, it is necessary to look behind the documents to discover its true nature;
- (5) if the facts are not truly stated in the documents, this is a circumstance tending to show that the documents are a mere cloak.

#### Omission of Words from Will

WHERE it is clear that a testator has accidentally omitted words from his will but it is possible to obtain from the context guidance as to what words were intended the Court in construing the will can supply the missing words. This occurred in Re Riley's

Will Trusts, Riley and Another v. Riley and Others ([1962] I All E.R. 513). The testator, after directing that his residuary estate should be held on trust for his children in equal shares and that his trustees should retain the share of each child and hold it on trust to pay the income thereof to such child for life, went on to provide by clause 13 that after the death of such child his or her share should 'be held in trust for all or any one or more exclusively of the others or other of the issue whether children or remoter descendants of the child of mine so dying who being male shall attain the age of twenty-one years or being female attain that age or marry and if more than one in equal shares'.

Buckley, J., said that it was perfectly clear that the testator in the earlier part of that clause was contemplating that someone should have power to exclude members of the class of beneficiaries from taking, that is to say, that there would be a power of appointment. There were words at the beginning which suggested that the power was going to be introduced, and words at the end appropriate to a trust in default of appointment. His lordship was satisfied, having regard to other terms of the will, including a trust for accrual in the event of a child of the testator having no child who attained a vested interest, that the intended trust in default of appointment must be confined to children of the life-tenant, and that there should be interpolated after the words 'the child of mine so dying' in clause 13 the words 'as such child of mine so dying shall appoint and in default of appointment upon trust for the children of the child of mine so dying', and he made a declaration accordingly.

#### Non-registration of Charging Order

DE Overseas Aviation Engineering (G.B.) Ltd R([1962] 1 All E.R. 930) was an application by the joint liquidators of the company to decide the validity of a charge under a charging order obtained by a judgment creditor. Cautions in respect of the charging order nisi and absolute were duly registered under the Land Registration Act, 1925 (the land being registered land), but the orders were not registered with the Registrar of Companies under section 95 of the Companies Act, 1948. Subsection 2 (d) of that section applies it to 'a charge on land, wherever situate, or any interest therein', and subsection (1) renders void against the liquidator and any creditor a charge within the section which is not registered as thereby required. Section 35 (3) of the Administration of Justice Act, 1956, provides that a charging order 'shall have the like effect . . as an equitable charge - created by the debtor under his hand', and Pennycuick, J., held that the effect of this was to give the charge in question the same characteristics as such an equitable charge, including liability to avoidance by the liquidators by reason of non-registration under section 95 of the Companies Act, and accordingly the charge was void. It is understood that this decision is under appeal.

#### Reviews

#### Differential Distribution Cost and Revenue Analysis: A New Approach

by Frank H. Mossman. (Bureau of Business and Economic Research of Michigan State University, East Lansing, Michigan, U.S.A. \$1.)

In dealing with selling and distribution costs, most textbooks are in general agreement about the functional headings under which such costs may be analysed – advertising, personal selling, transportation, warehousing, and credit control being a typical list. It is often desired to make further objective analyses, by location or product, or to express the results statistically in relation to some unit indicative of functional performance – selling costs per orders taken; transport costs per ton-mile; and so on.

Mr Mossman's purpose in this short work is to examine the factors affecting functional costs per unit of product, with the objective of establishing standard unit costs of distribution and selling under varying combination of factors. Such standards are then available in planning marketing policy and in assessing actual cost performance. The procedure outlined is as follows:

(1) to select the factors appropriate to the business concerned; the number of factors used being kept to a minimum consistent with the analysis of all significant costs. The author selects seven representative factors, including market density, distance of market from point of shipment, and the average size of order;

(2) to decide which are the primary and secondary factors affecting the unit cost under each functional heading. Advertising costs per unit, for example, are assumed to be determined primarily by the customer's knowledge of the product ('market knowledge'), and secondarily by market density. In theory one could develop the study into tertiary factors and beyond; but the exercise is obviously designed to be within the capacity of the accountant without exceptional mathematical training;

(3) to decide on gradations for each of the factors. For market density five gradations are suggested, ranging from 'twenty or less customers per square mile' to 'over eighty customers per square mile'. These gradations will be based usually on the result of market surveys or the analysis of historical records.

historical records;

(4) to establish the functional cost per unit for each gradation of the primary factor;

(5) to establish the primary factor cost per unit for each gradation of the secondary factor;

(6) to tabulate product unit costs of selling and distribution for various combinations of primary and secondary factors, the original functional analysis having now disappeared.

It is obvious that the value of the exercise will

depend on ability to achieve stages (4) and (5), on which no general guidance can be given. It may be said, however, that the calculation of such functional costs is not more nor less difficult than the analysis of costs between 'fixed and variable'; and that the achievement of factoral analysis will to a large extent eliminate the need for the latter exercise.

#### Green's Death Duties

#### Fourth (Cumulative) Supplement to Fourth Edition

by D. J. LAWDAY, LL.B., Barrister-at-law, and E. J. MANN, LL.B. (Butterworths & Co (Publishers) Ltd, London. 12s 6d net.)

This supplement brings Green up to October 1st, 1961, and reproduces the Double Taxation Relief (Sweden) Order, 1961, as well as discussing its provisions. There is a full discussion of Coutts & Cov. C.I.R. and its repercussions on the practice relating to the 'surviving spouse' exemption, as well as a discussion of the important case of Philipson-Stow v. C.I.R.

#### Mental Hospitals at Work

by Kathleen Jones, Ph.D., and Roy Sidebotham, B.A.(COM.), A.A.C.C.A., A.I.M.T.A., A.R.A.N.Z. (Routledge & Kegan Paul Ltd, London. 30s net.)

In this book the authors, a social scientist and an accountant (who has since been appointed Professor of Accounting at Victoria University, Wellington), with special interest in social problems, report the findings of a study of the organization and operation of mental hospitals, their problems and their achievements, their use of resources in money and manpower and equipment, and the techniques by which their efficiency can be measured.

The book contains a number of tables of comparative cost statistics for the three hospitals investigated and interesting explanations to account for the variations in cost under a variety of subjective headings. These show the dangers of accepting unit cost figures at their face value.

### Ashridge —

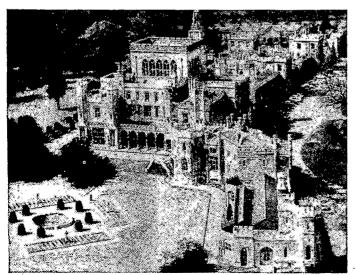

#### 'Staff College' for Management

IT is 700 years since a college was established at Ashridge by a monastic order, and since then the historical process, in full cycle, has moved through the stages of a Royal residence for Elizabeth Tudor, a private house for the Duke of Bridgewater and, in this century, a college of citizenship.

#### **Present Role**

In 1959 Ashridge College was reopened in its present role as a residential centre for management study, to offer a service to industry and commerce in providing courses with particular emphasis on middle-management development. It is supported by leading British industrial companies and its distinguished Council of Governors has as its chairman, Sir Hugher Beaver, K.B.E., LL.D., M.INST.C.E., M.I.CHEM.E., M.E. W. Mr Kenneth H. Adams, F.C.A., is one of the members. The educational staff, who are responsible for the direction of the courses, have been drawn from the ranks of practising management, in order to blend effectively direct experience and academic qualifications.

Ashridge courses are offered as a complement part of a manager's education and training. The number of companies which reinforce their internal training with external courses is increasing. Ashridge now offers six one-month development courses for middle to senior managers, together with a varied programme of one-week short courses on special topics as shown in the College prospectus. In the one-month courses, some thirty to fifty managers from all kinds of organizations — manufacturing and service industries, banking, insurance, Government, at home, from Europe and overseas — are brought together and by

Ashridge College, Berkhamsted, Herts - from the air.

means of lectures, discussions, syndicate work on projects, case studies, business games, etc., learn quickly and effectively something of the problems involved in general management.

#### **Main Aspects**

There are three main study aspects of such a course:

- (1) The environment in which an enterprise operates the political, socio-economic and technological changes of today.
- (2) The functional aspects of a company finance, production, marketing, etc. – and their integration in the model of an enterprise.
- (3) The personal arts of communication and the managerial skills of planning, executing and controlling the activities of an organization.

A great deal of value results from the bringing together of such a varied group of managers for a month's residence, in that they are able to help each other by sharing experience. There is an increasing body of opinion which has come to realize that the basic training which a man receives in any one of a number of professional qualifications – in accountancy, engineering, salesmanship, etc. – is only the beginning of management education, and that the most difficult transition in his career is from the skills of specialist management to the balanced vision and insight of the general manager.

#### Accountants and Management

Finance in its broadest aspect is an important part of the monthly courses. In addition to an introduction

to company accounts for the non-accounting members, the enlarged role of the accountant in modern industry is considered; some explanation of the whole wide range of his activities is given, but perhaps more usefully, some aspects, with practical illustrations, are considered in depth on each course. Emphasis is laid on the services which the accountant should provide for management, so that decisions can be taken in the light of relevant, up-to-date information, and attention is drawn to the fact that frequently – and increasingly so – the accountant finds himself leaving the pure accounting realms and taking his place with top management – or indeed as 'the top manager'!

In its first three years as a management centre, the twenty-one one-month courses held at Ashridge were attended by some 656 members from 367 home and overseas companies. In the same period there were twenty-three short courses attended by 550 members. The College also provides facilities for courses and conferences arranged by other organizations.

#### Notes and Notices

#### PROFESSIONAL NOTICES

Mr Donald Cunningham, Certified Accountant, of Noah's Ark Cottage, Kemsing, Kent, announces that he is commencing full-time practice with effect from October 1st, 1962.

The partners of Messrs Deloitte, Plender, Griffiths & Co announce with great personal regret the retirment on September 30th, 1962, of Mr C. R. Goulder, f.c.a. Mr Goulder joined the London office in 1912 and after service in the First World War rejoined in 1921 and became a partner in 1934.

Messrs James, Edwards & Co, Chartered Accountants, announce that Mr J. F. Hendre, A.C.A., who has been a member of their staff for a number of years, has been admitted to partnership as from October 1st, 1962.

Messrs Evans Smith, Boothroyd & Co, Chartered Accountants, of 99 Fenchurch Street, London EC3, announce that Mr George Flower, f.c.a., retired from the firm with effect from September 30th, 1962. The practice will be continued by the remaining partners and Mr Flower will be available in a consultative capacity.

Messrs T. C. Garden & Co, Chartered Accountants, of 25 Rutland Square, Edinburgh 1, announce that they have admitted Mr K. J. Garden, c.a., and Mr W. W. McVicar, c.a., to partnership as from October 1st, 1962.

Messrs Hodgson, Harris & Co, Chartered Accountof Hull, London and elsewhere, announce that Mr T. B. Campsie, F.C.A., and Mr J. H. Capey, F.C.A., who have been with the firm for many years, have been admitted as partners on October 1st, 1962.

MESSRS McLINTOCK MANN & MURRAY, Chartered Accountants, of 33 King William Street, London EC4, announce that Mr Alasdair G. Barclay, c.a., was admitted to partnership on October 1st, 1962.

Messrs Festus Moffat & Co, Chartered Accountants, announce that for the convenience of clients in the West Lothian area they have opened a branch office at 14 Hopetoun Street, Bathgate. Telephone: Bathgate 2075.

Messrs H. Overton, Salt & Co, Chartered Accountants, Birmingham and Sutton Coldfield, announce that Mr Kenneth Hope, A.C.A., of the Birmingham office, and Mr John Robert Fletcher, A.C.A., of the Sutton Coldfield office, both of whom have been associated with the firm for a number of years, have been admitted to partnership as from October 1st, 1962.

Messrs Peat, Marwick, Mitchell & Co, Chartered Accountants, announce that the address of their Leeds office from October 8th, 1962, will be Airedale House, Albion Street, Leeds 1. Telephone: Leeds 20331.

Messrs Price Waterhouse & Co, Trinidad and Tobago firm, announce the retirement on September

30th, 1962, of Mr T. J. HORT, F.C.A. Mr J. A. Low, C.A., has been admitted to partnership as from October 1st, 1962.

Messrs Russell, Durie Kerr, Watson & Co, Chartered Accountants, and Messrs Tyler & Wheat-croft, Chartered Accountants, announce that they have amalgamated their practices as from October 1st, 1962. All the partners practising in Messrs Russell, Durie Kerr, Watson & Co and in Messrs Tyler & Wheatcroft (other than Mr R. G. Watchorn, who has retired from the firm) have become partners in the amalgamated practice. For the time being Messrs Tyler & Wheatcroft will conduct their practice from their present address at Norfolk House, Smallbrook, Ringway, Birmingham 5, until such time as sufficient accommodation can be found for them in the offices of Messrs Russell, Durie Kerr, Watson & Co at Lombard House, Great Charles Street, Birmingham 3.

Messrs Sinclair, de Mesquita & Co, Chartered Accountants, of 118 Old Broad Street, London EC2, announce that Mr S. A. Sokel withdrew from their firm and from Sinclair Furman & Co, Chartered Accountants, of the same address, on September 7th, 1962. As from October 1st, 1962, Mr G. M. Graff, is joining both firms as a partner.

MIESSRS SINGLETON, FABIAN & Co, Chartered Accountants, announce that they are moving to new offices at Lee House, London Wall, London EC2. Telephone: Metropolitan 9631.

Messrs Howard Smith Thompson & Co, Chartered Accountants, announce that they have taken into partnership Mr A. C. S. Horden, A.C.A., as from September 30th, 1962.

MR G. C. Summers, c.a., has been assumed a partner in A. T. Niven & Co, Chartered Accountants, and in Touche, Ross, Bailey & Smart, Chartered Accountants, 15 Melville Street, Edinburgh 3.

Messrs Thomson McLintock & Co, Chartered Accountants, and Messrs Aston, Wilde & Co, Chartered Accountants, announce that their practices in Birmingham are to be amalgamated as from November 1st, 1962. The joint practice will be carried on for the time being in the names of Thomson McLintock & Co and Aston, Wilde & Co from 5 St Philip's Place and 45 Newhall Street. The partners resident in Birmingham will be Messrs H. B. T. Wilde, H. M. Pritchard, V. F. Stedeford, A. A. Davies and Wm. Parker.

Messrs Hartley Turner & Son, Chartered Accountants, of Lloyds House, Albert Square, Manchester 2, announce that on September 30th, 1962, Mr E. Gordon Turner, M.C., F.C.A., retired from practice in the firm which was founded by his father in 1885, and with which he has been associated for some fifty years. The practice will be continued in the same name by the remaining partners, two of whom served their articles with Mr Turner or his father.

#### **Appointments**

Mr R. F. Daly, F.C.A., chief accountant and member of the board of the Fatstock Marketing Corporation Ltd, has been appointed a director of the Corporation's meat processing subsidiary, Marsh & Baxter Ltd.

Mr George D. Verity, B.COM., A.C.A., has been appointed a director of Yorkshire Fine Woollen Spinners Ltd.

Mr Bernard Franklin, F.C.A., has been elected a director of United African Explorations Ltd.

#### **OBITUARY**

#### Jack Whittle, B.Com., F.C.A., F.I.M.T.A.

It is with regret that we record the death on September 21st, at the age of 63, of Mr Jack Whittle, B.COM., F.C.A., F.I.M.T.A., treasurer of Nottingham County Council and a Past-President of The Institute of Municipal Treasurers and Accountants.

Educated at Bury Grammar School, Mr Whittle joined the Royal Artillery at the outbreak of the First World War. He was commissioned at the age of 19 and served in Egypt and Palestine. On demobilization he entered Manchester University obtaining his degree in commerce in 1922. Admitted an associate of The Institute of Chartered Accountants in England and Wales in 1926 and elected a fellow in 1960, he was, for a time, in private practice before becoming associated with local government. He was admitted an associate of The Institute of Municipal Treasurers and Accountants in 1930 and was elected to fellowship in 1939.

Before moving to Nottinghamshire, Mr Whitele had held appointments with Durham County Council, Bury County Borough, Stetford Urban Council (Lancashire) and served as deputy borough treasurer at Wolverhampton and deputy county treasurer to the West Riding County Council. He was appointed treasurer to Nottingham County Council in 1939. For many years, he was financial adviser to the County Councils Association. He was also honorary auditor of the Nottinghamshire Playing Fields Association and a member of the finance committee of the Nottinghamshire British Red Cross Society. Apart from his extensive interests in local government affairs he found time to take an active interest in the affairs of the Institute of Public Administration and was largely responsible for the formation of the East Midlands Group.

Mr Whittle was elected President of The Institute of Municipal Treasurers in 1951 and served on the Council of the Institute from 1944-60.

#### **DEFENCE BONDS: CONVERSION OFFER**

The Treasury has announced that a conversion offer will be made to holders of  $3\frac{1}{2}$  per cent Defence Bonds (Conversion Issue) issued on January 1st, 1953, and

maturing on January 1st, 1963, of which £5.2 million are outstanding.

These holders will be invited to exchange their holdings into 5 per cent Defence Bonds (Second Conversion Issue) on January 1st, 1963. Holders who accept the offer of conversion will receive a final interest payment of six months' interest a 3½ per cent per annum on January 1st, 1963. Acceptance of the offer of conversion will not involve any break in the holders' encashment rights. If the offer is not accepted, interest on the maturing bonds will cease with the payment due on January 1st, 1963. The terms of the new Conversion Issue Bonds will be the same as those of the 5 per cent Defence Bonds currently on sale except that interest will be payable on January 1st and July 1st. The lists of acceptances of the conversion offer will be closed on October 26th, 1962.

#### LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

#### Meetings on the Common Market

Due to the good response to the announcement of the series of meetings on the European Common Market to be held by the London and District Society of Chartered Accountants, the meetings will now take place at The Chartered Insurance Institute, 20 Aldermanbury (near Guildhall) and not in the Oak Hall of the Institute as announced in our issue of September 8th.

#### **Taxation Conference**

A residential taxation conference organized by the London and District Society of Chartered Accountants is to be held at the Metropole Hotel, Brighton, from the afternoon of Thursday, November 22nd, until the afternoon of Saturday, November 24th.

The conference will be opened by Mr P. F. Carpenter, F.C.A., President of The Institute of Chartered Accountants in England and Wales, and will be under the chairmanship of Mr D. S. Morpeth, B.COM., A.C.A. There will be four papers: "Taxation in a modern economy', by Mr J. F. Chown; 'Organization of taxation work in an accountant's practice', by Mr G. H. Vieler, F.C.A.; "The taxation of interest and dividends', by Mr J. L. Wannan, F.C.A.; and 'Recent legislation regarding property transactions and the 1962 speculative gains tax', by Mr M. Nolan. There will also be a 'brains trust' comprising the above speakers under the chairmanship of Mr H. A. R. J. Wilson, F.C.A.

In the event of the conference being oversubscribed a ballot will be held. Applications to attend should be made not later than October 12th, but will not be acknowledged until the result of any ballot is notified. Further information, is available from the secretary of the Society, Mr J. W. G. Cocke, T.D., M.A., F.C.A., 2 Norfolk Street, London WC2.

#### JOHN FOORD & COMPANY

56 VICTORIA STREET, LONDON, SWI

#### CITY DISCUSSION GROUP

The first meeting of the 1962-63 session of the City Discussion Group of the London and District Society of Chartered Accountants will take place on October 10th at 6 for 6.30 p.m. at the Tiger Tavern, 1 Tower Hill, London ECr, when the topic for discussion will be 'Impact of current developments in computers on the auditor', and introduced by Mr A. d'Agapayeff,

The Group's meetings which are of the normal one and a half hours' duration, are held monthly and are open to accountants whether in practice, industry or commerce and are designed to give members of the profession an opportunity to keep abreast with current affairs affecting the profession.

The honorary secretary of the Group is Mr D. S. Lewis, F.C.A., A.A.C.C.A., c/o Alex Parkes, Westmacott &

Co, 3 Copthall Buildings, London EC2.

#### THE SHEFFIELD AND DISTRICT CHARTERED ACCOUNTANT STUDENTS' SOCIETY

The seventy-first annual report of the committee of The Sheffield and District Chartered Accountants Students' Society, presented at the Society's recent annual general meeting, shows that membership at March 31st, 1962, totalled 263 ordinary members and

134 honorary members.
The Society's winter programme comprised nine evening lectures at which the average attendance was slightly over thirty. Saturday morning lectures were again held throughout the year and enjoyed an increased attendance which the committee consider was due partly to the introduction of a two-year syllabus. The fourth residential course took place at the University of Nottingham at the end of September in conjunction with the students' societies of Leicestershire and Northamptonshire and of North Lincolnshire. The report notes with regret that out of the total number of seventy-five students who attended, only ten were from Sheffield. Social functions included the President's annual sherry party for new members, a car treasure hunt and the Society's seventh annual dinner-dance in February. At sport, association football, cricket and squash matches were played.

#### THE ACCOUNTANTS' CHRISTIAN **FELLOWSHIP**

'What do I do?', will be the title of a discussion for students at 6 p.m. on Wednesday October 10th, in the Oak Hall of the Institute of Chartered Accountants, Moorgate Place, EC2. There will be free discussion of the Christian aspects of any of the problems which are common to the student accountant; How do I work, how do I think, how do I speak, how'do I behave? There will be tea before the meeting.

#### SEVENTY-FIVE YEARS AGO

From The Accountant of October 8th, 1887

From a leading article:

**Building Societies** 

SCARCELY a week passes without affording some striking instance of the muddle in which building society legislation is at present, or the incapacity and mismanagement which but too commonly characterises the conduct of such societies. The Co-operative Building Society of Swansea has collapsed. It is found that loans to the amount of £4,800 have been accepted by the directors at a time when the borrowing powers of the society had been exhausted. Notice has accordingly been given by the solicitors to the society to the lenders that the society cannot legally pay the interest on such loans or repay the principal moneys. The lenders have served writs on several of the directors who, it is said, "are respectable tradesmen in the town". We have no desire to minimise the value of the qualities comprised in the word "respectable"; they are not so commonly met with as to be contemned. But respectability is no excuse for men who dabble in what they do not understand, nor should it constitute the slightest defence to any action by people who have found to their cost that respectability and financial ignorance amounting to financial lunacy are not incompatible.... The legislation relating to ilding societies should be altered so as, amongst other things, to prohibit them from borrowing, to give the Registrar of Friendly Societies more control over them than he has at present, and to direct an independent periodical audit of their accounts and a report to all members, of which audit the Registrar should take more or less official cognisance, and which he should, if needful, be enabled to enforce in cases of defaulting societies. Amongst many minor improvements, there should be a strict prohibition against the present very common and regular practice of building society officials trustees more especially-requiring fees from lenders who apply for or desire to repay loans, or who may wish to otherwise deal with deeds of property, unless such fees are brought into the society's account and clearly shown to have been paid. At present officials of the kind indicated get a tolerably fair recompense for very little trouble, and at the same time earn amongst the members a reputation for disinterested, philanthropic, and unpaid labour which is not altogether deserved.

#### LONDON STUDENTS' COLUMN

#### News from the London Chartered Accountants Students' Committee

The committee is back at work with none of its verbal fluency impaired by its two-month recess. Congratulations to two of its members, Messrs M. A. Line and T. G. N. Sylvan, on passing their Finals were not unmixed with that unholy joy which goes with demonstrating to principals the error of their ways committee work is not necessarily a bar to academic achievement.

#### Vacancy

The filling of the vacancy left in the committee by the resignation of Mr B. K. P. Möll was deferred for a month to allow time for a small constitutional problem to be resolved.

#### **Autumn Activities**

The first fixture of the autumn was the Oxford week-end residential course held at Balliol and Jesus Colleges from September 20th-23rd (a report of the course appeared in last week's issue of *The Accountant*). The programme in London commenced last Monday with a lecture by the Registrar of Joint Stock Companies who spoke about the 400,000 limited companies in the register under his care.

The introductory course lectures commenced on Friday, October 5th, and the debates section open their winter session on Wednesday, October 10th, when the subject will be the Common Market.

In addition to these activities there will be the 'Practical aspect' lectures, together with the mechanized accounting course which Mr Dudley Hooper, M.A., F.C.A., opened last Tuesday, October 2nd.

#### Students' Club

The urgent need of the Students' Club for new members has received the Committee's consideration. Its present membership of 1,400 is not sufficient to place it on a firm footing and the committee has undertaken to devote space to the Club's activities in all future general circulars to student members.

#### Contra

Contra, the third issue of which is now out, reported that another Students' Society was eager to buy a limited number of copies for its members. The editorial board asked for, and received, approval for acceding to such requests, and required guidance on a fair price. It was agreed that is per copy should be charged in future. The editorial board of the magazine would welcome criticism and suggestions indicating those parts of its largely experimental policy that are finding approval and those that are not.

#### Parker Report

The Education and Training Subcommittee has been asked to consider the Institute's first decisions on the Parker Report, and report on them to the Committee next month.

#### Sports Scheme

The new scheme for encouraging more students to join the Society's sports clubs, as proposed at the last annual general meeting, is now getting under way. As the scheme depends entirely on a number of members coming forward to organize games in their own sports, it will be some months before the committee can judge its success.

#### Activities

A party of eighteen students recently visited the National Provincial Bank head office.

The Social Clubs wisely avoid competing with holidays during the summer, but a few events took place. The now traditional "Taverners' river-boat shuffle was once again successful. 'The Punters', youngest of the clubs, is getting off to a vigorous start by holding regular meetings. The '61 Club' has held a highly successful car rally.

#### Sports results

Cricket v. Cardiff C.A.S.S. - won by two wickets. Golf v. Kent and Sussex C.A.S.S. - won 8-5. Tennis v. Bristol C.A.S.S. – lost 2–4. Bowling v. Manchester C.A.S.S. - won.

#### Next Week's Meetings

Monday, 5.30 p.m., at the Institute, Moorgate Place, EC2. Lecture on 'Where your accounts fail the investor', by Mr D. Napper, F.C.A. (Industrial and Commercial Finance Corporation Limited).

Tuesday, 7.30 p.m., at Reigate. Lecture on 'Executorship', by Mr T. R. A. Collett, F.I.B.

Wednesday, 5.30 p.m., at Luton. Lecture on 'Costing and budgetary control', by Mr K. G. Bishop, A.C.A. (Chief Accountant, Yardley & Co Ltd).

6 p.m., at the Institute. Debate on the motion "That Britain will betray the confidence of the Commonwealth if she goes into the Common Market'.

Thursday, 5.15 p.m., at the Institute. Introductory course lecture on "The chartered accountant's profession', by Mr R. J. Carter, B.COM., F.C.A. (Secretary of the Students' Society).

Friday, 5.15 p.m., at the Institute. Introductory course lectures on 'The fundamentals of business', by Mr R. J. Carter, B.COM., F.C.A. (Secretary of the Students' Society), and "The English judicial system', by Mr P. W. Medd (Barrister-at-law).

#### The Economy in the Balance

N unsophisticated observer of the British economy might well be excused if, after reading the address of The Chancellor of the Exchequer to the City of London bankers at the Mansion House and the 'Shadow' Chancellor's speech to the Labour Party at Brighton on successive days, he found difficulty in assessing the state of the United Kingdom economy. According to the one, home demand and production were expanding, while exports were rising. If the other was to be believed, the present Government had created economic stagnation. Doubtless the truth of the matter is to be found somewhere in between these two divergent assessments.

If it were not for the nation-wide debate on Britain's future role in Europe, the problems of the United Kingdom economy would be claiming much more attention than has been the case since the Budget. The Budget proposals last April were based upon the assumption that economic activity was on the increase and a tough Budget was needed to offset the excess demand that would rapidly emerge, just as it did in 1959. In certain respects there has been some improvement in the economy since the Budget. Industrial production is rising at about 7 per cent per annum and the national product at about 4 or 5 per cent. Exports have increased by about 6 per cent in as many months and, more important, the export drive has been especially successful in the competitive markets of Western Europe. Sterling is much stronger than a year ago; the reserves are slightly larger and over £500 million borrowed from the International Monetary Fund has been repaid in the past year.

It is easy to argue post hoc ergo propter hoc, but some part of this improvement is undeniably attributable to the restrictionist financial policies initiated over a year ago, albeit somewhat tardily, by Mr Selwyn Lloyd. For all the criticism of the 'pay pause' and the 'guiding light', which scarcely flickered, British labour costs rose at less than half the pace recorded in Continental Europe. Unfortunately, the increases in aggregate demand and industrial production at home have been insufficient to prevent some rise in unemployment, and, more significantly from the economic point of view, a reduced tempo of work in many plants. One can only guess at the scale of under-utilized industrial capacity in Britain at the present time, but it is certain that maximum output could make a difference to Britain's living standards and, more important, contribute greatly to a formulation of an incomes policy.

It is against this background that Mr MAUDLING's twopronged stimulus announced, rather surprisingly, to the Mansion

House guests, must be judged. To what extent will the release of a further f.42 million of post-war credits, coupled with public investment outlays of some £,70 million over the next eighteen months, change the situation? Of the first decision it can only be said that it may do as much for private savings as it does in stimulating consumer demand; on the second, one is left wondering whether the modest outlays reflect the fact that the constructional industries are 'already fairly heavily loaded' and larger contracts would not be fulfilled without renewed cost increases in those industries. Or is it because even the Government is waking up to the fact that the only figure in the United Kingdom economy which never declines is that of public spending? There is, of course, another view. The object of the CHANCELLOR'S measures is to provide the push which will overcome the present inertia in the economy, on the assumption that once under way, the economy will generate its own expansionist forces. Can this argument be sustained in the face of the evidence?

The most disquieting feature in the United Kingdom economy is the current recession private industrial investment. Fixed investment in British industry has increased continuously since 1945; even in periods of slackness in the economy the backlog of contractors' orders and the duration of most constructional schemes has ensured a persistent if variable rate of expansion in private fixed investment. This is hardly the case at present. No doubt the Common Market debate is casting its shadow across the economic horizon. Likewise, uncertainty regarding the outcome of the next general election is hardly calculated to stimulate the private sector to profitable activity, always assuming that recent ministerial remarks on profits need be taken no more seriously than most of the political verbiage of this day and age. The real problem in the private sector of the economy is not so much the various pockets of unused capacity and unemployed labour; it is a fundamental lack of confidence in the short-, as well as the long-term objectives of the Government's economic policy. In such circumstances a gentle nudge such as Mr MAUDLING has just given the economy is likely to be of little avail. What is it then that deters the CHANCELLOR from giving the economy the jolt required to overcome its present inertia?

The only satisfactory explanation for Mr MAUDLING's tentative steps is to be found in his comments on the recent meeting of the International Monetary Fund in Washington: 'There are doubts about the future of the American economy,... the present system whereby reserves are held only in gold, dollars or sterling could . . . inhibit the growth of trade and production in either the world or in individual countries, ... a further weakening of world commodity prices could produce a general contraction of world trade or a tendency towards world deflation. I am not predicting that this will happen; but it is a danger that we must reckon with.' In short, Britain's economic problems are soluble only within a framework of an expanding and prosperous world economy. Yet this does not mean that further Government inaction is justified; it merely signifies that without world economic expansion it will be that much more difficult to propound an acceptable policy. Whether Britain enters the European Economic Community, or any other grouping, it must ultimately formulate an incomes policy which will put an end to the persistent cost-push type of inflation which has characterized the United Kingdom economy for almost a decade.

Until there is a realistic incomes policy every future Chancellor will be inhibited from pursuing any long-run expansionist policy. According to Mr Maudling 'with the help that we will receive from N.E.D.C. and NIC I am confident that we can and shall make progress'. Unfortunately, until the public learns just what N.E.D.C. and NIC are expected to do, in more precise terms than have yet been used, no one is likely to derive more than a fleeting spasm of hope from the CHANCELLOR'S declaration. According to Mr Callaghan 'a succession of three fouryear plans could change the face of Britain'; an observation which might be interpreted in a variety of ways! One is driven inexorably to the conclusion, however, that for all the apparent differences in outlook, Mr Callaghan and Mr MAUDLING probably see things in much the same light. For the latter, however, the sands of time are running out; a new policy is needed and it is needed now. After all, the Government could lose the next election as a result of its Common Market policy. It will almost certainly lose office unless it provides a new economic policy.

#### Credit Transfer

ANY of those who have followed the giro debate over the past few years may have begun to think that it is now all over; the Post Office are showing a marked reluctance to announce any plans for a postal giro; the banks have introduced their credit transfers. We are reminded that the horse is not quite dead by the National Federation of Sub-Postmasters, who have lately issued a Press release setting out afresh the case for a postal giro.

No one who has studied the giro system in the various forms in which it is operated on the Continent would deny its substantial merits. When every business and most individuals have giro accounts, and everyone can make payments to any account holder by simple direction to the Post Office, the system is an admirable one. When no charge is made for the transfer it is better still—though there is a school of thought that argues that in all charge-free giros there is a disguised Government subsidy, which may not be recognized as such.

But although the sub-postmasters set out the merits of the scheme very well they do not improve their case by over emphasis. In 1959, for example, the Radcliffe Committee did not recommend the introduction of a postal giro; they said much more tentatively that 'in the absence of an early move on the part of existing institutions to provide the services which will cater for the need we have in mind' there might be a case for the Post Office examining the possibilities. The banks (as their critics suggest) took the hint, and introduced credit transfers, so that on the face of it the Radcliffe recommendation has been met.

There is a good case for arguing that the credit transfer system as it is operated now is not as good as the postal giro as it operates on the Continent. But this is not a good reason for ignoring the banks' credit transfers, as the subpostmasters do. Credit transfers are with us, and their use is spreading; a postal giro might provide formidable competition for them, but their existence is probably one of the reasons why the Post Office is apparently not eager to introduce a giro.

Another reason is almost certainly one of which the banks are also painfully conscious – lack of the counter space and counter staff the system would require. The sub-postmasters base much of their argument on the Payment of Wages Act. When payment by cheque becomes possible, cashing the cheques will be easier at a post office than a bank. Normal experience of post offices (and sub-post offices too) suggests that this part of the argument is, to say the least, over optimistic. The banks are finding it difficult, and in some areas impossible, to provide counter space and the staff to man it as fast as their increasing business requires. It seems unlikely that the Post Office could do better, faced with the substantially increased demand that wages cheques could generate.

There is a basic factor in the situation which protagonists of the postal giro have always tended to ignore. Mr Alan Jacobs, general secretary of the National Federation of Sub-Postmasters, is quoted as saying that 'Among the Western European countries only Great Britain and Ireland, Spain and Portugal are still without a giro'. It is equally true that in no European country but Great Britain and Ireland is there a highly developed cheque system, and it is very doubtful whether giro and cheque systems can in fact operate successfully side by side. Is it significant that the United States, rather more advanced than Portugal, is also giro-less?

Mr Jacobs suggests that Britain might suffer in the Common Market from the absence of reciprocal credit transfer facilities. Little is generally known in this country yet about international use of the continental giros, but one sees that this is a possibility, as European integration develops and perhaps the weightiest argument for the giro. But against the formidable difficulties of counter service and competition from an established cheque system reinforced by credit transfers, it may not convince Mr Bevins that the time is ripe for expansion of this order.

It is always disappointing not to be able to share the enthusiasm of the enthusiastic, and if in the event the sub-postmasters have their way and we have a postal giro then everyone will surely wish it well. But in the circumstances of 1962, different already from those of 1959, the case is not quite as strong as they suggest.

#### Short-term Gains — XIV

#### COMPANY RECONSTRUCTIONS

AST week we dealt with most of paragraph 12 of the Ninth Schedule to the Finance Act, ✓1962. This paragraph is designed to give relief where a shareholder or debenture-holder disposes of his holding in exchange for shares or debentures of another company, in pursuance of what we called an 'exchange amalgamation'. It does this by applying paragraph to to the exchange. Thus, broadly speaking the exchange is not treated as a disposal of the old holding and the new holding is treated as having been acquired when the old one was acquired. The relief under paragraph 12 is subject to modification where there are shares in a land-owning company in such circumstances that there may be liability under section 14 of the Act. These modifications are contained in paragraph 12 (3) (4) which we will examine when we deal with original holders are to be treated as exchanging section 14.

Paragraph 13 did not appear in the original Bill; it was not inserted until July 4th, at about two o'clock in the morning, when the minister introducing it described it as a succulent dish, and said it could be explained only by a long speech. Mr DIAMOND confessed he was unable to understand it, and therefore one may fairly safely assume that no other member could understand it either, notwithstanding their unanimous desire to avoid listening to a long speech about it. One therefore approaches paragraph 13 with a certain amount of trepidation.

It was pointed out to the Government at the Committee stage that there could be schemes which are not very dissimilar to an exchange amalgamation falling within paragraph 12, but which would fail to qualify for paragraph 12 relief because there was not in fact an exchange of a holding in company A. for an issue of shares or debentures in company B. It may be that under the scheme the old holding is retained or cancelled. In those circumstances, there may or may not be a 'disposal' of the old holding, but clearly the new holding would not, under paragraph 12, be treated as having been acquired at the time the old one was acquired. Therefore the six months would commence to run again. Paragraph 13 (1) deals with this anomaly which was created by the Bill as originally drafted. It applies where the following circumstances obtain:

- (a) An arrangement between company A. and its shareholders or debenture-holders (or a particular class of them) whom we will call 'the original holders'.
- (b) The arrangement is entered into (i) for the purposes of; or (ii) in connection with; a 'scheme of reconstruction or amalgamation' (as defined in paragraph 13 (3)).
- (c) Under the arrangement, company B. issues shares or debentures to the original holders.
- (d) The issue at (c) is both (i) in respect of; and (ii) in proportion (as nearly as may be) to the original holders' holdings.
- (e) The original holdings are either (i) retained by the original holders; or (ii) cancelled.

All the above conditions being satisfied, the their original holdings for 'those held by them in consequence of the arrangement'. The retained original holdings are to be treated as if they had been cancelled and replaced by a new issue. This deeming of an exchange automatically brings in paragraph 12 (1) which is expressed to cover an issue of shares or debentures 'in exchange for' shares or debentures, and applies paragraph to as if the exchange were a reorganization of a single company. Paragraph 12 (2) limits the application of paragraph 12 (1) to the cases where the exchange is part of what we have called an 'exchange amalgamation', the meaning of which we expounded last week. However, paragraph 12 (2) does not operate where paragraph 12 is applied by paragraph 13. This is because paragraph 13 itself does not operate unless there is a 'scheme of reconstruction or amalgamation'. The latter phrase is defined in paragraph 13 (3) as

'a scheme for the reconstruction of any company or companies or the amalgamation of two or more companies',

a definition which tells remarkably little. Paragraph 13 (3) also is at pains to say that references in the paragraph to shares or debentures being retained include their being retained with altered rights or in an altered form, whether as a result of reduction, consolidation, division or

otherwise. References to schemes of reconstruction or amalgamation also occur, *inter alia*, in section 208 of the Companies Act, 1948, and the meaning of the terms has been the subject of much judicial comment, beyond the scope of these articles.

Having entered the field of reconstructions and amalgamations, paragraph 13 goes on to deal with another topic, which is divorced from the question of disposing of shares and debentures as such. Paragraph 13 (2) applies where the following conditions are satisfied:

(a) there is a scheme of reconstruction or amalgamation (as defined);

(b) the scheme involves the transfer of (i) the whole or (ii) part, of the 'business' of company A. to company B.;

(c) company A. receives no consideration from company B. for the transfer (ignoring any liabilities taken over from company A.).

In the above circumstances, company A. is not chargeable to Case VII tax 'by reference to the transfer in respect of the acquisition and disposal of any assets included in the transfer'.

The advantage accruing from paragraph 13 (2) would not be very widespread except for the provisions requiring the assumption that the market price has been paid where the transfer is not at arm's length. It is worth observing that company A. need not transfer more than 'part' of its 'business'; so the question arises whether the subparagraph would apply to the transfer of a mere asset. Of course, the transfer must be involved in a reconstruction or amalgamation, but the subparagraph does not in terms require that company A. be reconstructed, nor that companies A. and B. be amalgamated. It is arguable that it is enough for some other reconstruction or amalgamation to 'involve' the transfer. The subparagraph resembles, but is not identical with, some of the terms of section 55 of the Finance Act, 1927, which provides for stamp duty relief on reconstructions and amalgamations.

The transfer of a 'business' to a company is also the subject of paragraph 14, which applies where the following conditions are satisfied:

- (a) A. (who may be an individual or a company) transfers to company B. a 'business';
- (b) the business is transferred as a going concern;
- (c) together with the whole assets of the business (or with the whole assets other than 'cash');
- (d) the transfer is wholly or partly in exchange for shares;

(e) the shares are issued, by company B.; (f) to A.

In so far as the shares are consideration for any asset of the business, then A. is not chargeable to Case VII tax in respect of his acquisition and disposal of that asset (paragraph 14 (2)). If A. would have been chargeable in respect of the asset but for this provision, then the shares which represent the consideration for that asset are to be treated, with the asset itself, as the same asset, acquired at the time when A. acquired the original asset. It follows that if the asset consists of land or an interest in land, then the corresponding shares will be treated as land, so that they would remain vulnerable to Case VII liability until the expiration of three years from A.'s original acquisition of the land (paragraph 14 (2)). In so far as the consideration for any asset included in the transfer is not an issue of shares by company B., then the ordinary Case VII rules apply. Thus if the consideration allocated to an asset transferred is a debenture, the market value of the debenture will be the measure of the proceeds of disposal. If the sale is within the statutory six months (three years for land) and the proceeds exceed the sum of the cost plus an apportioned part of the total sale expenses, there will be liability.

As regards the shares which A. receives under (e) and (f) of the conditions, his subsequent disposal of them will not attract Case VII liability unless they fall into one of the following categories:

- (i) shares representing the consideration for business 'cash' included in the transfer;
- [(ii) shares treated under paragraph 14 (2) as the same asset as a business asset transferred to company B. (paragraph 14 (3)).

This is not to affect any section 14 liability. Shares which enjoy the benefit of the exemption provided by paragraph 14 (3) are to be treated, broadly speaking, in the same way as if A. had acquired them as legatee. Thus paragraph 8 (5) will apply so as to ensure that in identifying disposed of shares the identification is to be primarily with shares not within the exemption.

If the consideration for the transfer of the business is not confined to a single homogeneous class of shares, it is clear that for the purposes of paragraph 14 the total consideration will normally have to be allocated among the various assets forming part of the business. Elaborate rules for

this allocation are contained in paragraph 14 (4). The taking over of the business liabilities is, of course, a consideration. It is to be allocated as far as may be to the 'cash' taken over (paragraph 14 (4) (a)). One wonders what the draftsman means by 'cash'. The cash, properly so called, of a business is normally confined to the contents of the petty cash box. So-called 'cash' on current or deposit account at the bank is not cash at all, but a debt due by the bank. For stamp duty purposes, the credit balance of a current account is by concession treated as cash, but it is only a concession.

If there is consideration (which we will call 'outside consideration') which is neither the taking over of liabilities nor an issue of shares, it is to be allocated, as far as may be, against other

matters, if any, than the transfer of the business, e.g. where both the business and some other assets are transferred for a global consideration. So far as it is not so treated, this outside consideration is to be treated as consideration for assets in respect of which A. is chargeable under Case VII (or would be but for paragraph 14 (2)). This is the effect of paragraph 14 (4) (b). Subject to paragraph 14 (4) (a) (b), the consideration (whatever it is) must be allocated (as far as necessary) between assets rateably according to their 'amounts', after allowing for prior allocations under (a) and (b). Paragraph 14 should supply ample food for thought to both lawyers and accountants.

(To be continued.)

# The Eyes and Ears of Management

by BRADFORD CADMUS

Director of Research and Education, The Institute of Internal Auditors

NE of the terms that internal auditors often / use to characterize themselves to others is that they are the 'eyes and ears of management'. I think this is an apt characterization - and in it we may assume that management is the controlling brain. Whether we are seeing or listening, we are principally affected by those things which we want to see or hear. If they are unusual enough, our attention will be drawn to them. But those things that we are not particularly interested in - because we are used to them or do not think them worth bothering about - just do not register. This brings us to the point that the internal auditor should be constantly aware and alert to the really important things in his organization, and should be able to express himself in terms that will be acceptable and understandable to those in management. Otherwise what he has to offer will be disregarded or rejected as unimportant.

As he examines a business and puts himself in the position of being responsible for its progress, the first thing he comes up against is that he must divide the business into logical sections and then determine some sort of goal for each section. This goal may be in such terms as profits, budgets, or favourable results as compared with what the company has been doing in the past.

Next he must pick the people who will have the responsibility for attaining the objectives. Finally, he must have a plan of reporting that will show how well the responsible people are getting the results that were hoped for. To keep things on an even keel, it is necessary to establish policies as ground rules

under which all sections of the business are to

It is reasonably safe to say that every company head thinks along the following lines, for each major section of his business:

- (1) Are the objectives well defined and set up with a logical division between the various parts of the business?
- (2) Are the objectives reasonably attainable?
- (3) How well is each section doing in gaining its objectives?
- (4) Have the right ground rules (policies) been set up for the business?
- (5) How good a job is being done by the man in charge?

The 'pay off' question is the last one - since almost everything comes down to people - to those who do the work. Every comment, every report will consciously or subconsciously be applied to help in answering the question - 'Is the right man in the right job?' Since people are people, there is a rather remote chance that any one individual would be rated 100 per cent as an executive by the sales department, the credit department, the manufacturing department, the controller and the internal auditor. So, we have to picture top management as faced with the problem of developing a composite judgment of each operation from a considerable volume of formal and informal reports and other communications. In this problem, the establishment of proper objectives is paramount. If these objectives are attained - this will be evidence that a good job has probably been done.

Let us summarize by using a little alliteration; it

can be assumed that the company chief will be interested in: plans, policies, people, performance.

It might seem that I am proposing that internal auditors become experts in everything – this is not the case. But they do have to bring to the business an expertness in control – and controls exist in every level and every department of an organization. Along with this expertness, as they travel around they get to know how the business is put together and how it operates. In my view the internal auditor in a farflung business has an unsurpassable opportunity to gain a broad-gauge perspective of the business.

The internal auditor who already has been assigned broad scope for his work is in a fine position to shape his operations to maximum overall effect; the auditor who is confined to narrow fields cannot do as well—but when he demonstrates what can be done in his assigned field, he usually will be given broader

responsibilities.

Now let us give some thought to plans, policies, people and performance.

#### **Plans**

Plans express the judgment of management as to the general organization and objectives of the business. They will be developed as a composite of judgment and experience, and their development is the job of management – not the internal auditor. What the internal auditor can and should do is to make sure that communications, such as reports, keep everyone who is affected informed as to how plans are working out in practice. This will help to answer what is probably the first question in any company chairman's mind – 'How are we doing?'

#### **Policies**

After plans and objectives are established, ground rules - policies - are set as to how the organization is to operate. Like any arbitrary rules, there will be times when policies may seem unfair, inapplicable or downright wrong. Sometimes the internal auditor's findings will permit very definite recommendations in policy matters; probably more often his report will confine itself to showing how the policy has worked in operation. For example, in a machine manufacturing company, policy called for having certain parts manufactured by a company unit that was not equipped with the special machinery that would permit most efficient production. Specialized outside suppliers could furnish the parts at about half the cost. The auditor's report did not say that the policy was right or wrong; it did bring out the facts as a basis for possible revision.

# People

People are the organization—and the universal question that all supervisors from the board down ask themselves is—'Is the right man in the right job?' In lower levels of organization, where work is

specialized, this question is comparatively easy to answer. A book-keeping machine operator who is poor in manual dexterity and makes constant mistakes does not belong on that job. As we get up to higher organization levels, we reach a point where it is impossible to have all requisite talents wrapped up in a single individual. Here we must judge the executive in charge—first, on his ability in attaining his objectives; second, on his ability in forming and heading a 'team' that in total will provide the necessary talents and controls. By far the most important is the first ability—the attainment of objectives. If he can do this, his superiors will be predisposed in his favour even if his team is not well balanced.

Here is an example of how internal auditing helped in such a situation. The operation was an autonomous commodity processing operation of a large company. It was essential that the man in charge be highly expert in commodity purchasing and trading. He was - and the operation consistently attained or exceeded the objectives set by management. Like many successful executives, the man in charge was inclined to be impatient with office controls and policies. His feeling was that his own ideas and ways of doing things were justified by the undeniably good results he was producing. In this situation, it would have been futile to force an issue on any narrow questions of control. Instead two steps were taken. First, more complete and more frequent internal audits were made than were scheduled in better controlled units. Second, a hardhitting down-to-earth auditor who could talk costs, profits and controls on a give-and-take basis with the successful manager was assigned to the internal audits. Over a period of time, he was able to 'sell' the reluctant manager on better controls - and the internal audit effort could be curtailed.

# Performance

On the question of prompt, fair and complete reports of performance, the internal auditor – having verified that reports of performance are properly prepared – should look at things from the angle of those who will receive the reports. He should ask – and answer – to himself such questions as:

- (1) Do the figures and other items reported give a good picture of operations?
- (2) Are both favourable and unfavourable situations and results fairly brought out?
- (3) If I (the internal auditor) were in charge of this operation, would I be willing to be judged on the basis of these reports?

#### **Procedures**

It may be noticed that I have previously left out one factor in operations that also begins with the letter 'P'. That is procedures – and I left it out deliberately. To be realistic about things, I feel sure that most

company chiefs are just not interested in procedures. Sometimes, of course, they are forced to think of them when people start kicking because procedures seem to be unduly complicated or expensive or are

not working.

The president of a company that I once worked for said that he considered procedures as the 'plumbing' of the business. I did not like that expression very much – since I happened to be in charge of procedures. Yet, as I thought it over, I had to admit to myself that it was a rather apt comparison. Procedures, like plumbing, should operate behind the scenes simply and effectively to produce the final results for which they are designed. If they do not, if things are plugged up or spring a leak, there's often hell to pay.

Let us not be unduly preoccupied with procedures, then. We want to be sure that they are simple and effective; they should be working as they are supposed to work. If they are not, we should report and suggest ways to straighten out or 'unplug' the

'plumbing'.

# Approach

Now an approach that some internal auditors take to their work - and one that is utterly wrong if they are to have any sort of broad-gauge responsibilities is what may be called the 'right' or 'wrong' approach. The auditor that does things this way has everything very nicely divided between 'right' and 'wrong' with few doubtful areas. He is the sort of fellow that talks of 'principles'; and by 'principles' means the things that must be done, regardless of reasons or extenuating circumstances. To him, bank deposits must be made every day since that is a 'principle' of the control of cash. If this is not done, the 'law' has been violated, and there is no argument about it. The internal auditor who can work with a check listof 'principles', ticking off 'right' or 'wrong', makes things easy for himself, but I am very doubtful whether he is doing a really effective job.

I am not proposing that internal auditors should give up checking and comparing. It is a most important part of their work, in the cycle of internal audit activity that has been expressed as (first) familiarization, (second) verification, (third) evaluation, and (fourth) reporting. But they must look at the practical side of things – at the importance and the contribution that their work and findings make toward the

objectives of the business.

Internal auditors should therefore adopt the approach that there are no axiomatic principles that cannot be deviated from regardless of circumstances. They should think in terms of standards. These are things that are nice to do—and should be done in many situations—but no one is to be condemned just because they are not done. Accordingly, any difference that is brought out in their verifications is first-off a clue and not a crime. They should wait until they have completed their examination and

have heard all sides before they think about criticism.

One of the hardest talents to define or to cultivate is a sense of proportion and value. This is the talent for putting things into perspective so that they are viewed in relation to their importance in the overall picture. To some degree, I think that perspective — or the lack of it — is something one is born with. Some people are just naturally interested in every detail to see that it is perfect. Such people are so interested in perfection of detail that they are not interested in putting the detail into its proper place in the overall picture. Other people are so occupied with big issues that they never become practical. Probably the best advice here is that the auditor should ask this question on each finding — 'Is this important to the company?

My favourite definition of accounting is that it is the 'art of expressing opinions in numbers'. Because accounting is to a large degree an art – because it is concerned with opinions – we cannot judge the results of the accounting effort unless we know the basis of the opinions. To put it in another way, we must know the operations on which the figures are based before we can have any assurance of the validity of the figures. That is why the 'broad-gauge' auditor must have broad-gauge curiosity about every operation – always asking 'what' and 'why' and 'how' until he is satisfied in his own mind that what is being done is properly recorded in the accounts and fairly and completely reported to those who are responsible

for final decisions.

#### Conclusion

For the internal auditor to do as I suggest – to regard himself in the position, and to think in terms of top management is a challenging assignment. To do so is not easy, since it is always easier to think in one's own way than to try to project oneself into another's way of thought. Once it is begun and is continued, however, it is fascinating and cannot but bring a great feeling of accomplishment to the auditor. More important, the usual result will be greater recognition and acceptance by all levels of management and by those who are the subjects of audit. They will look on internal auditors as members of their team – not as umpires.

Aside from the field in which they are qualified experts – the field of control – the internal auditor's job is to assure oneself that situations and facts are revealed completely to those who will give opinions and decisions. To limit oneself to control is sometimes hard, since one often cannot help but have opinions on matters outside of one's own field. But they have to be kept to oneself unless one is given an oppor-

tunity to present them.

So internal auditors require to think in the terms that management understands and can use. When they do this – when they pretend that they own the business – they are really earning their way in helping to bring better executive control.

# Problems Facing the Practising Accountant as a Financial Reporter

by Professor D. S. ANDERSON, M.A., C.A.,
Professor of Accounting and Business Method, University of Edinburgh

THE most important of the many functions of the accountant, whether he be in public practice or in whole-time employment in industry, is perhaps the effective communication of his ideas and opinions to those whom they concern. Yet this all-important aspect of the accountant's work is the one in which the profession has allowed itself most to be tied down by tradition and history and to which the leaders of the profession have devoted least effective attention.

Intelligible financial reporting is needed for a wide range of differing interests. Present and prospective stockholders, Government agencies, economists, national economic planners, creditors, the Press, workers, the public interest and even management, make use of such reports and are surely entitled to expect to receive a clear and unambiguous message.

# Challenge to the Profession

Reports on company accounts represent the great majority of the accountant's public communications and while the accounts themselves are generally the responsibility of the directors, the accountant's influence on the development of the art of financial reporting is in fact very considerable and presents a challenge to us all. How are we as a profession meeting this challenge? In my humble opinion the answer must be 'Not very adequately'.

Company accounts and reports are, we must remember, presented by the custodians of corporate funds to the owners of these funds and receive wide circulation among the public. These owners and the many other interested sections of the community are entitled to the fullest information which can be given without harming the best interests of the company concerned. They are equally entitled to expect that the information given be supplied in such a form that it can be understood by even the less well educated among them.

The rising standard of living throughout the civilized world in the past fifteen years has had amongst its beneficial effects the introduction to company share owning of hundreds of thousands of individuals who in earlier times had neither the funds nor the inclination to invest in industry. Stockbrokers throughout the world have emerged from their seclusion to instruct the masses in the benefits and machinery of share purchasing. Many of the larger companies have introduced schemes under which their employees are offered stock in the

A paper presented at the Eighth International Congress of Accountants in New York

companies by whom they are employed as a year-end bonus. Many of these people – indeed the vast majority of them – have no understanding of accounting forms and terminology; the financial reports which they receive as stockholders can have very little meaning to them unless they are couched in non-technical language.

Professor B. S. Young, in a paper which appeared in *The Three Banks Review* (a publication of the Royal Bank of Scotland and its associated banks), wrote:

'Company accounting statements are of considerable interest in our economy in which public companies occupy an increasingly important place, and in which the liquidity of their securities has wide implications. A strong case can be made therefore for urging that company accounting conventions and practices, as well as the legal rules concerning the determination of divisible profits merit an authoritative and thorough review.'

I would add to 'accounting conventions and practices' the words 'and language'.

What has been done to meet the needs of this ever increasing but not financially educated body of stockholders? So far as I can see the answer is 'Not nearly enough'. I admit that a lot of useful research has been done by some of the accounting bodies, many of whose pronouncements and recommendations have been of great value to the profession and to the

public, but the need for a fresh approach in the interests of the growing body of stockholders who

Professor D. S. Anderson, M.A., C.A., is a partner in an Edinburgh firm of Chartered Accountants, as well as Professor of Accounting and Business Method at Edinburgh University. He was admitted to membership of the Scottish Institute in 1925.

lack the necessary financial education does not appear to have been appreciated.

The annual reports issued by an increasing number of companies now frequently contain a certain amount of statistical data, and the chairman's statement also adds considerably to the information which can be gleaned from the financial accounts, but this additional information is not generally required either by law or by usage, is not reported on by the auditor and only goes part of the way in meeting my criticism. I suggest that as a profession we should use our best efforts to ensure that the stockholder be given all the information which he might legitimately expect to receive and in a form in which he may be expected to understand it. We pride ourselves on being an important - even indispensable - cog in the industrial machine. To maintain this claim we must move with the times and not remain content to act as a steam engine in the atomic age.

The impact of these financial reports on the ranks of organized labour must not be overlooked, and it is important that they be not misread and used as a weapon with which to attack the management side of industry.

#### Static Outlook

Where then do we fall down? In what respects are we lacking? Principally, I think, in our almost static outlook in relation to the needs of the ever-widening class of recipients of our reports. The form of the financial accounts issued by companies throughout the world has changed remarkably little in the past hundred years. It was devised in the days when joint stock corporations were few and far between and when the sector of the community which was interested consisted of a small and select group of highly educated and financially informed men. Changes have, of course, taken place, sometimes as a result of the recommendations of the accounting profession, sometimes as a result of legislation and sometimes in response to public demand. But such changes have been minimal and largely of a practical nature and not resulting from a consideration of the underlying theory. The tendency, too, has been to go no further than was absolutely demanded.

The profit and loss account or income statement and the balance sheet are today not very different from those produced at the beginning of the twentieth century. They may be produced in a much more expensive, elaborate and colourful form, but their contents have not improved or changed with their outward appearance. A language has been developed for use in these statements which employs words in everyday use in normal life, but which attributes to these words and phrases a narrow specialist meaning which is quite often very different from the meaning attributed to them in normal conversation. We are tending to develop a jargon of which we have no cause to be proud.

And as though this difference between the common language and the specialist language were not enough

confusion, even within the narrow confines of our own territorial boundaries, we accountants are not in agreement as to the exact meaning of some of the more important and elementary terms which we employ.

To illustrate my point I would cite as an example the word 'depreciation'. The man in the street knows and uses this word and knows what it means to him. To ask two accountants for their interpretation of this word is to invite a discussion of the merits of 'historical cost' and 'replacement value'. And 'depreciation' is a word which appears in every profit and loss account and balance sheet. Note the chain reaction; 'depreciation' affects the amount of the 'profit' and also of the 'book value of the fixed assets'.

What message does the reader of such statements receive? He will read the story according to his interpretation of all these everyday terms and this may not be the story intended by those responsible for it.

About three years ago Professor Louis Goldberg, of Melbourne, wrote a series of five papers on 'Concepts of depreciation'. These have recently been published in book form and highlight the confusion which this one word 'depreciation' can cause. In one paper he writes:

'Let us try to avoid deluding ourselves and others.'
If by "charging depreciation" we mean an allocation of historical cost let us use words (such as cost allocation . . .) which will convey this meaning.'
And he continues:

'If we mean attempting to provide resources for future replacement of assets why not use words (such as "provision for future replacement") which will bring this meaning out?'

'Let us not delude ourselves and others.' I stress these words because I think this is just what we are doing. We rather pride ourselves on our exactitude, but when we come to think of some of the ambiguities which we perpetrate, I feel that we must blush.

Professor Goldberg suggests that more precision in the use of terminology may call for some hard thinking by accountants, and adds in typographical parentheses, 'Are not accountants accustomed to hard thinking?' [Sic.]

# Double Talk

And so we, as individual members of a profession which prides itself on its integrity and exactitude, are continuing consciously to use words having to us a definite implication when even amongst ourselves we are not agreed as to the meaning of these words. This double talk does us no credit and must inevitably tend to discredit our pronouncements.

We produce balance sheets or statements of funds which we do not suggest show the present-day worth of our client's undertakings. Though aware of the fact that the great majority of those who receive these statements believe them to depict the year-end value of a business, we do nothing to dispel this wrong idea.

This is the position in this year 1962 as I see it; a

position which we calmly accept but one which I suggest should not be allowed to continue.

All the criticisms which I have so far made can be levelled at the accountants in my country; and I am pretty certain that they are true of most, if not all, the civilized countries where accounting has grown from a common root.

That there has been some concern about this state of affairs is evidenced by the existence of certain articles on accounting terminology which have appeared from time to time.

In Volume II of the C.P.A. Handbook reference is

made to a plan:

'to set up a group of representatives of leading branches of society which used terms similar to those used by accountants for the purpose of recommending definitions to be used by all. It was believed that if a group of this kind made up of accountants, lawyers, economists, financiers, business managers, bankers, labour leaders and investment counsellors would agree on a definition it might be reasonable to expect that all groups would adopt it'.

This project was unfortunately dropped in favour of another which at the time seemed more urgent.

A significant statement is made in this same publication:

'When words have meaning to only one person/ or to one group of persons they are not useful in statements to be given wide distribution.

The American Institute of C.P.A.s while admdoning this ambitious scheme has issued certain 'Accounting Terminology Bulletins' which, however, have a very limited scope and which were primarily intended to achieve a measure of standardization of terminology within the profession.

In 1957 the Canadian Institute of Chartered Accountants issued a book entitled Accounting Terminology. In a foreword the authors state:

'It is not the purpose of Accounting Terminology to direct the profession in the use of individual words and new phrases, but rather to define and explain the words and phrases which through continued use have become an accepted part of the language of accountancy. Changes there will be and only acceptance by the profession and by the public it serves will determine what will endure.'

This book lists and defines 517 words and terms in common use by accountants and is at least a step in the right direction. But unless the definitions be accepted by the members of the profession and become recognized by the general public the real benefit of this advance will not be enjoyed and its effect felt.

The Union Européenne des Experts Comptables (U.E.C.) and the Organization for European Cooperation (O.E.E.C.) have also made certain contributions on this theme to which I shall refer later.

# **Superseding National Frontiers**

If there is any truth in my assertion that the accountancy profession is being less than honest with its readers, it is important that something be done

quickly to put our house in order for one very good reason, viz. the development of international trade.

Alexander Graham Bell invented the telephone in 1876; in 1899 Senatore Marconi proved that wireless telegraphy was a practical possibility; in 1919 Alcock and Brown demonstrated that a heavier than air machine could fly the Atlantic.

These three discoveries have probably done more to shrink the size of the world and to bring the peoples of the earth closer together than all the other advances of mankind. Developments of these three achievements have made the inhabitant of New Zealand the next-door neighbour for all practical purposes of the Nova Scotian: have made Madras a suburb of Mexico City.

The effect has been truly dramatic in the world of commerce and industry. The constant shrinking of the distance - in time - between markets, between producer and consumer, has improved enormously the lot of both. Were it not for the unfortunately wide gaps caused by nationalism and ideological differences one could hope for the early arrival of that happy day when the peoples of this troubled world could enjoy the mutual benefit of the labours of all.

The ideas of NATO, EFTA, and the European Common Market, though possibly prompted to some extent by other causes, are developments in the common weal of these discoveries aimed at bringing man into closer contact with his neighbour across

national frontiers.

In recent years we have seen a growing awareness in the minds of the investing public of the opportunities offered by the stock exchanges of the world. Investment at quite a low level is becoming international instead of local. More and more American securities are being dealt in on European and Asian bourses; Swiss, German and French interests are becoming increasingly conscious of the opportunities offered for sound investment in industry outside the frontiers of their own countries. An ever increasing number of international concerns is investing in business carried on in countries outside their own frontiers, often in countries where the language is not that of the homeland.

# Problem of Language

One single obstacle above all others which inhibits or retards this very desirable development is the question of language. And by language I do not mean only the national tongue. English is the language of some 350 million people and is the commercial language of probably another 500 million. Can we say that in a commercial sense it is a common tongue even among the English - not to mention the Scots or Irish?

In our everyday language we, the English-speaking . nations, have different words for quite ordinary things. In Britain a flat is something in which one lives; a cuff surrounds the wrist; gas is used to illuminate the streets in some places; a fender is a

protection against coal falling out of the fire-place; a depot is a storehouse. Consider the American meaning of these terms! Even in Britain there are variations

of meaning from region to region.

If English-speaking people have such possible misunderstandings among themselves in everyday domestic matters, how much greater must be the possibility of confusion between them and those for whom English is not the native language? And how much greater is the likelihood of misapprehension when we get into the realm of technical subjects?

We have English/French, English/Spanish, French/ German, etc., dictionaries which give a translation into the second language of the common definitions of most words used in the first language. The need exists for similar dictionaries of accounting terms.

Here then is an opportunity for the accountants to do something to bring the business people of the world and others closer together. It seems to me that as a section of the community of man we can do more to achieve this end than any other group of people -

and certainly more than the politicians.

Nothing very radical is really necessary; no strongly held views need be sacrificed. All we require is a general acceptance of the meaning of the words which we use in a technical sense. Neither the alphabet nor the rules of this specialist language have been agreed upon. And this is a first essential of a satisfactory atmosphere in which to foster international aswell as domestic exchange of accounting information. Without this, confusion must arise. We all know of the trouble which blows up when two teams playing a game obey different sets of rules!

# **Individual Expression**

I am not a believer in standardization of accounting techniques. We practice an art which calls for individual expression of opinion and thought and I think that it would be a sad day for the profession and, in fact, for the community if the reporting accountant were forced to conform to a rigid code in performing his function of reporting. We cannot all think alike and there is generally room for two or more points of view in most matters. We do, however, owe a duty to those to whom our reports are addressed; a duty to make these reports comprehensible and in no way possible of two interpretations being given to them.

This can only be achieved if a common alphabet is employed. The basic terms which we employ should have only one possible meaning, no matter in what language they are expressed. Qualification of the basic meaning could be achieved by the addition of

suitable qualifying words.

Mr Kenneth S. Most, writing on 'Accounting terminology' in The Accountant (March 16th and 30th,

1957), says:

"To make words and figures meaningful is the accountant's task.... Although it may not be necessary to invent new terms for the forms and contents of accounts, it is most necessary to specify what exactly each shall contain. In doing so current requirements should be allowed to overrule accumulated tradition.

I would substitute the word 'made' for 'allowed' in the last sentence.

How then do we achieve this end?

We must endeavour to ensure that reporting accountants are awakened to the danger and possible criticism which may arise from the ill-considered use of accounting terms often resulting from a natural desire to reduce to a minimum the number of words used. The growth of technical jargon should be arrested and the compilation commenced of a carefully constructed lexicon of accounting terms which could be produced in the languages of all countries where accounting is a recognized and significant art. Such a work should be revised by an international panel in order to ensure that the definitions were on an agreed international basis. Each country would, of course, réquire to produce its own draft lexicon and this obviously would be a quite lengthy undertaking which would require to be entrusted to a body of responsible members of the profession including both members in practice and persons in other walks of life with similar interests.

The integration of the drafts in different languages would follow and would, of course, be an exacting task which would call for the agreement and acceptance by an international panel of the meaning to be actiouted to all terms in common use by the account-

ant in the pursuance of his function.

Difficulties and differences of opinion would be experienced, but these would tend to emphasize the need for just what I am advocating. These difficulties would arise at the national level, but I cannot see that it should be impossible even for the most dogmatic individuals to devise suitable phrases or terms to meet the different shades of meaning which can be advanced for such words and terms which have a possible variety of interpretations.

In the international field there are many differences of opinion on a multitude of matters; tariffs, quotas, subsidies, immigration, armaments, frontiers, etc. So long as these differences exist they cause friction and international misunderstanding – note the word – but most of them have been resolved at one time or another by international agreement and to the advantage both of the countries directly interested and those apparently not concerned. Armaments is unfortunately one of the fields in which agreement has not been reached, but the obstacle has largely been an ideological one. Is no responsible body of accountants willing to initiate international discussion in our particular sphere with a view to permitting understanding to be reached?

# An Accounting Lexicon

As this paper was being written, Union Européenne des Experts Comptables Economiques et Financiers (U.E.C.) published its Lexique U.E.C. Lexicon. This

is described as 'a multi-language dictionary of accounting terms and definitions thereof'. It is divided into five sections, these being respectively in French, German, American-English, Spanish and Dutch. In each section the 1,000 terms and phrases are defined and there is given the equivalent corresponding word or phrase employed in the other four languages.

This considerable task is the work of U.E.C. Committee Lexicologie Comptable. In a foreword it is stated that it is proposed to add an Italian and possibly an English section in later editions. The

authors state:

'Such peculiarities which are often the cause of incorrect translations are in the field of accounting due to different usage and customs as well as the prevailing accounting theories... This present first edition could not be perfect (in this regard) because the individual terms are as a rule defined only in the language of that country to which the explanation applies... A complete co-relating would have required a great deal of additional work which would have delayed publication considerably.'

That this work should have been produced shows that some people believe that a need for it exists. It is no doubt one aspect of the closer relationship which is being established among the Common Market, countries. All credit is due to the committee for the completion of this first phase of their enormous task. How far the definitions are accepted by the accounting profession in the countries concerned I do not know. It seems to me that an important need is for the committee to sell the idea to the members of the profession in the countries whose representatives have collaborated and then as a final stage to publicize the findings amongst the sections of the community most likely to be interested. General acceptance by the business and professional world of the single definition for any word or phrase used in accounting language should be the ultimate aim.

So far as I am aware, no move along these lines has been made in the United Kingdom nor in North America, even although a section of the *Lexicon* is devoted to American-English. This, I suggest, is a matter which should receive the early and serious attention of the leaders of the profession in these two

regions.

#### **Financial Statements**

While little has so far been achieved in establishing a common 'language' of accounting terms throughout the world, a certain measure of unanimity has been reached in the form of accountants' financial statements. This is evidenced by the fact that the published reports and financial statements of companies and corporations are framed in the same broad form. This form, the normal balance sheet and income statement or profit and loss account, was evolved in the United Kingdom, was followed by the U.S.A. and Canada, and has been adopted in most civilized

countries. But an increasing divergence seems to be developing in the principles adopted by different countries in the preparation of these documents. And it is significant that an increasing number of companies is finding it desirable to supplement these forms with a mass of additional facts; statements of cash flow, earnings on capital employed, turnover and expense figures for ten-year periods, etc. Why should this trend be developing? Surely it is the realization that the stockholder, creditor, potential investor and any other interested party is entitled to more information regarding the concern in which he is interested than is usually given in the normal balance sheet and profit and loss account.

Under United Kingdom statutes certain classes of British companies, including shipping companies, are exempted from giving certain information in their published accounts such as movements in reserves etc., which information is obligatory for the vast majority of British companies. The Jenkins Committee on Company Law Amendment heard evidence on this exemption from members of the General Council of British Shipping. One witness, in discussing the potential investor, is reported as having said: "The British investor is in no doubt whatsoever what is the strength of the company he is proposing to invest in.' This brought the tart rejoinder from a member of the Committee, 'I have some difficulty in examining the accounts, in forming a view as to the profitability and I can only say, Sir, that I cannot agree with you'.

The draftsman of company reports, be he a company executive or a practising accountant, does not, of course, have an entirely free hand in the preparation and presentation of his facts and figures. He is controlled in his function by three main factors, viz. legal requirements, the taxation legislation, and the recognized standards of presentation advocated by responsible accounting bodies.

# Informing the Public

While some readers of company reports, such as bankers and financiers, may be expected to appreciate the legal and fiscal conventions which have to be respected in the presentation of financial reports to stockholders, the vast majority of the readers, i.e. the stockholders to whom these reports are addressed, tends to interpret the language in such statements according to what one might call 'colloquial English'. Such persons are often not familiar with company and fiscal legislation and are unable to recognize that, for example, the profit disclosed on the face of a profit and loss account is not necessarily - and in fact seldom is - the profit on which a company will have to pay income tax. The published profit is arrived at after the directors have made a decision as to the provisions that they consider should be made (irrespective of fiscal provisions), the near capital expenditure which they think should be 'written off' against the year's profits, the sums which they have

decided to provide for amortization of capital or provision for future replacement of fixed assets. The result frequently is that the taxation charge is very different from the figure which would be required if there were applied to the published profit figure the appropriate rate of tax. A random examination of the accounts of six British companies for 1960 shows that the provision for United Kingdom taxation varied as follows:

Company A. 40°2 per cent

"B. 47°9 "

"C. 49°1 "

"D. 50°8 "

"E. 53°1 "

"F. 62°7 "

The rate of United Kingdom income tax and profits tax for that year was 53.75 per cent. Obviously company officials must be given freedom to make such provisions in their accounts as they consider necessary in the interests of their companies, but it seems to me that the stockholders have an interest in knowing what is being done. I can see no objection to, and in fact very good reason for, disclosure on the face of the profit and loss account of significant variations between the taxable profits and the published figures. The publication of such comparison might, in fact, bring home to the general public the effect of certain fiscal provisions which can only be described as harsh and restrictive. The resultant public reaction might do more towards amendment of such legislation than the many and oft reported submissions by industrialists and professional bodies.

The past fifteen years has shown an enormous increase in the number of 'take-overs' in Britain. Many of these have been inspired not so much by the prospects which amalgamation offers of more economical working, but rather by the attraction of large hidden reserves existing as a result of the comparatively low balance sheet value attached to the fixed assets – particularly land and buildings – compared with their real market value. Offers made in pursuance of such bids have frequently been for many times the balance sheet value of the companies and of the stock exchange valuations of these companies. As Lord Kilbrandon, a judge in the Scottish Courts, said at an accountants' dinner in Glasgow a year or two ago:

'What is the shareholder to think when M£3 is offered for the shares in a company whose balance sheet shows surplus assets of M£1.5 and where the directors of that company advise the shareholders that the offer is inadequate, particularly when the balance sheet carries the certificate of an accountant of repute that "the balance sheet shows a true and fair view of the state of affairs" of the company?'

This statement is specifically called for from the auditor by the Companies Act, though admittedly it is coupled with the words 'as shown by the books and accounts'. The balance sheet may show a true and fair view of the position as shown by the books, but seldom a true and fair view of the state of affairs

of a company, which to my mind implies a true view of its value.

In the U.S.A. the auditor reports whether the financial statements 'present fairly the financial position of the company in conformity with generally

accepted accounting principles' or not.

In Holland the words used are 'present fairly the financial position' of the company. Replacement value is frequently adopted in the Netherlands and may bring the balance sheet figures nearer to present-day value than does the historic cost less accumulated depreciation, but still 'replacement value' does not necessarily mean 'balance sheet date realizable value'.

# Legacy of Tradition

The trouble springs from the use of words in the auditor's report which are quite inappropriate and in fact misleading. This is a legacy of tradition. The auditor's duty is to report whether or not the books have been properly kept and whether or not the final statements prepared from these books, viz. the profit and capital statements, have been properly drawn up from these books in accordance with either statutory or customary requirements. The normal report does not do this. It implies far more than that and in fact could very often be challenged as being misleading and untrue. The remedy is simple. A simple change in title of the balance sheet and rewording of the terms of the report - a break with tradition - would put matters right. Will we as a profession take the necessary action before the general public start to question the value of our certificates?

The Institute of Directors, London, published a booklet last year entitled Standard Boardroom Practice. Dealing with 'Shareholder Relations' the authors write, '... directors should give shareholders the maximum permissible amount of information about what is happening to their company'. And dealing with "The Accounts' they state "The wise board will not look for excuses for keeping shareholders uninformed, but rather for opportunities to increase their knowledge of the company'.

While the extent of the information to be given is the province of the board, the practising accountant can use his influence to ensure that the shareholder is not denied any information that he may receive

without harm to the company's interest.

There is a considerable amount of opposition to the disclosure of turnover figures, on the argument that such information will be helpful to the company's competitors. It is seldom that this objection can be seriously upheld. With the facilities now available for market research, the information which can be obtained and assessed by intelligent reading of the national and trade Press etc., most companies mus have a fairly accurate picture of the progress of their competitors. Publication of turnover would enable interested parties to relate final profit to turnove and might do much to combat suggestions of profiteer ing. Shareholders, too, would have a better and more

graphic picture of the progress and efficiency – or lack of both – of the companies in which they were financially interested.

# Value of Short-term Reports

The issue of quarterly or half-yearly progress reports could be more generally adopted with advantage to the shareholders. Such reports may not be suitable for certain types of concerns and in businesses of a seasonal nature can, in fact, be misleading if comparative figures are not given. Twelve months is a long time for a shareholder to have to wait to learn how his investment is turning out. Short-term reports tend to lessen the impact of changing conditions on stock-market prices and may even bring to the notice of shareholders weaknesses in management which can be remedied before irretrievable damage is done.

There is a growing demand for directors to give some guidance as to the current value of their company's assets. This demand applies particularly in the case of land and buildings which have a value distinct from their commercial usage. Such information is essential if the shareholder is to be in a position to determine the real earnings of a company's assets. Periodical revaluations of fixed assets on the basis of current replacement cost may be the solution although it has to be kept in mind that replacement cost is by no means the same as realizable value. In France it is customary to revalue fixed assets in accordance with a Government decreed set of indices. This has the attraction that the basis of revaluation is standardized and not subject to the opinion of individual valuers.

To sum up then, while the company auditor's duty is to report to the shareholders on his examination of the books and accounts, his constant endeavour should be to ensure that any information given should be explicit, complete and free from ambiguity. He is in a position where his advice is often sought and he should miss no opportunity of urging directors to take shareholders as completely into their confidence as the interests of the company will permit. He should always keep in mind that the financial statements on which he is reporting will be read by many people to whom they are not expressly addressed. Some of these people may be more easily misled than shareholders who will at least have the opportunity of attending the meetings at which the statements are formally submitted and of asking questions and hearing explanations.

Some research into deficiencies of present company reporting with a view to ascertaining what additional information would be appreciated by shareholders and with a view to removing some of the ambiguities which at present exist, would be a worth-while exercise.

Serious consideration by research teams of the need for examination of accounting terminology is surely also long overdue in those countries which have not yet faced this vitally important task.

These problems face us as a profession. They will not get any less urgent by being postponed. They will not be solved in a year or even in two years. But solved they must be if the accounting profession is to maintain its reputation and its place in the world of affairs.

# Weekly Notes

# PRIME MINISTER ON THE COMMON MARKET

A SPECIAL pamphlet has been issued by the Conservative Central Office called Britain, the Commonwealth and Europe by Mr Harold Macmillan. While the pamphlet contains nothing very new the issues are clearly set out for those who want a summary of the impact of the European Common Market negotiations and the recent Commonwealth Prime Ministers' conference on Britain's application to join the E.C.M. as seen through the Government's eyes.

Mr Macmillan rejects the idea that this country is faced with a choice between the Commonwealth and Europe. He points out that the Commonwealth has no formal ties or obligations. In recent years economic

conditions and political sentiment in the Commonwealth has changed much. The proportion of total - Commonwealth trade done with other Commonwealth countries has fallen.

He goes on to say that the British are Europeans and that we cannot afford to isolate ourselves from Europe. He thinks that a united Europe is necessary to balance the United States and Russia and that the E.C.M. has already proved its economic vigour. He does not think that accession to the Treaty of Rome will involve a one-sided surrender of sovereignty. Our obligations would not alter the position of the Crown, rob Parliament of its essential powers nor deprive the law courts of their authority. He points out that national sovereignty is already circumscribed for all countries in the world by treaty obligations.

He believes that Britain will gain in strength from membership of the E.C.M. and that the Commonwealth will benefit from this strength. He admits that entry into the E.C.M. would mean the end of Commonwealth tariff preferences but thinks that in any case the British market is not big enough to absorb the increasing output of Commonwealth countries.

# BRITISH TRADE WITH AMERICA

SPEAKING last week in the West Country, the Parliamentary Secretary to the Board of Trade gave some useful figures of Anglo-American trade. He pointed out that the United States is Britain's largest market, accounting for about 8 per cent of total British exports in 1961 and in the first eight months of 1962. Although the level of exports to the United States has not yet returned to the record figure achieved in 1959, there has been a recovery this year and Britain is still the largest supplier of imports to the United States after Canada and Japan.

Speaking of American investment in Britain he said that this represented three-quarters of the total of inward investment into this country. It has increased from \$2,000 million in 1957 to \$3,700 million in 1961. So far as the outward flow of investment from this country is concerned, Britain is the largest direct foreign investor in that country. By 1960 our total direct investment there was \$2,250 million. The flow of investment by private enterprise in each direction is, however, of a different kind. Two-thirds of American investment in Britain is in manufacturing industry while half of the British investment in the United States has been in finance and insurance.

# HEAVY AIRLINE LOSSES

IT was expected that British Overseas Airways Corporation would make a substantial loss. In the event the Corporation lost £49.7 million for the year ended March 31st, 1962, bringing its cumulative loss to £64.6 million. The poor performance was due to a pause in the expansion of North Atlantic passenger travel in the summer of 1961 and a significant increase in the carrying capacity of all international airlines. In the case of B.O.A.C. the passenger load factor fell below 50 per cent. The operating loss for the year was nearly £14.4 million. The main item of loss, however, was a writing down of the value of its Britannias, DC-7Cs and Comets by £32.7 million.

Commenting on these figures on Monday, Sir Matthew Slattery, chairman of B.O.A.C., said: 'The day of reckoning has got to come. If you go on piling up deficits of this sort and paying interest on them there must come a time when the books do not balance any longer.' He went on to say that prospects of the Corporation getting back to a reasonable financial basis were good if the Government allowed it to write off, instead of merely write down, its accumulative losses, but he added that he thought that the financial structure of the Corporation and the way it is expected to operate are 'crazy'.

So far as is known the results for the first quarter of the current financial year have been disappointing and there may well be another deficit at the end of the present financial year. There are now indications that the international rate structure for the more competitive air routes and the replacement cost of modern airliners are now badly out of phase. There seems little sign of a letting up in the frantic technical

race to fly supersonic jets in the stratosphere and there is every indication that the cumbersome negotiating machinery for controlling air fares has now achieved that mixture of highly organized self-interest and diplomatic horse-trading which is calculated to bring the maximum amount of inflexibility to the whole rate-fixing procedure.

If there is to be any move towards remodelling the financial structure of the Corporation there should also be a complete re-thinking about the method of granting subsidies and in deciding how far airlines which operate for national prestige should maintain readily identifiable services which can never make a profit.

#### ESTATE DUTY AVOIDANCE AS A BENEFIT

N Monday the House of Lords allowed appeals by a taxpayer against the decision of the Court of Appeal in Re Pilkington's Trusts (1961) (2 All E.R. 330). A child aged 2 years had a contingent interest in a deceased person's estate, subject to prior interests. By implication, section 32 of the Trustee Act, 1952, applied to the will trusts; i.e. the trustees had power to make advancements for the benefit of the child. They purported to exercise this power by transferring funds to another trust under which the child would become entitled absolutely if she attained 30 years. This would in the normal course avoid estate duty on the deaths of the persons entitled to the income before the advancement and thus also increase the amount which she would receive. The Inland Revenue argued that section 32 did not give the requisite power and the Court of Appeal accepted this argument. The House of Lords has now held, in effect, that 'benefit' in section 32 means benefit, and is not to be cut down by reading limitations into the section (The Times, October 9th, 1962). However, the House of Lords affirmed the Court of Appeal's decision that the advancement in this particular case infringed the rule against perpetuities.

# LIFE ASSURANCE CONTINUES TO GROW

NCE again new records have been broken in industrial or 'home service' life assurance business. Returns from the twenty-three member offices of the Industrial Life Offices Association show that during 1961 premiums in this class of insurance exceeded £200 million for the first time. This income was collected from an estimated ten million households.

Payments to policyholders totalled over £141 $\frac{1}{2}$  million, also a record. This was an increase of £25.8 million over the previous year's figure, and the largest rise ever. This is a reflection of the large growth in new business, particularly endowment assurances, which has occurred during the post-war years. Net new saving resulting from industrial life business totalled £76.1 million. If the 'ordinary' life business transacted by the industrial life offices is

also taken into account, these offices were the channel for net new saving of almost £169 million.

# ACCIDENT TOLL IN INDUSTRY

ACCORDING to the report of the Chief Inspector of Factories, last year there were 192,517 accidents at work, an increase of 1 per cent on the year before. In building operations, there were 18,742 accidents reported, an increase of 10 per cent.

The figures are not quite as bad as they appear, however. The rate of accidents, that is accidents per thousand workers employed, fell slightly from 20.7 to 20.4 and there was a slight decline in fatal accidents from 675 to 669. While many concerns now have

safety officers backed by management support there is still room for improvement. The Chief Inspector's report says that there are too many firms without any safety organization at all, or one that is ineffectual.

The building industry's record in these matters leaves something to be desired although the big civil engineering and building contractors have taken an active part in furthering organized accident prevention. Some of the trouble here is that, as in other industries where there are a large number of small companies, resources are small and inspection by officials difficult to carry out. What is really required is the development of a safety system which can be shown to small companies to be effective from a safety point of view without adding significantly to their costs.

# This is My Life ...

by An Industrious Accountant

CHAPTER 141

We have a men's accessories department on the second floor, in a big bay adjoining our stationery department; it sells all sorts of expensively casual items for the luxury trade, like hogskin wallets and cocktail shakers. The gross profit is excellent usually, like the stationery beside it; we've made 40 per cent in peak months. Unfortunately both margins have dropped to an all-time low recently, and we've been rather worried as we can't trace the reason for the decline.

I was standing at the counter one afternoon, idly skimming through some dockets while waiting for the sales manager. A talk on percentages was indicated. Through a high cage-like stand of gift bridge-sets, I could just see into the stationery bay. There Smith, the senior assistant, was greeting a customer who asked for half a dozen cheap ball-point pens. Smith is one of those big, bland, smiling chaps who knows everything; he moved quickly to fill the order.

He scribbled the docket and beckoned to the assistant at the next counter to initial it, then turned back to his shelf to select and wrap up the pens. His procedure was wrong, I noted with some annoyance; according to our regulations, he should have had the pens laid out beside the docket before it was checked. For a moment I watched his broad back, his sleek head lowered between the shoulders, his elbows moving . . . his hands weren't in sight. His hands weren't in sight! strange how that rang a bell in my memory.

As a boy long ago, I had once brought home some bad fruit; the shop assistant had packed the bag with his back turned and his hands out of view, and I had lacked the hardihood to challenge him. My mother's indignant reaction had made the incident unforgettable.

Now I was watching Smith; he was turning back to his customer with his little parcel. Behind him the shelf with the expensive range - the five-guinea pens whose names are household words - was as near to him as the cheap line. That bell tinkled faintly again in my sub-conscious mind; how easy it would be to mix the different brands at stocktaking, especially when the pigeon holes weren't labelled. At stocktaking . . . or at any other time? The customer was a nice-looking, well-dressed character; perhaps there was something too smooth about his smile, too taut about his lips? Was there something indefinable in the atmosphere, or was I just being over-imaginative? Did the customer's drawled "Thanks a lot', have a note of smug amusement, or was it just normal courtesy?

I stepped briskly round the corner of the high stand into Smith's section, half expecting that my arrival might precipitate some action or gesture to crystallize my whirling impressions. No such luck. A quick but polite 'Good morning, sir', came from Smith (rather too startled, perhaps?). The customer turned on his heel and departed abruptly, but then why wouldn't he if he wanted to (no possible justification for accosting him, surely?). In a moment he was lost to view, and with him vanished the chance of examining that unchecked but perhaps highly informative parcel.

I asked Smith nonchalantly 'Who was that?' and he answered that he really had no idea, before moving briskly to greet another customer. The episode was over.

Only something shone in Smith's hard eyes that I couldn't put a name to, something watchful, and at the same time defiant and hostile. But he has a good record for years past... am I justified in suspecting on such flimsy imaginings? Shall I be wronging him if I report it up the line without a shadow of evidence? Am I morally entitled to damn his character on mere intuition?

But I'm convinced that in league with that smooth customer, he's running a pilferage scheme which accounts for that low profit margin.

# Finance and Commerce

# **Full Story**

\*FIGURES in a balance sheet can never tell the whole story' remarked Mr E. W. Pasold at the annual meeting of Pasolds Ltd, whose accounts form this week's reprint. Pasolds is the 'Ladybird' children's wear concern and at the annual meeting a share-holder asked: 'From various Press comments, it would appear that the company's growth has slowed down. Is this so?'

The question was prompted by the fact that trading profits were only some £10,000 to the good after having risen regularly by a considerably higher figure in previous years. Hence the Press comment to which the shareholder referred.

Mr Pasold answered 'Not at all. Figures in a balance sheet can never tell the whole story. The extra earnings from the increased turnover could have been used to swell our trading profit, but instead we decided to plough most of them back in the form of research, developments in the use of man-made fibres, and improved quality of our merchandise.'

Answering another question Mr Pasold said 'Manmade fibres have tremendous potentialities for us and we have spent a great deal of effort and at least £50,000 on development work. This is a non-recurring expenditure. The knowledge we have gained and the novel plant it has enabled us to construct will prove an excellent investment.'

# Begin Higher

No doubt the £50,000 and more will prove an excellent investment but it is the kind of figure which should come out in the company's accounts and not in a 'question and 'answer' session at the company meeting, more particularly if it is a special non-recurring item.

There is something in what Mr Pasold said. Accounts cannot always tell the whole story but they should tell enough to make this type of question unnecessary. 'Improved quality of our merchandise' is something that cannot be translated into figures in the profit and loss account. It could involve the use of higher quality raw materials, still better production of the article – but a non-recurring £50,000 on development work is not intangible. It needs no translation.

Although he put a round figure on development spending, Mr Pasold put no figure on the research spending through which the company is 'inventing and building all kinds of machines to improve manufacturing methods and increase efficiency in all departments'. Such a figure would have provided a

fuller answer to the shareholder's question on profit growth.

The real answer is to begin the profit and loss account much higher up the earnings ladder and to show where income went and not what the end product of trading profit was.

# Little Budget

THE accounts of J. Mandleberg & Co (Holdings) Ltd for the year to March 31st, 1962, show a trading profit of £312,842 as compared with £391,109 in the previous year. 'And it is right', says Mr R. G. Cooke, the chairman, 'that our shareholders should know that almost one-half the drop in profits is directly due to the Little Budget.' The greater part, if not all, of the balance, he adds, 'can be attributed indirectly to Government policy'.

This is a more-than-usual direct connection of lower profits with the Little Budget of July last year. Mr Cooke points out that the Chancellor's aim was to cut consumer spending. Less spending led to increased competition and thus to lower margins. And, secondly, he points to the 28 per cent increase in costs of fuel, the Little Budget's impositions and the 30 per cent rise in Bank rate. '30 per cent' puts a new angle on a Bank rate change.

The company is a big name in rainwear 'both' pretty and practical' and its rubber and plastics division has an important place in those fields, covering such widely diversed products as life rafts and industrial protective clothing.

#### Solution

THE Triplex Holdings accounts for the year to June 30th, 1962, cleverly solve the problem posed by a revaluation of assets undertaken just after the end of the financial year – on July 2nd. The parent and group balance sheet figures are provided in columnar form against a single narrative with comparison on a blue background on what would normally be the right-hand edge of the page.

The page, however, is extended by a flap which, when turned over, covers the 1961 comparative figures and provides the parent and group balance sheet figures as at July 2nd, taking the revaluation into account. The main differences between the June 30th and July 2nd group figures are an increase from £2,341,569 to £4,795,204 in fixed assets and an attendant increase from £863,203 to £3,318,803 in reserves.

Mr Joseph Steel, the chairman, explains that land and buildings were revalued by professional valuers on the basis of 'vacant possession and planning permission for industrial use excluding any development value'. For plant, present-day replacement costs were estimated and were then written down taking into account the number of years each item had already been in use, their future estimated lives and the effect of technical improvements in similar plant and machinery now available.

(b) Depreciation included an amount of £8,210 in respect of Special Depreciation on Land and Buildings.

6. PROPOSED DIVIDENDS

M. Pasold, Joint Managing Directors, have waived the dividend recommended on the whole of their holdings of "A" Ordinary Shares. Such dividend would have cotalled £20,454, after deduction of tax, and is excluded from the proposed dividends in the accounts.

7. 5½% FIRST MORTGAGE DEBENTURE STOCK 1959/79
The Company is required to make annual provisions for the partial redemption of the Stock.

CONTINGENT LIABILITIES—in respect of partly paid shares in overseas subsidiaries were:— Pasolds Ltd, D. Marks 11,000; a subsidiary, D. Marks 4,000.

9. CONTRACTS FOR CAPITAL EXPENDITURE
Forward commitments not provided for in the Accounts are estimated to amount to £112,600. FOREIGN ASSETS AND LIABILITIES
 The book value of assets and liabilities of the overseas subsidiaries have been converted into sterling at the rates of exchange ruling at 31st, March 1962.

481

# CITY NOTES

PAR from turning on the re-expansion mood in the investment markets the Chancellor of the Exchequer has apparently induced a mood of deflation to the Stock Exchange. Hopes of an early Bank rate reduction have receded very considerably following Mr Maudling's references to the difficult external position and the dangers inherent in too forceful a development of home demand.

The gilt-edged market has lost its strength and the equity sections, formerly buoyed up by the firmness in the funds, have turned decidedly easier. While industrial company news has not been entirely discouraging, it is appreciated that what encouraging news on profits and dividends there has been, has come lately from specialized companies whose results are not necessarily a line to the general trend of industrial earnings.

With a busy season of industrial company profit and dividend announcements ahead, the market in equities is open to 'disappointments' particularly in cases where there has been some recent support on longer term re-expansion grounds. Company results are likely to bring the equity market face to face with current facts whereas in the past few weeks they have been optimistically indulging in hopes for the future

Considered opinion is that, despite receding B rate hopes, there is stronger basis for fixed interest investment than there is for support for the equity markets. That view is taken on economic grounds -Common Market and General Election uncertainties tend to reinforce it.

# Current Law

# Hotchpot Directions in Will

HE testatrix in Re Slee, Midland Bank Executor and Trustee Co Ltd v. Slee and Others ([1962] 1 All E.R. 542) directed that in the distribution of her net residuary estate the beneficiaries should bring into hotchpot any benefits which they had received in certain funds over which the testatrix had powers of appointment.

Following Re Wills, Dulverton v. Macleod ([1939] 2 All E.R. 775), and Re Hillas-Drake, National Provincial Bank Ltd v. Liddell ([1944] 1 All E.R. 375) in preference to Re Mansel, Smith v. Mansel ([1930] 1 Ch. 352), Cross, J., held that the funds in question should be valued as at the date of actual distribution, not at the date of the testatrix's death;

that interest at 4 per cent on the amount of the advances should be added to the income actually received between the date of death and the date of actual distribution and the resulting income figure divided among the beneficiaries, the advanced beneficiaries being debited with interest at 4 per cent on their advances; and that on the distribution of the capital the amount of the advances should be added to the sum actually in the hands of the trustees to be divided together also with the amount paid by way of death duties on the funds in question other than the residuary estate. The gross sum was then divisible between the beneficiaries, the advanced beneficiaries being debited with their advances. In this way the incidence of duty was evenly spread.

# Operative Signature not Attested

N In the Estate of Bercovitz, Canning and Another v. LEnever and Another (Siemer van Hemert and Others intervening) ([1962] 1 All E.R. 552), the Court of Appeal affirmed the decision of Phillimore, J., ([1961] 2 All E.R. 481) that the testator's will was not

duly attested. He signed it at the top and also at the end, but the witnesses' signatures were subscribed to the testator's signature at the top of the will only.

The circumstances of their subscription were stated in these columns on November 11th, 1961. The argument in the Court of Appeal that the learned judge had failed to have proper regard to the maxim omnia praesumuntur rite esse acta and should have applied the presumption of due execution was rejected on the ground that the maxim was relevant where the evidence was consistent with the intention to do some formal act having been carried into effect in a proper way, whereas the evidence, which Phillimore, J., accepted, in the present case was not consistent with the intention to execute the will in the proper way.

# Charge of Annuity on Trust Fund

WO quite different points arose for decision in Re Chance, Westminster Bank Ltd v. Chance and Others ([1962] 1 All E.R. 942). The first question was whether certain annuities were a continuing charge on income or were only payable out of income of the year in respect of which they had accrued. The testator directed that the income of his residuary trust fund be held on trust (a) to pay his wife an annuity of £800 per annum which he directed should become a first charge on income and capital; (b) without recourse to capital, to pay each of his four children an annuity of £208 per annum; and (c) subject to (a) and (b), to pay the balance (if any) of the income from the trust fund to his wife. The doubt which arose was as to whether the annuities in (b) were a continuing charge on income so that in case of deficiency in any year or years they were payable out of the income of the other year or years, or whether they were payable in respect of each year only out of the income of that

Wilberforce, J., held that the annuities in (b) were a continuing charge to this extent, that in so far as they were not satisfied in one year they must be made up out of the income of future years: but that, in view of the express direction in (c) that the balance of income was to be paid to the widow, surplus income in any year should not be retained to meet deficiencies of income in future years.

# Apportionment between Capital and Income

The second question in Re Chance was concerned with the apportionment between capital and income of sums of money which were received by the trustee by way of capital and income compensation under section 14 (1) of the Town and Country Planning Act, 1954, and which fell into residue. Under the will the trustee held the residuary estate on trust for sale and conversion with power to postpone sale and so that any reversionary interest should not be sold until it fell into possession unless the trustee saw special reason for sale; and the testator expressly directed that his trustee should, at the earliest date after his death, but entirely at the trustee's discretion, sell and dispose of any property which was not income-producing or showed an income of less than 2 per cent per annum. The trustee was authorized to retain all or any properties showing a fair interest and required to invest the residue in trustee securities. There followed the direction for the payment of annuities out of the income of the fund to which reference has been made above, the clause in question containing a specific reference to income of investments authorized to be retained including the unconverted part of the residuary estate.

Rejecting an argument that these provisions had the effect of excluding the application of the rules as to apportionment, Wilberforce, J., held that the Rule in Re Earl of Chesterfield's Trusts ((1883) 24 Ch.D. 643) applied to the sums of compensation received, and accordingly that each payment must be apportioned as a whole, capital and interest together, the basis of calculation being that so much of the payment of principal and so much of the payment of interest as, if laid out with compound interest computed at 4 per cent per annum with yearly rests (less income tax) from the date of the testator's death, would have produced at the date of receipt the sum received should be treated as capital and the rest as income.

# Non-registration of Charging Order

"HIS note on Re Overseas Aviation Engineering (G.B.) Ltd, supersedes that inadvertently published in last week's issue which only dealt with the proceedings in the High Court. The proceedings in the Court of Appeal have now been reported ([1962]

3 All E.R. 12).

The appeal, by the judgment creditor, was in fact dismissed, but the Court of Appeal (Lord Denning, M.R., and Harman and Russell, L.JJ.) unanimously overruled Pennycuick, J.'s, decision that the charging order obtained by the judgment creditor required for validity registration under section 95 of the Companies Act, 1948. Their lordships found nothing in section 35 (3) of the Administration of Justice Act, 1956, which was apt to constitute a charging order conferred by section 35 (1) a 'charge created ... by a company' for the purposes of section 95 of the Companies Act. On the contrary, the reference in section 35 (3) of the Act of 1956 to registration under the Land Charges Act, 1925, and the Land Registration Act, 1925, indicated that no other kind of registration was necessary for validity. Moreover, it would not be natural to alter without express words the law relating to limited companies, or to place upon a company, as an artificial person, a requirement which was not in similar circumstances required of a natural person.

Pennycuick, J., having decided as he did, it was not necessary for him to answer the second question put to him, namely, whether the judgment creditor was

# FOR STUDENTS

# EXECUTORSHIP LAW

#### Variable Definitions

DEFINITIONS have an unhappy habit of varying for different purposes. No sooner is a definition learnt than it must be modified in a particular case. A number of examples can be found centred upon estate duty – most of them dealing with matters that are particularly important from an examination point of view.

#### Settled property

As a general rule the term 'settled property' applies to property settled upon persons in succession. In an executorship problem the assets of the estate may include an interest in property settled in this way. The interest may be one of three varieties:

- (a) The testator may have been the life-tenant of the settled property; i.e. he may have enjoyed the income from the property either solely or with others.
- (b) He may have had an interest contingent upon the happening of a certain event or upon his surviving to a certain age.
- (c) He may have had a reversionary interest or an interest in remainder; i.e. he may have been entitled to the property once all prior interests were satisfied.

The settlement giving rise to such an interest may have been *inter vivos* or testamentary and, in the former case, may have been made by the testator himself or by another person.

From the point of view of our original definition, all three interests are interests in settled property and should be classified as such. When, however, we are computing the duty payable they are not all dealt with in the same way.

In (a) duty is paid by the trustees of the settlement on the value of the property released by the death of the life-tenant. (Any 'cesser of interest' is settled property in this sense.) In (b) the interest is unlikely to survive the deceased, in which case, as he had no vested interest, no property passes on his death and no duty is payable. (Where his interest is vested but not to take effect until some future date, then it will pass with his estate and duty will be payable by the trustees as in (a) unless, of course, the interest is an interest in remainder.) In (c) the duty is payable by the estate on the present value of the expected remainder with an option to defer calculation of the duty until the interest falls in.

The foregoing deals with the incidence of duty. The next point to consider is aggregation. Where property other than settled property is less than £10,000, then the settled property is not aggregated with it for purposes of fixing the rate of duty.

At this point the definition breaks down. Reverting to our three examples above, (a) is settled property for non-aggregation purposes only provided that the deceased was not the original settlor or supplied the funds of the settlement. Nor would it be counted as settled where the testator was in any way able to dispose of his interest either in his will or by a power given in the settlement. The same would apply to (b).

As for (c), such an interest is rarely contingent; it is something of which the interested party is nearly always competent to dispose and would therefore be free, and not settled, property for aggregation purposes.

# Law of Commorientes

Another example of a definition not applying for all purposes arises from the law of commorientes. This states, briefly, that where two persons die in circumstances where it is impossible to state who died first, then it is assumed that the younger survived the older.

Though this still applies for purposes of determining succession, it is ignored for duty purposes and in the circumstances stated both persons are presumed to have died at the same instant.

# Gifts and advances

A third and final example concerns advances made inter vivos. Advances must be considered as:

- (a) gifts inter vivos eligible for duty;
- (b) advances to be brought into hotch-potch on an intestacy;
- (c) advances that may extinguish part or all of a legacy by virtue of the doctrine of satisfaction.

In each case the question of what is an advance will be answered differently.

In (a) an advance (being a sum given freely to any person) is dutiable if made within the previous five years (twelve months for charitable donations). For such purposes advances do not include those which were:

- (i) made in contemplation of marriage;
- (ii) part of normal expenditure and reasonable with reference to the income of the deceased;
- (iii) of less than £500 to the same donee (£100 where it includes settled property).

Advances for the purpose of hotch-potch (b) are not the same as for the purposes of duty. They are payments by a parent to a child of part of the portion that the child would otherwise have received on the death of the donor. The amount or purpose is not important provided the sum is substantial and of permanent benefit to the child, e.g. an amount given in consideration of marriage, or to set the child up in business. In a partial intestacy benefits taken by children under the will may rank as advances to be brought into account on the final distribution.

In (c) the purpose of considering advances is to prevent the giving of double portions to beneficiaries. The relevant cases are those where the testator, having left a sum of money to a person in his will, makes a subsequent gift of the same or a lesser sum to the same person. The question is whether the gift extinguishes the legacy. For it to do so, the property subsequently given must be substantially the same as that comprised in the legacy and both must be certain (or both contingent) and subject to the same conditions. If the gift is to someone to whom the donor stands in loco parentis there is a presumption of satisfaction. In other cases the opposite is presumed.

# Notes and Notices

#### PROFESSIONAL NOTICES

Messrs Binder, Hamlyn & Co and Messrs Russell Tillett & Co announce that agreement has been reached for the amalgamation of the practices at present carried on by them in London, Manchester and Bradford. As a first step the present partners of Binder, Hamlyn & Co will be joined on January 1st, 1963, by Messrs D. J. Kean, T.D., F.C.A., and J. S. Copeland, A.C.A., in London, and by Mr E. Midgley, F.C.A., in Manchester. For the time being both firms will continue in being with their existing partners.

Messrs Broads, Paterson & Co, Chartered Accountants, announce that they have taken into partnership on October 1st, 1962, Mr C. R. Warman, A.C.A., Mr B. F. Emmerson, F.C.A., and Mr S. F. Phillips, A.C.A., who have all been with the firm for a number of years.

Messrs M. W. Burrough & Co, Chartered Accountants, of 10 South Street, Bridport, announce that as from October 1st, 1962, thay have taken into partnership Mr G. F. Burrough, A.C.A., and Mr K. L. Palk, F. C. A.

Messrs Graham, Smart & Annan, Chartered Accountants, of 22 Charlotte Square, Edinburgh 2, announce that Mr Reginald Sydney Brown, B.Com., C.A., has been assumed a partner of the firm as from October 1st, 1962. The firm name remains unchanged.

Mr W. A. HARRISON, F.C.A., announces that as from October 1st, 1962, he has been joined in partnership by Mr D. F. Byrne, B.A., F.C.A., and Mr D. A. PALMER, A.C.A., and that the practice will be continued at 1 Triangle Chambers, Upper Richmond Road West, East Sheen, London SW14 under the style of W. A. HARRISON & Co. The practice carried on at Kingston upon Thames by Mr D. F. Byrne and Mr D. A. PALMER in partnership under the style of Byrne, PALMER & Co, remains unaltered.

Messrs Keith Paterson & Co, Chartered Accountants, of 139 Norfolk Street, Sheffield 1, announce that as from October 1st they have admitted into partnership Mr D. B. Shaw, A.C.A., who has been previously a member of their staff.

Messrs Howard Smith Thompson & Co, Chartered Accountants, announce that they have taken into partnership Mr A. C. S. Hordern, A.C.A., as from September 30th, 1962.

Messrs Starkie & Naylor, Chartered Accountants, of 10 East Parade, Leeds 1, announce that they have taken into partnership Mr P. L. Wood, A.C.A.

Messrs Warmsley & Roberts, Chartered Accountants, of 56 Ainsworth Street, (Refuge Assurance Building), Blackburn, announce that as from October 1st, 1962, they have taken into partnership Mr Alan Hayes, A.C.A., who has been with the firm for the past eleven years. The name of the new firm will be Messrs Warmsley Roberts & Hayes.

Messrs Whitehill Marsh Jackson & Co, Chartered Accountants, of London and Birmingham, announce the opening of a branch office at 103 Promenade, Cheltenham, as from October 22nd next. Mr G. M. Raine, A.C.A., will be the resident local partner.

Messrs Charles R. Whitnall & Son and Messrs Frank W. Langley & Co, announce that they have amalgamated their practices as from October 1st, 1962. The combined practice will be carried on by Mr C. Dudley Whitnall, F.C.A., and Mr Frank W. Langley, F.C.A., under the style of Whitnall, Son & Langley, at 14 Tithebarn Street, Liverpool 2.

Messrs Arthur Young & Co, announce that Mr C. R. Warman, A.C.A., is returning from Indonesia to take up a London partnership, and that Mr B. F. Emmerson, F.C.A., and Mr S. F. Phillips, A.C.A., who have both been with the firm for a number of years, have been taken into partnership on October 1st, 1962.

#### **Appointments**

Mr H. Chesley Boyd, F.C.A., a partner in the Belfast firm of Atkinson & Boyd, Chartered Accountants, has been appointed to the Transport Tribunal for Northern Ireland.

Mr G. J. Brown, A.C.A., has been appointed secretary of N. Greening & Sons Ltd and assistant secretary of The British Wedge Wire Co Ltd.

Mr I. G. Buchan, c.A., a director of Samuel Osborn & Co Ltd, has been appointed secretary of the company as from September 29th, 1962, and Mr J. Burgoyne, A.C.A., A.C.W.A., accountant of the company, has been appointed a local director as from October 1st, 1962.

Mr George C. Hamilton, F.C.A., chief accountant and assistant secretary of John Crossley & Sons Ltd, has become secretary of the company.

Mr K. M. Hepburn, F.C.A., has been appointed President of The British Waterworks Association for 1962–63.

Mr H. V. G. Upton, F.C.A., has been appointed general manager finance and accounts of Shell-Mex and B.P. Ltd.

# INDEX TO THE JENKINS REPORT

An index to the report and the minutes of evidence of the Company Law Committee has now been published. The index includes a table of cases and a list of witnesses who gave oral evidence to the Jenkins Committee whose report was published on June 21st last. Copies are obtainable from H.M.S.O., price 2s (by post 2s 4d).

The minutes of evidence, consisting of the oral evidence and the written evidence to which it referred, were published separately, between November 9th, 1960, and June 14th, 1961. They are available from H.M.S.O. in nineteen parts, price £4 5s.

# BIRMINGHAM AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

The next meeting of the 1962-63 session of the Birmingham and District Society of Chartered Accountants will be held on October 17th, when Professor H. C. Edey, B.COM., F.C.A., Professor of Accounting in the University of London, will give an address on 'Education for accountancy'. Other meetings have been arranged as follows:

November 12th: Sherry party for new members of the Society.

November 19th: 'Unit trusts', by Mr O. P. Stutchbury, manager, Save and Prosper Group of Unit Trusts.

December 3rd: 'Productivity with relation to wages and work study', by Mr J. N. Collis, F.C.A. (This meeting is in connection with the National Productivity Year.)

January 4th, 1963: Annual dinner at the Grand Hotel. January 28th: "The chartered accountant in the 1960s', by Mr T. A. Hamilton Baynes, M.A., F.C.A.

February 18th: Joint meeting with the Association of H.M. Inspectors of Taxes.

March 29th: Annual ball at Solihull Civic Hall.

April 24th: One-day conference at Birmingham University.

Except where otherwise indicated meetings will be held at the Queens Hotel, commencing at 6 p.m. Tea will be served from 5.15 p.m. onwards to members obtaining tickets from the Chartered Accountants' Library, 36 Cannon Street, Birmingham 2.

# NORTH LONDON DISCUSSION GROUP

The first meeting of the 1962-63 session of the North London Discussion Group of Chartered Accountants will take place at the Hotel Russell, Russell Square, London WC1, on Wednesday next, October 17th, at 6 p.m. for 6.30 p.m. The subject for discussion will be 'Some thoughts on the capital gains tax', leader Mr B. R. Pollott, M.A., F.C.A. New members and visitors will be welcome. The honorary secretary of the group is Mr P. D. Knox, A.C.A., Somerset Cottage, Duxhurst, near Reigate, Surrey.

# THE INSTITUTE OF INTERNAL AUDITORS Yorkshire Chapter

The next meeting of the Yorkshire Chapter of The Institute of Internal Auditors will be at The Grand Hotel, Sheffield, on October 16th, at 7.30 p.m., when the speaker will be Mr Bradford Cadmus, Director of Research and Education of the Institute who is making a world tour and will be visiting Chapters in four continents. The subject of Mr Cadmus's address will be 'Internal auditing in the world of today—and the future'.

Non-members will be welcome and further particulars regarding the Chapter's activities may be obtained from Mr A. E. Gardner, Divisional Internal Auditor, National Coal Board, Ellers Road, Bessacarr, Doncaster.

Mr Cadmus will also address a meeting of the Birmingham Chapter on Monday next, commencing at 6.30 p.m. at The Queens Hotel, Birmingham. Readers wishing to attend the meeting are asked to advise the secretary of the Chapter, Mr R. J. Lucas, West Midlands Gas Board, 5 Wharf Lane, Solihull. Telephone: Solihull 4861.

# THE CHARTERED ACCOUNTANT STUDENTS' SOCIETY OF LONDON

# **Next Week's Meetings**

The following meetings of the London Students' Society will be held during next week:

Monday, 'Practical aspect' lectures for Intermediate students, at the Institute: "The accountant's place in an industrial organization', by Mr E. H. Davison, F.C.A., financial director, General Electric Co Ltd; "The work of executors and trustees', by Mr D. H. Johnson, M.A., A.I.B.; 'Costing', by Mr J. B. Charles, F.C.A., F.C.W.A.; 'Accounting for management', by Mr Christopher I. Bostock, M.A., F.C.A.

5.30 p.m. at the Institute: Lecture on 'Making the most of your staff', by Mr H. T. Sharpe, B.COM., F.C.A., F.C.I.I., chief accountant, Beacon Insurance Co Ltd.

Tuesday, 'Practical aspect' lectures for Intermediate students, at the Institute: 'The practical view of auditing', by Mr S. J. D. Corsan, F.C.A.; 'Banking practice', by Mr G. I. Williamson, chief foreign manager, Midland Bank; 'Stock exchange practice', by Mr C. H. Dreyfus, member of the Stock Exchange.

5.30 p.m. at the Institute: Lecture and demonstration of Kalamazoo accounting methods (limited number).

Wednesday, 'Practical aspect' lectures for Final students, at the Institute: "The chartered accountant and accounting mechanization', by Mr Kenneth G. Bishop, A.C.A., chief accountant, Yardley & Co, Ltd; 'The finance of foreign trade', by Mr P. J. Shaw, assistant chief foreign manager, Midland Bank; 'Economic effects of taxation', by Mr A. R. Ilersic, M.SC. (ECON.), B.COM. 6 p.m. at the Institute: Joint debate with Westfield

6 p.m. at the Institute: Joint debate with Westfield College on "This house considers that marriage leads to bondage". '59 Club' discussion on 'Education and training,' with the District Society Management

Discussion Group.

Thursday, 'Practical aspect' lectures for Final students, at the Institute: 'Building societies - their functions and financial structure', by Sir Bruce Wycherley, M.C., F.C.I.S., managing director, Abbey-National Building Society Ltd; 'Assurance and insurance', by Mr S. R. Fenwick, F.C.I.I., manager, Home Accident Department Prudential Assurance Co Ltd; 'Receiverships and bankruptcy practice (including deeds of arrangement)', by Mr Leslie Cork.

5.15 p.m. at the Institute: Introductory course lecture on 'The fundamentals of accountancy', by Mr R. J. Carter, B.COM., F.C.A., secretary of the Students' Society.

#### SEVENTY-FIVE YEARS AGO

From The Accountant of October 15th, 1887

A Weekly Note

RECENT events in the Insurance world confirm the correctness of the opinion several times expressed in these columns, that sooner or later, and sooner rather than later, it would be exceptional to find a British Life Office whose accounts were not professionally audited. At extraordinary general meetings of the shareholders in the Briton Medical and General Life Association several resolutions were passed and confirmed, with the object of revising and improving some of the clauses of the supplementary deed of settlement of the Association. Amongst other changes which these resolutions will effect, will be the audit of the accounts by three auditors, one, who must be a shareholder, called the shareholder's auditor; another, who must be a policy-holder, but not necessarily a shareholder, called the policy-holder's auditor; and, as the third, "a chartered accountant, or firm of chartered accountants, who shall undertake to audit the accounts of the Association at least four times in his or their year of office, and who .... shall be called the directors' auditor." presume the practice of appointing auditors to represent different classes of persons interested is too well established to be departed from; though the custom implies some possibilities and probabilities which in a strict, impartial, and competently conducted audit would scarcely arise. In practice the auditor who, in this case, is called the "directors' auditor" no doubt really does the work and takes the responsibility.

7.15 p.m. at Reading: Lecture on 'The European Free Trade Area and The Common Market', by Dr C. R. Curtis, M.SC. (ECON.), PH.D., F.C.I.S.

Friday, 5.15 p.m., at the Institute: Introductory course lectures on 'The profit and loss account and balance sheet', by Mr R. J. Carter, B.COM., F.C.A., secretary of the Students' Society and 'The English judicial system (II)', by Mr Patrick W. Medd (Barrister-at-law).

# Debate on Decimals

HILE informed opinion is solidly in favour of the United Kingdom adopting decimal coinage — subject to any insuperable difficulties which the Committee of Inquiry now sitting under the chairmanship of Lord Halsbury may (but is not likely to) discover — two large practical questions have yet to be settled. The first is the choice of a suitable system. There are three main possibilities: that which retains the pound with either 100 or 1,000 sub-units; the 10s/cent system; and the 8s 4d/penny system. The first of these remains faithful to the pound and the third to the penny. The second abandons both. The second question is how best to effect the change-over with the minimum of expense and disruption not only to the big business of commerce but also the small business of everyday life.

Both questions were examined in some detail at a conference on decimal coinage held in Guildhall, London, on Friday of last week by The Chartered Institute of Secretaries. Some four hundred members of the Institute and kindred professional bodies attended when, in addition to addresses by five speakers, a panel of experts dealt with questions put to it by the delegates present. The standard of the papers submitted and of the questions and answers was on the highest level and the Institute is to be congratulated on promoting such a successful meeting.

One of the most stimulating contributions to the proceedings was a spirited defence of the pound by a banker, Mr E. P. JAGGARD. Second thoughts have led many, including the Councils of the English and Scottish Institutes of Chartered Accountants, to the conclusion that the ros/cent system would be the most suitable for the United Kingdom to adopt, but Mr JAGGARD believes that recently in other authoritative quarters there has been a reaction in favour of the pound. He bases his own case on the proud international reputation of 'the pound sterling' and thinks that, London being a recognized financial centre, a radical change in currency denominations might upset the confidence which traders all over the world have in its long and highly respected monetary system.

The experiences of a country which did drop the pound in favour of a principal unit of ten shillings were graphically described by another banker, Mr H. R. Reed. Despite initial irritations, the new system appears to be working well but the problems involved in South Africa were mainly domestic. Its pound had not the international significance and prestige of the British pound. It is the possible conflict between these considerations, international and domestic, which the Halsbury Committee will have to weigh up in making its recommendations.

# Short-term Gains - XV

# SHARES IN LAND-OWNING COMPANIES

ERHAPS the most complicated provision in the short-term gains legislation is section 14 of the Finance Act, 1962. It is directed against a possible avoidance device, but there is no doubt that it will hit far more innocent people than guilty ones. The section contemplates a taxpayer who wishes to avoid Case VII tax on a speculation. Instead of acquiring the asset himself, he causes it to be acquired by a company. He then sells the shares in the company. Having held the shares for the statutory six months, he avoids tax. This device is open in the case of assets other than land, but section 14 will counter it only in the case of land. Of course, the easiest avoidance device of all is to wait for the statutory period to elapse; there are no provisions, complicated or otherwise, for countering that.

The most obvious target of section 14 would be the following:

- (1) A. owns all the share capital in X. Ltd, a dormant company.
- (2) He has held them for at least six months and therefore can sell them, in the ordinary way, without Case VII liability.
- (3) A. wishes to buy Blackacre and resell it at a profit within the statutory three years.
- (4) A. procures X. Ltd to buy Blackacre.
- (5) A purchaser for Blackacre is found.
- (6) Within three years after (4) A. sells all the shares in X. Ltd to the person wishing to acquire Blackacre.

In those circumstances, one has to compute the Case VII gain which X. Ltd would have made if it had itself sold Blackacre for a price equal to its market value. Since A. has sold all the issued capital, the whole of that Case VII gain is attributed to A. and he is charged accordingly. If the notional Case VII computation shows a loss, however, A. will not be entitled to relief in respect of it. The application of section 14 by no means depends on A. owning all the share capital; a very small holding may attract liability, but in that case the amount of Case VII profit attributable

to it is scaled down accordingly. Before dealing with the extent to which A. has to be interested, or with the apportionment of the notional Case VII liability it will be convenient to deal with some restrictions on the scope of section 14.

The land in question must of course be 'chargeable assets'. It will be recalled that certain property, such as a factory used by a manufacturing company, is not chargeable assets<sup>1</sup>. The company owning the land must comply with the definition in section 14 (6) of a 'land-owning company', and it must also be under the control of not more than five persons. We will deal with these two requirements separately.

# A land-owning company is one

- (i) not trading as dealer in, or developer, of land (and therefore not already chargeable under Case I on its profit on the sale of land);
- (ii) entitled to land being chargeable assets;
- (iii) with a market value equal to or exceeding onefifth of the net value of all the company's assets.

The original draft of section 14 (6) defined 'net value of all its assets' as 'their value less the value of the debts and liabilities of the company'. To gild the lily, an addition was made at the report stage, when 'net value of a company's assets' was further defined to mean

'the net value they [sic] would have on a sale in the open market of the company's business as a going concern'.

This additional definition contains no provision for the deduction of debts and liabilities, and therefore seems to contradict the earlier definition. 'Market value' is defined in section 16 (1) to mean

'the price which that property might reasonably be expected to fetch on a sale in the open market'.

The land (being 'chargeable assets') must be valued, for the purpose of the 'one-fifth' test, free of any liability charged on it. The value of land (or interests in land) which the company has

<sup>&</sup>lt;sup>1</sup> Finance Act, 1962, section 11 (4); The Accountant, July 21st, 1962.

unconditionally contracted to dispose of, is disregarded. On the other hand, account is taken of the value of land (or interests in land) which the company has unconditionally contracted to acquire. There is ample scope here for manipulation by means of contracts, which are only technically conditional, or unconditional, according to the requirements of the case.

Having established that the company is a landowning company, it remains to ascertain whether it is under the control of not more than five persons. For this, one applies the familiar test applied for surtax direction purposes by section 256 (2) (3) of the Income Tax Act, 1952 (Finance Act, 1962, section 16 (1)).

As indicated above, in the simple example given, it was not necessary for A. to own all the shares in X. Ltd. It would be sufficient if, immediately before he disposed of any shares in X. Ltd, he had a 'substantial interest' in X. Ltd. According to section 14 (7), A. is to be deemed to have a substantial interest in X. Ltd if one-tenth or more in market value of the issued shares is held

- (i) by A.; or
- (ii) partly by A. and partly by persons 'connected with' him.

In the original draft, the fraction was onetwentieth but the Government shied away from this when members and lobbyists pointed out that many a shareholder with only a 5 per cent interest of his own, let alone in company with persons connected with him, may well have not the slightest idea about the company's property deals.

When are persons 'connected with' each other? Elaborate rules are laid down in paragraph 20 of the Ninth Schedule. It begins by declaring that any provision that one person is connected with another is to be taken as meaning that these two persons are connected with each other (paragraph 20 (1)). 'Person' includes both individuals and companies, but only the former, of course, can have spouses and relatives. For the sake of brevity we will ignore this obvious fact. A person, then, is connected with:

- (i) his spouse;
- (ii) his partner;
- (iii) his relative (i.e. brother, sister, ancestor, lineal descendant);

- (iv) the relative of his spouse or partner;
- (v) the spouse of any of the persons in (ii), (iii) and (iv):
- (vi) (in his capacity as trustee)
  - (a) the settlor of the settlement of which he is trustee; and
- (b) any person connected with such settlor; (vii) (in relation to any company)
  - (a) any person(s) with whom he acts together to secure or exercise control of the company;
  - (b) any person acting on the directions of any of the persons in (vii) (a) for that purpose.

'Settlement' and 'settlor' have the same very extended meanings as are given to them by section 403 of the Income Tax Act, 1952.

The above is a résumé of paragraph 20 (1) (2) (3) (4) (7) (8), which applies to individuals and juridical persons, subject, of course, to the fact that only individuals can have spouses or relatives. Paragraph 20 (5) (6) is confined to questions of persons connected with companies, which companies are defined in section 16 (1) to include any body corporate. If a person (individual or not) has control of a company, either alone or together with persons connected with him, then he is connected with the company (paragraph 20 (6)). Subparagraph (5) is confined to the question of whether company A. is connected with company B. They are connected if

- (a) (i) the same person has control of both; or
  - (ii) one person has control of one, and persons connected with him (or he together with those persons) have control of the other;
- (b) (i) the same group of two or more persons has control of each company; or
  - (ii) one group controls company A. and another group controls company B. but both groups could be regarded as the same by treating a member of either group as replaced by a person with whom he is connected (or by treating two or more members in this way).

The absurdity of introducing such complicated provisions into what began effectively as only a voluntary tax hardly needs stressing. It has to be borne in mind that everyone is presumed to know the law. If, by applying these rules, a person is chargeable to Case VII tax, then he is bound to make a return of the Case VII income; even though he may not have the slightest idea of any such liability, and still less of how to compute it

(To be continued.)

# The Use of Acceptance Sampling Techniques in Audit Work

by K. A. SHERWOOD, A.C.A.

VER since the time in the latter half of the nineteenth century when the professional auditor began to appear on the scene, it has been realized that the complete check of bookkeeping entries was not essential to a good audit. With the fairly small trading businesses of that time, it was not unusual for the auditor to check all the entries, especially as in many instances he also had to balance the books. With the passing of the Companies Act, 1900 (under which it became compulsory for companies to have auditors), and the growth of commerce and industry, the auditor found the task of testing every entry in the books well-nigh impossible and devised various rule-of-thumb methods for cutting out unnecessary tests of details. At first, work on personal ledgers was cut to a minimum, especially where accurate control accounts were kept. In more recent years, other tests have been reduced to more manageable proportions. Nowadays, the auditor rarely considers it necessary to check every entry in a client's books and records. The considerable cost of an exhaustive test would 'normally far outweigh the risk of material errors being overlooked.

But how far should the auditor reduce his tests? What are the rule-of-thumb methods at present in use? Perhaps some or all of the following points may be considered:

- A. The number of entries that could be checked (termed in this article 'population').
- B. The time necessary to check each entry as compared with the risk of accepting as correct a population which exceeds a pre-specified error level or of rejecting a substantially satisfactory population.
- C. The relative importance of individual errors that might exist in the accounts under audit as compared with the degree of error which the auditor is willing to accept as reasonable without the accounts needing amendment.
- D. The existence or otherwise of adequate internal control.

In practice, however, such a decision is more usually based on experience – the only effective criterion of the rule-of-thumb method. As a result, in any given circumstances there are

differences of opinion between individual practitioners, partly due to the difficulty of interpreting the above factors so as to give a practical basis for the extent of each test. Acceptance sampling enables these difficulties to be overcome.

# **Acceptance Sampling**

Three of the four factors outlined above are capable of mathematical interpretation thus enabling the statistical interpretation of the results of audit tests. The fourth factor – internal control – can be assessed broadly from an internal control questionnaire. Further attention will be paid to this later, under 'Inspection levels'.

Meanwhile let us examine the three other factors with a view to determining the mathematical basis for an audit test.

A. The size of the population: It is a statistical fact (which the writer will not attempt to prove here) that as the number of items in a population increases, the size of an adequate sample does not increase in proportion. For very small populations it will probably be necessary to check a large proportion of the items, whereas a population of 10,000 items may only require a 2-3 per cent test. Therefore, before choosing a sample it is necessary to know the approximate size of the total population.

At this point, further mention should be made of the two technical terms 'population' and 'item':

- (i) A 'population' may be defined as a collection of homogeneous items prepared by one person or by a number of persons in a similar manner and extending over the period under review. (For the internal auditor this might be a single day or week—the external auditor would normally cover a full year.) Where there are subsidiary companies or branches, the population might include several companies or branches if the test of homogeneity can be satisfactorily applied, e.g. a highly centralized business.
- (ii) An 'item' is the individual unit with which the auditor is concerned, e.g. extended values on stock sheets, daily banking in a cash receipts book. Theoretically each transaction or its resulting value or liability forms the item of

population, but the auditor must decide the most appropriate item for his test. For example, a punched-card listing of ledger balances usually shows in detail all invoices and credit notes outstanding, but the true 'item' in the population is the net balance outstanding rather than the individual entries on the ledger card

B. The length of time necessary to check each item and the specified risk factor in sampling: The auditor here compares cost as against risk, a factor which varies from client to client as well as between individual tests.

There would seem to be no valid reason for the auditor to restrict his test because an item is difficult to check; on the other hand, an easy test ought not to be extended simply because it is straightforward. The risk factor should be predetermined by the auditor; it is normally expressed as two percentages:

- (a) the risk of accepting as satisfactory a population which is unsatisfactory, and
- (b) the risk of rejecting as unsatisfactory a population which is satisfactory.

The latter might seem of little interest as most auditors would undertake further testing before qualifying their report, but its existence does prevent the auditor jumping too quickly to wrong conclusions.

- C. The relative importance of errors discovered and the acceptable error risk:

  (i) The auditor has to decide the relative importance of each error he discovers. At present the auditor assumes (possibly incorrectly) that the rate of error in the items tested equals that in the whole population; if the rate of error is excessive he extends his test or on occasion requests the client to re-check until he is either satisfied that sufficient items have been re-checked (and corrected) or that he must qualify his report. Often the auditor does not even calculate the error rate but makes a subjective judgment on the errors noted by his clerks.
- (ii) For the purposes of acceptance sampling the auditor must specify his acceptable error rate in advance; if, however, certain items will have more importance than others in a population he may use different error rates for different parts of the population. For example, in vouching purchase invoices he might use the following acceptable error rates:

Under £1,000 - 2 per cent Over £1,000 - 1 per cent Capital items - Nil

Each group of purchase invoices will then form a

different population and a different test, although in practice such tests will be combined.

- (iii) When the auditor specifies a particular error rate he should ask himself whether he is thinking in terms of 'items', e.g. 2 per cent of individual debtors in error; or in terms of value, e.g. 2 per cent of errors in the value of debtors. Both concepts are important but only the first can be used easily in acceptance sampling; the second requires the application of 'stratification', a principle well known in the profession (although not by that name) and summed up by the audit instruction 'Test all items over f(x)'. It goes without saving that errors in small items must be numerous before materially affecting the accounts; an error in only one large item may seriously affect the situation. The proper application of stratification to acceptance sampling has hardly reached the experimental stage and much work remains to be done.
- (iv) The auditor must define precisely what he means by error and set down on paper the main kinds of error possible in each individual test. For example, the testing of additions of an analysed purchase day book can give rise to only one error, namely, wrong additions; but in testing the carry-forwards the auditor may discover that the totals of two analysis columns have been switched quite a different sort of error but often discovered at the same time. An error of analysis on entry into a day book may be a clerical error in entering a pre-analysed invoice or an actual error in analysing the invoice.
- (v) When deciding on an acceptable rate of error, the auditor should remember that he also makes errors. He can, of course, guard against such errors by giving comprehensive instructions and employing sufficiently experienced staff; nevertheless, errors may still be overlooked and with this in mind the auditor may specify a lower acceptable error rate.

# Sampling Plans

Once the auditor has specified the population size, the degree of risk he will accept and the error rate, he can proceed to choose a 'sampling plan' by which to carry out his audit test, using either one of a number of published tables¹ or direct calculation. First, however, he must decide whether to use: single sampling; double sampling; multiple sampling; sequential sampling.

<sup>&</sup>lt;sup>1</sup> Sampling Procedures and Tables for Inspection by Attributes, Department of Defence, Washington, 1950; Sampling Inspection Tables, by Dodge and Romig, John Wiley & Sons, London and New York, 1944.

# Single sampling

From one of the published tables a sample size and acceptance number for the specified risk and error rates and population are obtained; the acceptance number is the highest number of errors which can be accepted without rejecting the sample level. If the errors in the sample exceed the acceptance number, the population must be rejected.

# Double sampling

In double sampling, the tables give in addition to a sample size and acceptance number a rejection number (the rejection number in single sampling is one above the acceptance number). If the number of errors equals or is less than the acceptance number, the population is accepted on the first sample; if the number of errors equals or exceeds the rejection number, the population is rejected on the first sample; if the number of errors is higher than the acceptance number but less than the rejection number a second sample is drawn with a new acceptance and rejection number which this time are sequential as in single sampling.

# Multiple Sampling

In multiple sampling, a third, fourth or even more samples can be drawn by a similar method to that outlined under double sampling.

# Sequential Sampling

This may be most easily regarded as multiple sampling with each sample consisting of a single item, i.e. after testing each item in the population a decision is taken as to whether to accept or reject the population. Such a decision cannot be taken, of course, until a minimum number of items has been examined.

#### Advantages and disadvantages

The main advantage of double, multiple and sequential sampling over single sampling is the smaller initial sample size; the disadvantage is that a far higher number of items may need to be examined before the population is finally accepted or rejected. For most auditing applications, double sampling is recommended although in certain work the drawing of a single sample may be the most practical method to follow, e.g. debtor confirmation. The use of multiple and sequential sampling in audit work gives rise to practical difficulties although where there is extensive testing necessary of individual items, it could be of definite value.

# **Inspection Levels**

Where good internal control exists or the risk of non-discovery of errors is not so important, the auditor may specify a greater risk of accepting an unsatisfactory population; this is known as a reduced inspection level and requires a relatively smaller sample. At the same time, he will reduce his acceptable error rate; as soon as one error is discovered, however, the ordinary level of

inspection must be reverted to.

On the other hand, where there is very poor internal control or it is important that the risk of non-discovery of errors should be reduced to a minimum, a tightened inspection level is specified with a relatively higher sample. Again if the error rate is low or non-existent, an ordinary inspection level can be reintroduced with the possibility of reversion to the tightened inspection level if, for example, the specified error rate is ever exceeded.

The proper use of inspection levels is a highly skilled job and variations in the inspection level should not be made without due regard to the implications.

# Selection of Random Sample

Throughout this article, use has been made of the word 'sample' without further definition. In order to be able to specify his risks, the auditor must draw probability samples, the type which we have discussed being 'unrestricted random samples'; these are of necessity random and therefore completely unbiased in every respect. One method of selecting such a sample is by the use of random number tables although these involve a lengthy pre-listing of numbers before the sample can be easily selected from a client's records. Alternatively, only the first item in the sample is selected at random, subsequent items being at a constant frequency from the previous number (e.g. 5, 12, 19, 26, etc.); the frequency is so selected that the sample is drawn from the whole population and not just a small section of it. It may be simply calculated by dividing the estimated population by the sample size.

The rules of sample selection can be applied with value to ordinary test checking procedures even if the technicalities of acceptance sampling are not used. The rules may be briefly summarized as follows:

- (1) The test should incorporate a review of the whole year (or other period under review) rather than be confined to a single week or
- (2) Where the minimum period for a test is one

month, each month should have an equal chance of selection; tests for 'window-dressing', 'cutoffs' and other year-end adjustments should be separated from the test of routine entries so as to eliminate any bias towards the last month.

(3) As far as possible 'items' for testing should be specified rather than periods, e.g. petty cash voucher entries rather than one week in the petty cash book; the extent of the test should always be given, e.g. 'Test 150 petty cash youchers chosen at random'.

#### Conclusion

This article has attempted to explain the application of acceptance sampling to routine auditing. The introduction of such techniques is a sizeable operation and should be spread over a period of several months. As a preliminary stage, information on the population and sample sizes and the number of errors found should be obtained on audit files to form a basis for the necessary decisions on error rates and risk factors.

Secondly, a sampling table (which will specify only one risk factor) should be chosen or sample sizes directly calculated. This may be a lengthy job requiring concentrated study. Finally, audit staff will require instruction in the basic principles of acceptance sampling and the additional information required on audit working papers.

Acceptance sampling will not necessarily reduce audit costs but it will avoid unprofitable work. It will enable the auditor to satisfy himself that sufficient work has been done to prevent any possible charge of negligence and to assess the accuracy of the detailed work behind a set of accounts. If used intelligently it will prove to be the auditor's servant rather than his master, an aid of immeasurable value in the routine work of an audit.

# Investment in Stocks and Shares - I

by A. G. TOUCHE, F.C.A.

# Types of Investor

INVESTORS in stocks and shares can be broadly divided according to their tax status, and also according to whether there is a sharp distinction between income and capital. This paper will consider, with emphasis on the statistical approach, the viewpoints of the gross fund ('o per cent taxpayer') such as a pension fund or charity, the standard rate payer ('40 per cent taxpayer') such as most individual investors, and the highest-taxpayer ('90 per cent taxpayer'). Companies, though paying profits tax, will be included in the middle group of 40 per cent taxpayers. For simplicity approximate rates of tax will be used.

2. We shall consider the attitude of the pension fund and the individual, where capital and income belong to the same person, and the attitude of the trustee of a trust where the beneficiaries interested in the income are distinct from those who will eventually have the capital of the fund. To the pension fund and the individual there is little difference between capital and net income, particularly where the income is reinvested; they are, as investors, solely concerned with increasing their wealth, regardless of whether the increase takes the form of net income or capital. Hence the purchase of national savings certificates and endowment assurance, which produce no income but do produce increase of capital, even by individuals who are not liable to tax.

# Types of Investment

3. In its widest sense 'investment' has many meanings, ranging from the purchase of a factory to

speculating on the results of association football matches. Here we are concerned only with long-term stock exchange investments, which are primarily divisible into 'equities' and 'money stocks'.

4. Equities, otherwise ordinary shares or common stocks, represent the ownership of the assets and profits of companies after all prior claims have been satisfied. Often the assets are 'real' (as opposed to 'money') assets, such as factories, plant, stock-intrade or goodwill; hence equities tend to represent real values as opposed to money values, and provide some protection against a decline in the purchasing power of money.

5. Money stocks are claims expressed as sums of money, regardless of its purchasing power. Stocks that must be paid off at a fixed date, or at any time between two fixed dates, are known as 'redeemable'.

Mr A. G. Touche, F.C.A., the author of this paper presented at the Oxford Summer Course of The Institute of Chartered Accountants in England and Wales, is a partner in the firm of Touche, Ross, Bailey & Smart, of London. He was admitted to membership of the Institute in 1951.

3m (w Others may be perpetual or repayable after a fixed date at the borrower's option; the former are known as 'irredeemable' and the latter are in practice often equivalent to irredeemable. Until repayment the holder normally receives interest.

# **Money Stocks**

- 6. Two and a half per cent Consols is the classic irredeemable money stock. At a price of  $£38\frac{1}{2}$  the buyer of £100 nominal of stock buys a perpetual income of £2 10s each year; the yield on cost is  $6\frac{1}{2}$  per cent. This yield may seem high, but irredeemable stocks are at present unpopular because of fears of inflation. Perhaps we can regard 4 per cent as a fair rate of interest and the extra  $2\frac{1}{2}$  per cent as being some offset against inflation, or amortization of purchasing power.
- 7. The o per cent taxpayer buying  $2\frac{1}{2}$  per cent Consols at  $38\frac{1}{2}$  nets  $6\frac{1}{2}$  per cent from his investment, the 40 per cent taxpayer 3.9 per cent, and the 90 per cent taxpayer 0.7 per cent. When they sell they will get back their capital, or make a capital profit or loss, depending on the then price of  $2\frac{1}{2}$  per cent Consols.
- 8. Redeemable money stocks have varying lengths of life till redemption, and varying coupon rates. 'Coupon' means rate of interest on nominal capital. With an irredeemable stock the gross yield is:

the coupon rate 
$$\times \frac{nominal\ value}{price}$$

For a redeemable stock this calculation gives the 'flat' or 'running' yield (i.e. the yield received each year). But this is not the complete yield because, where the present price differs from the amount payable on redemption, the flat yield makes no allowance for the capital profit or loss on redemption. Other bases on which the yield can be calculated are:

- (a) Gross redemption yield. This is the rate of interest at which the sum payable on redemption and all future years' gross income must be discounted to give a present value equalling the market price. If the flat yield is 3 per cent and the gross redemption yield 5 per cent, the gross redemption yield postulates that the 2 per cent notionally saved each year is reinvested with compound interest at 5 per cent. This yield is the significant yield to the o per cent taxpayer, except where the net United Kingdom rate of a redeemable preference share is less than the standard race.
- (b) Net redemption yield. This is the rate of interest at which the sum payable on redemption and all future years' net income (after deducting tax at the investor's rate) must be discounted to give a present value equalling the market price.
- (c) Grossed-up net redemption yield. This is the net redemption yield grossed-up at the rate of tax applicable to the particular investor. Whilst

- the annual interest received is liable to tax, the capital profit (or loss) realized on redemption is tax-free (or disallowed); unlike the gross redemption yield, the grossed-up net redemption yield grosses up at the investor's tax rate the capital profit (or loss) on redemption. The grossed-up net redemption yield is useful for comparison with the gross yield from irredeemable stocks; however, with its huge yields this concept is unrealistic for the 90 per cent taxpayer, and for him the net redemption yield is more appropriate.
- (d) Where the capital eventually goes to a remainderman and the income meanwhile goes to a life-tenant, capital and income should be considered separately. From the life-tenant's viewpoint the flat yield is relevant; the compound rate of interest at which the capital will grow until redemption is what concerns the remainderman.
- 9. The tax status both of the investor and of the source of income materially affects yields. The o per cent taxpayer cannot recover more than the net United Kingdom rate of income tax. The profits-taxpayer must pay profits tax on chargeable income out of his net income after income tax; the cost of profits tax in terms of gross and net running yield is:

$$\frac{20s}{20s - standard\ rate} \times rate\ of\ profits\ tax$$

which gives a cost of 25 per cent where income tax is 40 per cent and profits tax 15 per cent. Appendix 1 shows various yields for different taxpayers from representative money stocks.

#### Inflation

- 10. Unfortunately the investor must take into account the future rate of inflation and judge its effect on his investments. A long-term rate of interest of  $6\frac{1}{2}$  per cent may allow  $2\frac{1}{2}$  per cent for annual inflation; if  $2\frac{1}{2}$  per cent a year is in fact the rate at which money will depreciate in future, the o per cent taxpayer is covered and gets 4 per cent effective interest. But the 90 per cent taxpayer will get no effective interest, after allowing for inflation, on a money stock unless the grossed-up net redemption yield exceeds 25 per cent.
- 11. After Hitler's war companies and individuals found themselves with liquid resources (money, gratuities, savings certificates and short-term Government stock) that they had earned during the war but had not been able to spend because of the shortage of goods. Housing, clothes, cars, machinery, etc., needed renewing; capacity was not available to meet the demand; and rationing was necessary to restrain prices and to permit an equitable distribution among the whole community of such goods as were available. As supply came more nearly into balance with demand, rationing could be lifted. But the post-war

demand inflation, or too much money chasing too few goods, inevitably raised prices: there was a sellers' market and increased costs could easily be passed on to the consumer.

- 12. In 1962 we find ourselves in a very different situation. The pent-up demands that could not be satisfied during the war or for years after have now been met; there is unused capacity in industry; and we have a buyers' market. The ratio of money to the national income has materially declined: the economy is no longer liquid but on a tight rein. But we have a relentless increase in the cost of labour, and consequently in the cost of goods and more especially of services. Cost inflation, slower but persistent, has taken the place of demand inflation.
- 13. The price of labour responds to economic circumstances in the same way as that of any other commodity. If labour is in short supply, its price goes up and it is hoarded. In a free economy, in peacetime, rationing of labour and control of its price are unacceptable; yet it is difficult to see how an incomes policy can be effective without them. The degree of unemployment necessary to ensure a steady price for labour is politically impossible even if it were economically desirable, which many would dispute. Furthermore, even were there a sizeable margin of unused labour, the cost of labour in use might well still rise, because of the power of the trade unions: a monopoly controlling a vital commodity can increase its price, even where there is spare capacity, provided that all the capacity is under its control. Were the home market thrown open to competition from abroad, there might be restraint on cost inflation if the rate of inflation is less overseas than at home; but if labour is also in short supply abroad, economic forces will have a similar effect there.
- 14. Obstacles may be placed in the way of cost inflation, but they can only delay, not stop, costs from rising. Natural forces will insist that in the long run the price of labour will rise. If we divide all work very inexactly into two types, that where productivity does increase ('industry') and that where it does not ('nurvices'), we can see what chance the obstacles will i and This division is inexact, because there is in fact scope for improved productivity in many services. If the nation's production of goods and services in relation to the number of people consuming them rises by 2½ per cent, average incomes can rise by 23 per cent without affecting prices. But if there is any pay rise for those in services, the cost of services, as here defined, must rise; however, there will be no overall rise in prices if an adequate part of the increased productivity of industry is applied in reduction of the selling price of goods. This measure of restraint seems to be a pious hope: industry will not be keen to reduce prices; labour in industry will want a greater share in increased productivity than overall price stability can permit; on grounds of comparability labour producing services will want

- the same rise as is obtained in industry; the rise in the cost of services, inadequately offset by reduced prices for the products of industry, will provoke further claims because the cost of living has risen; because of the general shortage of labour, employers will bid up its cost, a phenomenon known as 'wage drift'.
- 15. The obstacles to cost inflation must be placed by the State, whose concern is to see that the balance of overseas payments is satisfactory. Provided others inflate no slower than we do, the State is happy and sterling is safe from devaluation. The State, however, as the biggest debtor, has a vested interest in inflation: it receives more from taxes and can grant tax reliefs, costing nothing in real terms, and the burden of the national debt in real terms constantly diminishes. But the balance of payments, and the expense of a vast payroll for services, are some check on the State's interest in inflation. Labour on the other hand is not concerned with the balance of payments or devaluations: pay rises in excess of rises in productivity increase labour's share of the national cake. Labour naturally wants the largest possible share of the largest possible cake, and is not interested in the money units in which the cake is quantified - the decimal point can be moved one place to the left from time to time when the currency unit gets too light.
- 16. In short, the investor can reasonably expect cost inflation to continue. He must decide what rate to allow in his calculations; and the rate he decides on must be covered by his net income after tax or by expected appreciation in the money value of his capital. If creeping inflation, sometimes called reasonable stability, is here to stay, the long-term rate of interest (i.e. pure interest plus inflation amortization) will probably remain at an apparently high level:
- 17. We must now consider the effect of these two types of inflation on equities. During the period of the sellers' market, increases in costs could be passed on to the consumer; companies had no difficulty in maintaining comfortable profit margins; and unreal profits were shown by accounts, which included stock profits and excluded depreciation on the difference between the current and historic values of fixed assets. But now in a buyers' market these factors no longer operate, except the inadequas depreciation charge: there is intense compression and overcapacity; it is difficult to raise prices; and costs rise relentlessly and squeeze profit margins. However, there must be some minimum long-term profit margin if companies are to stay in business; many companies may be near that level now.
- 18. Perhaps the outlook is now one of almost profitless prosperity. That does not sound too cheerful for equities, but on the other hand their traditional risk has probably been eliminated: although the particular equity can still go bad, the risk of equities in general being massacred by a major slump is now

very small. The State must now maintain full employment and, in the event of a slump, would spend money of its own creation to provide jobs. Its willingness to use the antidote to slump of more State spending is a great comfort to the investor in equities. And social changes since before the war have reduced the chance of the antidote's being needed: a great proportion of present demand – the State's spending of much of the national income, and the greatly increased purchasing power of the masses – is unlikely to be reduced. Although companies may not be very prosperous, they must be prosperous enough to continue giving employment.

# Yardsticks for Equities in General

- 19. Viewing the equity market, the investor must make a number of decisions:
  - (a) Whether equities in general are high or low in price in the short-term. This is a very difficult question, because prices are governed by what people do, not by the careful reasoning of one particular investor. At a time when the outlook for profits is gloomy, investors may buy in anticipation of the gloom dispersing; it is no use being shrewd enough to wait for a ray of hope to appear if no one else is waiting.
  - (b) Whether equities in general are high or low in price taking a long-term view of their prospects, regardless of what the short-term prospect for their prices might be. If prices on a long-term view seem reasonable, it is probably not worth worrying much about the short-term view.
  - (c) Whether a particular equity is reasonably priced in relation to equities generally.

20. The Financial Times index of industrial ordinary shares is the most widely used measure of the level of equities generally. The dividend yield from this index can be expressed as a percentage of the yield from 2½ per cent Consols, and the consequent figure was once considered to be a confidence indicator – an indicator, that is, of confidence in equities. The indicator was an inverse measure of confidence in equities: the greater the confidence, the lower the figure. Until 1959 this indicator was always more than one hundred, meaning that the yield from The Financial Times index was greater than that from 23 per cent Consols; the difference in the yields was known as the 'yield gap'. When the indicator came down to near one hundred a warning was sounded that equities were getting too dear; the indicator did in practice work. The yield gap, however, has since 1959 been a negative figure; and therefore the indicaror is less than one hundred and The Financial Times index yields less than 2½ per cent Consols. The gap is now called the 'reverse yield gap' suggesting that it is a temporary phenomenon, but with the loss of confidence in money the reverse yield gap is likely to persist. What was formerly called the yield gap should now be called the reverse yield gap, and vice versa. The present yield gap can be justified negatively because money is an unsound store of value, or positively because of expected growth in dividends. The yield gap will always be a factor of great importance to the investor, but he must not be dogmatic as to the conclusions he draws from it.

21. Probably the most significant indicator of danger to equity prices today is the ratio of the number of unemployed to unfilled vacancies. When the labour market is getting very tight, the State is obliged to impose restrictions if inflation is to be contained; these may have an adverse effect on equity prices. The investor, however, needs great restraint not to buy equities at a time when there is a highly inflationary atmosphere; but there is always the risk that the State will not act to damp inflation, with sad results for those whose investments are linked to money.

# Yardsticks for Individual Shares

22. The first yardstick used to assess an individual share is the dividend yield, which is calculated in the same way as the flat yield from a money stock. A high yield indicates an income stock, from which slow or no growth is expected; a low yield indicates a growth stock or a well-covered dividend, from which increasing dividends are expected. The yield from a particular share can be expressed as a ratio of the yield from an equity index (e.g. The Financial Times index); this yield ratio is an inverse measure of the esteem in which the share is held, and of the expectation of growth in dividends in excess of that from the index. Changes in the ratio may come from a change in the proportion of profits distributed as well as from a change in the basic circumstances of the share; but changes in the yield ratio, over both long and short periods, and both of individual companies and of whole industries, are of great interest.

23. The earnings yield, being the dividend yield multiplied by the number of times the dividend is covered, is even more important than the dividend yield. It, too, can be expressed as a ratio of the earnings yield of an equity index; but this ratio is less reliable than the dividend yield ratio, because earnings fluctuate from year to year more violently than dividends. If earnings retained are used by a company profitably enough, the increased capital employed will generate more profits (and probably more dividends) in the future; so for the long-term tax-paying investor an earnings yield higher than the flat yield from 21/2 per cent Consols is prima facie evidence that the share is a better buy than 2½ per cent Consols. In the United States earnings yields are expressed as price/ earnings ratios. What we call a 5 per cent earnings yield is called a twenty times P/E ratio, though it must be remembered that we mean earnings before income tax whereas they mean earnings after all company taxation. We sometimes use P/E ratios instead of earnings yields: goodwill may be expressed as valued at four years' earnings instead of on an

earnings yield basis of 25 per cent. Earnings yields are more readily comparable with dividend yields than P/E ratios and are therefore more useful. On the other hand P/E ratios appear to be a more sensitive indicator: for example, the difference between P/E ratios of fifty and eighty seems greater than that between earnings yields of 2 per cent and 1½ per cent.

24. If it is thought that creeping inflation and, more optimistically, real growth will cause profits to rise gradually in the long run – and the long-term trend of profits should follow what appears to be the inevitable trend of wages – gearing, sometimes called leverage, is highly desirable. The greater the proportion of profits required to service prior charges (preference capital and long-term borrowings), the greater is the gearing. In the last decade the equity of many investment trust companies derived great benefit from gearing, but as a result we now often find little gearing left: the spring is unwound. A simple illustration will show the benefit of gearing: if

50 per cent of a company's profit is needed to service the prior charges, 50 per cent is left for the equity; if the profit rises by 50 per cent all that increase belongs to the equity, whose profit has thereby doubled. If debentures cost 7 per cent interest a year and a company can earn 12 per cent on new capital employed, the equity can get a turn of 5 per cent by the employment of more debenture money. Furthermore, though profits may rise, debenture interest remains fixed; issuing more equity and paying increasing dividends is equivalent to raising money at rising rates of interest. The maximum gearing consistent with prudence is to the equity's advantage, provided that earnings trend upwards.

25. Gearing is usually measured by means of priority percentages. The net profit, after tax but before charging net debenture interest, is called one hundred; and the net debenture interest, net preference dividend, and net ordinary dividend are converted into percentages of that net profit. The

hundred is then treated as being divided into slices, the debenture interest taking say nil to eight, the preference dividend say eight to twenty, the ordinary dividend say twenty to sixty, and retentions sixty to one hundred. The ordinary dividend and retentions both take 40 per cent, so the dividend takes half the earnings available for the equity. This method is not precise, because it does not allow correctly for the effect of profits tax: debenture interest is better covered than it appears to be. Nor does it show the effect of concealed gearing: a company that rents its premises has a prior charge just as does the company that owns them but finances them by issuing debentures. The nature of some businesses, where the break-even point is high, may cause profits to be volatile, and high gearing would then be dangerous.

26. Sales and profit margins (net profit before tax as a percentage of sales) are of great interest, but often unobtainable. The profit margin obtained over a number of years gives an indication of whether increased costs can be absorbed; a high profit margin in a competitive trade is a sign of efficiency. The trend of sales may indicate whether the company is increasing its share of the market.

27. Net profit before tax expressed as a percentage of capital employed is an essential statistic. The effect of research and development and of the delay before new fixed assets become profitable must be considered. A company that retains much of its profit, but merely maintains its earnings per share, is obtaining a declining return on capital employed. It is probably better to consider the return on total capital employed (i.e. issued capital, reserves, and long-term borrowings) than on equity capital employed (i.e. issued ordinary capital and reserves); the degree and effect of gearing will be shown by the priority percentage and by the long-term trend in earnings per share. It will be realized that accounts based on historical cost may give rise to misleading conclusions; investors therefore welcome a revaluation of fixed assets and the consequently increased depreciation charge.

The investor wants from his equity the maximum long-term dividends; earnings retained should, if profitably employed, give rise to growing dividends, so earnings in this event are as valuable as dividends. From the ordinary shareholder's viewpoint, all decisions by directors should be judged according to their effect on the long-term earnings per share (whether expressed as a percentage of nominal value or as so much money per share) as adjusted for capitalization and rights issues. Size, diversification, empire-building and mergers are of no value to the investor if they do not increase longterm earnings per share - this must be slightly qualified, for short-term reduction in earnings per share may be justified by improved quality (i.e. safety and growth) of earnings. To see the growth of earnings (and dividends) in the past, it is necessary to make various adjustments to the figures that come from the published accounts:

(a) Capitalization issues require the earnings per share in previous years to be multiplied by

number of shares outstanding before capitalization issue number of shares outstanding after capitalization issue

This formula explains the principle, but in practice a more direct approach is feasible: for example, if the issue is one for five, the previous years' earnings must be multiplied by §. This is the same as multiplying by

# price after capitalization equivalent price before

which is similar to the adjustment to be made for rights issues.

b) Rights issues of ordinary shares usually contain an element of so-called bonus. This means that the ex-rights price of the existing shares is greater than the issue price of the new shares, which will therefore go to a premium over the issue price. We are sometimes told that a rights issue is 'on generous terms', meaning that the new shares will go to a premium and the issue will therefore be taken up. It is as untrue to say that a rights issue gives anything to shareholders as it is to say that a capitalization issue gives them anything, apart from possibly increased marketability of their shares. Rights issues and capitalization issues may coincide with an effective increase in the dividend, but that is a different point. A rights issue merely relieves the shareholders of a sum of money; if the issue price is low, value in excess of the issue price is transferred to the new shares from the old, just as capitalization shares have value solely at the expense of the old shares. 'The truth of this can be easily shown. The market price of X. Ltd's £1 ordinary shares is £5; X. Ltd wants to raise as much new money as it has ordinary capital in issue, i.e. £1 per share. It is immaterial to the shareholder whether X. Ltd has a one for five issue at £5 per share, a two for five issue at 50s, or (a splendid bargain to the ignorant) a one for one issue at 20s. In all examples the shareholder who takes up his rights puts up fix for each share held and has the same proportionate stake in the company as he had before. Earnings before years in which rights issues are made must be multiplied by

# ex rights price<sup>1</sup> equivalent cum rights price

to eliminate the bonus element in rights issues; the effect of this adjustment is to show how a

<sup>1</sup> i.e. The price at the end of the first day of dealings in the new shares so that the impact of the rights issue is reflected in the price.

shareholder fares who never puts up more money but always sells enough rights to take up the balance. The following examples, based on the alternatives previously mentioned, show the calculation of equivalent cum rights prices from given ex rights prices:

Ex rights price Less: Issue price	1 for 5 at £5 100s 100s	2 for 5 at 50s 85s 9d 50s od	for 1 at 20s 60s 20s
Premium over issue price	Nil	35s 9d	408
Cost of premium to each old share (i.e. value of rights in each cum rights share) (½×r		(%×35s 9d) 14s 3d 85s 9d	( <sup>1</sup> / <sub>1</sub> ×40s) 40s
Ex rights price	2001	85s 9d	l 6os
Equivalent cum rights		<del></del>	
price	1002	100s od	1008
=			

(c) Mergers and take-overs paid for by the issue of shares cause grave distortion to the record. An extreme example will illustrate this: a merger on the last day of a company's fiscal year causes a doubling of the issued equity; post-acquisition profits will be nil, and the apparent earnings per share will be halved. This can be adjusted by calculating the earnings on the average number of shares outstanding during the year. The past record should perhaps be adjusted to incorporate the results for past years of the new acquisition.

29. The adjustment explained in 28 (b) raises the interesting question of the timing, quantity, and desirability of rights issues by companies. We have seen that, if a company wants to raise a given amount of new equity capital, it is immaterial, apart from the question of underwriting, whether few shares are issued at near the market price (possibly followed by a capitalization of the resulting share premium account) or more shares are issued at a lesser price. To study the effect of a rights issue, let us assume the issue of few shares at market price: if the market price is high (after absorbing the news of the rights issue), fewer shares need be issued to raise the required sum, so there is less dilution of earnings per share - the vital consideration - than when the market price is low. If too much new money is raised at a time, the supply of shares will for a time be excessive owing to the inability of some holders to take up their rights; so money to be raised should not be too great in relation to the market capitalization of the existing equity. And as to the desirability of rights issues, they are rarely desirable if the company has inadequate gearing and if the shares are valued on an earnings yield basis greater than the interest (after profits tax relief) that would be payable on a debenture.

30. It is regrettable that the calculations outlined above are not published by companies with the usual tables of past years' figures. Instead statistical services, brokers and other analysts do the work with greater or lesser degrees of accuracy, but certainly

with much duplication. Wasted skill would be saved and greatly improved investment analysis would be possible if companies were obliged to do for their shareholders all the calculations necessary for a satisfactory study of their investment. The calculations should be as uniform as possible; this could be achieved by a central semi-official body issuing detailed requirements, answering queries, and thereby building up a code of practice. Perhaps the auditors should report to the central body that they have verified that the company's published statistics comply with the current requirements.

- 31. Apart from the arithmetical factors and the marketability of the shares, the investor in equities must of course consider the more obvious points, which can be summarized as the quality, or prospects, of a company's earnings:
  - (a) The trade, the state of competition, the likelihood of over-capacity, the ease with which new entrants can enter the trade, the effect of the Common Market, etc.
  - (b) The political risks, such as nationalization, subsidizing of foreign competitors by governments, price control, taxation, etc.
  - (c) The country of operation: many of the countries whose need for capital is greatest have, by word or deed, rendered themselves unfit for investment. The effect of any double tax relief must be considered.
  - (d) Management: general impressions may be obtained from many sources, apart from the conclusions to be drawn from financial results. The cult of a chairman's personality, combined with constant repetition of his photograph, rarely inspires confidence in the management of a company, but perhaps the effect varies with each investor's temperament.
- 32. Interesting attempts are sometimes made to project future years' earnings per share. If sales figures are published, estimates are made of future sales and of the future profit margin. Estimates are then made of the additional capital required to support these sales; after consideration of the present liquid position, of the cash flow from retentions and depreciation, and of possible issues of prior charges, future rights issues are projected. The information is then available for calculating the future estimated earnings per present share. When sales figures are not available, the projections can be made on the basis of estimated future capital employed and the return from it. Although these projections may not be fulfilled, they are more valuable than projections based solely on earnings per share achieved in a sellers' market that no longer exists.

(To be concluded.)

# Weekly Notes

#### RETIREMENT OF MR ALAN S. MACIVER

AS previously noted in these columns, Mr Alan Squarey MacIver, C.B.E., M.C., B.A., Secretary of The Institute of Chartered Accountants in England

Mr Alan S. MacIver

and Wales since 1950 and previously Deputy Secretary and Assistant Secretary since 1935 retires at the end of this month.

The youngest of a family of fourteen, Mr MacIver was educated Shrewsbury Christ Church, and rowed in both his school VIII and in the Christ Church VIII. spending only a year at Church, Christ Mr MacIver was commissioned into the Fourth

Battalion, Lancashire Fusiliers (special reserve) in August 1914, being posted to France in May 1915. There he served with the Second Battalion, Lancashire Fusiliers until being shot in the eye in July of that year. After twelve months in the United Kingdom, he returned to France, where he joined the Twentieth Battalion, Lancashire Fusiliers – known as one of the 'bantam' battalions. He was later posted to the staff of the 104th Infantry Brigade where he remained until demobilization in 1919. He was awarded the Military Cross in 1918.

After the war Mr MacIver returned to Christ Church. He became President of the Christ Church Boat Club and stroked the Oxford B crew in the 1919 Henley Regatta. He was called to the Bar (Inner Temple) in 1922 and practised until 1925 when he was attracted into his family's shipping business—David MacIver & Co Ltd—which had become one of the companies in the Royal Mail Group. The company was liquidated on the reorganization of the group following the Kylsant débâcle and he was appointed manager of the new Royal Mail Lines in Liverpool, from which position he resigned after about six months.

He joined the Institute as Assistant Secretary in 1935 becoming Deputy Secretary ten years later and Secretary, in succession to Mr R. W. Bankes, C.B.E., B.A., in 1950. Mr MacIver has served under thirteen Presidents and has seen the membership of the Institute grow from a little over 11,000 when he joined to its present figure of over 35,000. He was

awarded the C.B.E. in the 1960 New Year Honours List.

During the last war, he was a Lieutenant-Colonel in the Intelligence Corps and served in one of the Military Intelligence Departments.

We are sure that our readers will join with us in extending best wishes to Mr MacIver for a long and happy retirement.

# COMPUTERS AND REDUNDANCY

SHELL-MEX & B.P. LTD have decided to transfer most of their financial and statistical work from divisional offices to two new computer centres. One of these is to be established at Hemel Hempstead and the other at a place in the north not yet decided. The public interest in this development is the way in which problems of rehousing and redundancy have been handled.

News of the move was announced to the staffs in all divisional offices simultaneously one day this week. At the same time leaflets were distributed showing shops, schools and houses in Hemel Hempstead which employees were asked to take home and show their families. A coloured film strip was also shown.

To help the staff to decide whether they will move with the company or not, the company hopes to arrange visits to the town for their employees and their wives to see the computer offices and to talk to employees already living in the town. Costs incurred in the move and the arranging of mortgages, where necessary, will be taken on by the company. Those unable to move will be given the chance to transfer to other jobs wherever this is possible. Where this cannot be done they will be given bonuses based on length of service and help in finding other jobs.

# ECONOMIC STIMULUS NEEDED

THE general picture supports the view that the economy needs stimulation, that the measures recently announced by the Chancellor are justified and some further action will probably be necessary in the near future.' Such were the conclusions of the latest inquiry into industrial trends by the Federation of British Industries, from a sample of nearly 700 firms, published last week. There was a further increase in the proportion of firms reporting underutilized capacity, while the run-down in capital expenditure continues. The majority of firms report that they expect to authorize less capital expenditure in the next twelve months than in the past year. There has also been a further fall in stocks of raw materials held by industry.

The picture revealed by the export trends inquiry was not quite so depressing; there was a significant increase in the number of firms which are more optimistic about their export prospects as compared with the results of the last inquiry four months ago. Prospects for orders in the E.E.C. and the E.F.T.A. are stated to be improving, but are declining in Latin

America and worsening still further in South-east Asia, India and Japan. Delivery dates are shortening and the majority of firms report that price is becoming

an ever more important consideration.

Commenting on the findings of the latest inquiry, the F.B.I. refers to the need for reducing industrial costs, mentioning in particular the fuel tax, and stresses the need for labour-saving investments in industry. In line with the views expressed in our leading article last week, the F.B.I. notes that 'the August trade returns coupled with doubts about the future balance of payments have prevented the Chancellor from adopting a more vigorous policy on expansion'.

### IMPROVED EXTERNAL TRADE POSITION

THERE was a useful improvement in the external trade figures for September. The results for August had been exceedingly disappointing although account had to be taken of the fact that the month was the peak of the holiday season.

In September, exports increased by £16 million on the month to £325 million. Imports were £378 million which reduced the trade gap to £41 million, the best figures since June. Re-exports were almost

unchanged for the month at £12 million.

The critical question now is whether exports can keep pace with what is likely to be a rising import trend in the next few months. The official target for exports by the end of 1962 was £330 million a month and it looks as though it will be touch-and-go as to whether this is going to be achieved. The exports to Common Market countries have been particularly encouraging of late and the maintained prosperity within the European Economic Community holds out some expectation that exports will remain buoyant.

Meanwhile, any further recovery in industrial output in this country must mean increased stocking by industry and this is likely to be quickly felt on the level of imports. Earlier in the year high imports of food and animal feedingstuffs played an important part in keeping imports high. More recently restocking by business of imported semi-manufactured goods has taken over. Slightly easier terms of accommodation from the banks are likely to make restocking rather more attractive and the import bill is likely to feel the strain.

### BRITISH COAL AND THE COMMUNITY

WHEN Mr Heath returned from his recent discussions in Brussels on the question of British membership of the European Coal and Steel Community, he expressed himself well satisfied with the results. The admission of the United Kingdom coal industry into the European Coal and Steel Community is a major issue for the members of that organization. In the eyes of the Community, the National Coal Board would be a powerful member.

This country mines about two hundred million

tons of coal a year and the production and distribution of it is entirely handled by the National Coal Board. By implication the National Coal Board has control over exports. Furthermore, thanks to the vociferous support of the National Union of Mine Workers, it has become the only importer of coal into the United Kingdom. Lately, the National Coal Board has been exceedingly successful, again backed by the unions, in controlling the importation of fuel. Altogether the National Coal Board's influence in the British fuel and energy market is an impressive performance when viewed from the standpoint of the Community.

In the case of France, for example, the *Charbonnages de France* has been specifically refused the control of coal imports. For the European Coal and Steel Community to accept the National Coal Board as a member would be taking on a very large and doubtless opinionated bedfellow. On the other hand the National Coal Board would have to remove any discrimination in its price policies and would have to publish price lists in accordance with the European Coal and Steel Community Treaty, Article 60. It would also have to modify its discrimination among buyers and provide free access to the British market for dealers coming from other Community countries.

Altogether the marriage of convenience between the National Coal Board and the European Coal and Steel Community is going to be a complicated arrangement which is going to take a little time.

### INVESTIGATION ON BUILDING PROCEDURES

THE Minister of Public Buildings and Works, Mr Geoffrey Rippon, has announced that he is going to set up 'a strong independent committee' to review urgently the present practices in placing and managing building contracts. This is to be one of a number of changes which the Minister is putting in hand to give effect to recommendations made by Sir Harold Emmerson, who reported on the organization of the construction industries for the Ministry last April. Sir Harold's report was concerned mainly with the inadequate communication which exists between the professions (meaning by that mainly architects, consulting engineers and quantity surveyors), the building contractors and subcontractors and suppliers of raw materials.

Emphasizing the important role which the building industry must play in the growth of the economy, the Minister gave five undertakings. The first of these was the setting up of the committee mentioned above. The second was to proceed further with the main recommendations of the Emmerson report. The third was to set in motion an examination of the tangle of legal controls on building operations. He also intends to promote so far as possible a greater standardization of materials and components, and to improve the number and quality of personnel in the industry while, finally, he wishes to create a sense of confidence by evolving long-term construction programmes.

It is the last of these which he will doubtless find

the most difficult. It has become the custom to use the 'stop-go' technique on the building industry to control the rate of expansion of the economy. In the recent past this technique has been used rather less brutally than before, but the decision to use it at all has not so far been the province of the Minister of Public Buildings and Works. The setting of minimum targets with some flexibility upwards is highly desirable from the point of view of the building and civil engineering industry but it will be the Treasury which decides whether these changes in technique are brought about.

### THE UNIVERSITY SCENE

THERE must be many readers with children currently working for their 'A' level examinations wondering whether their offspring will succeed in the increasingly competitive struggle for a university place. The situation is not helped by the fact that

university regulations fall short of the desirable standards of clarity and simplicity, while few schools are well equipped to advise their sixth-formers about university prospects. For this reason the new edition of the booklet University and College Entrance: the basic facts, prepared by the National Union of Teachers, is to be welcomed. There is an excellent introduction on the present pressure on the universities, as well as the facts of financing a boy or girl through college which will save many parental tears. For each college of university status in Britain, as well as the colleges of advanced technology, the entrance requirements for each faculty and the degrees offered are set out clearly and intelligibly. Any parent who is hoping to put his child through college in the next year or two will derive considerable help and guidance from this excellent booklet.

<sup>1</sup> From the National Union of Teachers, Hamilton House, Mabledon Place, London WC1, or any bookseller. Price 4s net.

# This is My Life . . .

by An Industrious Accountant

CHAPTER 142

I REMEMBER long ago going to the senior partner in the firm of auditors I was with to tell him that I had reluctantly decided to leave him. I had been offered the post of whole-time secretary/accountant to this big textile concern at a staggeringly enhanced remuneration, I explained; it was a big day for me.

There he sat behind his desk, the shrewd, kindly little man under whom I had worked for years, smiling benignly. Yes, he knew all about it. They had very properly consulted him first. He had congratulated them then, he explained overwhelmingly; he would congratulate me now. True, I was foresaking the profession, but he understood and forgave; our relations were most cordial; we shook hands warmly.

At length I broached a point which seemed important to me. I'd like a reference from him. It seemed to me to be a normal request, as I felt my record had been good. Adjectives such as 'diligent' and 'reliable' passed through my mind; 'tireless' or 'exceptionally talented' were not perhaps impossible.

'I'm very sorry; we don't give references,' he beamed, much to my surprise. I explained the desirability of keeping my personal file up to date; should I look for another job in a year or so, even in a couple of months if the new post should have unforeseen snags, prospective employers would be favourably impressed by a good testimonial.

'We never give references. Just ask them to telephone or write to me,' said the senior partner, still smiling blandly. I felt he was rather obtuse. He might be sick, or away on holiday; he might be reluctant to talk about an ex-employee's character to an unknown voice out of the blue. 'Don't worry,' he said. 'I'll look after that side of it.'

A silence fell. The eyes watching me seemed curiously flinty. I had an instinctive feeling that there was more here than appeared on the surface, that he'd been over this ground before. Was he reluctant to concede my independence, was he trying to keep a long-range hold over me? After all, any future application by me to another firm was my private business; why should he reserve the right to know about it? He might even be personally involved in some way; the passage of months might have changed our relationship adversely. Had he something held against me in the back of his mind, which he had shrewdly kept secret?

'As I see it,' I said deliberately, 'I'm morally entitled to a statement testifying to my satisfactory services and good record as at today's date. Your refusal may jeopardize my prospects in the future.

You're not being quite fair to me.'

'It's not quite as simple as that,' replied the senior partner. He hesitated momentarily, as if about to explain something, then decided against it. 'As we don't give references, you'll have to rely on the telephone. I'm afraid there's no more to be said on the point.' He probably read in my face my unspoken resolve never to use his name even in extremity; his own face looked suddenly tired. But I was really hurt by his refusal; my farewell was strained and almost hostile.

Opinions seem to differ on this point. The precedents of other professions are not really relevant to an accountant, who must rely on the degree of warmth of the reference's praises. I wonder what justice should decree in a case like this; how far beyond justice should comradeship go?

# Finance and Commerce

### Collingwood Group

THE Collingwood Group, whose accounts are the subject of this week's reprint, is one of the newer industrial holding companies and one, it may be stated at the outset, with a sound record based on keen management. Interests fall into three main divisions: retail, engineering and property investment and development.

The retail interests are in jewellery – the original company from which the present group has stemmed was – and still is for that matter – the Collingwood business of Middlesbrough. Development has brought the well-known Carrington company into the group

as well as a number of other concerns and individual jewellery retail businesses.

John Shepherd & Sons and S.M.L. (Engineers) are two of the principal engineering subsidiaries, John Shepherd being a leading name in the field of poultry equipment — not to be confused with broilers. Property investment and development is mainly in the hands of Dauphine Property Investments.

The accounts cover a year of increased earnings, the maintenance of dividend on an increased capital, and a point of particular importance in this type of organization, the achievement of a sound cash position.

### **Substantial Progress**

Collingwood Group's chairman, Mr Edwin H. Marley, M.B.E., T.D., F.C.A., is one of two accountants on the board, the other being Mr Everard Goodman, F.C.A. Mr Marley reports that negotiations for a number of acquisitions had reached an advanced state at the date of the report and, with the first six months of the current year having shown a satisfactory increase in group turnover and profits, he looks

for this year to show 'further substantial progress and record profits'.

The growth of the group now appears to have reached the stage where the directors should seriously consider providing a breakdown in earnings by divisions and also providing an indication of the extent to which profits included new earnings from acquisitions.

Note 7 on the accounts puts the annual earnings rate into perspective but in an industrial holding company it is useful to go further than that. Accounts of companies of this type are difficult to prepare, but profits by divisions and profits common to both years plus new earnings provide the basic requirements once the pattern of group development has been set.

### **Qualification**

IN some boardrooms there is still a guarded Lapproach to the publication of half-year figures. Seasonal earnings fluctuations and possible misinterpretation of the figures are two of the most often quoted reasons for deciding against giving share-

### CITY NOTES

THE September trade figures, although not as bad as those of the previous month, were hardly good enough to turn the equity markets from negative to positive optimism. There is, at present, a mood of negative optimism in the market based on the acceptance that profit margins remain under severe pressure, that order books need replenishing and that surplus capacity tends to grow, but also that the Government will 'do something about it'.

So far, the Chancellor has simply made initial moves in the credit sphere, but the Federation of British Industries has lately put the case for more positive action in the shape of incentive towards a higher rate of industrial capital investment and of scrapping the fuel oil duty in order to cut industrial

At the Conservative Party conference Mr Maudling gave little or no indication that he was prepared to go all out on the question of economic stimulus but the market lives in hope.

Meanwhile the latest report from the Common Market countries indicates a slowing down in the industrial growth rate with as many common industrial symptoms of over-production and rising costs as there are here. Within that situation the Chancellor may be able to introduce stimulants and may, as a result, be able to stimulate the stock-market. Whether he can stimulate industry and the economy is another

The equity market would certainly respond quickly to any new official moves but any sharp price rise might prove difficult to sustain.

The recent half-year statement from Transparent Paper Ltd, however, showed clearly enough how a few words of explanation can help in special circum-

holders an interim view of the way profits are going.

stances. The half-year figures showed trading profits at £310,000 against a comparable £379,000 and net profits at £73,000 against £112,000, the interim

dividend being maintained at 5 per cent.

The directors stated that for several reasons, including factory reorganization, group profits were lower during the first four months of the year, but improvement had since taken place. If the present profit rate is maintained, the statement added, the final figures will compare favourably with 1961.

Finally the directors said that they thought that to publish the half-year's figures without qualification would be misleading under the circumstances. It certainly would have been. But the need to qualify is so often taken as an argument against providing figures, that this example of figures plus necessary and adequate qualification deserves notice as an argument 'For' rather than 'Against' the provision of the interim profit view.

### **Estate Duty Reduction**

SIR, — We wish to refer to Mr Cyril Williams's article on 'Estate duty reduction' in your issue of September 29th, and particularly to the sentence 'if a charge is allowed to appear in favour of the surviving spouse its release will attract duty if within the statutory period'.

In a case of a recent death now before us, the estate consisting of realty and personalty (both settled) no duty has yet been paid on realty, but the bank have made an advance to the executors to enable them to pay duty on personalty. No realizations in the estate have been made in order to repay advances for duty. The inference which we feel can be drawn from Mr Williams's article is that if the surviving spouse pays (within twelve months of the first death) the duty on realty, and now puts the estate in funds, without creating any charge in his favour, to repay the loan made for the payment of duty on personalty, then on the death of the surviving spouse, in due course, no estate duty will arise on the sums so paid, whether or not made within five years of the survivor's death.

Legal opinion given to us, however, does not support that inference, and considers that such payment as is made now by the surviving spouse, at any rate as regards duty on personalty, must be regarded as a disposition, and subject to the five-year period.

Does Mr Williams support the inference or the opinion?

Yours truly,

'FLEET'.

[Mr Williams writes: I support the legal opinion to which your correspondents refer. I entirely accept the view that if the survivor pays the duty out of his own funds that this is a disposition which will attract duty should the survivor die within a period of five years. The amount subject to duty would of course be relieved by the 15 per cent, 30 per cent and 60 per cent reductions by section 64, Finance Act, 1960. The point about the creation of a charge in this connection is merely that this may prevent the five-year period from starting to run.

The purpose of the scheme which I have tried to demonstrate is that this enables a surviving spouse to make a gift to the remaindermen of the deceased spouse's estate – who in many cases would be lineal descendants whom the survivor would wish to benefit

- which would be effective after five years and yet at the same time would enable the surviving spouse to retain a life interest in the funds gifted.

Your correspondents appear to be in just the right position to take advantage of the scheme which I have propounded. The estate of the first spouse appears to remain intact and if the survivor repays the bank overdraft created for the purpose of paying the estate duty on the personalty and also pays the estate duty on the realty in due course, taking care not to accept a charge in respect of the latter, then in my view the whole of the original estate which will be retained intact will be exempt from estate duty of the death to the survivor by reason of section 5 (2), Finance Act, 1894, as amended and as restricted by section 14, Finance Act, 1914, that is by the second of two spouses rule. I did not mean to infer that the gift made by the survivor would not be on risk for five years.]

### Training Accountants for Industry

SIR, - I have read with considerable interest the address 'The training of accountants for industrial responsibilities', by Mr G. W. Searle in *The Accountant* of September 22nd and 29th. I myself am a relative new-comer into industry, having qualified in 1954 and now occupying the position of managing director in a small company employing only ninety-five people.

Whilst agreeing with many remarks made by Mr Searle I cannot reconcile my own experiences with the suggestion put forward of giving articled pupils greater scope in the industrial sphere during their period of training. The effort required for the Final examinations constitutes a tremendous strain on the individual and any mediocre attempt during this limited period to understand industry with its many and varied problems is like taking only one small bite at the apple. I consider that an articled pupil should primarily concentrate all his efforts on examination work.

Two distinct phases should be laid down with regard to establishing oneself as a fully-qualified accountant. The first phase should involve examination work only. At this juncture respect would still be obtained commensurate with qualifying as an accountant. The second phase should incorporate the development of personality as a qualified accountant. A definite period of time should be allocated so that this personality (as distinct from knowledge) be allowed to develop together with the furtherance of knowledge in industrial spheres.

In my short period of time I have learnt that to qualify as an accountant is one thing but to gain knowledge of industry and subsequently develop personality in order to administer on a general basis is another. This cannot possibly be taught during a limited period of apprenticeship whilst actual study is of such importance.

Yours faithfully,

M. J. COMPTON.

Nuneaton.

# THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

### SPECIAL AND ORDINARY MEETINGS OF THE COUNCIL

At a meeting of the Council held on Wednesday, October 10th, 1962, at the Hall of the Institute, Moorgate Place, London EC2, there were present: Mr Percy F. Carpenter, President, in the Chair; Mr Robert P. Winter, C.B.E., M.C., Vice-President; Mr J. F. Allan, Mr C. Percy Barrowcliff, Mr G. T. E. Chamberlain, Mr J. Clayton, Mr C. Croxton-Smith, Mr E. Hay Davison, Mr W. G. Densem, Sir Harold Gillett, Bt, M.C., Mr J. Godfrey, Mr G. G. G. Goult, Mr P. F. Granger, Mr L. C. Hawkins, Mr J. A. Jackson, Sir William Lawson, C.B.E., Mr E. N. Macdonald, D.F.C., Mr L. W. Robson, Mr D. Steele, Mr J. C. Montgomery Williams, Sir Richard Yeabsley,

### Bve-law 47

The amendments to bye-law 47 as approved by members on May 3rd, 1962, were allowed by the Lords of Her Majesty's Most Honourable Privy Council on August 2nd, 1962, and the revised bye-law is therefore now effective.

### **Registration of Articles**

The Secretary reported the registration of 561 articles of clerkship during August and September, the total number since January 1st, 1962, being 1,769.

### Fellowship

The Council acceded to applications from sixteen associates to become fellows under clause 6 of the supplement Royal Charter.

### Re-admission to Membership

It was reported to the Council that the following readmissions, made at the Council meeting on August 1st, 1962, subject to payment of the amounts required, had become effective.

Howell, William Mostyn, A.C.A., 'Bryncerdin', Cefn Coed, near Merthyr Tydfil.

Jones, William Peter, A.C.A., Griffiths & Sutton, 152/154 Lord Street, Southport.

Sutton, Thomas Hague, F.C.A., Griffiths & Sutton, 152/154 Lord Street, Southport.

### **Exclusion Expunged**

At a hearing by the Disciplinary Committee on July 4th, 1962, the committee decided that Mr Frank Norris Pinder, F.C.A., be excluded from membership for non-payment of subscription. It has been reported to the Council that notification has now been received that Mr Pinder died in 1961, and accordingly the Council resolved that the exclusion of Mr Pinder be expunged.

### **Members Commencing to Practise**

The Council received notice that the following members had commenced to practise:

Barton, Brian Henry, A.C.A., a1960; 26 Bedford Avenue, Barnet, Herts

Biddle, Donald Frank, A.C.A., a1956; †Smith & Williamson, Scottish Union House, 25 Bucklersbury, London EC4,

and at Glasgow.

Bird, Arthur William, A.C.A., a1959; Greaves, Grindle & Co, Victoria House, Bondgate Within, Alnwick, Northumberland.

Board, Clinton Julian, A.C.A., a1959; Cobden, Board & Co. Fountain House, Broomgrove Road, Sheffield 10; also at London, †Cobden, Board & Co.

Bond, Alan, A.C.A., a1959; L. Milburn & Co, 48 West Sunniside, Sunderland.

Bouic, Joseph Gaetan, A.C.A., a1961; ††de Chazal, du Mée & Co, 10 Intendance Street, Port Louis, Mauritius.

Bryant, Peter David, A.C.A., a1960; Warley & Warley, 13
Bloomsbury Square, London WC1, and 74 Marylebone
High Street, London W1; also at Tonbridge.

Burtwell, George Arthur, A.C.A., a1953; Charles Comins & Co, 50 Cannon Street, London EC4.

Cappin, Michael Benedict, A.C.A., a1962; Benedict Cappin & Co, 22 Riverside Drive, London NW11.

Carsberg, Bryan Victor, A.C.A., a1960; Bryan Carsberg & Co, 18 Hill Avenue, Amersham, Bucks.

Christie, John Denton, A.C.A., a1961; 33 Avondale Gardens, Hounslow, Middx.

Clarkson, Alan Malcolm, A.C.A., a1959; \*N. W. Plummer & Co, 73 Gillygate, York.

Coleman, Robert Grant, M.A., B.COM., F.C.A., aS1940; C. St John Frost & Co, 82 Station Road, Clacton-on-Sea, Essex. Collett, Christopher, A.C.A., a1953; †Price Waterhouse &

Co, 31 Mosley Street, Newcaste upon Tyne 1.
Collyer, Brian Percy, A.C.A., a1961; Higson & Co, White House, Wollaton Street, Nottingham.

Coventry, Edward Reginald, A.C.A., a1959; 52 Hillview Gardens, Cheshunt, Herts.

Crapp, Leslie Rufus, A.C.A., a1960; Willcox & Co, La Motte Chambers, St Helier, Jersey, C.I. Cutts, Michael Arthur, A.C.A., aS1953; Geo. W. Spencer & Co, 110 Cannon Street, London EC4, and at Chelmsford.

Davies, Anthony Warren, A.C.A., a1962; E. H. Davies & Co, 45 Parliament Street, Westminster, London SW1.

a Indicates the year of admission to the Institute.

### **Deaths of Members**

The Council received with regret the Secretary's report of the deaths of the following members:

Andreas, George Ernest, F.C.A., London.

Ballantyne, Thomas Norman, F.C.A., Torquay.

Binns, Leslie Reginald, F.C.A., London.

Brown, Harry Shell, F.C.A., Manchester.

Bull, Lawrence, F.C.A., Rochester.

Burns, David Brunel, F.C.A., Salisbury, Southern Rhodesia.

Butler, Edgar Harold Barnett, F.C.A., Worcester.

Dickinson, John Casson, O.B.E., F.C.A., Stockholm.

Fisher, Sydney, B.COM., F.C.A., London.

Hogg, Edwyn Rymer, M.A., F.C.A., London. Mason, Henry Haradyne, F.C.A., London.

Midgley, Charles George Holmes, M.C., F.C.A., London. Mossop, Henry, F.C.A., Barrow-in-Furness.

Pinder, Frank Norris, F.C.A., London.

Sharratt, Frank, F.C.A., Weston-super-Mare.

Simmonds, Gordon Scot, F.C.A., Teddington.

Stephenson, Geoffrey Christian, F.C.A., Marlow.

Sutcliffe, Clifford, F.C.A., Manchester.

Thorn, Edward Stanley, F.C.A., London.

Walker, Archibald Hughes, F.C.A., Liverpool.

Ward, Douglas Martin, F.C.A., London.

Watkinson, Alfred Sheppard, F.C.A., Blackpool. Whittle, Jack, B.COM., F.C.A., Nottingham.

Wild, Clifford, F.C.A., Dorchester.

### FINDINGS AND DECISIONS OF THE DISCIPLINARY COMMITTEE

Findings and Decisions of the Disciplinary Committee of the Council of the Institute appointed pursuant to bye-law 103 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at hearings held on September 6th, 1962.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Roy Arthur Whitman, A.C.A., had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of sub-clause (3) of clause 21 of the supplemental Royal Charter in that (a) he failed to pay the subscription payable by him under bye-law 42 in respect of the year 1962 for four months after the same had become due; (b) he failed to ensure that sufficient funds were available to meet the cheque dated April 28th, 1962, for the sum of £5 5s drawn in favour of the Institute in payment of the said subscription, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against Roy Arthur Whitman, A.C.A., had been proved under both headings and the Committee ordered that Roy Arthur Whitman, A.C.A., of 31 Parkfields, Strood, Rochester, Kent, be reprimanded.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Edgar Victor Leathers, F.C.A., had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of sub-clause (3) of clause 21 of the supplemental Royal Charter in that he failed (a) within a reasonable time or at all to answer or take any action in response to requests in relation to a Deed of Arrangement of which he was appointed trustee made to him by the solicitors of a preferred creditor under the Deed; (b) within a reasonable time or at all to reply to or take any action in response to four letters addressed to him by an Under-Secretary of the Institute, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against Edgar Victor Leathers, F.C.A., had been proved under both headings and the Committee ordered that Edgar Victor Leathers, F.C.A., of 21/23 Princes Street, Ipswich, be reprimanded.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Alan Sidney Bennett, F.C.A., was on May 30th, 1962, convicted in the District Court of Mengo at Kampala of three charges of stealing by a company officer contra to section 259 of the Uganda Penal Code, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against Alan Sidney Bennett, F.C.A., had been proved and the Committee ordered that Alan Sidney Bennett, F.C.A., imprisoned in Uganda, be excluded from membership of the Institute.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that John Duncan King, F.C.A., had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of sub-clause (3) of clause 21 of the supplemental Royal Charter in that (a) having been removed by a bank from the office of receiver and manager of a limited company he failed within a reasonable time (i) to hand over to his successor as receiver and manager or to the said bank a motor-car purchased by him as receiver and manager and the books and papers of the company and/or (ii) to render to the said successor or to the bank any detailed statement of his remuneration as receiver and manager; (b) he failed within a reasonable time or at all to implement the terms of a certificate of a Master of the High Court dated November 2nd, 1961, in relation to the moneys due from him as receiver and manager, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against John Duncan King, F.C.A., under heading (a) (i) had been proved but that under headings (a) (ii) and (b) the formal complaint had not been proved and the Committee ordered that John Duncan King, F.C.A., of 137 Victoria Street, London SW1, be reprimanded.

### FINDING AND DECISION OF THE APPEAL COMMITTEE

Finding and Decision of the Appeal Committee of the Council of the Institute appointed pursuant to bye-law 108 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at a hearing held on September 5th, 1962.

The Appeal Committee heard an appeal against the Finding and Decision of the Disciplinary Committee of the Council of the Institute upon a formal complaint preferred by the Investigation Committee of the Council to the Disciplinary Committee that Stanley Bryce a member of the Institute had failed to pay the subscription payable by him under clause 11 of the supplemental Royal Charter and bye-law 42 in respect of the year 1962 for four months after the same had become due so as to render himself liable under

clause 21 (7) of the supplemental Royal Charter to be excluded from membership or to be suspended for a period not exceeding two years from membership. The Appeal Committee affirmed the Finding of the Disciplinary Committee that the formal complaint against Stanley Bryce had been proved and the Committee also affirmed the Decision that Stanley Bryce, of 58 Fenham Hall Drive, Newcastle upon Tyne 4, be excluded from membership of the Institute.

### INTERNAL AUDITORS' CONFERENCE

### Third European Regional Conference at Brighton

The Third European Regional Conference of The Institute of Internal Auditors was held on Wednesday, Thursday and Friday of last week at Brighton. The theme of the conference, which was sponsored by the London Chapter, was 'Developing the internal audit perspective'. Present at the conference was Mr Bradford Cadmus, Director of Research and Education, from the Institute's headquarters in New York. Besides the United Kingdom Chapters, representatives were present from Chapters in Norway, Finland and the Irish Republic.

The conference was opened on Wednesday by the European Regional Director, Mr J. O. Davies, F.C.A., who referred to various definitions of perspective, particularly the one that defined it as 'the proportion in which the parts of a subject are viewed by the mind'. In emphasizing that it was the eye of the beholder that was the determining factor, Mr Davies said that he had always believed that, given adequate technical skill, it was the personality and character and, in particular, the judgment of the internal auditor that produced the perspective that resulted in a first-class audit appraisal of a given situation.

In a paper given at the opening session on 'Internal auditing in the world of today and tomorrow', Mr Cadmus discussed the present status of advanced internal auditing practices and forecast the development of internal auditing in the future. He said: 'If I were asked to name a single element as the most important to the future development of internal auditing, I would say – You. The work of the Institute, a receptive attitude by management, an understanding of internal auditing by educators – all of these can do no more than to set the stage on which you do the work.'

Introducing Mr Cadmus, Mr Davies paid tribute to his previous work for the Institute as managing director for the last fifteen years. Mr Cadmus's achievement in creating a world-wide Institute was without parallel, he said, in the auditing, accounting and management control fields.

### Communications

In a paper on 'Communications', given on Thursday morning, Mr C. S. Deverell, M.A., B.S.C.(ECON.), B.COM., F.C.I.S., A.M.B.I.M., said what struck him as fundamental in the communication of information between men and women was the consideration of the attitudes of those who impart and receive data. In the work of an internal auditor, getting the co-operation of employees was a major point gained.

The power of conveying information persuasively, said Mr Deverell, was linked with suggestion, itself a process which resulted in the acceptance of a proposition in spite of the absence of logically adequate grounds for acceptance. Where the source of an item of information or an instruction has prestige and authority, suggestibility can be an aid to management.

The process of memory was equally important. It was going on inside the mind of the person who was making

the communication. It helped him to store his data until he was able to arrange it in the best possible way. Similarly, the work of memory must be going on in the mind of the receiver or nothing would be retained. He wondered if sufficient time was spent in getting to know the attitudes of the parties to communication.

To the internal auditor, reports were an important tool but the number of them had to be kept to a minimum. Anything enabling reports to be written with less expenditure of time and energy was valuable. Above all, one should attempt to reduce the length of reports, to make use of visual material and charts, and to tabulate where appropriate.

It had been estimated that the preparation, writing and dispatch of a business letter could cost up to 7s 6d. There was a temptation to resort to written communication as an escape, although in many matters a better understanding could be reached by direct contact. Only let two people discuss a single problem together and their subsequent correspondence and telephone talks on other problems would be more effective. In a direct verbal exchange misunderstandings were more quickly removed.

Mr Deverell concluded: 'We still devote too little attention in our business, technological and scientific training to this central matter of communications. When we at last do so, the saving to the national economy can be very important indeed.'

### **Management Problems of Size**

Mr J. E. Wall, O.B.E., of E.M.I. Ltd, addressed the conference on 'Management problems of size'. He stated that the management problems of large growing companies, after a certain point, tend to grow faster than the business itself-indeed many companies move into an area where the problems are totally different (e.g. control by personal supervision is replaced by impersonal control by systems, methods and procedures). The main management problem here was the tendency towards rigidity, inflexibility, slowness in decision, lack of liveliness and lack of receptiveness to change. This raised, directly, problems of control, especially how to achieve that lightness of touch which was essential if inflexibility was to be avoided and liveliness to be encouraged. This entire problem, difficult enough in itself, was aggravated, especially for the internal auditor, by the development within the larger industrial organizations of a multitude of specialist services to management.

Somehow, said Mr Wall, it was necessary to resolve the conflict between the system of control which is at once so light that it will not prejudice initiative and innovation but yet which is sound and secure enough to avoid an auditor's qualification on the annual balance sheet of the company.

The real problem is, he said, that the profession of internal auditors does not yet seem to have resolved one major issue. Should the internal auditor be a totally independent man apart or should he be an ally of the

whole mass of management services? One group will argue that once an internal auditor departs in any way from his position of independence and becomes even a partial ally of some other service, he is on a slippery slope which can lead rapidly to disaster. The other group is more aware of the complexity of the management services concerned with efficiency and effectiveness in their widest sense and accepts that they must get to know about these services and what they do, with little hope of being able to check upon their success.

Mr Wall stated that he belonged to the second school because, inevitably, the internal auditor would have to check the validity of the systems and procedures proposed by the specialized services.

### Impact of E.D.P. on Audit Techniques

Addressing the conference on "The impact of electronic data processing on audit techniques", Mr D. W. Hooper, M.A., F.C.A., chief organizing accountant, National Coal Board, stated that data processing operations in the field of industry and commerce prepared information relating to the conduct of the organization, and usually had an accounting flavour. It was in this context that the function of audit became enmeshed with data processing and, as computers took over more and more of the familiar procedures, the auditor would become involved deeply with electronic data processing.

The introduction of electronic data processing, considered as a form of mechanization of regular accounting procedures said Mr Hooper, should of itself have little impact on auditing as a fundamental art and technology. The wider scope for management information processing should, however, give the auditor in his turn equally wider scope for fuller development of the audit function.

This possible development, and indeed the successful everyday work of an auditor in an electronic data processing centre, depended on him really understanding his craft, irrespective of conditions of manual or conventional accounting machine systems or of computers. If he really appreciated the need to audit in depth, to differentiate between the significant and insignificant, to discard old-fashioned methods of ticking every manual entry with a quill pen, then he had nothing to fear from the introduction of electronic data processing.

If, however, he remained content to carry out his audit by historical checking of individual transactions, without regard to their relative importance or their ultimate effect on management information, then he must, even if it meant returning to the textbook and evening classroom, go back to the first principles of auditing, and learn again real understanding of the true meaning of the word 'audit', before he was allowed to enter an electronic data processing centre, still less to come within touching distance of a computer.

At the European Regional Conference (left to right): Mr J. O. Davies; Mr O. Ingebrethsen (Norway); Alderman W. H. G. Button, J.P., Mayor of Brighton; Mr Bradford Cadmus; Mr N. J. Haughey; Mr E. Salava (Finland); Mr E. N. Judge.

# THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

President's Luncheon

The President, Mr P. F. Carpenter, and members of the Council of The Institute of Chartered Accountants in England and Wales gave a luncheon on October 10th, at the Hall of the Institute. The guests were the Lord Mayor of London, Sir Frederick Hoare, Mr Alderman and Sheriff R. I. Bellinger, Sir Wentworth Rowland, Bt (Chairman, Bridge House Estates Committee), Mr Deputy Rodway Stephens (Chairman, Coal and Corn and Finance Committee), Mr Leslie B. Prince (Chairman, Rates Finance Committee), Mr W. B. Holden (Chairman, Central Markets Committee), Mr E. W. Watts (Chairman, City of London Schools Committee), Mr K. R. Cork (Chairman, Music Committee), Mr Deputy R. J. Hayward (Chairman, Officers and Clerks Committee), Mr Deputy E. F. Wilkins (Chairman, Barbican Committee), Mr E. K. Stewart-Smith (City Chamberlain), Mr Desmond Heap (Comptroller and City Solicitor), Colonel N. F. B. Shaw (Acting Secretary to the Lord Mayor), Brigadier R. H. S. Popham (The Swordbearer), Brigadier P. Clapham (Common Cryer and Serjeant-at-Arms), Colonel G. E. P. Hutchins (City Marshal), Sir Irving Gane.

### PROFESSIONAL NOTICES

MESSRS J. B. DUNN, F.C.A., J. H. MOORHOUSE and J. E. MOORHOUSE, announce that the practice of WILD & SMITH, previously carried on by them at 64 Seymour Grove, Manchester 16, has been transferred to Regal Cinema Buildings, 104 Oxford Road, Manchester 1, as from October 1st, 1962, and the name changed to DUNN, MOORHOUSE & Co.

Messrs Kemp, Chatteris & Co, announce with deep regret the death, on October 4th, of Mr E. R. Hogg, F.C.A., who had been a partner since April 1st, 1946.

Messrs de Paula, Turner, Lake & Co, Chartered Accountants, of Imperial House, Dominion Street, London EC2, announce that they have admitted into partnership Mr John Derek Budd, A.C.A., a senior member of their staff. The name of the firm remains unchanged. They also announce that, owing to redevelopment, their premises formerly at 17 Coleman Street have been vacated and the entire practice will in future be conducted from extended offices at Imperial House, Dominion Street, London EC2.

MESSRS HARRY L. PRICE & Co, Chartered Accountants, of 47 Mosley Street, Manchester 2, announce that

they have opened a branch office at Bingley House, 12 Lune Street, Preston.

MESSRS SINGLETON, FABIAN & Co, Chartered Accountants, of Lee House, London Wall, London EC2, announce that they have taken into partnership Mr P. W. G. DUBUISSON, A.C.A., and Mr R. W. CHETWYND, A.C.A., as from October 10th, 1962.

Messrs Tribe, Clarke, Darton & Pollock, Chartered Accountants, of 62 High Street, Rochester, Kent, announce with regret the death of their senior partner, Mr Lawrance Bull, F.C.A.

### **Appointments**

Mr D. G. Badham, F.C.A., has been appointed deputy chairman of Powell Duffryn Engineering Co Ltd, and will relinquish the position of managing director.

Mr Sydney Croudson, F.C.A., has been appointed to the board of the Leeds and Holbeck Building Society.

Mr W. S. Ledden, A.A.C.C.A., secretary and financial controller of Austin Knight Ltd, has been appointed a director of the company.

Mr N. S. Thompson, F.C.A., group financial controller of David Brown & Sons (Huddersfield) Ltd, has been appointed to the board.

### OBITUARY Edward Taylor, F.C.A.

We have learned with regret of the death on September 27th, in Jersey, at the age of 85, of Mr Edward Taylor,

F.C.A.

Educated at King Edward Grammar School, Aston, Birmingham, where his father was a form master, Mr Taylor was admitted an associate of The Institute of Chartered Accountants in England and Wales in 1899 and was elected to fellowship in 1921. Following a short period of partnership with the late Mr Clement Keys, F.C.A., Mr Taylor practised for over thirty years under the style of Edward Taylor & Co, of Temple Row, Birmingham. He was particularly known for the work he undertook for the brick industry, acting as secretary for a number of its associations as well as serving on the Council of the National Federation of Clay Industries and many of its committees.

In 1941 Mr Taylor went into semi-retirement, but continued to practise from his home in Wylde Green, Sutton Coldfield, while being able to devote a little more of his time to golf and other interests. He moved to Jersey in 1954 with his wife Cissie Taylor, who died two years ago. He leaves a daughter and two sons.

### THE ACCOUNTANT

### CERTIFIED ACCOUNTANTS' LUNCHEON

The first of the 1962-63 luncheon meetings of The Association of Certified and Corporate Accountants was held at the Connaught Rooms, London WCI, last Tuesday, when Professor Sir Albert Richardson, K.C.V.O., P.P.R.A., spoke on modern architecture.

### COMMON MARKET LECTURES

The second in a series of ten public lectures on the European Common Market entitled 'Machinery of Government', by Professor Max Beloff, will be given on Tuesday next at The London School of Economics and Political Science, Houghton Street, Aldwych, London WC2, commencing at 5 p.m. Other lectures: November 6th: 'Legal aspects', by Professor O. Kahn-

November 20th: 'Labour problems and social policy', by Mr R. W. Cox.

December 4th: 'Problems of the association of overseas

countries', by Dr J. J. Van Der Lee.

January 15th, 1963: "Tariffs and trade', by M J. Royer.

January 29th: 'Industrial repercussions, especially the problems of particular industries in individual countries' (lecturer to be announced).

February 12th: 'Agriculture', by Hr H.-B. Krohn.
February 26th: 'The rules of competition in the E.E.C. Treaty and in the participating countries', by Dr E. Günther.

March 12th: 'Money and finance', by Professor S. Posthuma.

Admission is free, without ticket. All the above lectures will take place at The London School of Economics commencing at 5 p.m. Each lecture will be preceded by tea at 4.30 p.m.

### COURSES FOR MANAGEMENT

Three one-day courses entitled 'Top data for top men' 'How to analyse company accounts and yields', and 'Stock control and reduction', will take place in London from October 30th to November 1st.

A two-day course on office management entitled 'How to control office costs', is to be held in Man-

chester from October 30th to 31st.

Further particulars, together with a complete list of courses for the 1962-63 session, are obtainable from Management Courses Ltd, 8 St George's Terrace, London NW1.

### CORRECTIONS

The current interest rate on tax reserve certificates was incorrectly given as 21 per cent instead of 21 per cent under 'Rates and Prices' in our October 6th issue.

In addition to her qualifications as listed on page 438 of our issue of October 6th, Mrs Helene M. A. Ramanauskas, Associate Professor of Accounting at De Paul University, Chicago, who presented a paper at the Eighth International Congress of Accountants, holds the degree of Doctor of Political Economics from the University of Munich.

### THE INSTITUTE OF INTERNAL AUDITORS

The next meeting of the Manchester Chapter of The Institute of Internal Auditors will be held on Wednesday, October 24th, at 6.30 p.m. in the Chartered Accountants' Hall, 46 Fountain Street, Manchester 2, when the former managing director of the Institute. Mr Bradford Cadmus, will be speaking on 'Internal auditing in the world today - and the future'.

### THE CHARTERED ACCOUNTANT STUDENTS' SOCIETY OF LONDON

The following meetings of The Chartered Accountant Students' Society of London will be held next week:

Monday, 5.30 p.m. at the Institute, Moorgate Place, EC2. Lecture on 'What is income?', by Professor B. S. Yamey, B.COM. (Professor of Economics, University of London).

Tuesday, 7.30 p.m. at Epsom: Lecture on 'Time to think'. by a representative of International Computers and Tabulators Ltd.

Wednesday, 6 p.m. at the Institute: Debate on "There is

no education like co-education'.

Thursday, 5.15 p.m. at the Institute: Introductory course lecture on 'The fundamentals of auditing', by Mr F. R. Porter, F.C.A., A.C.W.A.

6 p.m. at Bedford: pre-examination course by Mr V. S. Hockley, B.COM., C.A., F.A.C.C.A.

Friday, 5.15 p.m. at the Institute: Introductory course lectures on 'The basic principles of double-entry book-keeping and accounting systems', by Mr R. J. Carter, B.COM., F.C.A. (Secretary of the Students' Society) and on 'The law and its branches', by Mr P. W. Medd (Barrister-at-law).

10 a.m. at Bedford: pre-examination course by Mr

V. S. Hockley, B.COM., F.A.C.C.A.

### CHARTERED ACCOUNTANTS' GOLFING SOCIETY

The autumn meeting of the Chartered Accountants' Golfing Society was held at Liphook Golf Club on October 5th. The leading scores were as follows:

Scratch Prize: R. Anderson, 29 pts.

Stableford Medal: S. W. Penwill, R. G. Pegler, P. G. Barber and A. M. Milling, all 35 pts.

Stableford Foursomes: R. Anderson and A. M. Milling;

R. G. Pegler and H. C. Staines, both 37 pts.

The Turquand Young Challenge Cup was won by Mr S. Pleydell-Bouverie.

### DUBLIN SOCIETY OF CHARTERED ACCOUNTANTS

The annual golf meeting of the Dublin Society of Chartered Accountants was held at the Grange Golf Club, Rathfarnham, Co. Dublin, on September 10th. The attendance set a fresh record, with 107 members, students and guests taking part. The results were as

Past Students' Cup: D. W. Pratt (15), 2 down (won on

# Great Expectations?

NOLLOWING on the depressing picture of the domestic industrial scene drawn by the recent inquiry of the Federation of British Industries, there comes, as if further evidence were needed, confirmation from the National Association of British Manufacturers. A survey of some five hundred member firms based on their trading experience during the third quarter of 1962 confirms that the economy continues to drift. The position in the textile industry is 'least satisfactory' and that in the engineering and building industries 'worse than average'. This disturbing picture, to quote the N.A.B.M. report, has resulted from the decline in home orders. All industries are described as showing rising costs although, in the main, these cost increases have not been passed on in higher prices to the consumer, but have trimmed profit margins still further. There is, states the report, a marked lack of confidence regarding the future, and it is therefore 'clearly desirable that some further and positive announcement of its policy should be made by the Government at an early date'.

Whether the announcement following the fifth meeting of the National Economic Development Council, that its members are to receive by the end of the year details of a plan for expansion, will provide the necessary fillip to industrial confidence is dubious. The brief outline of objectives within the various sectors of the economy, as set out in the table overleaf, is certainly encouraging. The promised 4 per cent per annum growth for the economy as a whole depends on the attainment of a  $4\frac{1}{2}$  per cent increase in imports and a 6·2 per cent growth in investment in each year until 1966. Exports will increase by 5·7 per cent if the plan is fulfilled. The significance of these figures may be better appreciated if it is stated that the projected surplus on the balance of payments account is £300 million, while the annual increase in the national product will be about £1,150 million.

Judging by the performance in recent years of other advanced economies, these planned goals are not impressive. They are striking merely in comparison with the depressing record of the United Kingdom economy in economic growth, industrial investment and exports. In fact, it is already clear that the plan will not be fulfilled for 1962, so that if it is to be completed by 1966, the pace of development needs to be accelerated. At no time is it intended that either exports or industrial investment will re-empt the domestic consumers' share of the rising national product. According to the plan, domestic consumption should rise annually in real terms by about  $2\frac{1}{2}$  per cent. All that remains, therefore, is to implement the plan.

It is worth stressing, since the point tends often to be overlooked, that there is no inherent advantage in planning as opposed to twentiethcentury laissez faire for ensuring the maximum rate of economic growth. To put it no more strongly, the most impressive growth records in the past decade are to be found in Japan and Western Germany rather than on the other side of the Iron Curtain. The much-vaunted success of French planning in recent years probably owes as much to internal political stability, economic expansion and the boom in intra-European trade, as it does to the national planning commission. In fact there is a real danger at present that internal inflationary pressures in France are building up at pace quite likely to disrupt the plan. The same weaknesses are now to be discerned on the other side of the Rhine where rather less is now heard of the 'Wirtschaftswunder'.

The case for planning has arisen in most of the West European countries for the simple reason that full employment, coupled with the increasing rigidity of institutional forces such as

<sup>(1)</sup> Allowing for net investment income from abroad and grants paid abroad the balance of payments surplus on current account would be £300 million.

trade unions and manufacturing associations. means that the pricing system can no longer bring about the required distribution of economic forces in the classical economic manner. No doubt price-fixing and restrictive practices, which are the essence of modern economies, are the inevitable product of societies in which individuals, whether they be employers or employees, rate economic security far higher than economic progress in competitive conditions. Any society is free to make its choice and there is little doubt, least of all in Britain, as to which way the pendulum is swinging. It is equally evident that the community has only the haziest notion of the full implications of its choice; witness the demand for consumer sovereignty in the market coupled with the demand for an industrial welfare state for the consumers qua workers. It will be interesting to observe just how long it will be before the virtues of competition in the market place (including the labour market) are replaced by the virtues of planned and ordered economy. It is for such very human reasons that one may reasonably doubt the ultimate efficacy of the provisions in the Rome Treaty relating to monopoly practices.

Once the full implications of economic planning are recognized, especially in an economy in which both sides of industry are well able to protect their own interests, the actual plan itself warrants examination. The objectives of the N.E.D.C. planare well within the capacities of the economy. Given the modern technique of economic model building, such as is described in the latest study from the Department of Applied Eonomics at Cambridge, it may be assumed that the plan is internally consistent and the various objectives compatible. The basis for such projections, however, rests ultimately on the validity of the assumptions regarding the relationships between various parts of the economy, coupled with the quality of the statistical data themselves. Furthermore, one of the biggest problems is to build into such a model the corrections required to compensate for changes which will inevitably stem from unexpected shifts in the price level which must, in varying degrees, affect consumer expenditure patterns, private investment and Government fiscal policy. Superimposed upon all this is

<sup>(2)</sup> Constant 1961 prices are used to show the changes in 'real' terms.

<sup>(3)</sup> Current expenditure by central and local government on goods and services. This is about half the total public expenditure. The rest is investment in roads, schools, hospitals, etc., and 'transfer payments' such as pensions, subsidies and debt interest.

<sup>&</sup>lt;sup>1</sup>A Social Accounting Matrix for 1960. Published for the Department of Applied Economics, Cambridge University, by Chapman & Hall Ltd, London. 128 6d net.

he linchpin of the balance of payments account which has dominated United Kingdom economic solicy since the war.

To state such obvious problems is not to decry he significant progress in economic planning that he computer and the model represent. It merely erves to remind the more optimistic reader of he errors to which the best laid plans of mice and conomists are liable. It would be as unkind as it sunnecessary to remind the reader of the disasrous record of post-war forecasting, even in such relatively simple matters as the prospective demand for doctors, teachers and fuel. The one positive contribution to a solution of Britain's economic problems that 'Neddy' might well make is to engender a measure of confidence among employers and unionists alike in the capacity of the Government to achieve continuous growth and stability. This will hardly be done overnight, and in the meantime something rather quicker acting than the N.E.D.C.'s first plan is urgently needed.

# Short-term Gains - XVI

### LAND-OWNING COMPANIES

AST week we gave a very simple example of a disposal of shares which, although not caught by the general provisions in the linance Act, 1962, relating to Case VII tax, vould be caught by the special provisions of ection 14. The example concerned the sale of hares in a land-owning company, the seller aving a substantial interest in that company. Iowever, the draftsman of the section was clearly letermined that it should not be by-passed by he use of one or more intermediate companies. Section 14 (1) lays down compendiously a number f different sets of circumstances, the presence of which, immediately before a disposal of shares, an bring the disposal within the operation of the ection. Now that we have defined the expressions and-owning company', 'substantial interest' and inder the control of not more than five persons', re can proceed to a fuller exposition of section 14 1).

It is essential in any event that a taxpayer, who nay be an individual or a company, and whom we will call 'T.', should dispose of shares in a ompany, which we will call X. Ltd. For this urpose 'shares' receive an extended definition om section 14 (8) with a view to bringing in iterests in guarantee companies. Another essentials that somewhere in the chain there must be a ind-owning company. The disposal by T. of hares in X. Ltd may be caught either by pararaph (a) of section 14 (1) or by paragraph (b), or, f course, by both. Paragraph (a) applies only there T. has a substantial interest in X. Ltd. aragraph (b) applies only where X. Ltd is concolled either by T. alone or by T. and persons

connected with T. We will take the two paragraphs separately.

Paragraph (a) (T. having a substantial interest in X. Ltd.):

Additional conditions for satisfying paragraph (a).

X. Ltd. (i) is under the control of not more than five persons; and

(ii) either (1) X. Ltd is itself a land-owning company; or

(2) X. Ltd has control of a landowning company

Paragraph (b) (T. having control of X. Ltd, alone or with persons connected with T.):

Additional conditions for satisfying paragraph (b).

### Either:

- (i) X. Ltd has a substantial interest in a landowning company; and
- (ii) the land-owning company is under the control of not more than five persons;

### O1

- (iii) X. Ltd has control of a company (Y. Ltd); and
- (iv) Y. Ltd has a substantial interest in a landowning company; and
- (v) the land-owning company is under the control of not more than five persons.

If, after applying the above tests, it is shown that section 14 (1) applies, then the subsection directs that T. shall be chargeable to tax under Case VII by reference to his disposal of the shares in X. Ltd, regardless of the date he acquired them, and regardless of the fact (if it is a fact) that he acquired them as legatee. It is perhaps idle to speculate whether the draftsman really needed to include so many alternatives. It would seem that if X. Ltd has control of a company which has a substantial interest in a land-owning company, so as to satisfy (iii) and (iv) above, then

it is at least highly probable that X. Ltd has a substantial interest in the land-owning company direct, so as in any case to satisfy the alternative condition (i).

If T. disposes of his shares in X. Ltd at a profit, it by no means follows that that profit is in any way attributable to an increase in the value of chargeable land acquired by X. Ltd (or one of the other companies in the chain) within the preceding three years. Section 14 (1) could, therefore, cause considerable hardship if it stood alone. However, it is expressed to be 'subject to the provisions of this section', and in fact subsection (2) is directed to protecting T. from any such hardship. Subsection (2) contains two paragraphs. If paragraph (a) is not satisfied, there is no Case VII charge at all. If paragraph (a) is satisfied, then paragraph (b) imposes an overriding limit to the Case VII assessment which section 14 (1) imposes. The position is summed up by paragraph 41 of the White Paper' reproduced below:

- '41. If a disposal of shares in a land-owning company comes within the ordinary Case VII charge, section 14 does not apply. But if it is outside the ordinary Case VII charge, the gain to be charged in respect of a disposal within [section] 14 is whichever is the lower of
  - (i) the amount of the gain on the disposal, and
  - (ii) the appropriate part of the gain the company would have made if it had sold its chargeable land which was acquired not more than three years before the disposal [section] 14 (2).'

Paragraph (a) does not make it entirely clear whether one merely assumes a sale by the land-owning company (or companies) concerned, or whether all the companies in the chain must be assumed to sell their land, whether they are land-owning companies or not. There is a sting in the tail of paragraph (b); it prohibits the allowance of any Case VII loss which section 14 may attribute to T.

In computing the notional chargeable gains for the purpose of section 14 (2) one must allow the notional Case VII losses which would have accrued to the company concerned on the notional sale (section 14 (3)). Moreover, one must allow 'the like deductions as would have been made in charging that tax (under Case VII) for the losses that would have so accrued'. Again one must also allow 'losses previously accruing' to the company 'so far as they could not

be deducted from chargeable gains previously accruing to' the company. These latter losses must apparently be real, and not notional, losses.

Section 14 (3) acquired a proviso at the Report Stage of the Bill, on July 2nd. Its object is to protect a legatee of shares from section 14 liability if the company acquired the land before the death. Clearly, if T. inherited land itself on a death, he would not be chargeable on its redisposal, however soon. Therefore it would be wrong to charge him under section 14 if the land-owning company had already acquired the land before T. acquired the shares. The proviso directs in effect that the land is to be excluded from the computation of notional chargeable gains of the company.

Section 14 (4) resumes discussion of the losses to be allowed in computing the company's notional chargeable gains. If losses allowable to a company under section 14 (3) cannot be deducted because notional chargeable gains of that company are absent or insufficient, then the chargeable gain attributable to T.'s disposal of his shares is reduced. If X. Ltd itself is the company concerned, the full amount of the unallowable loss is deducted. If the company concerned is further down the chain of companies, the deduction is limited to the proportion of the unallowed loss 'attributable' to the shares of X. Ltd.

It remains to deal with the method of computing the part 'attributable' to any shares in a company of:

- (i) notional chargeable gains; or
- (ii) amounts deductible in respect of losses.

Taking the simple case where X. Ltd is also the land-owning company, and there are chargeable gains, the procedure is as follows:

### Assume

- (a) that apart from the chargeable gains, the assets of X. Ltd just balance the sum of (i) its liabilities and (ii) its paid up capital;
- (b) that X. Ltd is in liquidation;
- (c) that a sum of money equal in amount to the chargeable gains is added to the assets o X. Ltd.

It remains to compute the amount which would come to T., in right of the disposed of shares in X. Ltd, by reason of (c). If there is a loss, instead of a gain, one must compute the reduction in the amount which would come to T. on the winding up. Where the company is further down the chair than X. Ltd, a like method is followed up the chain.

(To be continued.

# Opportunism and the Accountant

by A. H. TAYLOR, M.C., A.A.C.C.A.

Dearth of materials or labour, changes in fashion – even a revolution in South America, a crash on Wall Street, the publication of a committee report or the speech of a statesman – these and many other occurrences in this modern business age can have rapid and serious repercussions in an enterprise. To meet this situation the author concludes that there is need for a 'new race of accountants' and a 'new emphasis' on their training for industry.

### The Budget as an Intention

N a striking phrase, budgetary control was once described as 'the replacement of oppor-L tunism in business by considered intention'. The possibility of eliminating opportunism in ousiness has many attractions to the theorist, but he ability to grasp the opportunity of the noment is still one of the most valuable attrioutes of the practical business man. Success in nany enterprises must have been due to the rision which made capital out of a change of aste or fashion, and to the quick decision which iltered the product 'mix' because of a 'feeling or the situation'. Profits are derived from many ectivities including, for example, an alert purchasing function which is capable of seizing the opportunity presented by a favourable movement in prices, and to flexible selling which diverts output to a newly emerging market. That kind of opportunism does not, however, remove the need, when circumstances so require, for careful planning and painstaking analysis.

In some industries producing a staple commodity or an essential service, the long-term budget may indicate not only an intention but a reasonably assured forecast of future turnover. If this is the case, efficiency will largely depend on sound administration. Furthermore, in all businesses planning should be founded on key factors such as the space, personnel and capital available. Nevertheless, in even the most conservatively managed organization, the appearance of a new invention or an improved manufacturing method can immediately create the need for an alteration in the design of the product or in the manufacturing process. Electronic devices are already revolutionizing the techniques of mass production, inspection methods and the processing of business data. New materials are being marketed and scientific achievements are constantly creating new consumer demands.

These rapid changes which are occurring in the industrial world are not only influenced by new operating techniques, equipment and materials, but also by the development of new markets throughout the world. Economic, financial and political changes may disrupt business programmes but they also give rise to new opportunities for making and selling. A revolution in South America, a crash on Wall Street, the publication of a committee's report or the speech of a statesman may each cause a redeployment of effort in innumerable businesses.

### Amending the Plan

Precision is the essence of effective budgeting but not all changes of the nature indicated above can be foreseen. When an unpredictable event occurs, it takes at least a month before the complete budgetary system can be amended so as to reflect fully the new direction of the making, selling and buying effort, and the new financial situation. Many companies establish regular dates, perhaps at three-monthly or six-monthly intervals, for the revision of budgets, but while this revision exercise is taking place the system is largely ineffective for planning or control purposes.

Perhaps it is because budgets so frequently become out of date that reliance is still placed on past figures for purposes of control. At least past figures represent facts, whereas budgets which have become out of step with reality can be downright misleading. It is, of course, true that in a large and well diversified organization, the failure of one product line may not significantly affect the overall projections of turnover and profit; but if budgeting is to fulfil its purpose as a means of control then it is the detailed, departmental budgets which are of vital importance.

When circumstances compel a change in the pattern or volume of sales turnover, the usual course of action is for the repercussions of the change to be considered at an executive meeting at which, it is to be hoped, the accountant or

chief financial officer of the business, would be present. At this meeting, the accountant may well be called upon to demonstrate in figures the probable financial effects of the new situation. He may have no more than an hour or so to produce an entirely new set of estimates, which must be factual and informative even though they may be prepared on broad lines. In such an emergency the accountant is unable to rely on recorded figures or existing budgets, but of necessity must deal with the situation by a combination of rapid and logical thinking, experience and 'flair'. Where management becomes a matter of opportunism, the accountant must also become an opportunist.

### **Executive Action**

Subject to the infinite variety of new situations which can suddenly arise in the affairs of a modern industrial concern, the immediate executive action when a radical change occurs in market conditions might take the form of a switching of production, buying and selling effort from one product line to another. If it is a question of taking advantage of a newlyemerging market, the action decided might involve the employment of more personnel, the purchase of new plant, a revision of the form and content of the purchasing programme, the rearrangement of space in factory and office. If the problem concerns the failure of a market the consequences could be redundancy of men, materials, equipment and space. A re-budgeting exercise will take time if the amended figures are to be effective in 'replacing opportunism by considered intention'; meanwhile, the opportunity has been grasped and remedial measures taken. Except in an historical sense the original budget is dead.

A change of the nature envisaged in the operations of a business implies that until the budget can be thoroughly revised it must be replaced by some temporary substitute for planning and control. In such a situation it is a waste of managerial and clerical time for the accountant to continue to issue statements comparing actual performance with budgets which are of historical value only. In the temporary absence of an effective budget, the accounting service has two alternatives. First, to compare current figures with perhaps hastily prepared estimates. Such a device, if it is at all practical, will have little incentive value and may lead managers to lose confidence in the whole budgetary system. The other alternative is to resort to a system of comparing current results with related figures. For control purposes, percentage relationships between costs and sales, profit and capital employed, stocks and current cost of sales and other ratios, will be of greater significance than variances on outdated budgets.

October 27th, 1962

The purely accounting effects of an unpredicted change in activities are of particular importance where monthly accounts are prepared. The overhead expenses included in interim accounts are bound to contain a substantial element of approximation, or may merely represent budgeted figures – especially for expenses which occur irregularly, such as publicity and building occupation costs. A sudden change in the direction of sales may result in considerable alterations to variable overheads such as selling expenses and the cost of many factory services.

### Accounting Adjustments

A further accounting area which may be affected is the system of expense allocation for departmental accounts. The accuracy of such allocations depends not only on sound assessments of the overheads subject to allocation, but also on the selection of correct bases of apportionment. It is, for example, essential for the accountant to have a reasonable estimate of, say, employee benefit costs for a year ahead as well as to know the probable manpower strength of the different departments. Alterations to the physical features of business premises, such as the allotment of space, the distribution of personnel and the availability of equipment, may soon falsify the allocations made in departmental accounts and consequently affect the overhead content of job costs.

It may thus be desirable to leave in abevance for the time being detailed apportionments of overheads to product groups and departments. So far as the system of unit costing is concerned, a standard costing system, if it is based on near capacity loading, would theoretically eliminate the need for any adjustment to the standard oncost rates, even if the output of a particular product line was drastically changed. A fundamental change in the rate of output, or the relative proportions of labour and material in the costs would, however, as a matter of practical accounting, almost inevitably call for a review of the costing rates. If a standard costing system was not in operation it would be desirable for the accountant to assess, even on a temporary

pasis, reasonable standards for the purpose of elieving stock accounts and charging cost of ales.

One of the most important duties of the iccountant is to make a rapid assessment of the effect of a change in programme on the future ash position. Such a forecast, which in any event should be made monthly, if not weekly, s of vital importance to a business in ensuring hat adequate arrangements are made to finance. uture activities or that surplus cash is put to profitable use. Changes in a programme of proluction or sales can affect the cash position in somewhat unexpected ways. An opportunity for t business to bring about an unbudgeted expansion in sales is not necessarily followed by a rise n cash holdings. A temporary shortage of cash nay, for example, be caused by an anticipated ise in sales turnover which necessitates restocking and a substantial buying programme. Conversely, a fall in sales will not always be followed by a shortage of cash, for the situation may be quickly met by curtailment of expense and the liquidation of stocks. Particularly with regard to cash control, the movement of events will not wait on the necessarily complex process of revising a complete system of interlocking oudgets.

### Maintenance of Control

The future is undeniably one of change, and in all probability rapid change, in trading, financial and economic conditions. It is likely that success in business will depend to an increasing degree on the speed with which the management can adapt the resources under its control to the new situations which occur from time to time. Because business is concerned with the basic factors of sales, costs and profit, management needs an accurate, speedy and flexible instrument of financial control on which to base its decisions. Whilst the overall company budget will probably always remain the major instrument for long-term planning, the revision of a budgetary system may be too cumbrous a process to control a fluctuating situation.

What appears to be required from the accounting function is a service of information and forecasting more immediate than that provided by the normal process of budgeting, and capable of assessing the financial implications of changed conditions at short notice. This may mean that short-term forecasts, revised month by month, will be overlaid on the formal budgets. The formal budgets may tend to be expressed on

broader lines than has been the practice hitherto and the control of day-to-day activities may rest on the short-term forecasts which will be constantly changing.

Rapid amendments to the forecasts can undoubtedly be assisted by the widening use of mechanical methods, and eventually computers may become part of the normal equipment of an accounts office. The most advanced office systems will, however, be quite ineffective if the management team fails to keep abreast of events, and the business accountant, as a member of that team, may find himself less able to rely on the information supplied by the line functions. If he is to maintain the requisite flow of purposeful control information and forecasts, it may well be necessary for him to become aware of a potential change in markets before the sales manager.

### **New Emphasis on Training**

Whilst there can be no divorce between 'historical accounting' and so-called 'management accounting', the intense pressure of events is demanding a new race of accountants with an approach quite different from that of their predecessors who were content with the laborious presentation of past events. The situation necessitates in any substantial business that the head of the financial department shall be relieved of all routine duties so as to be free at all times to interpret the effects of change, to watch events and to predict the future. The qualities required for this purpose also suggest that a new emphasis is needed in the training of accountants for industry.

Whilst substantial developments have occurred in the examination requirements of the accountancy bodies it is open to question whether an accountancy qualification, and even considerable experience in accounting, entirely meets the needs of modern business from the point of view of financial control. An examination syllabus must by its very nature always lag a little behind events in a fast moving world. A remedy which lies in the hands of the business world is to organize carefully planned and well-managed discussion meetings for managers. Such meetings, if held frequently within each individual business and divorced entirely from daily routine, would do much to keep not only the accountant but all managers in touch with current developments in their respective spheres. In this way the implications of opportunism could be considered on a team basis.

# Investment in Stocks and Shares-II

by A. G. TOUCHE, F.C.A.

### Growth

E have seen that the flat yield from irredeemable money stocks and the redemption yield from redeemable money stocks are the significant yields. The market price of many equities puts them on a flat (or dividend) yield basis of less than the yield from 2½ per cent Consols. It follows that the dividend yield cannot be the whole story and must therefore be an imperfect measure. The long-term investor in a growth equity, like the investor in a redeemable money stock, expects to obtain growth of capital; but, unlike the investor in any money stock, he also expects to receive growing income from his investment. Serious attempts to measure growth have been forced on investors in recent years by the reverse yield gap; it is now necessary to use some of the expected growth to justify the purchase of an equity in preference to the purchase of a money stock. We shall examine the concept and valuation of growth by treating 21 per cent Consols as a growth stock, and thus eliminating confusing side-issues.

34. Let us assume that the income from 2½ per cent Consols during the next year will be £2 10s per £100 nominal of stock, but that in all subsequent years it is 4 per cent greater than in the previous year - for example, in the second year from now, it will be 104 per cent of £2 10s. What would be a reasonable price for 2½ per cent Consols on these terms? They might reasonably be worth 100, giving a flat yield of 22 per cent on the first year's income. If they remain on a 21 per cent flat yield basis, their price will increase each year by 4 per cent compound. Their annual benefit to the investor will be 2½ per cent gross flat yield, growing at 4 per cent compound, and 4 per cent capital growth; these can be combined and called a growth yield of 61 per cent. Curiously enough, to a permanent investor the present value of all the future income discounted at 6½ per cent is 100. Six and a half per cent is the gross growth yield; the net growth yield is  $6\frac{1}{2}$  per cent to the oper cent taxpayer,  $5\frac{1}{2}$  per cent to the 40 per cent taxpayer, and  $4\frac{1}{4}$  per cent to the 90 per cent taxpayer. Growth yields can be compared with flat yields from irredeemable money stocks and with redemption yields from redeemable money stocks.

35. The fictitious example of a growth money stock illustrates the theory of growth that is applicable to equities. Unless the yield basis changes, income and capital value grow pari passu. The investor holds growth stocks because he is prepared to give up some immediate income for bigger future income and its

The second and concluding part of a paper presented at the Oxford Summer Course of The Institute of Chartered Accountants in England and Wales.

attendant capital growth – both are the reward of present abstinence. If the same rate of growth is expected to continue for ever, the net growth yield is the next year's rate of income (after tax) plus the rate of growth. And all growth yields are the same as the rates at which all future dividends must be discounted to give the present market price. If all the expectations from an investment are fulfilled, the true return to an investor is the same however long he keeps it, illustrating that income and capital values are reflections of one another.

36. It would be unwise to expect from an equity a high rate of growth for an unlimited number of years; the rate of growth is very difficult to quantify, starting with a low degree of certainty and becoming even less certain the longer the view is extended. The tables in Appendices 2 and 3 have been prepared by a leading firm of stockbrokers, who have kindly given permission for them to be reproduced. They show growth yields on the assumption that the initial rate of growth will last for five or ten years and that the rate will afterwards be 3 per cent a year. The 3 per cent is regarded as a reasonable assumption based primarily on the increasing capital employed derived from retained profit. The alarming heading 'Dividend/ price ratios per cent' means 'flat yields based on next year's estimated dividend'; it has been devised to avoid the use of the word 'yield', which can be misleading as it implies the total benefit. The tables can be used in two ways:

- (a) The rate of growth is estimated and the growth 'yield is ascertained to see whether it seems reasonable. For example, if the flat yield on next year's dividend is estimated at 2½ per cent and the rate of growth at 20 per cent for the following four years, the gross growth yield is 7.4 per cent.
- (b) The required growth yield is decided by reference to the income's quality, the yield from 2½ per cent Consols etc., and the growth rate postulated by the present price is ascertained to see where it seems reasonable. For example, a growth yield of 9 per cent is required and the flat yield on next year's dividend is 3 per cent; this postulates five years' growth of 25 per cent, which may or may not seem reasonable.

37. It is obvious that the higher the rate of tax the more valuable is growth as opposed to current income. But the lower the current yield at which an investor buys a share and the higher the rate of growth which he is implicitly forecasting, the greater the risk of loss should his estimate of growth prove too optimistic. For example, if the dividends on a

specific share are thought likely to grow at 20 per cent for ten years, should the dividend yield be  $1\frac{1}{2}$  per cent (growth yield 8 per cent) or 3 per cent (growth yield 12 per cent)? A 50 per cent difference in growth yields causes here a 100 per cent difference in the present prices. And the price of an alleged growth stock that stops growing can tumble sadly.

- 38. Let us now examine the basis of growth, first defining certain terms:
  - (a) 'Growth' means growth in dividends and earnings per share, as adjusted for capitalization issues and the bonus element in rights issues.
  - (b) 'New shares issued' means effective new shares without any bonus element (i.e. shares issued at the full market price).
  - (c) 'Percentage earned on equity capital employed' means earnings available for the equity expressed as a percentage of the assets attributable to the equity. Where the equity benefits from earnings on assets attributable to fixed-interest capital in excess of the fixed interest payable, the excess earnings are part of the equity earnings on equity capital employed. Where reference is made to increased equity capital, it is assumed that the gearing is maintained by the issue of further prior charges. Assets (and, similarly, capital employed) means true, not book, assets, so the correct figures are normally unobtainable.
- 39. A company that distributes all its income can grow in one or more of the following ways:
  - (a) It can increase the percentage earned on total capital employed.
  - (b) It can increase the percentage earned on equity capital employed by issuing prior charges, whose rate of interest is less than the percentage earned on the new money. This can be achieved even with a declining rate of earnings on total capital employed.
  - (c) If the earnings yield from the equity at market price, after the price has reflected the rights issue, is less than the percentage earned on equity capital employed, a rights issue and maintenance of the percentage earned on equity capital employed will cause growth in earnings per share. This can be looked at in another way: if the market valuation of the equity is greater than its asset value (not to be confused with book value), additional equity assets will be valued by the stock-market at a similar premium where the new assets are as fruitful as the old.
- (a) and (b) are obvious, but (c) is complex. If our company earns 20 per cent on equity capital employed and is valued on a dividend (and earnings) yield basis of 4 per cent, the market capitalization of the equity is five times its asset value. Let us see what happens if the equity capital employed is increased by 10 per

cent and the 20 per cent earned on it is maintained:

	rights	rights					
	issue	issue					
Equity capital employed	100	110		•		•	
Market capitalization of equity	500	550					
Earned on equity capital employed	20 (=20%)	22 (=2	0%)				
Number of shares in issue	N	102% of	и (	i.e.	N+	10% of 5	<u>_N</u> )

Because the market capitalization of the equity is five times its asset value, a 10 per cent increase in the equity's assets (and earnings) requires new shares amounting to only 2 per cent of the old shares in issue. A 2 per cent dilution of the equity goes with a 10 per cent increase in the earnings, giving growth in earnings per share of nearly 8 per cent (\frac{1102}{102}\text{ per cent} = 100 \text{ per cent}). The lower the earnings yield, the greater the ability to use new money fruitfully that is normally postulated.

40. Similar reasoning applies to a company that retains some of its earnings. The increased equity capital employed arising from retentions reduces the amount that must be raised by issuing more shares. If our company retains three-quarters of its equity earnings (i.e. the dividend yield is 1 per cent and the earnings yield 4 per cent), the equity capital employed (and equity earnings) will increase each year by 3 per cent, less income tax, of the market value of the equity. With income tax at 40 per cent and the market value of the equity five times the asset value, the equity's assets (and earnings) will grow each year because of the retained earnings by 9 per cent (60 per cent of  $5 \times 3$  per cent). By their company's ploughing back each year 1.8 per cent (60 per cent of 3 per cent) of the market value of their investment, the shareholders achieve growth in earnings (and assets) per share of 9 per cent.

41. In the above examples of companies expanding by making rights issues or by retaining profit, we saw that equity assets in the hands of the company had a market value of five times par, giving an earnings yield of 4 per cent. This postulates that the company can make fruitful use of enough new money (whether obtained from rights issues or from retentions) to give the earnings per share a growth rate sufficient to justify the valuation. The opposite type of company, where the equity assets are valued by the market at less than par and the earnings yield on the equity is greater than the percentage earned on equity capital employed, achieves the opposite results. New equity money, whether from rights issues or from retentions, is worth to the shareholder less than he puts or leaves in the company; and the company piles up unfruitful assets, thus becoming increasingly ripe for a take-over.

### Psychology

42. Like other occupations, investment is influenced by psychological factors. As accountants we tend to be interested in book values, and these are a frequent source of confusion. If an investor is considering whether to retain his holding, to buy more, or to sell, he should consider the reasonableness or otherwise of

he present market price and of the market value of is present holding in relation to the value of his portfolio; but he should forget the book value, or cost price, of his present holding: what he happened to pay at some date in the past has no bearing on whether he present price is right. An investor who lets book values influence his policy is like a roulette player who magines that particular past results at the gaming able are a guide to particular future results. Someimes an investor decides to sell because he can realize 1 capital gain, and not to sell if he would realize a loss; this causes him to end up with a portfolio consisting entirely of mistakes. Backing one's losers is sometimes called 'averaging': 500 shares are bought at 30s, the price falls to 20s, and 500 more are bought to average the book cost to 25s. Twenty-five shillings does not look as bad as 30s in comparison with the market price of 20s; but the reason for the purchase should not be 'averaging' - that can never be a good reason - but that the shares are good value at the present price.

- 43. It is very difficult not to watch the market performance of recently bought shares more closely than that of shares bought long ago, and possibly showing handsome appreciation over cost. A recent purchase was recent action and is watched and commented on; yet the conscious or unconscious recent decision to retain an old holding, being inaction, is ignored: but both decisions have the same significance. The same foible tempts the manager of other people's money to refrain from selling an investment that shows good appreciation over cost but which he thinks is too high. If he sells he once shows to his client a good realized capital gain; but if he retains, he can at every valuation show a good unrealized appreciation instead of a recently bought investment that may even show depreciation. If a fund stays fully invested, there is no practical distinction between realized and unrealized appreciation: the whole fund is subject to the risks of the market, regardless of any changes of investments.
- 44. Glamour exerts a subtle influence. At times particular industries or shares are in or out of fashion, and the market price is probably too high or too low; investors tend to have a strong herd instinct and to think and act alike: they tend to overdo particular courses of action. Names of companies have their influence: 'electronic' in a name might at one time have great appeal; at another it might adversely influence an investor who has lost heavily in a company whose name contains the word. The corporate image of a company, derived from prestige advertising or other sources, influences the subconscious and may impair judgement.
- 45. Many investors are influenced by the mere price of a share, regardless of its value. Two investments may be exactly comparable, apart from the price of one being more than that of the other. Often the investor prefers to have more of lower priced to fewer of higher priced shares; hence the subdivision

of shares into 5s or even lower nominal values, and the expense of trivial holdings in share registers.

46. A frequent misconception is the idea that there is a distinction between the financial interest of a company and that of its shareholders, apart from anomalies arising from tax. Thus we may be told that when its shares are priced on a 3 per cent dividend yield basis, a company should make a rights issue, instead of issuing a 7 per cent debenture. Subject to prudence, the only criterion should be what will increase the earnings per share most. With profits tax at 15 per cent and income tax at 40 per cent, the cost of a 7 per cent debenture in terms of gross equity earnings is 5½ per cent. The earnings yield of the 3 per cent dividend yielder may well be more than 5½ per cent, so the apparent saving by a rights issue is nonexistent. But the debenture's interest is fixed, whereas the shareholder hopes that his dividend will increase; so, taking just the dividend yield of 3 per cent and ignoring the earnings yield, we must add on the hoped-for rate of growth before we can compare the dividend yield with the  $5\frac{1}{4}$  per cent cost of the debenture. In this example, we could perhaps compare a growth yield on the share of 8 per cent with the 5½ per cent cost of the debenture; but it would be even more correct to add on the rate of growth to the earnings yield. Perhaps a rights issue at a time of high interest rates is the best method of financing growth if it is intended to reinstate the gearing when interest rates are lower; but the right conclusion does not validate the wrong reasons.

#### The General Investor's Viewpoint

47. Each investor must make the choice between money stocks, equities, or a mixture of the two. In money stocks he can achieve certainty in terms of uncertain money; in equities he cannot achieve certainty even in terms of money, but he hopes to achieve better long-term results. Creeping inflation seems likely to stay with us permanently; as money gradually erodes, the money value of equity capital employed should increase; and maintenance of even a basic minimum, or survival, percentage earned on the increasing money value of the equity capital employed will mean increasing money earnings for the equity. In addition, real growth in the economy, with or without inflation, should cause real equity growth. In essence, the choice is between units of measurement, whose supply can be increased by mere ledger entries, and tangible possessions, which we hope can be profitably employed. The investor who has liabilities quantified in money may like the safety of assets fixed in terms of money; the investor without liabilities to match against his assets must decide whether the hope of greater reward justifies greater money uncertainty, though possibly not greater real risk. The short-term investor, who will need money for other purposes within two years or so, may prefer the certainty of a suitable money stock to the short-term risks of the equity market, even

though he is convinced that the long-term risks are outweighed by the long-term advantages.

48. The risks of particular equity investments can be overcome by diversification of the portfolio. If the fund is not large enough to have, say, twenty-five separate investments, investment trust companies and unit trusts provide a ready way to diversification. They are particularly suitable for the individual or the trustee who wants to be an inactive investor. Investment trusts with good gearing are excellent for the investor to whom the highest immediate income is not necessary; but if they are geared by debentures. they tend to have a low net United Kingdom rate. A unit trust with a higher yield may be better for the fund where immediate income is of greater importance, though it lacks the advantage of gearing. And unit trusts never bother their holders with rights issues.

#### The o per cent Taxpayer's Viewpoint

- 49. Not being liable to tax, the o per cent taxpayer may prefer the certainty of high yield to the uncertainty of future growth. With redeemable money stocks he will, subject to his choice of redemption dates, choose the highest gross redemption yield. If he thinks that long-term interest rates will fall, he may choose a low running yield in order to secure the high gross redemption yield on the effective saving each year of part of the profit on redemption; or he may prefer irredeemables. If he thinks that long-term interest rates will rise, he will avoid long-dated stocks and irredeemables, and may prefer the highest running yield, or perhaps he will place his money on deposit.
- 50. If the price of equities is governed by the standard rate taxpayer, higher-yielding equities should theoretically be better value to the o per cent taxpayer than lower-yielding equities. He must, of course, watch for low net United Kingdom rates, which can materially reduce his yield. In practice, if he is prepared to accept the uncertainties of growth in the hope of better long-term results, he may well do better in low yielders than in high yielders. But the latter are logically his best chance of good results. Perhaps a mixture of growth stocks and 'yield sweeteners' is his answer.
- 51. Because the o per cent taxpayer can recover income tax on distributed profit whereas the company he invests in suffers income tax on retained profit, a company making a full distribution and financing growth by raising new money should, theoretically, be better value to the o per cent taxpayer than one that retains a high proportion of its profit.

#### The 40 per cent Taxpayer's Viewpoint

52. As the rate of tax rises, the emphasis inevitably changes from current income to growth. A taxpayer invests for growth to maximize his wealth; he does not mind whether his wealth increases from savings out of income or from growth. If income is taxed at

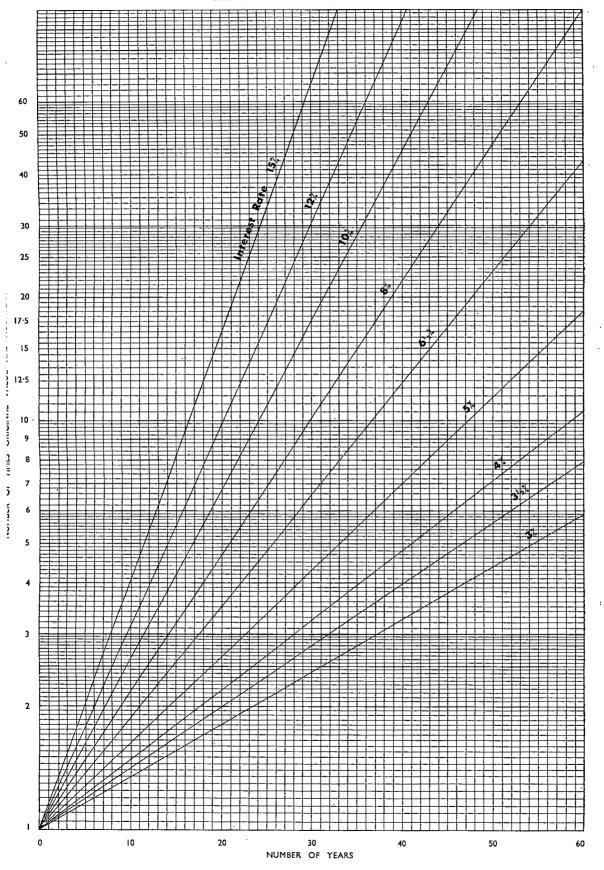

- 40 per cent, £1 of capital growth is worth 33s of income. Or he may wish to defer income until retirement when his need for it is greater: he accepts a low flat yield now in the hope that by the time he retires it will have grown into something worth while, on which he may pay a lesser rate of tax. He would be investing for long-term income with no intention of realizing the capital growth at any date: that is the basis on which an investment trust company would buy low-yielding equities. The proportion of his funds that are put into equities must be decided by each individual, but he must be able to raise money in an emergency that coincided with a slump in equity values. Perhaps ability to borrow on the security of a life policy is the best means of providing this essential liquidity.
- 53. The 40 per cent taxpayer will be particularly affected by tax considerations, such as double tax relief. An individual's investment decisions will be affected by his rate of tax on any additional income, but his double tax relief rate will be roughly his average rate of tax. If his double tax relief rate is 5s in the £, the yield to him before tax from, for example, American Telephone and Telegraph, will be 113 per cent of the apparent flat yield. The particular circumstances of the individual overseas investment must be considered in relation to those of the particular investor; and the problem is complex.
- 54. Apart from double tax relief, an important question for a company making an investment is whether the income is franked or unfranked for profits tax. With income tax at 40 per cent and profits tax at 15 per cent, unfranked yields must be reduced by 25 per cent before they can be compared with franked yields. This is most easily proved by comparing net with net: £100 unfranked gross leaves £45 net, which is 25 per cent less than the £60 net from £100 franked gross.

#### The 90 per cent Taxpayer's Viewpoint

55. The taxpayer with a marginal rate of 90 per cent should not ignore dividend yield, although he is primarily concerned with growth. At first it might seem that any dividend yield (and therefore any price) is justified if there is assured growth; but the price will not hold in the long run if it is unreasonable. As we saw when we examined growth, the valuation of high (but uncertain) growth is exceedingly difficult. With dividend yield 90 per cent valueless to him, the 90 per cent taxpayer can seek reasonable earnings yields accompanied by low dividend yields. The earnings ploughed back in a profitable company should ensure long-term growth; and the reasonable earnings yield is some safeguard against a fall in price following a levelling-off in growth.

#### The Trustee's Viewpoint

56. Where there is a life-tenant and a remainderman, different people have an interest in income and in capital. Sometimes investors, to whom belong both

the income and the capital, object to a purchase of a share yielding 3 per cent and growing, it is hoped, at 8 per cent a year, on the grounds that even in the ninth year their yield on cost will be only 6 per cent; they forget that by then they should have some capital growth. But the argument is valid from the viewpoint of the life-tenant, who receives only the income and has no direct interest in the capital value or in the size of the income after his death. Appendix 4 shows the effect of growth at various compound rates per cent. From it can be seen how long a lifetenant must wait to receive the required income at various yields and growth rates. For example, if the yield is now 3½ per cent and 6½ per cent is required, the life-tenant must wait five years if the growth is at 15 per cent a year and twenty-three and a half years if the growth is at 3 per cent a year. Appendix 4 is also useful for estimating capital values at future dates, where a constant growth rate is forecast instead of an initial growth rate for five or ten years reducing to 3 per cent after the initial period. Where the latter is assumed (i.e. where appendices 2 and 3 are used), the dividend yield on cost and the estimated capital value in the last year of the initial period can be calculated: for example, a 4.06 per cent yielder on next year's dividend is expected to grow at 15 per cent for the following four years and at 3 per cent thereafter, giving a growth yield of 9 per cent; in the last year of the initial period the dividend yield at the then market price will be 6 per cent, being 3 per cent less than the continuing growth yield; Appendix 4 shows that £1 becomes 35s after four years' growth at 15 per cent compound, so our 4.06 per cent yield on cost has become 7.1 per cent. The market value will, in the last year of the initial period, be 118 per cent (i.e.  $\frac{7\cdot 1}{6\cdot 0}$  per cent) of the purchase price, thereafter increasing at 3 per cent a year compound.

57. The extent to which a trustee should invest for current income or for growth depends on the circumstances. The financial status of both the life-tenant and the remainderman will influence him: there is little point in depriving a poor life-tenant of income in order to improve the income and capital of a remainderman to whom additional wealth has little utility. The classic trust limited to money stocks has, by its stagnant income and the post-war demand inflation, deprived the life-tenant of a substantial part of the purchasing power of his income from the trust; it is not reasonable for a trustee materially to reduce the income unless the life-tenant thinks that present abstinence will be adequately rewarded in the later years of his life. But where there is a new trust, or a new life-tenant comes on to the scene, it would seem reasonable for the trustee to take the view that the long-term rate of interest, like the income from a mining share, allows for some amortization of capital, and that the life-tenant is not entitled to have initially the full long-term rate of interest. Four per cent might be a reasonable initial yield from a fund where the life-tenant's and the remainderman's financial needs are similar, and this will make possible some sacrifice of present income for the sake of growth. If the life-tenant and remainderman will reveal their circumstances to the trustee and agree an investment policy, well and good; otherwise the trustee must act reasonably. Having decided the yield he wishes to achieve, the trustee must consider whether the maximum permitted proportion of equities, and then whether growth or income stocks, will be in the long-term interests of both life-tenant and remainderman.

#### Conclusion

58. The theory of investment will never be a complete guide to practice; the inadequacy of company accounts alone will ensure this. Even were a complete analysis possible, some unforeseen factor possibly a stampede by other investors - might well upset the most careful and shrewd plans. The inadequacy of data means that intuition and luck will always count, and an art will be saved from degenerating into a science. (Concluded.)

## Weekly Notes

#### PROFESSIONAL AMALGAMATIONS

AST month at the Oxford summer course of The Institute of Chartered Accountants in England and Wales, one of the speakers stated that 19 per cent of all Institute members practising in the United Kingdom were 'sole practitioners'. In the legal profession the proportion applicable is appreciably higher. At The Law Society's annual national conference at Torquay last week, Mr Henry B. Lawson, in his presidential address, announced that the number of solicitors in practice as one-man firms formed 24 per cent of the profession. This percentage, for the first time in many years, has fallen and Mr Lawson attributes the decline to the modern tendency for larger units in business, commerce and the professions caused, in turn, by the economic necessity to employ both men and machinery as effectively as possible. With the law growing more complex, he also questions whether the one-man firm can provide the public with the full range of services it requires and suggests that solicitors should not be allowed to practise on their own until they have served a period either as an assistant or in partnership.

While comparable statistics are not readily available it would seem from our 'Professional Notices' column that the same trend towards amalgamation is happening with accountancy firms and for the same reasons. It is not so many years ago that the idea of specialization had as many enemies as advocates but it is now generally recognized that, with an ever-expanding repertoire being demanded of the professions, a full orchestra is better than a one-man band, however, much of a virtuoso the latter may be.

## PROFESSIONS AND THE COMMON MARKET

HERE is an important professional aspect to the I integration which is going on within the European Economic Community. All countries have their own professional standards, systems of examination and methods of recruitment. It is by no means always a straightforward matter when a professional man in one country of the Common Market seeks to practise in another. Prior to the Treaty of Rome it was probably impossible in most professions for a man to practise in two countries without having satisfied a board of examiners in both - an undertaking which few professional men would care to assume. Efforts have been made within the European Economic Community to establish common standards and practices in certain professions, for example in the case of architects, but progress is slow.

The subject was broached by Sir Edwin Herbert, a past president of The Law Society, last week in addressing The Law Society at Torquay. He said that in some cases British Courts, even the House of Lords itself, might not be able to come to a final conclusion without first obtaining the opinion of the Luxemburg Court and that administrative practices, amounting in some instances to requests to Parliament for the repeal or amendment of statute law might be involved. It would appear that Sir Edwin was going a good deal further in his assessment of the impact of the Treaty of Rome than did the Lord Chancellor recently.

Sir Edwin said that ratification of the Treaty of Rome would be an act of sovereignty, not a surrender of sovereignty. He went on to say that British lawyers would have to widen their knowledge and accustom themselves to the idea that they would have to deal with a new kind of law if this country goes into the Common Market. There is, of course, not only the problem of the legal profession having to adjust its idea to the legislative acts made by the European Economic Community in Brussels but also of taking into account the attitudes of lawyers on the Continent who have been trained in Roman law.

Altogether there are important professional implications for this country's entering the European Common Market and it will be surprising if any of the more established professions are not faced with important problems of adjustment and integration.

#### REGISTRATION OF CHARITIES

THE Home Secretary and the Minister of Education, acting under subsection 10 of section 4 of the Charities Act; 1960, made on September 28th the order necessary to effect completion of the compulsory registration of charities in England and Wales provided for by that section. When we commented in a leading article in our issue of April 14th last, on the order which extended registration to,

The Charities (Registration) (Commencement No. 4) Order, 1962 (S.I. No. 2166 of 1962).
The Charities (Registration) (Commencement No. 3)

Order, 1962 (S.I. No. 698 of 1962).

amongst others, national charities, it was thought that two more orders would be made to complete the process of registration. In fact the latest order covers Wales and the whole of that part of England not yet subject to compulsory registration, but names two appointed days for the purposes of subsection ro. In the case of the administrative counties (thirteen) and county boroughs (eighteen) in the Midlands (which for this purpose stretch as far south-west as Monmouthshire) and the whole of Wales, the order requires registration by November 30th next. In the case of the rest of England, that is to say, the geographical counties of Cumberland, Durham, Lancashire, Northumberland, Westmorland and Yorkshire, registration is to be completed by February 28th, 1963.

It could hardly have been imagined, when the Charities Act was passed, that the seemingly vast task of registering charities throughout England and Wales could be taken in hand so quickly. That it has been possible to provide the necessary administrative machinery redounds greatly to the credit of the two departments concerned. There cannot, however, help being a strong suspicion that their work has been made easier - in a way which neither would desire by the failure of many trustees to make the applications for registration which the statute requires of them. With the making of the last registration order the completion of the central register of charities provided for by subsection (1) of section 4 becomes theoretically possible, but there are undoubtedly many gaps in it at present which should not be there, and until theory becomes fact there will not be that full record of charitable institutions which is potentially so valuable to charity as a whole and hence to the public at large.

#### LOCAL AUTHORITY BORROWING

URING the second and third quarters of 1961 Othe proportion of temporary borrowing made by local authorities in Great Britain, which was repayable at call or within seven days, rose to 69 per cent. The increasing reliance of many local authorities on ultra short-term finance has been a matter for concern, not so much perhaps among the local authorities themselves as among Government financial circles. Over the past year, however, such short-term finance has diminished slightly in importance. Of £1,210 million of temporary borrowing outstanding at end June 1962, just 60 per cent, or £709 million, was in the form of call or seven-day money. The continuously rising needs of the local authorities during the past year seem to have been met to a greater extent by borrowing for periods between seven days and three

This information represents the first fruits of the new data on local authority borrowing which appears in the October issue of *Financial Statistics*. Of equal interest are the latest figures of hire-purchase finance

<sup>&</sup>lt;sup>1</sup> H.M.S.O. 7s 6d net.

houses' activities. Of almost £820 million assets, hirepurchase credit in its various forms represented over £560 million, while advances and loans at end June 1962 at £114 million showed little change over the past six months. The main source of funds available to the finance houses engaging in this class of business is deposits, which account for over 40 per cent.

#### COTTON IMPORTS UNTIL 1965

THE President of the Board of Trade has told the Cotton Board that cotton textile imports from Hong Kong, India and Pakistan will continue to be subject to the same ceilings for cloth and made-up goods as at present until the end of 1965. Imports of yarn will be limited to the rate of imports in 1961.

Of the three eastern countries concerned, Pakistan is at present the most difficult case to deal with. That country has indicated that it is reluctant to agree to

enforce limitations of exports to this country in view of its need to increase its import earnings. The knowledge that India and Hong Kong will accept the ceilings (the Government has hinted that it will ensure that, in fact, Pakistan imports do not exceed the ceiling) should give the Lancashire cotton textile industry greater confidence in its short-term future and a short extension of the time it has to put its house in order.

Speaking at the Cotton Board conference last week-end the retiring chairman of the board, Lord Rochdale, said that constant complaints by the Lancashire industry of its vulnerability to imports of foreign cloth were to be depreciated. Not only did such incessant talk in Lancashire lower morale in the industry but it put the industry in a needlessly unfavourable light in the City and financial circles generally.

## This is My Life ...

by An Industrious Accountant

CHAPTER 143

THE office door opened noiselessly and a bronzed, bearded face grinned round the edge with a flash of white teeth. I didn't recognize him for a minute. Then he advanced, a broad-chested, husky he-man whose salaam aleikoum fairly rattled the window-frames, and recognition dawned. It was my erstwhile junior accountant, Harry, just returned from a two-year tour in North Africa and looking twice the man he was when he left us.

It's extraordinary how service abroad matures accountants for the better. Harry had been a cheerfully unsophisticated character, but responsibility and freedom beyond the skyline had changed all that. It was fascinating to hear his story.

His first lucky break came when he found the salary was even better than had been indicated by the advertisement in *The Accountant* that sparked off his ambition. There was also a kit subsidy, plus a disturbance allowance, male, single, extra-European zone, as listed in his new training manual. He had sloughed off suburbanity with his navy-blue gent's natty suiting when he donned his first lightweight tropical garb; he had breathed internationalism when his plane was grounded by fog *en route* and he saw the grandeur that was Rome.

It came as a shock to find his new office was a tent sited in desolate windswept desert, his new lodgings comprised a caravan parked near the workers' canteen. But his cost-conscious mind rejoiced at free digs, and his bank balance began to swell in the absence of expensive amusements. He was site-accountant in name, but that included being cashier

and payroll supervisor and financial administrator and almoner. It broadened his human sympathy when he found his non-accounting compatriots confiding their currency exchange troubles to him; it sharpened his intellect when he had to study local as well as United Kingdom tax law. He was far from overworked, and the White Man's Burden was only a joke to him, but he learned leadership perforce. After all, some forty native clerks were raw from the cameltracks, and touchingly hungry for literacy and hygiene; somehow, he took on their schooling also.

The advertisement didn't explain that the job was a seven-day, twelve-hour one in practice. After all, you can't refuse to help when a harassed technician is knocking at the caravan door, in an emergency; anyhow, there was little else to do and the sun was too hot to encourage frivolity. But in return, he was credited with Sundays, plus assorted local State holidays, so he accumulated a stockpile of odd-days towards his leave. The lad who had rarely looked beyond Blackpool or Butlin's wandered round Crete and Cairo instead, and went shooting at lions instead of bottle-tops.

They wanted him for another two-year tour, on a senior level, he explained, and he had an even better offer from a West African Government agency, but he hadn't decided. He looked at me rather appealingly. He'd like to stay at home. There was a girl he had been writing to...they'd looked over a semi-detached bungalow on the new estate...he'd saved quite a bit. In short, could we ever take him back? He wasn't to guess I'd just been planning to offer him a job with us.

Well, the personnel director was outside so I invited him into my room there and then for a chat. Unfortunately, Harry had thoughtlessly put a stuffed souvenir on my desk, a six-inch hairy black tarantula of revolting aspect. Prinny nearly had a heart attack when he saw it by his elbow as he was talking, so we had to postpone Harry's job application indefinitely.

# Finance and Commerce

#### Salvage

THE accounts of Francis Sumner (Holdings) for the fifteen months to March 31st, 1962—reprinted this week—reflect the salvage operation put into effect by a new board of directors under the chairmanship of Mr C. C. Miller, F.C.A. The company was earlier caught up in the affairs of Hide & Co, in which it had a considerable share interest. The former chairman of Francis Sumner was also chairman of Hide and the Sumner interest in Hide was sold to the Selincourt group before Mr Miller came on the scene. The sale is reflected under quoted trade investments in the accounts and in Note 7.

The accounting date was extended to cover fifteen months to March 31st, Mr Miller explains, in view of a number of items which had to be dealt with which made it impracticable to present an accurate picture earlier.

The main loss item included in the accounts is in respect of trading losses in two subsidiaries amounting to some £386,000 of which about £100,000 had been treated as a capital loss in the previous year's accounts. On the advice of the reporting accountants, Peat, Marwick, Mitchell & Co, the whole of the loss has now been treated as a trading item.

#### Reorganization

Peat, Marwick, Mitchell & Co were invited last March 'to report on certain matters'. Their report has now been received, Mr Miller states, and is being examined by the company's legal advisers, but Mr Miller adds 'we shall not use our time in any unproductive delving into the complicated past affairs but concentrate our efforts on increasing profits'.

That concentration has already led to the reorganization of the managements of three of the larger companies of the group. Management reorganization, as a whole, is now almost completed and the group is working at a profit with 'satisfactory results' expected for the current year. Head office has been moved to cheaper premises and head office staff and overheads have been cut to save about £20,000 a year in head office expenses alone.

Textiles in the form of rainwear, dressing-gowns, ladies' dresses and children's wear, as well as woven labels, embroidery and trimmings, form the com-

pany's principal interests. Non-textile interests are in electrical goods and television rental, both of which are doing well.

Given two or three years of normal trading conditions Mr Miller expects to achieve 'good results'. He is sure that 'left to do the job and with the continued support of Barclays Bank and the bill market we can be sure of success'.

#### Metal Profit and Loss

NOT every profit and loss account has to be read in such close conjunction with the directors' report as that of Capper Pass & Son Ltd, the metal refiners. The profit and loss account opens with the trading account balance of £1,000,557, including profit from rise in metal prices, and compares with a figure of £420,533 in 1960-61 reached after a loss from a fall in metal prices.

The metal price profit and loss is explained in the directors' report. The transfer of £170,000 to market reserve shown as a deduction from the net profit of £418,482 is in line with the board's policy of transferring from profit to market reserve the approximate net (after tax) equivalent of the estimated stock profit which in these accounts was £368,000.

After eliminating the estimated stock profit and investment and exceptional income the directors calculate that the smelting profit, before tax, for the year was £528,000 compared with £334,000, and that, of course, is a clear guide to the real operating earnings of the company. It was on that profit basis that the ordinary dividend was raised from 10 per cent to 11 per cent.

#### Adequate Reserve

The profit from the rise in metal prices resulted mainly from a large increase in the price of tin as applied to the company's stocks between the beginning and the end of the financial year. Since the end of the financial year the tin price has fallen again quite considerably 'and it is likely', the directors state in their report, 'that we will show a market loss during the current year'. The directors, however, are satisfied that the market reserve of £578,000 is adequate in relation to the value of the stock.

Smelting profits benefited from a higher throughput of material and from some success in efforts to hold down costs despite continuing inflation. Net capital expenditure on fixed assets during the year was £145,190, made up of £17,595 on buildings, £79,079 on plant and equipment and £48,516 under the heading of 'increase in capital work in progress'.

At the end of the financial year, further capital expenditure estimated at £185,000 had been sanctioned and this, like the bulk of the past year's spending, relates to an extensive programme for the modernization and integration of plant at the company's Melton works at North Ferriby, Yorkshire.

#### CITY NOTES

NTERNATIONAL political and economic un-Lecrtainties have given the latest round to the 'bears' in their stock market contest with the 'bulls'. The optimists consider that because there is industrial and economic slack to be taken up, it will be taken up through Government action in the credit and domestic economy sphere and that, therefore, equities are worth selective support at current prices.

The pessimists - or realists as they prefer to call themselves - point to the failure, so far, of easier credit policies to inject new life into industry and to the potential problems posed by the forecast United States business recession. They argue that recent equity improvement has turned on the buoyancy of the gilt-edged market rather than anything else, and that the gilt-edged rise has gone just about as far as it can be expected to go. War in India and the United States manoeuvring against Cuba have introduced adverse political influences to the market in addition to the unsettled economic factors.

Meanwhile the Chancellor seems extremely tentative in his re-expansion policies even though 'Neddy' has shown that re-expansion is vital.

A full report of the case summarized in this column will be published, with a Note on the Judgment, in the 'Annotated Tax Cases'.

#### In Re Pilkington's Will Trusts

In the House of Lords - October 8th, 1962 (Before Lord Reid, Viscount Radcliffe, Lord Hodson, Lord Jenkins and Lord Devlin)

Estate duty - Surtax - Advancement - Statutory power - Resettlement of lump sum proposed to be advanced -Advancement to save surtax and estate duty - Rule against perpetuities - Trustee Act, 1925, section 32.

A testator, who died in 1935, constituted by his will a trust fund and settled part of it for the benefit of a nephew, a son of his brother, for life, and after the death of the nephew in trust of such of his children or issue, and in such manner, as the nephew should appoint, and in default of appointment for his children equally. The power of advancement conferred by section 32 of the Trustee Act, 1925, was implied.

In 1959 the testator's brother proposed to make a settlement on Penelope, then 2 years of age, the daughter of his son, the nephew above referred to. If Penelope attained the age of 30 years, she would take the settled fund absolutely; if she should have died under that age leaving a child or children who attained the age of 21 years, the child or children would take the fund absolutely. Subject to this trust the fund should be held in trust for all the children of the nephew, other than Penelope, who being male attained the age of 21 years or being female attained that age or married.

The trustees of the testator's will desired, in exercise of the power given by section 32 of the Trustee Act, 1925, to advance about £7,600 out of the testator's trust fund and pay it to the trustees of the brother's proposed settlement to be held by them on the trusts thereof. The purpose of this advancement was the saving of estate duty and surtax.

It was contended on behalf of the appellants, Penelope and the nephew (her father), that the power of advancement conferred by section 32 of the Trustee Act, 1925, was sufficiently wide to permit of the making of an advancement in the form proposed. It was contended on behalf of the Inland Revenue that the power of advancement conferred by the section was limited to advancements to meet the actual circumstances of the object of the power at the time of the exercise of the power; and that as the proposed new trusts had to be read into the testator's will, they would, on the facts of the case, infringe the rule against perpetuities.

*Held*: there was nothing in section 32 to prevent the kind of advancement in question; but that as the trusts of the proposed settlement would have to be read into the testator's will, they would be void for perpetuity.

#### **Acceptance Sampling**

SIR, - During the past year or so, a number of practitioners have been experimenting in the application of acceptance sampling techniques to audit work and I would hope that my article on this subject in your issue of October 20th may have interested them and others. However, there is at present no means whereby the many practical problems which are continually arising can be mutually discussed or where individual members can share their experiences.

With this in mind, I have suggested to the London and District Society of Chartered Accountants that a discussion group be formed for the sole purpose of discussing this topic. May I, sir, through the courtesy of your columns, ask any members of the Society who may be interested in this group to write to me

at the address below.

Yours faithfully, K. A. SHERWOOD,

A.C.A.

37 Hampermill Lane, Watford, Herts.

#### **Credit Transfer**

SIR. - I was most interested in your very objective article on 'Credit transfer' in the issue of October

13th.

The universal use of some simple system for the transmission of money would save industry and commerce thousands of pounds and man-hours annually. While there are post offices in every village and every busy street in towns, there are few banks in working-class districts, and banking hours are limited. The use of traders' credits brings additional customers and necessitates additional counter space in banks, but these customers use their post office regularly and can make an additional transaction without needing extra counter space.

· From the accounting point of view the advantages surely are substantial. Receipts are notified by the giro and can be recorded in the cash-book at this stage or the giro advices themselves can serve as a cashbook, as compared with the need for listing cheques on a paying-in slip prior to banking. Payments are debited by the giro on the day they are made and therefore are basically in sequence. Compare that with the need to reconcile the cash-book with the

bank statement on which cheques are entered in a different order. The T.C. system does not advise the recipient who has to search for payments in his bank statement, which he may not receive for a considerable time. The giro provides a daily statement accompanied by portions of the payment forms giving relevant particulars.

On the Continent companies and firms print their giro account number on their stationery just as we print our telephone number. The fact that any member of the public can make payments to any giro account holder at any post office would be a very

real convenience.

Yours faithfully, ALAN JACOBS, Evelvn House. General Secretary, Windlesham Gardens. NATIONAL FEDERATION Shoreham by Sea, OF SUB-POSTMASTERS. Sussex.

[Mr Jacobs over-simplifies when he suggests that additional transactions by existing users of the post office would not need extra counter space; the alternative to extra counter space would be longer queues. The virtues of the giro system are generally admitted; our article questioned, however, whether a giro would be a viable proposition alongside a highly developed banking system which has introduced credit transfers. Mr Jacobs' comparison of giro with cheque transfer is misleading in ignoring the fact that credit transfers provide the same book-keeping advantages as the giro; and the credit transfer system does in fact advise the recipient who makes arrangements with his bank for this to be done. The automatic advice to all users offered by the giro is undoubtedly a better service; but it might be more fruitful to press the banks to provide this automatic advice of credits received than to set up a competing service. In the meantime companies and firms can print the names of their bankers on their stationery almost as easily as they could a giro number; the full benefit of either system depends on its widespread use. Traders' credits are no longer used; they were absorbed by the wider credit transfer service. -Editor.]

#### **Profits Tax**

Sir. - It has occurred to me that the effective rates for profits tax may be stated as follows:

	Per cent
On profits below £2,000	Nil -
On profits between £2,000 and £12,000	18
On profits above £12,000	. 15
The following indicates the proof of t	he 18 pe

21 cent rate:

£9,215 less one-fifth of £2,785=£8,430 at 15 per cent (£1,298 14s). £9,215 less £2,000=£7,215 at 18 per cent

£1,298 14s). I had not previously realized that the withdrawal of the marginal relief produced a straight rate of 18 per cent or 3s 7d in the f.

> Yours faithfully, S. J. BIRKETT.

London Wr.

#### NATIONAL TAXATION CONFERENCE

#### INSTRUCTIVE MEETING AT SCARBOROUGH

The twelfth National Taxation Conference organized y our contemporary *Taxation* was held from Friday f last week until last Monday in Scarborough. There was an attendance of several hundreds and once again the occasion was a notable success.

The Conference was presided over by Mr Percy F. Iughes, Editor of *Taxation*, and the papers on various spects of taxation law and practice proved of great ractical value and interest. Other features of the Conference were a number of enjoyable social functions and an interesting programme for the ladies.

#### CHAIRMAN'S OPENING ADDRESS

pening the conference on Friday afternoon, Mr ercy F. Hughes, said:

On this occasion of the opening of our Twelfth lational *Taxation* Conference, the second which we are held in Scarborough, I am delighted to welcome ou all and to express the hope that you will have a nost enjoyable and helpful week-end.

As I am sure you know, it is my hope that these onferences will continue to provide a forum where nose interested in the subject of taxation can meet from me to time so that problems can be discussed in a riendly atmosphere. It is surely good that we should neet one another from various parts of the country and indeed also from overseas with this object in mind.

#### **Reduction in Income Tax**

ince we met last year much has happened in fiscal ircles. We now have a different Chancellor of the xchequer, although some may feel that the devil ou know is better than the devil you do not know. Iowever this may be, the signs are that there is some nprovement in the economic climate and therefore feel that some easing in the general level of taxation, t least for individuals, is to be anticipated in April ext year. The effect of the earned income reliefs for artax purposes authorized by the Finance Act, 1961, rill be apparent in January 1963 and I feel that it is perefore time for a complete review of the system ow in operation of the progressively increasing rates f tax as the level of income rises. It is important that ne steps by which the effective rate of tax increases or an individual shall not be erratic. It follows from his that attention should be devoted to ensuring that ne area in which no tax is charged and those areas in thich the reduced rates of income operate and then ne standard rate and lastly the progressive rates of urtax shall all be satisfactorily in line.

#### Relations with H.M. Inspectors of Taxes

Ve pride ourselves, and in my view quite rightly, on ne confidence which exists between practitioners and fficers of the Inland Revenue department. Without nis our taxation system would break down. On my isits to other countries I have gained the impression nat people overseas are impressed with this aspect of ur system, although it is not operated in their ountries, and they are inclined to feel that it would not operate abroad as it does here. In the United States of America, for example, they have the impression that accounts in the United Kingdom are accepted by Inspectors of Taxes automatically and seem to find it difficult to appreciate that we prefer to volunteer information about doubtful matters instead of waiting, as in their case, until Inland Revenue investigators unearth them. I am sure that any suggestion that the Revenue in this country should have the right of investigating the books of clients in order to test the accuracy of the accounts and tax returns would be adopted in the United Kingdom only over the dead body of the accountancy profession.

#### Capital Gains

Income tax is an annual tax but it would seem to be like the brook which goes on for ever. No one likes to see the introduction of a new form of taxation and short-term taxes such as excess profits tax, excess profits levy and the special contribution are never popular. There is, however, a tendency these days to widen the conception of income by providing that there shall be treated as income for tax purposes receipts which would not otherwise be income. In 1060 we had legislation which has resulted in a charge to income tax arising on profits derived from the sales of shares in certain property companies. In the Finance Act, 1962, we have the creation of a new Case VII of Schedule D in order to charge to income tax, surtax and profits tax gains from short-term capital transactions. We cannot tell how far this tendency will go or what transactions which give rise to gain will be the next to be brought within the scope of the Income Tax Acts. The trend is clearly there and we would do well to note it. Perhaps I may be allowed to refer to what I

At the conference reception on Friday evening. Mr Graham A. Usher, M.B.E., T.D., C.A., Immediate Past President of the Scottish Institute, is greeted by Mr and Mrs Hughes.

Mr and Mrs Hughes welcoming Mr Edgar Spencer, F.A.C.C.A., President of The Association of Certified and Corporate Accountants, and Mrs Spencer.

said last year in Bournemouth, 'It would seem therefore that in the next Budget we may well find some increase in the artificiality of what is to be considered as income for income tax purposes'. If this leads you to suppose that the old Chancellor of the Exchequer had a word in my ear I hasten to say that the new one has not done so even though I am one of his constituents.

#### Review of Estate Duty

It is high time that the provisions of the Finance Act, 1894, dealing with estate duty and its amendments spread throughout the length and breadth of the numerous Finance Acts which have been introduced since that time, including the Finance Act of 1962, were consolidated into a single Estate Duty Act. Opportunity could then be taken to review that Act with care with the object of seeing whether a different form of tax should be introduced and the old form repealed, or whether such amendments could be introduced to the old legislation which would ensure that anomalies are removed and the burden eased in cases of hardship. In recent times there has been a tendency to ease the burden in the case of the smaller estates which is very good to see, but the burden of estate duty has had very severe repercussions in the case of family businesses which should be avoided as far as possible. I may say that I have no hope that the new Chancellor will repeal estate duty which yields about £185 million each year.

#### Single Tax for Companies

Technical matters are dealt with at some length at our normal business sessions and it has not been my practice to refer to them at the opening of our conferences except in general terms. There is, however, one further matter to which I would refer. Although I do not envisage any substantial reduction in the level of taxation imposed on companies, I would like to see the Chancellor of the Exchequer give active consideration

to the introduction of a single corporation tax and thus avoid the complexities which arise as a result of having to cope with income tax and profits tax on the profits of companies. It would not be so bad if the profits were computed on the same principles, but the need to make two separate computations of profit and then to have two separate periods of assessment is wasteful in time and labour. The introduction of a single tax, assessed if necessary for a fiscal year but on an actual basis would no doubt bring its own problems, particularly if the rate of tax differed from the standard rate of income tax, but I am of the opinion that the advantages would be considerable and far outweigh the difficulties such as determining the rate of tax to be deducted on payment of dividends.

#### Tax Problems of Family Companies Seeking Public Finance

Mr E. H. Gordon, B.A., was the speaker at the first business session; with Mr G. L. Barker, F.A.C.C.A., in the chair. Mr Gordon referred to the tax problems that need to be solved when a private company is seeking finance by a public issue. The 1940 Act gave the Revenue power to collect estate duty from a company where the deceased had transferred assets or had a controlling interest. This liability was not lost merely because the company had become publicly quoted, whether the public had a substantial interest or not. surtax was also a tax recoverable from the company and a clearance should be obtained. The seeking of additional finance from the public provided evidence of continuing expansion which would have justified the company in declaring smaller dividends. The Special Commissioners are no longer prepared to discuss

Mr E. H. Gordon, B.A., addressing one of the technical sessions. Mr G. L. Barker, F.A.C.C.A., immediate Past President of The Association of Certified and Corporate Accountants (left), was Chairman.

#### THE ACCOUNTANT

whether a particular dividend is 'reasonable' before it is declared. The company has to decide this for itself. Subsequently it may be necessary to discuss the matter personally with the representatives of the Special Commissioners so that the matter is disposed of before

any public offer is made.

Mr Gordon then reviewed, with special reference to property companies, recent Finance Acts which impose ipon a company income tax liabilities that properly belonged to its present or former shareholders. Next ne considered how a publicly quoted company could satisfy section 256 and escape the risk of paying the surtax of some of its members. The Stock Exchange ecognize that what will amount to 25 per cent of the ordinary voting shares in a company is a quite common ssue. On the other hand there are circumstances in which such an offer will still fail to satisfy the section. t often happens that two family companies amalganate in some way before the public issue is made and a orm of share exchange is the procedure to be aimed it. Both stamp duty and the new short-term gains tax an be avoided and use made of section 17 of the Finance Act, 1954. Mr Gordon examined the case of C.I.R. v. C.H.W. (Huddersfield) Ltd (40 A.T.C. 371) nd noted that subsidiary companies do not enjoy the protection from surtax accorded to a publicly quoted company by reference to its position at the last day of in accounting period. In practice a concession applies o acquisitions more than three months before that late. Before a public issue, contentious matters should be cleared with the Revenue or dealt with by an dequate reserve or the obtaining of indemnities from he appropriate shareholders.

#### **Brains Trust**

The first session on Saturday morning took the form of a Brains Trust at which there were questions on juotations from the Income Tax Acts and decided cases n the Courts. The chairman was Mr James S. Heaton, C.A., and the members of the panel were Mr J. Christie, A.C.A., Mr Maurice F. Coop, B.A., Mr J. M. Cooper, A.A.C.C.A., A.C.I.S., and Mr L. Varty, H.M. nspector of Taxes.

it Saturday morning's 'Brains Trust' session: (Left to right) Ar J. Christie, A.C.A.; Mr L. Varty, Inspector of Taxes; Ir James S. Heaton, F.C.A., (Chairman); Mr Maurice F. Coop, B.A., secretary, Dunlop Rubber Co; Mr J. M. Cooper, A.A.C.C.A., A.C.I.S.; Mr T. L. A. Graham, F.C.A. (Clerk to the Panel).

#### **Drafting the Finance Bill**

Mr Graham A. Usher, M.B.E., T.D., C.A., immediate Past President of the Institute of Chartered Accountants of Scotland, took the chair at the first session on Saturday afternoon which was addressed by Mr Peter H. Sée, C.B., Parliamentary Counsel. In his talk Mr Sée referred to some of the difficulties of Parliamentary draftsmen in framing legislation, with particular reference to the Finance Bill.

Mr Sée said that the draftsman's greatest enemy was time. As the law stood, the Finance Bill must be law not later than August 5th. This meant, bearing in mind the proceedings in the House of Lords, that the Bill had to leave the House of Commons, where the main work was done, by the beginning of July. The Chancellor of the Exchequer could not be expected to make up his mind what he was going to do in the Budget much before the end of the financial year, so there were three months, April, May and June, in which the Finance Bill had to be finally settled and passed. It was in fact, really much less than three months, because the main bulk of the drafting had to be done before the Bill was introduced.

Comprehensibility was the most important of the aspects of drafting, and one of the difficulties about making the Finance Bill comprehensible was the artificiality of the subject-matter. Beyond this, also, there was, so to speak, the conflict between the English language on the one hand and the way the Courts construe the law, on the other.

Mr Sée referred to the difficulties which would be involved in meeting the requests made for explanatory memoranda to Finance Bills, and in finding alternatives to 'legislation by reference'. He concluded his address as follows:

'I believe that one of the greatest improvements would be if the outside world, so to speak, came in with its criticisms hard, firm and early. You see, the draftsman is the last person in the world to judge how easy or difficult his stuff is to understand. He knows, I hope, what it is he is trying to do. Because of his job he is a little more used to reading the long and difficult sentences than a lot of other people. What is more, by the time you have written variations on the same thing ten or twelve times, the purely communication

difficulties tend to have disappeared.

'I believe a lot can be done if those who are going to be concerned with the administration of Finance Bills, when they become law, communicate firmly and early with those concerned, saying "Look, this bit really is too difficult". It may take the form of a question from a Member of Parliament on the floor of the House. It may take the form of an outside body writing in to the Chancellor of the Exchequer. It may take the form of the private individual writing to the Chancellor or the Board of Inland Revenue. It may well be that an actual amendment would not solve the problem, and I am sure that if people concerned with the administering of Finance Bills when they become law, would look at Finance Bills early enough, and would simply say "Look, we find this one particularly difficult for the following reasons", much could be done to help it.'

'We are, believe it or not, on the same side of the fence on this occasion. It is not true that on the one side you have, so to speak, the official army; on the other side, you have the taxpayers' army and all they want to do is fight one another to reach an agreement.

So far as the form of the law is concerned it must be in the interests of both of us that we should understand one another just as fully and as easily as we can, and I believe it to be the duty of both sides, I mean both sides, to do whatever we can to produce this result. I want all the help from you that I can.

'I can only add just this by way of postscript. I am, of course, talking about the form of the law; I have no concern with, or responsibility for, the substance of the law. If you think you are being overtaxed or for

that matter undertaxed, don't blame me.'

#### Taxation and Industry

The second address on Saturday afternoon was given by Mr A. Dale, F.A.C.C.A., under the title 'Taxation and industry - with particular reference to tax problems concerned with United Kingdom entry into the European Common Market'. The chairman was Mr

A. E. Dawson, F.C.A.

The fiscal provisions of the Treaty of Rome important to Britain in the event of membership were outlined by Mr Dale. Article 92 prohibited State subsidies other than grants in cases of natural disaster or expenditure in special areas of unemployment. Articles 95 to 98 contained general principles to prevent distortion of competition in the export trade and the rules were similar to those previously adopted by G.A.T.T. and O.E.E.C. Of fundamental importance in relation to indirect taxes was Article 99 which read:

'The Commission shall consider how to further the interests of the Common Market by harmonizing the legislation of the various member States concerning turnover taxes, excise duties and other forms of indirect taxation, including compensatory measures in respect of trade between member States.

'The Commission shall submit proposals to the Council; the latter shall decide upon the matter unanimously . . .

The position of direct taxes was covered by Articles 100 and 101 which gave the Council the very broad powers, first, to 'issue directions for the approximation of such legislative and administrative provisions of

Mr A. Dale, F.A.C.C.A., addressing a technical session on Saturday afternoon. Mr A. E. Dawson, F.C.A., immediate Past President of the Irish Institute (left), was in the chair.

member States as directly affect the establishment or operation of the Common Market' and secondly, to 'consult member States and, if corrective action does not follow, to issue directions, if it finds that a discrepancy between the legislative or administrative provisions of member States is interfering with competition within the Common Market and consequently producing distortions which need to be eliminated'. Considerable progress had already been made towards harmonization. Difficulties remained through the varying emphasis on direct and indirect taxes and

distinctive patterns of expenditure.

In France the turnover tax takes the form of an 'added-value' tax charged on the additional value at each change of ownership, i.e., it is multi-stage but non-cumulative. It compares with the United Kingdom purchase tax which, however, has the advantage of being collected at one point. Other Common Market countries have cumulative multi-stage turnover taxes known as 'cascade' taxes under which the whole value is taxed at each transfer during the course of production. Mr Dale listed many of the problems of direct taxation that required to be resolved. The time was ripe for harmonization of the differences in treatment by various countries of income derived from foreign sources. In the long-term the solution probably lay in the acceptance internationally of the rule that the country of origin of the income has the sole right to tax it. The proportion of the cost of social security met by direct charges represented 30 per cent in some countries as compared with 12½ per cent in the United Kingdom but it was problematical if entry into the Market would increase the total cost of social welfare. Changes to be expected would include a switch from direct to indirect taxes and the Board of Inland Revenue might have to modify its attitude to stock valuation and the revaluation of assets in times of inflation.

#### History and Work of the Committee of Ways and Means

On Monday morning, Mr Geoffrey Stevens, M.P., F.C.A., gave the first address on 'The History and work of the Committee of Ways and Means of the House of Commons with particular reference to the Finance Bill 1962'. Mr Ernest Long, F.C.I.S., was in the chair.

Mr Stevens traced the history of the Ways and Means Committee and explained that a Committee resolution is a necessary preliminary to the imposition of a new tax, the continuation of an expired tax and an increase in the rate of an existing tax or an extension of the incidence of tax so as to include persons not already payers. The authorization of expenditure was the special function of the Committee of Supply but there were certain charges such as the service of the National Debt which are permanent charges on the Consolidated

After discussing Government expenditure, Mr Stevens enumerated the stages passed through by a Finance Act. These included: First Reading, which meant the publication of the Bill; Second Reading, when the principle of the Bill is debated in the Commons; Committee stage in the Commons; Second Reading in the House of Lords; Report Stage in the Commons; Third Reading of the Bill as amended; Royal Assent.

Mr Stevens reviewed Parliamentary practice in rela-

#### THE ACCOUNTANT

Ar Geoffrey P. Stevens, M.P., F.C.A., addressing the conference last Monday

ion to the Judget. He referred to the secrecy with which changes in taxation are guarded by a select band f Treasury officials, from shorthand-typists to first ecretaries and also the printers who must know eforehand some details of the Chancellor's taxation roposals. Many amendments to the Finance Bill abled by M.P.s originated from such sources as the axation department of a great company, a leading tax counsel or the taxation committee of a large association. Ar Stevens thought that it seemed a pity that there vere so few M.P.s with any practical taxation xperience.

Mr Stevens continued with a reference to the xplanatory note issued in connection with the taxation f short-term gains and expressed the hope that this rould form a precedent for future Bills. However, he mphasized that a ministerial statement had no force it was not in accordance with the Act which it purorted to interpret.

#### Tax on Short-term Capital Gains

'he final address was given by Mr Percy F. Hughes n the subject of 'Tax on short-term capital gains', ith Mr F. M. W. Hird, F.C.A., F.C.W.A., in the chair. 'he general climate of opinion had tended to move wards a capital gains tax, said Mr Hughes, but the ew Case VII of Schedule D was more an extension of ne scope of income tax. Case VII gains might have an fect on the calculation of small income relief, age elief and life assurance relief as well as affording over for charges and section 341 claims, but Case VII sses could only be utilized by carry-forward against ture Case VII gains. Surtax also was affected. There as some doubt as to whether a wife's Case VII losses ould be set off against her husband's gains. For profits x purposes short-term gains only entered into the imputations to the extent of any net gains.

Mr Hughes considered the position of short-term sses of companies within a group which could be tilized against the net short-term gains of other couped companies. Losses not utilized in any charge-

able accounting period would, it seemed, be available for carry-forward only against short-term gains subsequently accruing to the same company. Assets chargeable extended to all forms of property whether situated in the United Kingdom or elsewhere but there were exclusions for certain kinds of tangible moveable property, a dwelling-house occupied by an individual, being his sole or main residence, patent rights and assets used for business purposes. Mr Hughes drew attention to the advantage to an individual taxpayer if the liability is dealt with under Case I rather than under Case VII. Liability would not arise in respect of a letting for less than twenty-one years unless effected in conjunction with a sale. All expenses wholly and exclusively incurred in obtaining the Case VII gain would be allowable but disposal of a chargeable asset would involve tracing back its acquisition. There was a general rule that a reorganization or reduction of a company's share capital would not involve any acquisition or disposal for Case VII purposes while bonus shares were treated as part of the original

Mr Hughes explained the operation of section 14 of the Finance Act, 1962, which deals with a possible loophole where shares in a land-owning company are sold after an interval of six months in circumstances where a disposal of land by the company would have been caught as having been effected within three years. He went on to observe that only in rare cases would the assessment under Case VII be made and the tax charged by January 1st, in the fiscal year to which it related. No special forms of return are required but the taxpayer would be under an obligation to include Case VII gains in his normal income tax return and the appropriate penalties would be applicable for failure to do so. An agent could only be required to give factual information concerning acquisitions and disposals in respect of which he had acted for a particular person specified in the notice served on him by the

Revenue.

#### Reception and Cocktail Party

A reception and cocktail party was given by the Editor of Taxation in the ballroom of the Grand Hotel on Friday evening to which all members and their ladies were invited.

#### Civic Reception and Dance

The Mayor and Mayoress of Scarborough, Councillor W. H. Smith and Mrs Smith, gave a civic reception and dance on Saturday evening in The Spa Ballroom.

#### Church Service

A morning service for conference members and their ladies, conducted by the Rural Dean and Vicar of Scarborough, the Reverend Canon D. Oxby Parker, M.A., was held at St Mary's Parish Church on Sunday morning.

#### **Golf Competition**

Mr Cyril E. Taylor, of Derby, was the winner of the eighteen-hole Stableford golf competition which was held on Sunday at Scarborough South Cliff Golf Club. The Taxation Golf Challenge Cup was presented to Mr Taylor by Mr Percy F. Hughes.

## Notes and Notices

#### PROFESSIONAL NOTICES

Messrs Booth, Ainsworth & Co, Chartered Accountants, of Midland Bank Chambers, Cheadle, Cheshire, announce that as from October 1st, 1962, they have taken into partnership Mr Stanley Lawrence Howard, A.C.A., who has been with the firm for a number of years. The firm name remains unchanged.

Messrs Kemsley & Co, Chartered Accountants, have moved to new offices at 9 Southampton Place, Holborn, London WC1. Telephone: Holborn 4434.

#### **Appointments**

Mr J. A. Graham, F.C.A., has been appointed to the boards of Bromilow & Edwards Ltd and Edwards Bros (Tippers) Ltd.

Mr G. E. A. Beardall, F.C.A., A.C.W.A., has been appointed secretary and chief accountant of Ruston & Hornsby Ltd.

Mr Alexander G. Scott, F.C.A., formerly chief accountant and controller of the Solartron Electronic Group Ltd, has been appointed controller and secretary of Schlumberger Overseas S.A., London.

#### FIRM'S GOLDEN JUBILEE

The partners and about seventy members of the staff of Messrs Slater, Dominy & Swann, Chartered Accountants, of Cambridge, met for dinner at the University Arms Hotel, Cambridge, on October 12th, to mark the fiftieth anniversary of the founding of the practice by the late Mr Harry Slater, father of the present senior partner.

#### OFFICIAL RECEIVER APPOINTMENTS

The Board of Trade have announced the following appointments:

Mr Arthur Thomas Cheek as Senior Official Receiver for the purposes of the Companies Act, 1948, and attached to the High Court.

Mr Christopher Albert Taylor as Official Receiver for the purposes of the Companies Act, 1948, and attached to the High Court. Mr Philip Anthony Lawrence as Official Receiver for the Bankruptcy District of the County Court of Canterbury and the Bankruptcy District of the County Courts of Rochester and Maidstone.

Mr Robert Livingstone Lochhead as an Assistant Official Receiver in Bankruptcy attached to the High Court.

Mr Ralph Arthur Donovan Copper as Official Receiver for the Bankruptcy District of the County Courts of Northampton, Bedford and Luton and the Bankruptcy District of the County Courts of Cambridge and Peterborough.

Mr Thomas Arthur Tuck as Official Receiver for the Bankruptcy District of the County Courts of Norwich, Great Yarmouth and King's Lynn and the Bankruptcy District of the County Courts of Ipswich, Bury St Edmunds and Colchester.

## THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

#### Summer Courses 1962

The programme and full texts of the addresses given at the Institute's Oxford and Cambridge courses this year have been reprinted in booklet form, one for each course, and are obtainable from the Institute, price 5s a copy, post free. The addresses presented at the two courses were as follows:

Oxford: "The problems of the smaller practice', by Mr R. W. Smith, O.B.E., T.D., F.C.A.; 'Investment in stocks and shares', by Mr A. G. Touche, F.C.A.; and 'The training of accountants for industrial responsibilities', by Mr G. W. Searle, D.SC., F.C.A.

Cambridge: 'Insurance and the accountant', by Mr David Williamson, F.C.A.; 'Taxation aspects of amalgamations and reconstructions', by Mr D. O. Bailey, F.C.A.; and 'Service to management', by Mr R. D. S. Shrimpton, F.C.A.

#### Members' Library

Three-year Digest of Income Tax Cases classified 1959-1961 in continuation of Butterworths Income Tax Digest.

(Butterworth & Co: edited by P. F. Skottowe.) 1962.

(Butterworths, 15s.)
Towards a General Theory of Accounting; by R. J. Chambers. Sydney. 1961. (Australian Society of Accountants, presented.)

#### BEDS, BUCKS AND HERTS BRANCH Annual Dinner

The annual dinner of the Beds, Bucks and Herts Branch of the London and District Society of Chartered Accountants was held at Watford, on October 16th, and was presided over by the Branch Chairman, Mr

P. J. L. Case, F.C.A.

In his response to the toast of "The Institute of Chartered Accountants in England and Wales', proposed by Mr E. T. Warren, Secretary of the Tottenham and Watford Division of the Eastern Gas Board, the President of the Institute, Mr Percy F. Carpenter, F.C.A., assured members that it was his intention to see that some of the matters which the Institute had in hand were brought to fruition during his year of office. Mentioning that the Parker report was about to be implemented he said: 'We feel we must be entirely practical and try and link our educational

#### **OBITUARY**

### Sir Harold Barton, F.C.A.

It is with very deep regret that we record the death on October 20th, in his eighty-first year, of Sir Harold Montague Barton, F.C.A., a Past-President of The

Institute of Chartered Accountants in England and Wales and co-founder of the firm of Barton, Mayhew & Co in 1908.

Sir Harold was born in Hull on September 24th, 1882, and was educated at Oundle. He was admitted an Associate of the Institute in 1904 and was elected to Fellowship in 1914. In 1928 he was elected

to the Council of the Institute and served as Vice-President from 1942-44 and as President from 1944-45. He was appointed first chairman of the Taxation and Financial Relations Committee (the predecessor of the Taxation and Research Committee) in 1942 until his election as Vice-President of the Institute. He served on most of the committees of the Institute and was chairman of many of them. Following the Second World War, Sir Harold interested himself wholeheartedly in the affairs of the Institute and will be particularly remembered for his work in connection with the Planning Committee (of which he was chairman), refresher courses for members returning from the Services, and all other matters concerning younger

members. For many years he was on the Co-ordinating Committee and when that scheme failed, played an active part in the deliberations leading up to integration with the former Society of Incorporated Accountants. He retired from the Council of the Institute in July 1957, three years after his retirement from practice.

Outside his Institute activities, Sir Harold served as financial director of the National Dock Labour Corporation, becoming vice-chairman in 1947, when it was succeeded by the National Dock Labour Board; he received his knighthood in that year. He remained vice-chairman until 1949. From 1939-42 he was a member of the London Region Price of Goods Committee; the Higher Appointments Committee of the Ministry of Labour and National Service from 1943-44; an Authorized Controller of General Aircraft Ltd on the appointment of the Ministry of Aircraft Production from 1943-45; chairman of the Unlicensed Residential Establishments Wages Board from 1946-50, and a member of the tribunal to determine compensation under the Cable and Wireless Act, 1946. Among other appointments, he was chairman from 1950-58 of the British Film Production Fund which had been set up to administer the fund supplied by the levy on British Cinema exhibitors under the Eady Plan. He was also a member of the Panel of Judges for The Accountant Annual Awards for three years from the inception of

the Awards in 1954.

Sir Harold will be remembered as a most distinguished accountant and as a leader of the profession in which he was held in such high regard. His qualities of sympathy and understanding endeared him to all those who knew him or served with him. We extend our sincere sympathy to Lady Barton and to his son and daughter in their sad loss.

requirements with the educational system of the country.

558

Referring to the Eighth International Congress of Accountants held in New York last month, Mr Carpenter said that throughout the world the title 'chartered accountant' was held with very great respect. 'I always feel', he added, 'that the greatest help the Council of the Institute can give its members is to uphold and enhance the general reputation of the chartered accountant.'

#### LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

The first of three meetings on the Common Market arranged by the Committee of the London District Society of Chartered Accountants will be held next Tuesday at 5.30 p.m. at The Chartered Insurance Institute, 20 Aldermanbury (near Guildhall). Sir Graham Cunningham, K.B.E., LL.B., will speak on "The European Common Market and the Treaty of Rome', and a period of discussion and questions will follow.

#### CHARTERED ACCOUNTANTS' GOLFING SOCIETY

#### A. O. Miles Challenge Cup

In the final match for the A. O. Miles Challenge Cup, played at Luffham Heath Golf Club, Messrs Futcher, Head, Smith & Co (A. W. Coleman and E. H. Head), beat Messrs Stanley Blythen & Co (R. W. Cox and C. W. Bingham).

#### INTERNATIONAL FISCAL ASSOCIATION United Kingdom Branch

The first meeting of the 1962-63 session of the United Kingdom Branch of the International Fiscal Association was held in London on October 2nd, when members heard a full report on the proceedings of the Association's sixteenth congress held in Athens from September 10th-14th (a report of the congress appeared in The Accountant of September 22nd). This was followed by two papers dealing with the 1963 congress to be held in Paris entitled "The comparative tax treatment of process of merger and capital reconstruction of enterprises', by Mr H. J. Hinves, F.C.I.S., and 'Fiscal measures in capital exporting countries for the purpose of encouraging investment in countries in the process of development', by Mr A. Dale, F.A.C.C.A.

Further meetings of the Branch have been arranged

as follows:

November 7th, 'The German tax audit', by Dr Arndt

Heinicke.

November 22nd and 23rd, Tax Seminar. It is proposed to organize a tax seminar on British taxation and the Common Market sponsored jointly by the United Kingdom Branch of the Association and the Federal Trust. (Further details will be announced later).

November 27th, Wine tasting session. Dr O. W. Loeb will

give a short talk on German wines.

The honorary secretary of the Branch is Mr D. I. Main, F.C.A., 9 Basinghall Street, London EC2.

#### THE LEICESTERSHIRE AND NORTHAMPTONSHIRE SOCIETY OF CHARTERED ACCOUNTANTS

The following functions arranged by The Leicestershire and Northamptonshire Society of Chartered Accountants, will take place at the Grand Hotel, Leicester:

November 15th. Luncheon meeting: 'Yardsticks and examples', by Mr L. V. Tindale, c.a., joint general manager, Industrial & Commercial Finance Corporation Ltd.

January 24th, 1963. Luncheon meeting: "The property developer and provincial towns and cities', by Mr C. L. Bounsall, B.SC., A.R.I.C.S., A.A.I.

March 27th. Evening meeting, 6 p.m. for 6.30 p.m. "The legal aspects of the capital gains tax", by Mr David Shirley, Barrister-at-law.

The honorary secretary of the Society is Mr J. H. Golcher, F.C.A., 32 De Montfort Street, Leicester.

#### SCOTTISH CHARTERED ACCOUNTANTS IN LONDON

#### **Discussion Group Meetings**

'A criticism of certain accounting conventions', by Mr R. M. Morison, M.A., C.A., based on part of his address to the Scottish Institute's Summer School held at St Andrews last September, will be the subject at a discussion group meeting for London members of The Institute of Chartered Accountants of Scotland to be held on December 10th, in the Oak Hall of the English Institute, Moorgate Place, London EC2, commencing at 6 p.m. A further meeting will be held, also in the Oak Hall of the English Institute and commencing at 6 p.m. on January 14th, when the subject for discussion will be 'Export finance', by Sir Laurence Menzies, adviser to the Governors of The Bank of England.

#### THE CHARTERED ACCOUNTANT STUDENTS' SOCIETY OF LONDON

The following meetings of The Chartered Accountant Students' Society of London will be held next week:

Monday, 5.30 p.m., at the Institute, Moorgate Place, EC2:
Lecture on The facts, the law and the General Commissioners', by Mr Douglas A. Clarke, LL.B., F.C.A.
(A General Commissioner for the City, member of the Council of the Institute and Vice-President of the Students' Society.)

Wednesday: Demonstration of Lamson-Paragon accounting methods (limited number).

6 p.m., at the Institute: Joint debate on 'This house

welcomes the revival of the Liberal Party'.

At Reading: Whole-day course, by Mr V. S.

Hockley, B.COM., C.A., F.A.C.C.A.

Thursday, 5.15 p.m., at the Institute: Introductory course lecture on 'Details of final accounts', by Mr F. R. Porter, F.C.A., A.C.W.A.

Friday, 5.15 p.m., at the Institute: Introductory course lectures on 'The taxation system', by Mr F. R. Porter, F.C.A., A.C.W.A., and 'The ownership and control of a business', by Mr P. W. Medd (Barrister-at-law).

## THE INSTITUTE OF OFFICE MANAGEMENT One-day Conference in Glasgow

The twelfth annual one-day conference and exhibition, organized by the Glasgow and West of Scotland Branch of the Institute of Office Management, will be held in St Andrew's Halls, Glasgow, on Wednesday, November 7th. Mr L. Hodson, of Norcros Consultants Ltd, will give a paper on 'Controlling stocks and stores'. A number of main manufacturers and suppliers of office equipment will participate in a comprehensive exhibition.

Further particulars may be obtained from the

conference secretary, Mr C. Maclean, Weir Housing Corporation Ltd, Calder Street, Coatbridge.

#### ECONOMIC CONDITIONS OVERSEAS

Two booklets in the 1962 series dealing with economic conditions in member and associated countries of the Organization for Economic Co-operation and Development has recently been issued covering France, and the Belgium-Luxemburg Economic Union.

Copies of the booklets are obtainable from H.M.

Stationery Office, price 3s.

## Money Values and Accounts

N less than a quarter of a century the purchasing power of the pound sterling in the United Kingdom has declined by about two-thirds. Thus older people, who are inclined to keep turning to the past in any case, often divide present-day prices by three to see what would have been the equivalent 'before the war'. This, for them, is an easy and sensible way of maintaining some kind of stability in a world of constant change. The modern industrialist, on the other hand, with his eyes fixed on distant horizons, impatiently brings the past up to date by multiplying the pre-war costs of his more ancient fixed assets by three in order to calculate how much of his splendid profits he must set aside to maintain the earning capacity of his plant.

The problem of how to tether the value of money so that injustices may be avoided is one primarily for economists, bankers, financiers and, seemingly nowadays, politicians. The task of recording money transactions, whatever fluctuations may have occurred, in such a way that they can be understood by everyone without recourse either to division or multiplication, is that of accountants, and it cannot truthfully be said that the profession has ever fully faced up to it. Ten years ago, at the Sixth International Congress on Accounting in London, a large number of accountants listened to and commented on a number of excellent papers on fluctuating price levels in relation to accounts. About this time, also, certain professional bodies had made or were about to make statements on the same subject. These aroused polite interest on publication, but like the Congress proceedings, were quickly forgotten. In the absence of any concerted lead, companies have continued as before to produce accounts which are a hotchpotch of historical and current values and from which economists, investors and others find the greatest difficulty in calculating reliable ratios between - to mention but one essential comparison - profits and capital employed.

At the recent Eighth International Congress of Accountants in New York, Mr W. E. PARKER, C.B.E., F.C.A., returned to the charge in a paper - the first part of which is reproduced in this issue - on the bearing on accounting of changes in the purchasing power of money. He clearly restates the problem and presents a solution which if, on his own admission, is not new, nevertheless deserves careful study.

Put briefly, his proposal is that, as a first step, the usual accounts submitted to shareholders should be supplemented by statements showing the effect on the 'traditional' accounts of changes in the value of money. In general, the 'traditional' accounts would be

based on 'historical cost'. The supplementary statements would be based on 'historical cost' expressed in terms of the current value of money. The items so translated would be all those which represent the consumption or ownership of goods and services and would include the balances which reflect the ownership of the business by the equity shareholders. In the profit and loss account (which covers a period of time), the current value of money would be that at the time of consumption of the various goods and services. In the balance sheet (which deals with a particular moment of time) the current value of money would be that at the balance sheet date. The effect

of these supplementary statements would be to show the changes in money values not only on the trading outcome but also on the funds and financing of the business.

Mr Parker describes these measures as 'a first step' towards the presentation of completely realistic financial statements and considers that the practical difficulties of producing them would not be unsurmountable. It would be interesting to learn the experiences of any readers who have had occasion to prepare similar accounts, both as regards the methods of preparation and the uses to which the information so derived was put.

## Short-term Gains - XVII

#### MISCELLANEOUS TRANSACTIONS

EFORE Case VII liability can attach under section 10 of the Finance Act, 1962, there has to be an acquisition and a disposal of an asset. We have seen how the disposal need not be by sale; it can be by gift or in other ways. Moreover, where there is no ordinary sale at arm's length there are provisions for adopting the market value of the asset at the time of the transaction. These provisions could cause hardship where the acquisition and disposal were part of a mortgage transaction. Accordingly section 12 (9) of the Act provides that a conveyance or transfer by way of security is not to be treated as involving any acquisition or disposal. This applies whether one transfers an asset, or a subsisting interest in it, or a right over it. A similar provision applies on re-transfer from mortgagee to mortgagor.

Having laid down this general principle, section 12 (9) goes on to deal with the special case of rights to money secured on land. The chief example is mortgage money. However, the subsection also applies to rights to periodical payments issuing out of the land, provided that the periodical payment is not incident to an estate or interest in the land – an exception presumably aimed at ground-rents. Such rights to money are to be treated as assets other than land, and accordingly the statutory period, for Case VII purposes, is six months, not three years. Thus a person who buys and sells mortgages or deben-

tures secured on land will be dealt with in the same way as if he bought shares or stock.

When a mortgagee is not paid at the stipulated time, he has certain powers to sell the mortgaged property in order to recover his money. In certain circumstances he can cause some third party to be appointed to do the selling, the proceeds being applied to paying the costs, and the mortgage debt, the balance (if any) being paid over to the mortgagor, i.e. the borrower. Normally, of course, all this happens without the borrower wishing it. However, it would be possible for him to enter into a collusive agreement under which he was lent money on mortgage and under which the land was sold at a large profit in the three-year period. Conversely, a forced sale may occur in a genuine case, where the land is sold at a heavy loss to the borrower, within three years after he acquired the land. These situations are dealt with by section 12 (10) which is not confined to land. It provides that where a person is entitled to an asset by way of security, or is entitled to the benefit of a charge or incumbrance on an asset, and he deals with the asset for the purpose of enforcing the charge, his dealings with the asset are to be treated for Case VII purposes as though they were done through him as nominee by the person entitled to the asset subject to the charge. In other words, if a mortgagee sells the mortgaged property, one assumes for Case VII purposes that the mortgager has sold it. It follows that the

mortgagor bears the Case VII liability, if any, or has the benefit of the Case VII loss. The same applies where the sale is carried out, not by the creditor himself but by, say, a receiver appointed by the creditor under a special provision in the mortgage deed, or by the Court. It is a matter of opinion whether the mortgagor should be made to pay Case VII tax where the sale is genuinely made against his will.

To grant a lease of land is one way of disposing of it. However, it was not intended that leases granted in the ordinary course of turning one's property to account by letting it should attract Case VII tax. The provisions of Schedule A and the excess rent provisions are regarded as sufficient for that purpose. On the other hand, to grant a long lease is in effect to sell. Section 12 (11) of the Finance Act, 1962, cuts the Gordian knot by making the familiar twenty-one-year lease the dividing line. A person disposing of land by letting it for a term of less than twenty-one years is not to be chargeable to Case VII tax in respect of any acquisition and disposal by reference to that letting. One cannot avoid the subsection by making an agreement for consecutive short leases. The benefit of the subsection is withheld if the letting is 'accompanied by' another letting (or by an agreement for one) such that the combined terms amount to twenty-one years or more. Similarly, if the letting is accompanied by an agreement to dispose of the land the penefit of the subsection is withheld.

Section 12 (11) is in any case subject to the provisions of section 13 which deals with the computation of profit and loss. It will be recalled hat the computation is to be on Case I lines on the footing that the acquisition and disposal constitute an adventure in the nature of trade.

Given the following facts:

(i) a chargeable disposal of land;

(ii) the disponer had already granted an undertwenty-one-year lease which was excepted by section 12 (11);

(iii) the grant at (ii) had been made since a relevant acquisition (i.e. an acquisition within the statutory three years);

then the adventure is to be treated as extending to the letting at (ii) to the same extent as if the interest created by the letting had been included in the disposal of the land. It will be appreciated hat the chargeable disposal could be another etting. However, a number of agreements,

spread over a period, for under-twenty-one-year lettings, would apparently not be caught.

Paragraph 16 of the Ninth Schedule was introduced at a late stage in the Bill in order to protect persons selling land to authorities having powers of compulsory purchase. Such a person will not be chargeable on the proceeds if he can prove two negatives, i.e. that he neither:

(a) acquired the land at a time when he knew or might reasonably have known that it was likely to be acquired by the authority; nor

(b) taken any steps by advertisement or otherwise to dispose of the land or to make his willingness to dispose of it known to the authority or others.

We turn now to the question of debts, which are the subject of paragraph 15 of the Ninth Schedule to the Finance Act, 1952. When C. lends fx to D, an asset comes into existence, namely, a debt for f(x). It follows that by the transaction of lending, C. acquires an asset, which of course he can dispose of to a third party. The transaction need not be by way of loan; the debt may be, for instance, unpaid purchase money, or it may even result from an enforceable agreement to pay money for no consideration at all. Assuming that C. has given full value for the right, he is unlikely to be able to sell it at a profit, unless the debt agreement includes special advantages such as a high rate of interest. In the case of an ordinary debt, paragraph 15 (1) provides that the creditor 'shall not be treated as thereby acquiring the debt'. This is typical of modern slipshod drafting; what the draftsman presumably intended was that the creditor should be treated as not acquiring the debt; which is not the same thing.

Paragraph 15 (1) is subject to the inevitable exception. The sub-paragraph does not apply where 'the debt is on a security (as defined in paragraph 11 of this schedule)'. There is in fact no definition as such in paragraph 11; the paragraph merely says (our italics) that:

"security" includes any loan stock or similar security whether of the Government of the United Kingdom or of any other Government, or of any public or local authority in the United Kingdom or elsewhere, or of any company<sup>1</sup>, and whether secured or unsecured'.

The precise ambit of the exception is therefore doubtful.

Paragraph 15 (2) deals with two kinds of debts: (i) a debt on a security 'defined 'as above;

Defined in section 16 (1) to include every body corporate.

(ii) a debt acquired by the creditor from a previous creditor.

Satisfaction of such a debt (or part of it) is to be treated as a disposal by the creditor. This however is subject to paragraphs 11 and 12 of the Ninth Schedule (See The Accountant, October 6th) which deal with conversions of securities and with company amalgamations.

Sometimes a debtor discharges his debt by inducing the creditor to accept some property in satisfaction of the debt. The value of the property at the time is unlikely to be as much as the debt: otherwise the debtor would probably be able to raise enough money on it to settle the debt and still have something over. On the other hand, if the debtor is in poor circumstances, the

creditor is often content to accept property which is worth very much less than the face value of the. debt. In a sense, the creditor buys the property for the face value of the debt. However, for Case VII purposes, paragraph 15 (3) directs that not more than the market value of the property is to be taken into account. 'Market value' is defined by section 16 (1), i.e. the price which the property might reasonably be expected to fetch on a sale in the open market. This provision in paragraph 15 (3) prevents the debtor from being charged to tax on what is in a sense a purely notional profit. It also prevents the creditor from charging an artificially high cost of acquisition. However, if the case is within paragraph 11 or 12, then paragraph 15 (3) does not apply.

## Internal Control with a Computer

by R. MITCHELL, A.A.C.C.A.

THE age of electronic data processing systems is with us. There will be a substantial increase in the number of users of electronic equipment over the next few years, either possessing their own equipment or hiring time from a bureau. Small computers are already being produced to attract the small- and mediumsize organizations, and it must be only a matter of time before there is a break-through into the production of a cheap, fast access store, to make them more competitive with the conventional punched-card equipment.

The computer makes it feasible for the whole of the accounts to be processed by one machine, including the revenue accounts and balance sheet. The field is a challenging one, enabling management to have information faster and receive information previously impracticable on conventional equipment. Accountants should, accordingly, familiarize themselves with these electronic systems to determine their capabilities and limitations. This article is intended to deal with one aspect of the system – the control over

It is the responsibility of management to maintain an efficient system of internal control. Generally, the control should be simple to be effective; it should be purposeful, and for any condition it should not be duplicated. Any aspect in the control should not be looked at in isolation. The auditors will need to appraise the internal

control to determine its strengths and weaknesses, to form an opinion as to whether the books of accounts properly record the operations of the organization.

#### **Principles of Internal Control**

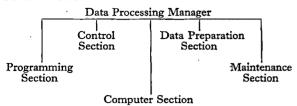

The principles of a good system of internal control may be summarized as follows:

- (1) Proper segregation of functional responsibilities.
- (2) Correct allocation of duties within the functions.
- (3) Quality of personnel that is commensurate with responsibilities.
- (4) Efficient system of authorization and recording to control capital and revenue items.

It can be seen, therefore, that internal control covers a much wider area than the financial and accounting departments. The methods of control in general terms should have been agreed by the systems analysts, programmers and auditors at an early date in the design of the accounting procedure. At this early stage it may only have been possible to agree the organization plan of the data processing unit. At a later date, when more detail flow charts have been prepared, then the question of control over the data flow can be settled.

Management's first responsibility towards the data processing unit is to see that it has an efficient organization that is easily administered. Generally, the computer serves the company as a whole and for this reason is not usually controlled by one of the functional managers.

The organization of a data-processing unit could be as follows:

The responsibilities and duties of selected sections will be discussed when considering the flow of information through the unit.

For convenience, the control of the information from the production of the source document to the end results produced by the computer may be divided into three sections: (a) control of information to and from the computer; (b) control over the processing of the data within the computer; (c) check over programmes and files. Each section is now dealt with in turn.

## (a) Control of Information to and from Computer

1. Source documents: There should be effective control over the preparation of the source document. It may be that the coding of the creditor's name on the invoice used as a punching document implies writing up the bought ledger and the bought daybooks. Should the sales department be allowed to pass a coded delivery document to the control section when that department is also responsible for the fixing of discounts and allowances with customers? In this instance, the operating department is surely responsible for the recording of their sales; routing the delivery note through the accounts department to be coded there and having authorized terms on separate sheets of paper may involve a duplication of effort and slow up considerably the transmission of the document to the computer.

Preferably recording should be done outside the operating department and there should be very good reason for any departure from this principle. Where, however, it is decided that this cannot be done, then the allocation of duties and the methods of authorization in the operating department should be examined to ensure that it prevents any irregularities through human weakness.

The introduction of a computer may involve looking further than the control of the data flow, and organization changes may be necessary.

2. Routing documents to control room: All source documents sent to the control room should be batched and supported by a numbered control slip (or a control book). The control slip should show the number of documents in the batch and a batch total of information that is being used by the computer, e.g. hours from clock cards.

3. Action in control room: The duties of the control room should include the handing out of source documents to the data preparation room, issuing to the computer operator the input media, programmes and tables, and receving back the computer's end results. The movement of the data will be in accordance with the machine load chart.

The control room will be responsible for ensuring that all the numbered batch slips are accounted for. The particulars contained on these slips will be entered in a register for higher grouping requirements.

The control room will determine the control totals for each batch of data sent to the computer. The operator before commencing the processing programme will produce evidence to the control section that the computer has agreed these totals. This will generally be by means of a print out. Where data has been transmitted to the computer by means of paper tape, the tape itself should contain a control total.

Sometimes it is necessary for balancing to be carried out on peripheral equipment to release the computer for more important work. Whichever method is adopted the aim should be to provide the computer with accurate and comprehensive information.

An alternative method is to punch a card from the control slip; the computer is programmed to test whether the detail cards agree to the control card before commencing to process the data.

4. Data preparation control: The duties of this section include manually converting the information in the punching document to machine language and reproducing and interpreting cards and tape.

All fields punched must be verified. Whether it is necessary to verify prepunched cards that have been pulled from a master file depends whether it is possible to verify the card with the punching document at the pulling stage, and the importance the pulled card plays in the data pack. A master card may contain the customer's code and name; if the punching document contains these details then on pulling by reference to the code, the interpreted name on the card can be compared with the name on the punching document.

5. Operators' duties: The operators should not have access to the control section or the data preparation section. This ensures that all machine processing is controlled independently of the operators. There should be a manual of instruction for the operators to follow; this should include instructions as to the general running of the machine, the action on the showing of the external indicators on the console and the routine to be followed if the machine stops owing to an error etc.

Rules should be established as to the keying in of information through the console. A case where this is done is in a restart procedure where the computer is instructed to return to a particular location in the programme; this location is keyed in. Unlike informa-

tion received by means of cards or tape, it is unlikely that this information will be verified. If it is not possible to restrict the keying in to such information as dates, invoice numbers, etc., then immediately the data is keyed in, the computer should be programmed to print out the data received, this to be controlled by the control section.

Each job should have written instructions referring to the files used, sequence of the cards or tape feed to the computer, and paper required etc.

## (b) Control Over Processing Data within the Computer

- 1. Machine checks: The programme checks will depend on the degree of confidence the programmer has in the machine control over the operation in question. Some of the more important machine checks are:
  - (i) Parity checks on transfers: A word of core store is made up of a number of 'bits'. Assume that each stream consists of a stream numeral for each digit position. A 'bit' is either 'off' to represent o or 'on' to represent the stream numeral. On receiving the information the computer determines whether the number of bits in each stream is odd or even, if it is odd then the check bit is set. An example should illustrate this point.

Stream No.		in l	wo loca: Vore	tion		?	Check bits
8	0	0	0	0	0	•	•
4	0	•	0	•	0	0	o off
2	0	0	•	0	0	0	• on
1	0	0		- 0	•	•	•

To record o 4 3 4 1 9

Every time a transfer takes place an automatic check is made to see if the check bits are the same in the new location. On arithmetric functions, generally the bits are dropped prior to entering the register and regenerated after the calculation is made and the result is on its way to storage. There is, therefore, the slight possibility that a word bit could be dropped before the parity bit has been regenerated.

Similar checks are used for stored information on magnetic tapes, discs and magnetic

(ii) Reading input: There are various methods to ensure that the card reader has read the data correctly. One method involves reading the card with two independently controlled heads and comparing the results. Another is a double count of the holes in each index point in the card.

(iii) Punching output: After the card has been punched, the card is immediately read back and compared.

- (iv) Print output: Unlike the punching of a card by the computer there is no check that the print out is correct. All information to the point of leaving the print buffer is controlled in the normal manner, but the wrong print hammer could be generated. Experience has shown that provided preventative maintenance is carried out the possibility of this happening is remote. Computers have relatively short lives and the mechanical components are usually very reliable during this life.
- (v) Writing: The writing on magnetic tape is usually verified by reading back and compared immediately after writing.

There are generally no such facilities for drums or discs, to ascertain that the correct information has been written. The parity on other similar checks will, of course, be made before the information is received back in fast access store.

(vi) Indicators: Various internal indicators are set or unset automatically by the computer when certain conditions are present. These can be tested by programme. On reading in a card the sequence of operations could be, instruct to read six columns into the buffer, while this is being done the computer is processing on some other data, then return to the full buffer. and transfer the information to core store. If, however, the programme failed to return to the buffer in time, the next six columns of the card would over-write the first six columns, but a special indicator would be set. Therefore, immediately prior to transferring the contents of the buffer into core store the indicator is tested to see if anything has been missed.

There are also external indicators. The action to be taken in the event of these showing will be defined in the operators' manual.

- (vii) Card and paper feed: A check is present to prevent the computer's print unit and punch unit operating after the paper feed and card hopper are empty.
- (viii) Double circuiting: Because of the reliability found in computers and the cost involved, the arrangement for all calculations to be agreed after being done on different circuits has not been incorporated in modern designs.
- 2. Programme Checks: The object of incorporating checks in a programme extends further than ensuring that the final results are correct, it ensures that time is not wasted in processing data containing an error. Checks that are sometimes written into a programme include:

- (i) Plausible test: The net salary of workers of a particular department may be within certain limits. The programme ensures that the final calculation is within these limits.
- (ii) Code check: The computer is able to test that a code is an acceptable one. Assume that a customer's code received was 237433, the programme directs the selection and computation of 2+7+3÷9, this provides one with 3 as the remainder, the 3 is then compared with the last digit. Usually the method adopted is more sophisticated than adding every other digit and dividing by 9. Although the placing of this last digit adds security, it does restrict the codes that can be used.
- (iii) Restart positions: To prevent having to return to the beginning, in case of an error in processing, restart positions are built into the programme, at these points any accumulating totals are stored away. After the fault has been diagnosed and corrected the computer returns to the last restart position and picks up the accumulated totals.
- (iv) Transfer to and from backing stores: Information written on drums and discs comes from core store and the record is not generally obliterated by transferring the information to another part of the computer. As illustrated in (b) I (v), the correctness of records written on backing stores cannot sometimes be ascertained until it has been brought back into core store. In some cases the programmer may feel that it is necessary, immediately after writing, to transfer back and compare with the original. This discovers errors before processing commences.
- (v) Card pack check: The programme ensures that the packs of cards for each transaction are complete and in sequence before calculation, updating, etc., is commenced.
- (vi) Tape reference: To ensure that the operator selects the correct tape file, the computer tests the first record on the tape which is referenced to the input media.
- (vii) Reverse operations: In (b) I (i) it was shown that there is no absolute check that A.×B.=C. To overcome this after the result has been calculated the computer computes C—(A.÷B.) to test if the answer is equal to o.

The same register that performs the arithmetic calculations is generally used in the modification of programme steps, and a faulty unit giving rise to an incorrect modification would soon be very apparent. For this reason, if the computer has a reliable fault-free record this check is generally not used.

A record should be kept of all machine faults. Any fault occurring frequently should be covered by a programme check if possible.

#### (c) Check Over Programmes and Files

1. Writing and amending programmes: A procedure for writing and amending programmes should be laid down.

After the first programme has been debugged, programme sheets should be initialed by the programmer and chief programmer. Any amendments to the programme should be made on the written authority of specified persons; the amendments should be initialed as above. The internal auditors should have a copy of the programmes and amendments, and should see that the programme sheets bear evidence of proper authorization.

- 2. Programme standardization: Standardization should not be carried to a stage resulting in inflexibility. There are, however, advantages in using standard flow-chart symbols, subroutines, terminology and programme checks. The internal auditor should be satisfied that all standard procedures are being adhered to.
- 3. Index, tables, etc.: A similar procedure to the control over programmes should be carried out controlling constant information and amendment thereto.
- 4. Dumping: It is not always possible to start and finish a job in the same working day. The question then arises: Should the information be left stored in the computer or should it be dumped on to tape or cards? In those instances where information is lost when the current is cut, then undoubtedly the information should be dumped and fed in the following day. It is also a good practice to dump information even when the information is not lost. This is a safeguard against interference by the uninitiated.
- 5. Keeping files: Tape (magnetic and paper) and cards should be kept when not is use in fireproof cabinets in an environment as recommended by manufacturers of the tape and cards. In the case of magnetic tape, the practice is to produce the son tape before overwriting on the grandfather, this ensures that the last tape (the father) can be reconstituted if desirable.

#### **Books of Accounts**

It may be academic to ask whether the spots on magnetic tape or the holes punched in tape or cards, could be regarded as the statutory books of accounts? Presumably the answer would be, 'No they are not'. However, as tabulations can be produced from cards and tape undoubtedly the former would be accepted as books of accounts.

Statutory requirements to have internal control over records produced by a computer are contained in section 436, Companies Act, 1948, which states that where bound books are not kept 'adequate precautions should be taken for guarding against falsification and facilitating its discovery'.

## Changes in the Purchasing Power of Money - I

by W. E. PARKER, C.B.E., F.C.A.

#### The Problem

THE following tables¹ based on an index of 100 for the year 1938 illustrate by reference to the United Kingdom what I believe to be, throughout the world, the outstanding accounting problem of the present generation.

Year		rice level of con- imers' goods and services	Purchasing power of money in terms of price level of consumers' goods and services
1938		100	100
1950		202	49
1954		244	41
1955		251	40
1956		26´3	38
1957	·	271	37
1958		278	36
1959		278	36 36
1960		286	35

The problem is whether accounting should take cognizance of changes in the purchasing power of the money in which the capital invested in, and the income produced by, commercial activities is expressed, and if so how best to reflect in accounts the effects and consequences of such changes.

- 2. The problem relates to the presentation of significant accounting information not only to the general public as actual and potential stockholders in commercial undertakings but also to management, to creditors and to other interested parties. While in many respects the needs of all these interested groups may be identical, particular groups also have their particular needs, differing with the nature of their interest and the standpoint from which they view the information. Moreover, as between information provided internally for management and that made available externally for stockholders and others there is great difference in the scope for accounting presentation. In this paper I propose to consider the problem from the standpoint of the general public as actual or potential equity stockholders.
- 3. The problem is no new one. The value of money as measured by the goods and services which it buys never has been stable and never will be. The subject attracted attention in Britain as long ago as the beginning of the nineteenth century, and in other countries earlier still. In the present century it has again been brought into prominence in many countries by

The first part of a paper presented at the Eighth International Congress of Accountants in New York on September 24th.

the inflation and other economic disturbances resulting from two world wars. In Britain and America among others it has attracted increasing attention from accountants over the last thirty years. In that period and particularly since 1945 it has received extensive and intensive study out of which have emerged many differing views both as to the nature of the accounting problem and as to possible methods of meeting it. Because of the extent and intensity of the study which has already been given, I do not claim to offer now any new and original ideas. Because of the differences of opinion to which the study has given rise, I have made a point of writing this paper in the first person to emphasize that I speak for myself and not with the authority of the Institute of Chartered Accountants to which I belong. The text will no doubt reveal that I write as an accountant, not as an economist.

## Development of Opinion in Britain and North America

4. In Britain and North America – and I refer to these countries because their circumstances are more familiar to me – examination of the problem has proceeded from an initial general acceptance by the accountancy profession of the view that, at least so far as stockholders are concerned, the profits of a commercial undertaking can generally best be measured by setting against the monetary proceeds of its sales of goods and services the amount of money actually expended by the undertaking in providing the goods and services so sold. In my own country

Mr W. E. Parker, C.B.E., F.C.A., the author of this International Congress paper, is a member of the Council of The Institute of Chartered Accountants in England and Wales. He is also President of the Chartered Accountant Students' Society of London and is well known as the chairman of the committee which was set up by the Institute on training and education for the profession.

<sup>&</sup>lt;sup>1</sup>The tables do not embrace the year 1961 because this paper was written before the end of that year.

this method of measuring profit, commonly known as the 'historical cost' method, has had the merit that it has conformed until recently, and to a large extent still does conform, to the natural thinking of the ordinary man. To him commercial activity has seemed to consist in the making of money by using sums of money to buy goods and services with the object of turning these back, by sale, into greater sums of money; the profit is the amount by which the sum of money produced by the sale of the goods and services exceeds the sum of money laid out in providing them, and it is on the sale that this profit arises. For those who think of commercial profit in this way any departure from the 'historical cost' basis of measuring it will tend to confuse them unless and until their thinking can be changed.

- 5. If, however, the ordinary man is mentally attuned to an income statement in which the profit is measured in this manner, there is much evidence that he does not so readily understand its corollary, namely, a balance sheet in which the goods and services as yet unsold are similarly brought into account in the main not at what they are currently worth to sell (or even to buy) but simply at the amount of money which was laid out in acquiring them. The amount of the net assets shown by the balance sheet still tends widely to be interpreted as the current measure of the undertaking's wealth. It might well be that a change from the 'historical cost' basis of accounting, while tending to confuse understanding of the income statement, would produce a balance sheet which is understood better. But the difficulty remains of securing understanding at one and the same time of both documents.
- 6. To some accountants a change in the purchasing power of money is not a matter with which they feel any obligation to deal. They see the change as one affecting the prices of goods and services rather than the value of the money with which these are bought. As accountants they are concerned, they say, with the money itself rather than with what it may be used to buy. The fact that with rising prices monetary income may have to be ploughed back into an undertaking (or, failing that, more capital brought in from outside) to provide additional funds for the replacement of the goods and services which produce its income does not mean that the monetary profits have not been earned. The facts are that they were indeed earned but that changes in prices now make it necessary to find more money to finance the business.
  - 7. It would be difficult to contest this attitude to the accounting measurement of profit if the commercial activities consisted of a single and finite venture. In such circumstances the objective of those who provide the capital is limited; they put in their money with the specific object of getting it out again at the end of the venture. Whether they repeat the venture is a matter for subsequent decision; whether their monetary profit on the venture arises from one cause or another is interesting but largely academic.

But, where the undertaking for which equity capital is provided is not a single finite venture but a 'going concern' which is expected to go on going and in which the capital is therefore regarded as being, for all practical purposes, sunk permanently, one cannot escape the fact that, unless prices remain constant, monetary profits as now determined by reference to historical cost are likely to differ from the amount which can be distributed to the equity stockholders as income without prejudicing the continuance of the undertaking.

8. This problem was officially recognized by the professional accountancy bodies in North America and Britain in statements issued in the late 1940s. The American Institute's Accounting Research Bulletin No. 33, issued in December 1947, contained, among others, the following statement:

'In reporting profits today, the cost of material and labor is reflected in terms of "inflated" dollars while the cost of productive facilities in which capital was invested at a lower price level is reflected in terms of dollars whose purchasing power was much greater. . . . When there are gross discrepancies between the cost and current values of productive facilities, the Committee believes that it is entirely proper for management to make annual appropriations of net income or surplus in contemplation of replacement of such facilities at higher price levels.'

Compare with this quotation the following excerpts from Recommendation 12 issued just over a year later (in January 1949) by the English Institute of Chartered Accountants:

'In periods when rises in price levels are marked, businesses tend to become undercapitalized. . . . As stocks of materials are converted into goods and sold, and as fixed assets wear out or become obsolete, substantially greater amounts have to be invested in the assets which replace them than were invested in the purchase of those displaced; other working capital requirements likewise increase.

"The raising of new capital from outside sources necessarily implies a surrender by the proprietors of a proportion of their equity in the business or the

introduction of prior ranking capital.

'The Council wishes to draw attention to the fact that the funds which can be accumulated by businesses through charging sums against revenue in absorption of the historical cost of goods sold and assets consumed must, if the enhanced levels of prices are maintained, be inadequate to meet the cost of replacing goods and assets which were purchased at substantially lower levels. . . . It is, therefore, of the greatest importance that directors should be advised to consider, in relation to the circumstances of their company, the effects of the rise in price levels and the relative merits of (a) relying upon the company's ability to raise new capital as and when it may be required for the purpose of meeting enhancements in replacement costs, and (b) the desirability of setting aside and accumulating out of profits such sums for this purpose as may be practicable. In many cases this consideration may be a matter of major importance in determining the

amount of profits which, from the standpoint of financial prudence, should be regarded as available for dividend.'

It appears from these quotations that at that time both Institutes regarded the question as one of providing additional capital rather than a problem concerning the measurement of profit. Even so, the English Institute's statement, in another passage, mentions that

'a number of business men and their advisers... question the validity of the methods of profit ascertainment hitherto generally followed by industrial and commercial undertakings...'

and adds the following highly relevant comment:

"They (the business men and their advisers) do not challenge the generally accepted accounting principle that the profit of a period can be ascertained only after providing, by way of charges against revenue, adequate sums for remedying any impairment of the capital of a business which may have occurred in the ordinary course of trading in that period. Opinions differ however as to whether capital for this purpose means (a) the money contributed by the proprietors, including profits left by them in the business for financing it, or (b) the power of that sum of money to purchase a particular volume of goods or equipment."

9. From 1948 onwards the two Institutes continued, as did others, to study the problem, and in 1952 there became available a report on the results of the deliberations of a Study Group on Business Income initiated by the American Institute and a further statement, Recommendation 15, by the English Institute. To do justice to either of these publications, it is necessary to study their full text. For the purpose of this paper, however, I think it would be fair to quote the following passages from the American Study Group's 'Summary and Conclusions'.

'It would seem that in the longer view methods could, and should, be developed whereby the framework of accounting would be expanded so that the results of activities, measured in units of equal purchasing power, and the effects of changes in value of the monetary unit would be reflected separately in an integrated presentation which would also produce statements of financial position more broadly meaningful than the orthodox balance sheet of today. It is believed that statements of business income in which revenues and charges against revenue would be stated in units of substantially the same purchasing power would be significant and useful for many of the purposes for which income determinations are commonly used, if not also in reports upon stewardship.

'For the present, it may well be that the primary statements of income should continue to be made on bases now commonly accepted. But corporations whose ownership is widely distributed should be encouraged to furnish information that will facilitate the determination of income measured in units of approximately equal purchasing power, and to provide such information wherever it is practicable to do so as part of the material upon which the independent accountant expresses his opinion.'

vas presented as an amplification of its earlier statement of January 1949. It reviewed the whole problem in greater detail and the pros and cons of various suggested solutions. The conclusions reached were stated in the following terms:

'The Council cannot emphasize too strongly that the significance of accounts prepared on the basis of historical cost is subject to limitations, not the least of which is that the monetary unit in which the accounts are prepared is not a stable unit of measurement. In consequence the results shown by accounts prepared on the basis of historical cost are not a measure of increase or decrease in wealth in terms of purchasing power; nor do the results necessarily represent the amount which can prudently be regarded as available for distribution, having regard to the financial requirements of the business. Similarly the results shown by such accounts are not necessarily suitable for purposes such as price fixing, wage negotiations and taxation, unless in using them for these purposes due regard is paid to the amount of profit which has been retained in the business for its maintenance.

'On the other hand the alternatives to historical cost which have so far been suggested appear to have serious defects and their logical application would raise social and economic issues going far beyond the realm of accountancy. The Council is therefore unable to regard any of the suggestions so far made as being acceptable alternatives to the existing accounting principles based on historical cost.'

Accordingly the statement recommended that, unless and until a practicable and generally acceptable alternative is available, annual accounts should continue to be prepared, and the profits shown by them computed, on the basis of historical monetary cost; but it also recommended that members of the Institute in practice or in the employment of commercial undertakings

'should stress the limitations on the significance of profits computed on the basis of historical cost in periods of material changes in the purchasing power of money, and that they should draw attention to the desirability of . . .

- (b) showing in the directors' report or otherwise the effects which changes in the purchasing power of money have had on the affairs of the business, including in particular the financial requirements for its maintenance and the directors' policy for meeting those requirements, either by setting aside to reserve or by raising new capital;
- (c) experimenting with methods of measuring the effects of changes in the purchasing power of money on profits and on financial requirements.'

11. The features of these 1952 statements in Britain and America which strike me as being of particular interest are:

(1) despite some differences of emphasis, their remarkable similarity of substance, both recognizing difficulties of departure from the accounting bases at present used and familiar, but both advocating the development and issue of supplementary information to remedy the limitations of accounts so prepared;

(2) the change of attitude since 1947-49 in that, whereas then the problem was seen as one fundamentally of raising additional capital, now it is recognized in both statements as a problem also of the measurement of profit;

(3) the fact that in both statements the problem is seen as one arising not out of changes in the prices of individual types of goods or services but out of changes in the purchasing power of money.

An important pronouncement on 'Price Level Changes and Financial Statements' made in the latter part of 1951 by the American Accounting Association shows that this body too had reached the same three conclusions.

12. The third conclusion is especially important because there are many, among them in Britain a research group of The Association of Certified and Corporate Accountants (see Accounting for Inflation published in 1952), who have concluded that the solution of this and many other accounting problems lies not in adapting the 'historical cost' basis of accounting by means of adjustments for changes in the value of money but in abandoning the 'historical cost' basis and adopting instead a basis of 'current cost' which takes account of the current purchase prices and/or production costs of the particular commodities in or with which the undertaking is trading. Among the many arguments in support of 'current cost' is the contention, which has much to support it, that 'historical cost' is a method of accounting developed only in the twentieth century; a change to 'current cost' would not be an innovation but rather a return towards the greater wisdom of our ancestors.

#### 'Current Cost' versus 'Historical Cost'

13. Whatever may have been the wisdom of earlier generations or the circumstances of business enterprise in an earlier age, I submit that the choice between 'current cost' and 'historical cost' confronts us whether the value of money changes or not. Even if the value of money remained constant the stability of the general price level would embrace continual changes, albeit over the whole field of consumption compensating ones, in the prices of particular goods and services. As I see it, the 'current cost' method of accounting is designed to take account of these particular changes and is not directed primarily at the general changes which are superimposed on them when the value of money (as reflected in the general price level) alters. I agree that the adoption of the current cost' method would make an important contribution to solving the accounting problem of instability of the monetary unit but I do not agree with those who advocate this method specifically and solely for that reason. It seems to me that the valid argument (and I am not saying that I accept it) must be not that the 'current cost' method is the right solution in accounting for changes in the value of money but that, if the familiar 'historical cost'

method has to be adapted to meet such changes – an adaptation which necessarily involves some reeducation of the general public – it is wiser to grasp this opportunity for making a complete change to a different basis which, according to its proponents, would be more informative and useful than 'historical cost' even if the value of money (as distinct from the prices of particular goods and services) remained constant.

14. On that view it follows that the considerations which would govern a choice between on the one hand 'current cost' and on the other hand 'historical cost adjusted for changes in the value of money' are the identical considerations which have governed the choice between 'current cost' and 'historical cost' in conditions in which the value of money was regarded as stable. I am anxious to make this point because I believe there has been confused thinking on it.

of The Journal of Accountancy contained a remarkable article by Professor A. Goudeket on the 'current cost' (or, as he calls it, 'replacement value') method as applied in the accounting of his own company, the Philips Company of the Netherlands. I attribute no confusion of thought to him, but I quote the following important premise from his article as an illustration of a statement which, though leading in his case to the treatment of changes in the prices of individual commodities (whether or not these reflect any change in the value of money), is equally applicable to changes in the value of money.

'At Philips we hold the view that there can be no recognition of income for a period unless the capital employed in the business at the beginning of the period has been maintained, that is to say, after it has been established that the purchasing power of that capital at the end of the period is equal to that at the beginning of the period.'

Professor Goudeket was there speaking of the 'capital employed' in the sense of the particular kinds and quantities of assets held by the undertaking at the opening and closing dates respectively - kinds and quantities of which the proportions held change from day to day. He could equally have been speaking of the amount of capital put into the undertaking by the proprietors, irrespective of the proportions in which it happened to be represented by various kinds and quantities of assets at any particular time. Thus, his statement could well be interpreted as a reason not for adopting the 'current cost' method of accounting (which reflects changes in the prices of individual types of goods and services) but for adapting the 'historical cost' method so as to reflect changes in the general price level, that is to say, in the value of money.

16. As I understand them, some of those who would advocate the 'current cost' method even if the value of money remained constant would do so because, among other things, they attach importance

to distinguishing between on one hand the gain or loss which arises from the difference between current buying and selling prices at the time of sale and on the other hand the gain or loss which results from a change in buying prices in the interval of time between purchase and sale. For example, if goods bought for one hundred units of money were later sold for 150 units and by the time of the sale their replacement cost had risen to 120 units, the monetary profit of fifty units on the transaction would be attributed as to twenty units to the holding of the goods and as to thirty units to the selling of them. For certain special kinds of undertakings, for example, those of dealers in the commodity or foreign exchange markets, whose activities do not necessitate the carrying of inventories, I see clearly the merits of 'current cost' accounting; and I can well believe that, at least for management purposes, it would be useful to distinguish the speculative results of taking 'long' or 'short' positions in the saleable commodity from the trading results of contemporaneous buying and selling. Normally in such undertakings these two activities are not interdependent but are matters for separate and deliberate policy decision. But in the generality of commercial activities the carrying of a stock of merchandise is a prerequisite of selling and is therefore an inseparable part of the ordinary process of trading. In a manufacturing undertaking the size of the inventories will depend among other things on the length of time which it takes to bring the products from the raw material to the finished state; this in turn will depend on the character of the products, on the speed and rhythm of the production process and on a whole host of considerations unconnected with possible changes in the buying prices of materials, components and productive services in the interval occupied by the production process. In the retail shop the volume and variety of its stock of merchandise is intimately connected with the task of attracting custom, a consideration which is quite different from that of buying for a rise in price. In any undertaking the volume of saleable goods which it carries at any particular time will be liable to vary with variations in sales policy; for example, where a special sales drive is projected, additional stocks will be accumulated beforehand in anticipation of the increased demand which it is hoped will eventuate. Evidently, decisions on all such policy matters will be influenced by considerations of the probable trends of costs and selling prices, and speculative positions may be taken which represent a deliberate over-stocking or under-stocking in relation to ordinary trading requirements. It may well be informative, especially for management, to isolate from ordinary trading results the outcome of these special positions; but to do so involves first determining what the 'ordinary' trading requirements are, and these will vary from business to business and within any one business will vary with changing conditions. It is an extreme over-simplification to suggest that the results of ordinary trading can

be isolated from those of price changes by assuming that all goods sold could have been procured at the time of sale or by assuming some generally applicable norm for the interval of time between acquisition and disposal. Each individual business has its own particular circumstances, and accounting methods designed to measure significantly the success or otherwise of the various operations and policy decisions which are involved in its trading activities need to be applied with due regard for those particular and individual circumstances. It seems to me that trading profit or loss, at least from the standpoint of the equity shareholder, must be viewed as including against the background of the general price level, the consequences of successful or unsuccessful anticipation of the market for the particular goods and services in which the business trades. In the words of the English Institute's Recommendation 15:

'Whether prices are rising or falling the difference between the cost of an article and its current value may often result to a much greater extent from market fluctuations in the prices of particular goods than from any trend in the purchasing power of money. Such market fluctuations are an ordinary business hazard affecting profit or loss and their incidence on a particular business may be dependent to a considerable extent upon judgment in buying and on management generally.'

#### Effect on Monetary Resources

17. If the 'current cost' method of accounting were to be adopted not so much for its own sake (that is, on its merits in the conditions of a stable value of money) as for the contribution it would make to solving the accounting problem of monetary instability, my main criticism would be that it deals with only part of the problem. For the viability of most commercial undertakings depends not only on the possession of goods in the form of equipment and merchandise but also on the possession of requisite working capital in the form of cash and accounts receivable. In terms of money the amount required for this working capital will, other things being equal, vary inversely with changes in the value of money. Thus, if money loses one-third of its value, the amount of money required to finance accounts receivable will, other things being equal, be half as much again. To the extent that additional money thus required to maintain the working capital represented by monetary assets is not forthcoming from the concomitant increase in the monetary trading liabilities, recourse must be had either to borrowing or to the introduction of additional capital by the proprietors. Either of these courses erodes the rights of the original equity. If neither of them can be taken the undertaking must at best reduce its scale or at worst collapse. I do not see how, in measuring the results of an undertaking, the presumption of its continuing life can be reconciled with failure to take account of depletions in the purchasing power of its monetary resources when potentially such depletions could bring that life to an

end. Moreover, since it is the duty of management to maintain the undertaking, it is an important part of this duty to ensure that so far as possible the undertaking is protected from impairment of its resources by depreciation in the value of money. A management which recognizes the instability of money also recognizes that whenever cash and money receivable together exceed or fall short of the money payable a speculative position in money has been taken. If speculation in money is to be avoided, the undertaking must be managed and financed in such a way that the monetary assets and liabilities are kept in balance. In so far as in the particular undertaking they cannot, or are not, the consequences need to be measured and reported to the proprietors. The point is well brought out in the following passage in the English Institute's Recommendation 15:

'Unless all items were converted into the "new currency" and not merely selected items such as depreciation of fixed assets and consumption of stock-in-trade, the account would not, in a period of rising prices, reflect the loss in purchasing power arising from the holding of assets such as investments, debtors and bank balances or the gain arising on liabilities of fixed monetary amount. In businesses where such items are material in relation to fixed assets and stock-in-trade it would be inconsistent to ignore such losses and gains and to take into account only those arising on particular types of assets. To do so would not enable the effects of the diminution in the purchasing power of money to be measured so that they can be eliminated in ascertaining profits or losses. Similar considerations arise in a period of falling prices.'

18. In relation therefore to the equity in commercial undertakings I find myself in agreement with the American Accounting Association's conclusion in its 1951 statement:

"The measurement of price level changes should be all-inclusive; all statement items should be adjusted in a consistent manner'

and I find myself in disagreement with the American Institute's Study Group on Business Income who opposed this view, commenting in a postscript to their eport

'An "all-inclusive" adjustment would result, inter alia, in showing a loss rather than income as being derived from the maturing of a savings bond of \$100 which had been purchased ten years earlier for \$75 if the purchasing power of the dollar had fallen more than 25 per cent in the interval.'

would contend that it is inapposite to compare the eccounting treatment of a single and finite financial enture such as the purchase of a savings bond with he accounting treatment of a going concern which indertakes the provision of goods and services and by presumption is to go on doing so indefinitely. But the argument goes deeper than that. In my view of accounting is to be significant it must be related to the standpoint of those to whom the accounting being made. Where an investor, thinking in terms of money rather than what it will buy, puts his money

into a \$100 savings bond with the sole object of getting back in due course \$25 more than it cost, I would agree that there may be no very useful purpose in demonstrating to him, as a matter of accounting, what would have been the outcome if he had invested the money with a different object and therefore viewed the transaction differently. Where, however, an investor is thinking in terms of what money will buy and from that standpoint buys savings bonds in anticipation of a rise in the value of money, I do not consider that the accounting presentation of the outcome of his venture would be significant unless it reflected not only the interest earned on the outlay but also the consequences of whatever change in the value of money had occurred. Here is the core of my argument, for I believe that equity stockholders should regard, and increasingly are coming to regard, their investment in commercial enterprises as being not a monetary investment but an investment in what money buys. Moreover, it seems to me that the whole principle of accounting for a commercial undertaking on the basis of its maintenance and continuance is consistent, and only consistent, with that view. If therefore it proved expedient for savings bonds to be held by a going concern as a means of maintaining its undertaking, I should say that without question the accounts presented to its equity stockholders ought to incorporate the effect on the equity capital of changes in the purchasing power of the bonds so held.

19. Perhaps it is only fair that I should cap these arguments by saying that I do conceive and hope that in due time Governments, investors and workers (in whom I include managers as well as those whom they manage) will all become educated to thinking of wealth in terms not of money but of what it will buy. When that stage is reached the concept of profit and loss will be uniform and even the \$100 savings bond will present no special accounting problem. Until this stage is reached, there will be differing interpretations of profit and loss, and I conclude that we as accountants must cater for them.

#### **Action Taken by Governments**

20. Under the pressure of events a number of Governments have indeed from time to time been forced to move in the direction of recognizing changes in the purchasing power of money as a factor of which account must be taken in measuring the results of commercial activity - for example, the German Government in 1921, the French Government at various times since 1930, the Italian Government since 1936 and the Belgian Government in 1947. There is not the space in this paper to review the various measures adopted by these Governments but I think it is fair to say that they have been in the main ad hoc measures, dictated by fiscal and political considerations at the time, and that for the most part they were concentrated on increasing, in the conditions of inflation, the permissible deductions

for tax purposes in respect of charges against income for the exhaustion of the physical assets of commercial undertakings. If this comment does less then justice to any of the countries concerned, I hope that members of the profession from those countries will take the opportunity of attendance at the Congress to correct me. In Britain and North America the authorities seem to have been reluctant to accord official recognition to changes in the value of money as an integral feature of the measurement of commercial profit and loss. In all three countries,

Canada, Britain and the United States, 'accelerated depreciation' has been allowed in one form and degree or another, but, so far as I am aware, only the British Government has allowed for tax purposes over the whole life of a plant a greater deduction than the historical monetary cost and only the United States Government has formally recognized for measuring the consumption of inventories a LIFO ('last in, first out') principle which has broadly the effect of evaluating the consumption at current prices.

(To be concluded.)

## Weekly Notes

#### NEW LEGISLATIVE PROGRAMME

T the opening of Parliament on Tuesday the A Queen's speech promised legislation on a number of different topics. It seems that the recommendations of the Molony Committee on consumer protection are largely to be adopted; that is to say that the Weights and Measures Acts are to be extended and brought up to date, and a Consumer Council established in order to represent the interests of consumers in general. There is to be a Bill to increase the pensions of retired members of the public services and their dependants, while the Government promises to keep under close review the position of war pensioners and people receiving National Insurance benefits. It is strange that, generally speaking, weekly wage earners are still entitled under the general law to only one week's notice of dismissal, no matter how long they have served. There is to be a Bill which will lay down the period of notice, and will also make it compulsory for employers to give to employees a written statement of the terms on which they are employed. Notwithstanding vociferous opposition, the legislation for reorganization of local government in Greater London is to go ahead. Another Bill will provide for the conservation and development of water resources in England and Wales; it follows on the report of the Central Advisory Water Committee, with which the Government is in general agreement. Persons employed in offices and shops will be the beneficiaries of a Bill directed to securing their health, safety and welfare while so employed.

On the general front, further improvements are to be promoted in the housing, health and welfare of the people generally. Local authority health and welfare services are to be the subject of planned development over the next decade, in parallel with the development of hospitals. There is to be a Bill to extend the powers of local authorities in connection with the care of children. Attention will be given to improving the supply of school teachers, while the expansion of university and technical education will continue.

#### JOINT SECRETARIES OF THE INSTITUTE

MR F. M. WILKINSON, F.C.A., and Mr C. A. Evan-Jones, M.B.E., became Joint Secretaries of The Institute of Chartered Accountants in England and Wales on November 1st following the retirement as Secretary of Mr Alan S. MacIver, C.B.E., M.C., B.A.

Mr Wilkinson, who is aged 48, has been Deputy Secretary since January 1st, 1960. After serving his articles in a small provincial practice he was admitted to membership of the Institute in January 1936 and then took up a commercial appointment until the outbreak of war in September 1939. He served with the Middlesex Yeomanry (T.A.) until being invalided from the army in August 1940. In May 1944 he joined the Institute staff and was appointed an Assistant Secretary in January 1946. For the following eight years he also served as Secretary to the Taxation and Research Committee.

Mr Evan-Jones, who is 50 years of age, has been an Under Secretary of the Institute since January 1st, 1960. Prior to the Second World War he had nine years' experience in industry, and during the war, in which he served in the Gordon Highlanders, he saw active service in the Western Desert and in Italy, attaining the rank of Lieutenant-Colonel. He returned to civilian life in December 1945 and in 1946 joined the Society of Incorporated Accountants, becoming Assistant Secretary in 1947 and Deputy Secretary in 1950. Following the integration scheme with the Institute in 1957 he joined the Institute's staff, acting temporarily as Secretary to the Board of Examiners for the Society's examinations, and subsequently becoming an Assistant Secretary on May 1st, 1959.

A further Institute appointment also took effect on November 1st. Miss Margaret J. D. Reynolds, B.A., who has been a member of the staff for fifteen

years and an Assistant Secretary for nearly three years, is a new Under Secretary of the Institute.

### P. D. LEAKE RESEARCH FELLOWSHIP

THE Institute of Chartered Accountants in England and Wales, as Trustee of the P. D. Leake Trust, has been advised that Mr G. Patterson, F.C.A. has been appointed to a P. D. Leake Research Fellowship tenable in the University of London at The London School of Economics and Political Science for the academic year 1962–63. Mr Patterson proposes to conduct research into 'the effects on ship design of the economics of ship operation'.

The P. D. Leake Trust is a charitable trust created under the will of the late Percy Dewe Leake (a member of The Institute of Chartered Accountants in England and Wales from 1886 until his death on November 27th, 1949), for the benefit and advancement of the sciences of accounting and of political economy including the subject of public finance and taxation. The P. D. Leake Committee decided in 1956 to provide funds for the establishment of P. D. Leake Research Fellowships. The object of the Fellowships is to provide university facilities for experienced accountants to carry out research in subjects with which the accountancy profession is directly concerned within the charitable object of the Trust.

### COMMON MARKET LAW REPORTS

N Tuesday appeared the first issue of Common Market Law Reports, published by Thomas Nelson & Sons Ltd. It contains extensive reports of three cases, two before the Court of Justice of the European Communities, and one before the French Conseil d'État. The former Court was set up in Luxemburg to interpret the three great European treaties – coal and steel community, Euratom, and Common Market – and to control the executive authorities created to implement those treaties. Decisions of national Courts on litigation arising out of the treaties are also of interest since clearly they will be influential in shaping the way the treaties are interpreted throughout the European community.

If the United Kingdom joins the Common Market, hen it will be essential to have easy access to English ranslations of relevant decisions. But even independently of such an event the reports are of great nelp to lawyers and accountants advising clients who are engaged in trade with firms in the Common Market territories. The editorial board of the new series are three barristers, and the reports have been ranslated and edited either by them or by other parristers working under their supervision. Only two parts will be published this year but in future years here will be a quarterly issue, with bound annual rolumes published subsequently. Annual subscription for four parts is £9 gs. Annual subscription with

the right to an additional bound volume is £10 10s. Individual parts cost £2 10s plus postage; and the bound volume will be sold to non-subscribers at £12 12s.

### INFORMATION ON EUROPE

THE continuing economic integration of Europe, whatever form it may take, is creating a growing interest in obtaining information. Never before have British organizations of one kind or another shown as great an interest in the economic affairs and industrial structure of Continental Europe. The same is true in all European countries.

It is a small step from realizing the need to obtain information to appreciating the value of directories which explain where information is to be found. It speeds the finding of the information and prevents time being wasted looking for material which does not exist.

The latest recruit to directories on Europe is European Companies: A Guide to Sources of Information<sup>1</sup>. Sources of information on each country are assembled in five groups. These are, publications and services providing extensive financial information about each company; publications giving basic information in a concise form; publications setting out relationships between parents and subsidiary companies; directories of directors and executives and directories of banks, stockbrokers and finance houses.

This is a useful publication. Coverage in a first edition is inevitably uneven but it should be extremely useful for quick reference and as a means of avoiding hours of time spent searching for sources of information on companies.

### **EXECUTIVE SALARIES**

THE conference on executive salaries and fringe benefits organized by Associated Industrial Consultants in London recently, found in its discussions that fringe benefits were not a major item in the emoluments of senior staff in this country.

A summary of the first thousand questionnaires received in answer to a nation-wide survey on salaries and fringe benefits was presented. The report covered company secretaries in the upper average salary bracket of £4,350 a year and a lower average bracket of £1,625. The corresponding brackets for chief accountants were £3,775 and £1,475; cost accountants £2,690 and £1,170; and a number of other managerial groups in similar income brackets. According to the replies, 38 per cent of the sample were provided with cars (68.5 per cent sales managers) 29 per cent qualified for top-hat pension schemes and 99.6 per cent received retirement pensions.

<sup>&</sup>lt;sup>1</sup> Compiled and edited by G. P. Henderson, C.B.D. Research Ltd. Price 50s. Service sheets, approximately quarterly, 10s a year.

576

### THE ACCOUNTANT

Bonuses were received by 53 per cent of the sample and of these 66 per cent were based on profits. The average of all bonuses paid was between £350 and £375, but bonuses of over £1,000 were paid to 10 per cent of all directors in the sample. The average value of fringe benefits was £122 a year. Benefits included lunches, expense allowances, car allowances, free life assurance and free housing. There were particular benefits in a small number of cases. These included loans for house purchase, car tax and insurance cover, free telephone, club subscriptions, travel to work refunded, and so on. So far as holidays were concerned, 5.6 per cent qualified for ten-fourteen working days, 44 per cent fifteen to nineteen, 31 per cent twenty to twenty-four and 3.5 per cent twentyfive to twenty-nine working days. Only o.8 per cent qualified for more than thirty working days holiday. These figures did not include statutory holidays.

### WELFARE READING?

NADEQUATE staff, underpaid librarians, long Awaiting lists for the latest books, dissatisfied publishers and exploited authors. Such, it would seem, is the present situation arising from the present public library system as described in the latest Hobart Paper, Libraries: Free for All? by Mr A. P. Herbert. An introduction by Mr Ralph Harris, General Director of the Institute of Economic Affairs, argues that even a modest charge of 3d per volume borrowed would produce £5½ million, i.e. as much as the present annual expenditure by public libraries on new books. Such an infusion of additional funds would convert the library system from its present state as a penurious relic of nineteenth-century paternalism to an agency equipped to meet the needs of the affluent society of the twentieth century.

For his part, Mr Herbert develops the now wellknown proposal that authors should enjoy the same benefit of copyright as do musicians and each time a book is borrowed, a nominal charge might be made. This scheme has been flatly rejected by the Library Association on the grounds that it would be administratively impracticable and the principle would conflict with the original conception of the free library service. As Mr Herbert and Mr Harris explain, neither of these defences of the status quo bears examination. Sweden is able to operate such a system and Mr Herbert's own proposals are simplicity itself.

On the role of the public library system in the midtwentieth century, when the average punter 'invests' 5s weekly in football pools, it would not be unreasonable to ask the average borrower, who gets about thirty books per annum from his library, to pay 7s 6d for the privilege. When it is recalled that 70 per cent of the total borrowings consist of light fiction, the cry that such a charge would run counter to the nineteenth-century ideal of educating the masses seems irrelevant.

### LEARNING TO EXPORT

BOOKLET has been prepared by the Board of Trade called How to Export.<sup>2</sup> Presenting it this week the President of the Board of Trade said that although a great deal had been written and spoken about selling for export there seemed to be a need for a short and comprehensive work which would direct a would-be exporter to find the right answers on how to set about doing it. The booklet has been written by Mr M. Shanks, industrial editor of The Financial Times.

The booklet has a useful contents page at the beginning and many of the sections, which are brief and to the point, proceed on the question-and-answer basis. The forty pages of the booklet are completed with a list of useful addresses in various parts of the country of organizations which can help with advice and facilities.

Subjects covered include how to get an agent and how to keep in touch with him, how to get paid, the part played by such organizations as E.C.G.D., role of the banks, how to use a merchant, how to use trade exhibitions, advertising and market research. It concludes with brief sections on design and packaging.

### FURTHER RISE IN LIFE OFFICES' BUSINESS

AN increase of £521 million to £6,163 million in policyholders' funds last year is one of a number of outstanding features of the annual statistics published last week by The Life Offices' Association, the Associated Scottish Life Offices and the Industrial Life Offices Association for the years 1957-61.3

Payments to policyholders - chiefly by an increase in payments under maturing endowment assurances - reached new record levels in 1961 at £326 million for ordinary life and annuity business, and £142 million for industrial business. The growth of demand for life assurance in all sections of society has been a notable economic feature of the past decade. A total number of 1,120,000 new ordinary branch policies were issued during the year as against 1,070,000 during 1960 and new yearly premiums rose by £5 million. Home service business saw a slight reduction in the number of new policies issued, but the amount of new yearly premiums issued showed a rise of  $f_0 \cdot 1 \cdot 4$ million. New single premiums for ordinary assurance and annuity business rose sharply from £46.5 million

<sup>&</sup>lt;sup>1</sup> Hobart Paper No. 19. Institute of Economic Affairs. 66A Eaton Square, London SW1. Price 6s net.

<sup>&</sup>lt;sup>2</sup> Available free of charge from Board of Trade Offices throughout the country.

<sup>&</sup>lt;sup>8</sup> British Life Assurance, 1957-61, available on request from The British Life Offices Association, 33 King Street, London EC2, Associated Scottish Life Offices, 23 St Andrew Square, Edinburgh, or Industrial Life Offices Association, Cheapside, London EC2.

in 1960 to £59.8 million in 1961. By far the greater part of this related to annuity business. New premiums for occupational schemes and 'self-employed' pension business in 1961 amounted to £63.5 million compared with £53.2 million in 1960. The increase largely reflects the setting-up of many new schemes and the improvement of existing schemes to facilitate contracting out of the Government graduated pension scheme which began during the year.

In spite of the relative attraction of yields from fixed interest stocks, there was no significant change in the overall investment of funds of the life offices in 1961. Government securities and ordinary stocks and shares accounted for 22½ per cent of total investment; debentures, etc. 20 per cent; mortgages and real property 17 per cent and 18 per cent respectively.

#### ANOTHER E.C.G.D. RECORD

BUSINESS declared by the Export Credits Guarantee Department under 'commercial' insurance during the third quarter of 1962 amounted to £221.5 million – a record for any quarter, and 16 per cent up on the corresponding quarter last year. The face value of comprehensive policies current at the end of the quarter was £944.2 million, compared with £835.4 million a year ago.

Taking new specific contracts together with contracts covered under comprehensive policies which involved more than six months' credit, the value of new business during the quarter where terms exceeded six months amounted to £45.8 million, compared with £49.2 million in the previous quarter and a quarterly average over the previous twelve months of £50.1 million.

### This is My Life...

by An Industrious Accountant

### CHAPTER 144

Our discontented assistant accountant, Arthur, of whose astronautical aspirations I wrote recently, put his head in the door and asked could he see me. Permission being duly accorded, he sat down, hands on spread knees, a seraphic smile splitting his ingenuous face, and said he was leaving us. He'd got another job.

Frankly, I wasn't sorry. He's been a dreamy, rather lackadaisical employee, though well-meaning and scrupulously accurate; never bad enough for severe reprimand, never good enough for promotion. So much the warmer were my congratulations, so much the deeper in my mind was I planning his prompt replacement. Arthur's departure would be welcome as clearing a promotional blockage . . . good man, Arthur! I beamed on him in return.

'I wonder if you could give me a good reference?' asked Arthur happily. 'My new boss would like one. I suppose I've done a pretty satisfactory job here, barring the odd clanger. Useful, too, if I ever change jobs again, to have your name to a testimonial.'

I was a little taken aback. His reference wouldn't be as glowing as he seemed to expect. What about that time he left the stock sheets in the bus... or dropped the general ledger down the lift shaft... or went abroad on holiday with all the office keys in his pocket. I temporized tactfully.

'It's against our policy to give references. Your new employer can phone me for a chat', I smiled, and his face fell. He might want the reference for use elsewhere some time, he protested, so I tried to soothe him with the assurance that I'd always respond to telephone or letter.

He brooded with tight lips; his disappointment was manifest. 'That's not much use to me,' he grumbled. 'You might be away.' His eye flashed indignantly. 'You might be out sick for ages. Jolly hard luck on me if they couldn't contact you... I might lose a good job just because you'd broken a leg or something.' This self-centred sentiment, I reflected, might have been phrased with more delicacy.

The telephone, I explained urbanely, was far more useful, if he'd only try to appreciate the position. Eulogies could be fuller, character analysis could be uninhibited, a balanced picture could be presented. (I had an intuitive feeling that he didn't want a balanced picture; he just wanted that eulogy.) My recommendation could be tempered to suit the new job specification; I might be able to say more if I knew his prospective employer, for instance.

Clearly, my words fell on stony ground. His eyes were hurt and hostile. But in fairness I wasn't prepared to gush unqualified praises; in fact I was reluctant to lay bare to public view his frailties and failings just now when he was leaving us. Obviously, our admonitions over the years hadn't registered with him at all; he saw himself as sans reproche; my letter would be the golden key to automatic success.

It was all far from simple. Furthermore, I pointed out, testimonials should be on a confidential ad hoc basis, not circulars to be distributed at random. Arthur rose without a word, cut to the quick, and left. I almost expected him to say 'Et tu, Brute', as he went out.

# Finance and Commerce

### B.I.C.C. Half-year

THE half-year report to June 30th, 1962, of British Insulated Callender's Cables Ltd, is the subject of our reprint this week. Like most improvements in company reporting, half-year figures have not arrived without opposition. It has been said it would be improper to present to shareholders figures that had not been audited. It has been objected that half-year figures might be misleading; that seasonal influences might distort the view; that they could be no guide to a full year's results.

How well this opposition reminds us of the objections of the past to the dropping of shillings and pence from published accounts; to the provision of comparative figures; and to the near-insuperable difficulties that stood in the way of consolidated figures. Yet the advance in company accounting has gone on and, in time, half-year figures will come to be taken for granted. It is the way things are moving

in accord with public opinion.

British Insulated's half-year statement speaks for itself. Its group sales figure is rounded-off to the millions; the rest of the figures are approximated to the thousand point – but do the last three figures really matter when dealing with millions of fs? The comparison goes back through three consecutive half-years, so that the view is not just of the first half of the year in isolation.

This, then, shows what can be done and what, it may be hoped, more companies will do as time goes

### Report

Figures are the more useful when accompanied with a report on them. With British Insulated's half-year is a report from the chairman, Sir William McFadzean, C.A. He first announces the board's decision on the interim dividend: 4 per cent actual (9.6d per £1 unit) less tax at 7s 9d; net United Kingdom rate 5s 3d; and the vital dates that matter when paying dividend.

He notes group turnover as 'fully maintained' and 'further improvement in our exports and overseas turnover'. Trading profit (£3,640,000) is up some 9.6 per cent over the first half and some 14.1 per cent

over the second half of 1961.

Overall profit rate on sales at 4.7 per cent, he says, 'although still inadequate in view of the very heavy requirements a progressive Group such as ours must have for technical development, research and new plant, shows a further welcome improvement on 1961'. These improvements, whilst aided to some extent by the higher turnover, were almost entirely due to the benefits of the reorganization programme

over the last few years and 'the continued drive forefficiency so vital under present world trading conditions'.

And then what lies ahead? With the exception of certain of the Group activities at home which have been adversely affected by the continued recession in the radio, television and domestic appliance industries, the profits of all our home and overseas operations have increased. On the basis of current figures and in the absence of any special factors which cannot be foreseen at this stage, the overall level of trading profits achieved in the first half of 1962 should be at least maintained during the second half of the year.'

### **Analysis of Success**

**F**OR some reason it is not as usual to seek to analyse the reasons for improvement as for recession but it can be at least as profitable an exercise, says Mr H. C. H. Graves, chairman of Vitamins Ltd. And for more than five thousand words, he proceeds with a most interesting review covering animal nutrition — not least, the human sector — as well as the economics of providing it, which Vitamins does. It is impossible to do justice to it in a few lines but it deserves this placing on record as a more than normally interesting chairman's statement.

Most of us will recognize the truth of his opening statement from life's experience. Success can pass unnoticed; failure brings the 'kicks' and the investigation. Good administration will keep both constantly

under review.

Mr Graves, in his statement, covers some of the hazards of the drug and fine chemical industry. One of the most dangerous – which has been publicized by chairmen of companies similarly situated – is the right claimed by the British Minister of Health to buy for the Health Service in the cheapest market, irrespective of any patent rights. It has, he points out, led to drug espionage: "The first such spy to appear in the Courts (and to be sentenced to gaol) came to trial only in July 1962 – and it may well be that the Minister will consider the moral aspect of his bargain purchases."

### The Accounts

On the accounts of Vitamins, two observations arise. First of all, the annual publication measures, unopened,  $6\frac{1}{2}$  inches wide by 12 inches deep, a rather unusual size that gives a page opening of 13 by 12 inches. In that space is presented in single column, either side of a centrally-disposed narrative, consolidated figures to the left and the company's own balance sheet to the right, with 1962 single-column figures on the inside against the narrative and 1961 single-column figures, of course, entail the rulings-off in the column for sub-totals.

It is a beautifully concentrated layout of two balance sheets and comparisons but, as has been sug-

# Report to Stockholders on Trading Results for the Half-year to 30th June, 1962 BRITISH INSULATED CALLENDER'S CABLES LIMITED

2th October, 1962

Dear Sir/Madam,

I have to advise you that on the 8th instant your Directors declared the undermentioned distribution on the Ordinary Capital:

interim of 4% actual (9.6 pence per £1 unit) less income Tax at 7/9d in the £ on

account of the year ending 31st December, 1962. Net U.K, rate 5/3d in the £.

Warrants will be posted on 16th November, 1962, payable on 17th November, 1962, to Stockholders registered in the books of the Company at the close of business on 12th October, 1962. The consolidated results of the Group for the half-year to 30th June, 1962, based on unaudited figures, are given on the opposite page together with the corresponding results for the half-years to 31st December, 1961, and 30th June, 1961. Group Turnover has been fully maintained with, I am glad to say, a further improvement in our exports and overseas turnover.

profit rate on sales at 4.7%, although still inadequate in view of the very heavy requirements a Trading Profits (before Investment Income, Exceptional Items and Taxation) at £3,640,000 show increases of some 9.6% over the first half and some 14.1% over the second half of 1961. Our overall progressive Group such as ours must have for technical development, research and new plant, shows a further welcome improvement on 1961. These improvements, whilst aided to some extent by the higher turnover, are almost entirely due to the benefits of our re-organization programme over the ast few years and the continued drive for efficiency which is so vital under present world trading conditions, . With the exception of certain of the Group activities at home which have been adversely affected by the continued recession in the radio, television and domestic appliance industries, the profits of all our home and overseas operations have increased. On the basis of current figures and in the absence of any special factors which cannot be foreseen at this stage, the overall level of trading profits achieved in the first half of 1962 should be at least maintained during the second half of the year,

WILLIAM McFADZEAN, Chairman Yours faithfully,

# SUMMARY OF GROUP RESULTS (based on unaudited figures)

	Half-year to 30/6/1962	Half-year to 31/12/1961	Half-year to 30/6/1961	
Group Sales	£77,000,000	£76,000,000	£75,000,000	
Surplus on Trading – See Note (1)	5,972,000	5,467,000	5,454,000	•
before charging: – Depreciation	1,485,000	1,455,000	1,424,000	
Interest on Debentures, Bonds and Loans	389,000	360,000	200,000	
Directors' Emoluments, Pensions, etc.	89,000	94,000	87,000	
Factory Re-organization Expenses Amounts transferred to Provisions	195,000	200,000	118,000	
	2,332,000	2,278,000	2,133,000	
Trading Profit	3,640,000	3,189,000	3,321,000	
Investment Income (Gross) – see Note (2)	26,000	700,000	62,000	
Profit before Taxation and Exceptional Items Less Taxation – see Notes (1) and (3)	3,666,000	3,889,000	3,383,000	
	2,049,000	2,034,000	1,912,000	
Exceptional Item's – see Note (4)	252,000	520,000	675,000	
Total Net Profit of the Group	62,301,000	£2,554,000	22,587,000	•
Proportion of Total Net Profit of the Group attributable to Holding Company	62,174,000	22,441,000	12,473,000	·

- (1) The net cost of terminating the Magna Pipeline Contract in May, 1962, amounted to £193,000 (£417,000 less tax relief thereon) and this sum has been charged to Revenue Contingencies
  - (2) investment income arises mainly in the second half of the year and the total for 1962 is likely to be similar to that for 1961.
    - (3) Taxation on profits for the half-year to 30th June, 1962, has been calculated on the basis of existing
- (4) Exceptional Items arise mainly from the realization of certain investments no longer required by the Group. The total 1961 credit of £1, 195,000 was represented mainly by Realized Capital Profits from Investments of £745,000 and adjustments of Taxation Liabilities for earlier years of £460,000.

gested before, the very concentration defeats the objective of presenting a statement that can be looked at and grasped, if not at once, at least without that feeling of being involved in a maze of figures. As an ideal, it is perfect but. . . .

The other point has recently been noted in another instance: the use of fold-out flaps to increase the space in immediate view. In this case, the left flap carries the profit and loss account and the right flap the notes on the balance sheets. Anything that brings a note into its close balance sheet context is well worth while.

### Centenary

THIS year marks the centenary of the City of London Building Society whose accounts have featured in this column more than once in the past. The Society has produced a *Centenary History*, 1862–1962, to which unfortunately justice can hardly be done in the space available here.

Two or three points of interest, however, merit attention. It was from its founder, James Higham

(1821–1903) that the call came to hold a meeting of representatives of London societies in 1869 which led to the foundation of the nation-wide Building Societies' Protection Association, the ancestor of the present Building Societies Association. And it was Higham's efforts that, against opposition, led to the Royal Commission of 1870 to inquire into both friendly and building societies, and in turn to the Building Societies Act, 1874, which placed all such societies under the control of a Chief Registrar.

Another point is that the Society stands apart with its 'varying interest' in respect of its mortgage contracts. It uses a formula, first devised in 1934, linking interest rates to a factor beyond the board's control; in recent years the factor has been the market standing of  $3\frac{1}{2}$  per cent War Loan.

Finally, it is noteworthy that the Society's chairman, Mr G. R. Appleyard, F.C.A., a past-chairman of the London and District Society of Chartered Accountants, is a great-grandson of the first chairman, who in his time was so prominent a personality in the City of London.

### CITY NOTES

In stock-markets the wide price fluctuations of the past two weeks have obviously shaken investment confidence. The Cuba affair may be past the critical stage but the international political atmosphere can hardly be described as calm.

Quite apart from political factors, there are still economic uncertainties to be considered. When the economic accent appears to be placed on ways and means to avoid recession rather than on methods to contain inflation, the background to the equity markets is not particularly impressive.

Mr Maudling still seems to be in no hurry to foster economic re-expansion despite pressure from the Federation of British Industries. A weather eye is being kept on the United States business position. Current forecasts, by economists there, of a business downturn in 1963 point to the need for a cautious approach to re-expansion in Britain.

The Cuba affair and its effect on the stock-markets has put out of joint the well laid scheme for inducing and holding a lower level of long-term interest rates. In the short-term end of the market, a sharp rise in the Treasury bill rate points to the growing view that Bank rate reduction is being ruled out of the reckoning for some time ahead.

Seasonal pressure on sterling and on the reserves seems to rule out Bank rate reduction possibilities at least until the New Year.

### **Education for Accountancy**

IR, - Since the publication of the article by Professor V. T. Baxter in your issue of January 20th, and my ibsequent letter (February 3rd issue), I have come realize that much that is discussed and argued bout at society meetings, and elsewhere, is somewhat smoved from the limited aims I had in mind. The onception of university courses in this and that is o doubt an interesting field, but I am seeking someting much more modest.

About 90 per cent of newly-articled clerks know bsolutely nothing, or very little, about even elementry book-keeping. Apart from isolated examples, ich as Wednesbury Education Authority, there is ot even a scheme for giving these young men a rounding in principles up to, at least, the trial alance. Apart from correspondence courses, lectures which are not a substitute for tuition classes) and a ague idea of 'ask your senior', the articled clerk must rope his own way. Such a state of affairs hardly istifies a system of articles.

The absence of any tuition system worth the name perhaps most serious during the first two years of rticles. After a clerk has built up a certain volume of capital' of knowledge, he may find it easier to undertand and accumulate more. During those two years is likely to have a discouraging struggle to comprehend, from shortened versions in text-books and ramming notes, what it is all about. The clerk with to accountant in his family circle deserves special ympathy.

My plea is simply that this 'pick-it-up-as-best-youan' arrangement is not good enough, and a positive cheme of tuition is essential. It ought to have preeded the enlargement of the permitted number of rticled clerks.

If something effectual can be done to teach articled lerks the matters in present syllabuses so that they eally do know them, I shall be content for the resent to leave the subject of 'higher education' and iniversity courses to others.

Yours faithfully, Hatton, Warwicks. J. E. ROWE, F.C.A.

### Changing Price Levels

SIR, - I trust I am not too late in referring back to your issue of October 6th, in which you report the addresses given to the Eighth International Congress n New York.

In particular, I should like to underline, if I may, the address given by Drs. P. F. S. Otten, Chairman of N.V. Philips' Gloeilampenfabrieken, and his statement that, 'In our own enterprise we only consider as profit the surplus remaining after the purchasing

power of the capital invested has been maintained'.

When I was engaged on research into the possibility of integrating standard and current costs in 1950, I discovered they were doing just that even then. In Britain in 1961, one of our more enlightened concerns, John Summers & Sons Ltd, reported in their profit and loss account, under 'Depreciation' calculated by reference to the actual costs of fixed assets, an 'Allocation to fixed assets replacement reserve to take account of higher replacement costs — £1,285,000', and a glance at the balance sheet reveals that depreciation is still being calculated on historical cost, as are the stocks also.

You report Sir Harold Howitt as saying, at the Congress, 'the closer integration of financial, industrial, and political contacts between nations – of which the latest is the European Common Market – must place heavy responsibilities on the accountancy profession'. Does not this mean that we have to begin to re-form our accounting statements to include replacement costs, as is being done in those countries with whom we are probably going to become members of a truly economic European Community? Or are we going to drag our feet until the event is upon us?

Replacement cost accounting is no longer a mere academic exercise, but a vital necessity if we are to be a leading member of that Community, and exercise our proper influence in the economy of the world.

Yours truly,

Mundesley, Norfolk. WM. E. SPRUCE.

### **Acceptance Sampling**

SIR, — Although the statistical theories enunciated by Mr K. A. Sherwood are beyond my ken, his article (October 20th issue) includes a statement which in my opinion is basically incorrect in principle.

He states . . . 'the extent of the test should always be given, e.g. "Test 150 petty cash vouchers at random".'

In case a reader should be led to apply this basis to the vouching of more important payments, I write to suggest that the object of vouching is to verify payments and consequently the instruction should be 'Vouch 150 petty cash payments chosen at random' – otherwise one misses all the items which may not be substantiated, in fact, by vouchers!

Yours faithfully, Pinner, Middx. R. W. EDWARDS, F.C.A.

[Mr Sherwood writes: I fully agree with Mr Edwards that a fuller description of the audit test quoted should have been 'Vouch 150 petty cash payments chosen at random'.

The sample in this instance must, of course, be drawn from the petty cash book and not from the vouchers, which may or may not be complete. For the benefit of students I should perhaps explain that samples are sometimes drawn from documents rather than from the books of account. It can be more important to ensure that all documents have been entered rather than that all entries are supported by authorized documents.]

### THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

### TAXATION AND RESEARCH COMMITTEE

The one hundred and twenty-fourth meeting of the Taxation and Research Committee was held at the Institute on Tuesday, October 23rd, 1962 at 2 p.m. There were present:

Mr S. M. Duncan (in the chair); Messrs F. W. Allaway, G. R. Appleyard, G. L. Aspell, T.D., D.L., D. G. Bee, R. P. Brown, K. P. Chapman, D.S.C., L. H. Clark, P. G. Craven, T.D., W. F. Edwards, N. Cassleton Elliott, R. W. Foad, C. R. P. Goodwin, S. R. Harding, J. S. F. Hill, S. Kitchen, H. P. Lawrence, C. Yates Lloyd, J. W. Margetts, A. G. Martin, B. A. Maynard, G. M. Metcalf, S. A. Middleton, G. P. Morgan-Jones, F. L. Moulding, E. J. Newman, R. D. Pearce, J. Perfect, T. B. Pritchard, A. H. Proud, D. W. Robertson, H. Robinson, C. Romer-Lee, B. G. Rose, E. C. Sayers, H. C. Shaw, C. C. Taylor, J.P., G. Thompson, D. C. Urry, J. G. Vaughan, G. Wadwell and J. A. P. Whinney (forty-two members) with Mr S. P. Wilkins and the Assistant Secretaries to the Committee.

### Address by the President of the Institute

The President of the Institute, Mr P. F. Carpenter, F.C.A., attended the opening of the meeting. In reply to a speech of welcome by the Chairman, the President said:

I am sure that all members of the committee will share my sense of loss on the death of Sir Harold Barton who, as you know, was the first Chairman of the Committee. Sir Harold took an active interest in the affairs of the Institute for very many years and the success of the work of the Taxation and Research Committee owes a great deal to those members who were instrumental in its formation.

As one who served on the main committee and a number of sub-committees for a number of years, it gives me particular pleasure to address you this afternoon.

The Committee has now concluded its twentieth year of office and so it is entering on its 'coming of age' year. Many tributes have been paid to the work of the committee and I should like in particular to refer to a paragraph in the Jenkins Report. You will remember that in paragraph 334,

the Report states:

'Whether the information provided in the accounts is enough to give a true and fair view is to some extent a matter of the opinion of the directors based on the circumstances of a particular company. In the last resort the auditor must decide whether he is prepared to state that in his opinion the accounts give a true and fair view; if all the necessary information is not given the auditor is required to qualify his report accordingly. The Recommendations on Accounting Principles periodically issued by the Institute of Chartered Accountants in England and Wales to their members have already done much to ensure that the standards of accounting are reasonably uniform and constantly rising. These recommendations are based on close and constant study of the relevant problems, which are ever changing, and it is primarily to the initiative of the professional associations that we must look if the general principles of the Act are to be effectively applied in practice.

In the preparation of these recommendations the Committee has always played a most important part.

As most of you know, the Council has had under consideration through its Technical Activities Committee the whole question of the future research policy to be followed

and I feel sure that the work of this Committee and of its various sub-committees will continue to be of the greatest

Like most Presidents I gave a good deal of thought as to what the policy should be during my year of office and I came to the conclusion that with so many matters under consideration the best contribution I could make would be to do all in my power to expedite, and if possible to bring to conclusion, as many as possible of these projects. I need only mention the implementation of the Report on Education and Training (the Parker Report) and the Small Practitioner Inquiry. In a world where events move so rapidly there is always the danger of proposals, however well founded, being overtaken by events and out-dated before they can be fully implemented.

As one who has taken part in and very much enjoyed the debates on the various matters dealt with by the Committee, I appreciate very fully the time which must necessarily elapse before a final draft can be completed, but I would commend to all members of the Committee the desirability of agreeing reasonable target dates and pursuing their

deliberations with those dates in mind.

I have often thought that our many members who were serving with the armed forces must have thought it rather remarkable that in 1942 when London and in fact the whole country was in the front line, that the Council of that time should have established this Committee which has played such an important part in the development of the Institute in the post-war period.

I should like to congratulate Mr Duncan and Mr Shaw on their appointment and to wish you all a very successful

vear.

### Mr J. Cartner, F.C.A.

The Chairman paid tribute to Mr J. Cartner for his services as Chairman during the year 1961-62.

### Membership

The Chairman extended a warm welcome to the following new members of the Committee:

Mr D. G. Bee (Manchester).
Mr K. P. Chapman (Co-opted)
Mr P. G. Craven (Co-opted).
Mr S. R. Harding (Co-opted).
Mr H. P. Lawrence (Bristol).
Mr G. M. Metcalf (South Wales).
Mr B. G. Rose (Birmingham).
Mr G. Thompson (Leicester).
Mr G. Wadwell (East Anglia).
Mr J. A. P. Whinney (Council nominee).

Letters of appreciation for their services are to be sent to the following who have retired from membership of the Committee:

Mr R. D. R. Bateman.
Mr W. R. Carter.
Mr R. A. Chermside.
Mr E. S. Foden.
Mr L. Pells.
Mr J. D. Reekie.
Mr B. D. Shaw.
Mr H. Eden Smith.
Mr D. E. T. Tanfield.
Mr G. H. Yarnell.

#### **Sub-committees**

eports of progress were received in connection with renty-two matters.

### **Future Meetings**

he next meeting of the Committee was fixed for hursday, December 13th, 1962, at 2 p.m., and the

meetings of the Committee in 1963 were provisionally arranged for:

Thursday, February 14th, 1963. Tuesday, April 9th, 1963. Thursday, June 13th, 1963. Tuesday, September 17th, 1963. Thursday, October 10th, 1963. Thursday, December 12th, 1963.

### ACCOUNTANTS' VITAL ROLE IN THE COMMON MARKET

### VICE-PRESIDENT'S VIEWS AT HULL DINNER

hartered accountants will have a vital role to play if itain joins the European Common Market, said r R. P. Winter, c.B.E., M.C., T.D., D.L., F.C.A., Vice-esident of The Institute of Chartered Accountants England and Wales, at the annual dinner of the ull, East Yorkshire and Lincolnshire Society of lartered Accountants, held in Hull on October 19th. Chartered accountants would have a greater responsility than ever to industry and commerce if Britain med the Six, he said. It would lead to much keener mpetition and much more integration with business Europe. He felt that accountants must help their ents by giving them guidance on management and lance and helping them to achieve increased productity.

### A Common Standard

he ease of travel, Mr Winter said, was bringing counes closer together and, with such a flow of capital d business between them, it was most important at the different bodies of accountants should have an derstanding of each others' methods and that they ould have a common standard of accounts.

The profession had got to try to get across to industry d commerce that accountancy was only one part of eir service, and they could offer quite a lot of help the smaller firms, which did not have accountants their staff. 'If we can do that, we will convince our ents that we are of some use, and not something posed on them by the Companies Act or the Inland venue.'

Mr Winter paid tribute to Mr C. M. Strachan, 3.E., F.C.A., President of the Chartered Accountants udents' Society of Kingston upon Hull, for the rk he had done for the Society and for the profession, ring the ten years he was a member of the Council, fore his retirement. He also paid tribute to Mr Alan acIver, C.B.E., M.C., B.A., who recently retired after enty-seven years' devoted service to the Institute, st as Deputy Secretary and Assistant Secretary and

en as Secretary.

Referring to the Institute's 'small practitioners' nuiry, Mr Winter said that the Council had received tremendous amount of information from district lieties and they hoped that when the recommendans were placed before them, they would be of some lp to the small practitioner.

Judge Norman Harper, Hull County Court Judge, o proposed the toast of the Institute, said account-

ants could face the advent of the Common Market with confidence having had what he described as 'an immense amalgamation of the two main branches of accountancy'. 'You seem to have had a good deal more foresight, not only than the Government, but also more than two of the political parties,' he added.

#### The Guests

Mr A. Macdonald, F.C.A., President of the Society, proposing the toast of 'The Guests', said that in the first half of the last century accountants were not popular; they were 'clothed in a sense of calamity'. Now they were an essential part of business and British accountants were an example to the world.

Replying to the toast, Mr Ronald Dufton, F.A.L.P.A., President of the Hull Institute of Estate Agents and Auctioneers, paid tribute to the help that accountants gave to members of his Institute. He had, he said, spent some time as a young man in an accountant's office and therefore had some knowledge of their profession and difficulties. He was grateful to them for simplifying the lives of estate agents and auctioneers.

Among the guests present were:

Messrs C. V. Best, F.C.A. (Chairman, London and District Society of Chartered Accountants); K. A. Buxton, F.C.A. (President, Nottingham Society of Chartered Accountants); Capt. J. E. Cooper, O.B.E. (Master Warden of the Corporation of the Hull Trinity House); Messrs C. E. Copley, B.S.C., F.C.A. (President, Sheffield and District Society of Chartered Accountants); J. R. Dufton, F.A.L.P.A. (President, Hull Institute of Estate Agents and Auctioneers); C. A. Evan-Jones, M.B.E. (An Under-Secretary, Institute of Chartered Accountants in England and Wales); T. W. Hibbert, F.C.A. (President, Leeds, Bradford and District Society of Chartered Accountants); C. G. Heselton, F.C.A. (Vice-President, Hull, East Yorkshire and Lincolnshire Society of Chartered Accountants).

Messis A. D. Langridge, F.C.A. (President, South Eastern Society of Chartered Accountants); H. M. Lepper, F.C.A. (President, Leicestershire and Northamptonshire Society of Chartered Accountants); S. Morris, F.C.A. (President, Liverpool Society of Chartered Accountants); G. W. Murphy, J.P., B.A., F.C.A. (President, Manchester Society of Chartered Accountants); A. K. Sheppard, F.C.A. (President, East Anglian Society of Chartered Accountants); R. G. Slack, M.A., F.C.A. (Member of Council, The Institute of Chartered Accountants in England and Wales); D. E. T. Tanfield, F.C.A. (President, Birmingham and District Society of Chartered Accountants); G. R. Watson, F.C.A. (Chairman, Grimsby Branch of the Hull, East Yorkshire and Lincolnshire Society of Chartered Accountants).

### Importance of a Strong Professional Body

The need for a strong professional body and the purposes it could fulfil were stressed by Mr M. V. Argyle, M.C., Q.C., Recorder of Northampton, at the annual dinner of the Leicestershire and Northamptonshire Society of Chartered Accountants at Northampton on October 22nd.

Mr Argyle, who was proposing the toast of 'The Institute of Chartered Accountants in England and Wales', said that he sometimes heard from accountants suggestions that they had competition to face from the solicitors' branch of his own profession and from the banks. There was something, no doubt, in that point of view, but he would not have thought that there was any great threat to the accountancy profession from either of those directions. His father was a solicitor in a fairly substantial way, and he thought it fair to say that twenty-five years ago a great deal of work now done by accountants was done by solicitors.

Nowadays, although they did a good deal of tax work, most firms of solicitors were not equipped with staff or facilities for doing most of the work which accountants had either taken over, or which had appeared in the past quarter of a century.

Again, as far as the banks were concerned, although they had done first-class work in certain directions, work which they would no doubt retain, he would not have thought that this was any substantial threat to the accountants' profession.

### **Problem of Rising Costs**

What I want to put before you', he continued, 'is the desirability and the tremendous need you have for a very strong professional association. The threat, I would say, to any profession comes principally from its own ranks.'

'This is a familiar situation to me as a barrister. Most of us are competitors, but it is the function of a strong professional body so to organize the remuneration and affairs of its members that, while they remain rivals, they are in basic agreement over the major influences which affect them.

agreement over the major influences which affect them.
'In the past few years in my profession at the Bar, the Bar Council, and the Benchers of the four Inns, with great difficulty and great patience, have succeeded in negotiating an increase in remuneration which was certainly justified by increases in costs, overheads, staff and everything else. It was difficult because we all compete with each other.

'I have been told by a number of accountants, from small firms on the whole, that costs in the past few years have risen in a substantial way. It may be that your professional body will be able to negotiate, in the same way as the legal bodies, an increase in remuneration which will meet the requirements of you all.'

On preserving their public image, Mr Argyle said that accountants had an advantage because at present theirs was good. In the cases of the law, the Church and the medical profession it was far below what it deserved to be.

'Your profession, in the past twenty-five years, has made one of the greatest advances – I would even call it a breakthrough – of any profession in this country.

'Accountants are on the boards of most great businesses.

They are sought after by the Church, the State, industry, public service and private service. They are in tremendous demand.

'I would suggest to you with great respect: take great care through your leaders that that public image does not get at all blurred or distorted.'

### **Institute Activities**

Replying to the toast, Mr P. F. Carpenter, F.C.A., President of the Institute, expressed appreciation of the work of the district societies.

Referring to various activities of the Institute, he said that since the publication of the Parker Report on Education and Training for the Profession, seven new universities had been founded. He suggested that within the next five years it would probably be necessary to make some fairly drastic revisions of the report's recommendations.

"The future of the profession lies a lot with the quality of recruits,' declared Mr Carpenter. 'It is obvious that with the expansion of our educational service the brighter boys and girls will go to the universities, and we shall have to arrange our plans so that we receive our fair proportior of them.'

Mr Carpenter said that the Institute's Taxation and Research Committee had done great work of considerable value to the profession, and they were now considering whether that work could be extended, and the form in which it might be developed.

"Then we have had our investigation into the problem of the small practitioner,' he went on. 'I am a smallist practitioner myself. We are very close to the problems o the small practitioner.

'We do not want to run your businesses for you, bu nevertheless we are inquiring into the problems which confront you. We are looking into the questions of staffing and remuneration, and we hope that we shall be able to render some practical help to you.

'I think that in the long run to make a success of you practice you must keep up to date and be efficient. We recommend those members who can afford the time to go to our summer courses at Cambridge and Oxford.

'We have put a great deal of emphasis in recent month on the work of the provincial accountant. We are encourag ing our members to have a rather more forward lookrather, to be financial advisers in addition to being auditors

'The absolute independence of the auditor is essential but he should be encouraged to be forward-looking and no be afraid to act as a financial adviser to the company h serves.'

### The Guests

The toast of "The Guests' was proposed by Mr H Murray Lepper, F.C.A., A.C.I.S., President of the Leicestershire and Northamptonshire Society. The company to which he referred, numbering some two hundred and seventy members and guests, included nine presidents of district societies.

Replying on behalf of the guests, the Mayor o Northampton, Alderman E. F. Tompkins, paid tribut to Mr Murray Lepper's work for further education as a member of the commerce advisory committee a Northampton College of Technology.

## Independence of Mind Needed in Modern Society

### LEEDS & BRADFORD CHARTERED ACCOUNTANTS' DINNER

A level of sturdy individualism was needed more and nore in modern society and that independence of mind vas bred in The Institute of Chartered Accountants n England and Wales, said the Earl of Limerick, i.B.E., C.H., K.C.B., D.S.O., T.D., speaking at the annual linner of The Leeds, Bradford and District Society of Chartered Accountants at the Queen's Hotel, Leeds, in October 26th.

Lord Limerick, who was proposing the toast of he Institute, said that throughout a long life of paid nd unpaid jobs and of seeking help from experts of nany sorts – engineers, scientists, and the professions – e had not only had that help but a great deal of kindess thrown in. Among his expert friends had inevitably een a number of accountants.

'An accountant, it is said, can find a solution for very difficulty, whereas the cynic remarks of the aligned Civil Service that it can produce a difficulty or every solution', said Lord Limerick, amidst aughter. He went on:

'I have found 95 per cent of accountants admirable and 1e rest intolerable (*Laughter*). Now this is a very high roportion of passes to failures in any profession. Luckily can put my son, who qualified some time back, amongst 1e 95 per cent. As for the 5 per cent, they fail through ver-regimentation of mind. They seldom see the new idea, and when they do they hate it.'

Lord Limerick said that the training for accountancy as a safeguard against one of the social dilemmas of iodern times, the standardization of men for material ficiency.

"The increase in specialization in a highly organized sciety makes us frighteningly inter-dependent.

'Nowadays we are schooled to a pattern, we are specialized and popped into little places in the standardized mass achinery of central or local government, big business or ade associations. So it needs quite an effort to retain our ower of objective and individual thought and reaction. We seem in danger of becoming asses loaded with and pre-inditioned by the eleven-plus, the wireless, the television at the picture press.'

#### Good Public Image

esponding to the toast, Mr Percy F. Carpenter, c.a., President of the Institute, said that one of the eat pleasures of being President was the opportunity visit district societies. It was an opportunity which I presidents treasured. He said the visit also gave him e opportunity of thanking the officers and members the local committee for all the work they did on shalf of the Institute.

The public image of the chartered accountant, intinued Mr Carpenter, stood as high in public teem today as it ever had. One of the best contribuns the Council could make for the general welfare its 36,000 members was to maintain and raise that the image.

He said that recently he had had the very great easure of attending a conference of French accountts. He found that the reputation of the English

Institute was very high indeed, as indeed it was in the United States as he had noted at the International Congress there. 'One of the themes of the Congress in New York', he added, 'was the opportunity we all have in our profession of helping our fellow men, not only from a professional point of view but in the ordinary way of life. I would commend that view to you.'

Referring to the Council's work, the President said: 'We are concerned with the problems of the Common Market, the decimalization of currency and so on. Domestically we are preparing to implement the recommendations of our committee on educational training and in addition we have started an investigation into what is known as the small practitioner problem. In this inquiry we hope we shall be able to give considerable assistance to you from a fact-finding survey which should help you in staffing, remuneration and basis of fees.'

#### **Textile Problems**

Proposing 'Our Guests', Mr T. W. Hibbert, T.D., F.C.A., President of the Leeds, Bradford and District Society, said:

"This is a very industrial area and we produce in the East and West Ridings approximately £600 million each year, or roughly 10 per cent of the gross national product.

'We pride ourselves on being industrious and thrifty, we continue to develop our overseas markets and the struggle to increase productivity is almost second nature to us. So far as the wool and clothing industries are concerned, we try to make ourselves more and more efficient.'

Mr Hibbert said the National Productivity Year would start in November but 'the increase in productivity does not entirely depend on our own efforts. The policy of the Government has a very important bearing on our plan for expansion'.

"To take one example, there is the difficult problem of trade agreements with foreign countries. We have tried to give Lord Limerick some idea of the crippling effects which the proposed Japanese Treaty could have on the wool and clothing industries, on the prosperity of which depends the livelihood of many people in the profession in this area.'

He said that the present terms of the proposed agreement would allow free entry of Japanese textile products into this country. Mr G. E. Birkenshaw, Chairman of the Wool Textile Delegation, was doing magnificent work on behalf of the industry. But, said Mr Hibbert, he must feel at times completely frustrated in his efforts to impress upon the Government the seriousness of the situation whereby this country could be flooded by cheap, subsidized Japanese imports before the Government could take any action to prevent it. 'We are prepared to stand up against the lower Japanese wage rates but we can't compete against their export subsidies and other unfair practices', he added.

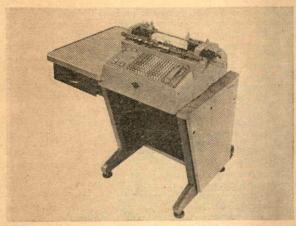

The toast was responded to by the Lord Mayor of Leeds, Alderman Harold Watson, and Mr R. G. Summers, chairman of the Bradford and District Centre of the Institute of Bankers.

A monthly feature designed to keep readers whether in practice or in commerce - abreast of the latest developments in the field of office equipment.

### Fast, Low-cost Accounting

NEW, high-speed machine in the well-known National series has many of the features of the Class 31 and 32 models but costs well under £1,000. Known somewhat ponderously as the High-speed Ledger Machine, it has a full numerical keyboard, a number of keys for abbreviated alphabetical description (a choice is available to meet individual needs) and four registers.

Like other machines manufactured by this company, the new model is controlled by a programme bar and gives instant proof that previous balances have been

N.C.R. High-speed Ledger Machine

brought forward correctly and rightly identified as debit or credit. This check is applied before an entry is made. There is a choice of two keyboard layouts, one of which allows the entry of two dates. Both dates can be pre-set before posting begins, or one can be varied from the keyboard - an essential facility when the date of the original as well as that of the posting must be entered.

Typical applications are sales and purchase ledger,

stock records, P.A.Y.E. and hire-purchase work.

Price, £849. An alternative model with slightly different keyboard arrangement costs £877.

From the same maker comes a new Automatic Line Finder attachment which fits the new machine, and the 31, 32, 33 and Compu-Tronic models. Designed for 26 in. carriages, it accepts forms up to 18 in. wide and, by assuring perfect alignment of entries, improves the appearance and legibility of records while procuring maximum form usage.

The attachment gives controlled spacing of six lines to the inch. This result it achieves by sensing indentations at the right-hand edge of the form. The first indentation is pre-punched; subsequent ones are made automatically with each entry. Double-sided forms printed head to head can be accommodated. Using the attachment, the operator merely inserts the leading edge of the form between two guides. The machine positions the document and, after the entry is completed, ejects it at a speed varying from 16 to

### New Offi

20 in. per second, depending on the form width.

The attachment can be fixed to or removed from the carriage in a few seconds and is immediately adjustable for varying widths. Other forms can be inserted and straightened manually beside the automatically aligned

Automatic line spacers for 20 and 16 in. carriages will be available later, the makers say.

Price, on application.

National Cash Register Co Ltd, 206-216 Marylebone Road, London NW1.

### **Inexpensive Automation**

HE cost of automated cheque handling has been sharply reduced by a new machine in the Protectograph range. Known as the Cheque Disburser, this device writes, dates and signs the documents in a single operation. Its price is only £345 - well below half the cost of similar all-purpose machines previously offered by this distributor.

Security is not sacrificed in this low-cost model. The amount figures and the date are entered in indelible ink and shredded into the paper, making alteration virtually impossible. The signature plate, which can contain one or two names, is locked into a compartment to which access is gained only with two keys, each of which may be kept by a different person. The passage of every cheque through the machine is recorded on a non-resettable counter.

The machine is very simple to use. The operator sets the amount figures on a keyboard like that of an adding machine. He then presses a button which causes the machine to sign, write and date the cheque simultaneously, then eject it. Model 78-7 writes amounts up to £999 19s 11d with shillings and pence in full. The larger 78-6 goes up to £999,999 but without shillings

Prices: Model 78-6, £345. Model 78-7, £340. Halsby & Co, Ltd, 52 Dean Street, Shaftesbury Avenue, London W1.

Protectograph Cheque Disburser

### uipment

### **Dual-purpose Intercom**

HOWN in prototype at the recent Business Efficiency Exhibition was an intercom system ich combines the functions of telephone amplifier. is based on the well-known *Fonadek* device on to ich any standard telephone handset may be placed give two-way speech amplification.

The amplifier is linked by one thin flex to a subit which is, of course, situated at some distant int. A push-button allows the user of the *Fonadek* 

switch over to intercom.

Price complete, £37 10s including purchase tax. Fonadek (Branson) Ltd, Harborne, Birmingham, 17.

### **Fast Copying Service**

HEN economic or other reasons preclude owning one's own photocopier, common sense gests making use of a service organization. Untunately, however, there may be long delays before reproductions are available.

A new Birmingham company (offshoot of a similar I highly successful venture in London) gives over-counter service. Single-sheet documents or pages and into books, periodicals or legal briefs are copied the dry Xerographic process within a few seconds. e process uses no negatives, so the confidential ure of originals is preserved: and customers who he no one at all to handle the original may do their neopying – a childishly simple procedure.

Maximum copy size is 9 in. by 14 in., but larger ruments can be reproduced by copying in sections I piecing the reproductions. In no case is the original tilated, nor does it ever go into the machine. Copies be made on card, gummed paper or translucent

ets as well as on to standard paper.

Prices, 1s 3d per 9×14 in reproduction (e.g. one ginal of this size, two facing pages of a smallish k or a portion of a plan of larger overall size).

Central Xerocopying (Birmingham), 212 Corporation eet, Birmingham 4.

### Steel Furniture

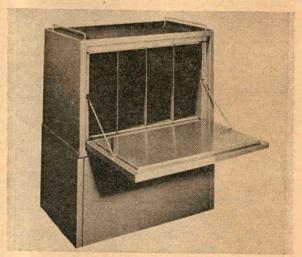

NE company which is already looking toward the Common Market is G. A. Harvey Ltd. A new ge of steel office furniture brought out by this npany contains drawers made to fit the A4 paper the international standard used for some time the Continent and now being gradually adopted

The Milhall A4 range includes a four-drawer filing oinet, a double-pedestal junior executive desk and a gle-pedestal typist desk with off-set typewriter lf. All are finished in light grey and the desks have s covered in black linoleum.

Prices on application.
G. A. Harvey (London) Ltd, Greenwich Metal rks, London SE7.

### Fire-resistant Deed Cabinet

Pasically the new Agdon fire-resistant deed cabinet comprises a plinth upon which is set a unit containing four vertical compartments and having a drop-front lid which acts as a table when open. But it is designed on the unit principle, so that the two handles on top of the cabinet act as locating points when similar units are stacked on top. There is thus scope for constant enlargement of capacity without occupying extra floor space.

Agdon Fire-resistant Deed Cabinet

The double metal skin of the cabinet is filled with fire-resistant material which, it is claimed, can with-stand temperatures of up to 2,000°F. And although not intended primarily to afford protection against theft, each cabinet has a high-quality lock which should effectively deter pilferers.

Outside, the cabinet is  $28\frac{1}{2}$  in. wide, 18 in. back-to-front and  $19\frac{1}{2}$  in. high. Each interior compartment is 6 in. wide,  $14\frac{1}{2}$  in. back-to-front and  $13\frac{3}{4}$  in. high. Cabinet weight is 117 lb. The plinth weighs 27 lb.

Price, Plinth and one cabinet, £49 plus 10 per cent purchase tax.

Agdon Steel Equipment Ltd, 15-19 Agdon Street, London EC1.

### Norwegian Miniature Office

DESIGNED for installation in the home, the Norwegian Miniature Office should appeal to the busy man or woman whose working hours do not end when the office closes in the evening. It consists of three compartments, the two side ones, divided by movable shelves, swinging forward to form a three-sided room, giving ample space for business papers, files, reference books and ledgers, and a typewriter. An adjustable lamp illuminates the writing area. When not in use the sides fold across the centre to make a closed cabinet with a safety lock. This measures  $45\frac{1}{2}$  in.  $\times$   $21\frac{1}{4}$  in.  $\times$   $32\frac{1}{4}$  in. When open the width is  $64\frac{1}{2}$  in so that even a small room will accommodate the 'office'.

Prices, Mahogany and Light Oak £68, Teak £75. Badenia Calculators Ltd, Lion House, Red Lion Street, London WC1.

### Notes and Notices

#### PROFESSIONAL NOTICES

Messrs Barton, Mayhew & Co and Turquand, Youngs & Co, announce that they have established offices in Switzerland to operate under the style of Barton Mayhew & Turquand Youngs A.G., from Dreikönigstrasse 7, Zürich 2, and Genfergasse 5, Berne. Mr John Lucas, a.c.a., will be resident manager and the practice will be conducted in association with Schweizerische Revisionsgesellschaft A.G.

Messrs Cassleton Elliott & Co, Chartered Accountants, of 4 and 6 Throgmorton Avenue, London EC2, announce that as from November 1st, 1962, they have admitted into partnership Mr Christopher Collett, B.A., A.C.A., who has been a member of their staff for some years.

Messrs Chalmers, Wade, Impey, Cudworth & Co, announce that Mr James Heaford, f.C.A., and Mr Dennis William Eckersley, b.com., a.C.A., have joined them as parters in their Manchester firm from November 1st, 1962. Mr Heaford and Mr Eckersley will continue as partners in Messrs Edward Myers, Clark, Eckersley & Co. On the same date Mr Robert Michael Dowler, f.C.A., retired from the firm to take up an appointment in Australia.

Messrs Cohen, Arnold & Co, Chartered Accountants, of Ling House, Dominion Street, London EC2 and 8 City Road, London EC1, announce that as from October 12th, 1962, they have admitted Mr Arnold J. Cohen, A.C.A., and Mr Michael Barnett, A.C.A., to the partnership. The style of the firm remains unchanged.

Messrs Cooper & Cooper, Chartered Accountants, announce that their sole London address is now Oxford House, 15 Crosswall, London EC3. Telephone: Royal 9842-5 and 6210.

Messrs Harold Everett, Wreford & Co, Chartered Accountants, of Harford House, 103 Gt Portland Street, London W1, announce that Mr A. VINOCOURT, A.C.A., who has been a senior member of their staff for some time, has now been admitted into partnership. The name of the firm will remain unchanged.

MESSRS TURQUAND, YOUNGS & Co announce that Mr E. TURNER GREEN, F.C.A., has joined the partnership as from November 1st, 1962. Mr TURNER GREEN has been associated with the firm for many years and, from 1958, was senior partner in the Ceylon firm.

#### Appointments

Mr T. H. Benn, F.C.A., has been appointed sales director of Scottish Agricultural Industries Ltd.

Mr Denis Craft, F.C.A., has been appointed secretary of Charrington, Gardner, Locket & Co Ltd, in place of Mr L. H. Hatcher, F.C.A., who remains a member of the board.

Mr J. W. Finn, F.C.A., has been appointed a director of Thomas De La Rue International.

Mr H. Haworth Ford, F.C.A., has been appointed to the board of Taylor Bros & Co Ltd of Manchester.

Mr Noel N. Lunt, F.C.A., has been appointed a director of Scottish Cables Ltd (B.I.C.C. group).

Mr A. E. Queening, F.C.A., chief accountant of Vokes Group Ltd, has been appointed secretary of the group and of its United Kingdom subsidiaries and associated company, succeeding Mr J. Phillips, O.B.E., F.C.A., who has retired from office, but remains on the board of the parent company. Mr Queening also joins the board of Vokes Group Ltd.

### **B.O.A.C. INQUIRY**

It was announced this week that the Minister of Aviation, Mr Julian Amery, has instructed a firm of chartered accountants to investigate the financial affairs of the British Overseas Airways Corporation. This follows the recent report that B.O.A.C. and its associated companies had lost over £14 million in the year ended March 31st, 1962. This has brought the accumulated deficit up to £64½ million, on which interest has to be paid to the Government. B.O.A.C.'s chairman, Sir Matthew Slattery has suggested that the deficit should be written off, thus relieving the Corporation of the interest burden.

Although not officially stated – as the inquiry is regarded as a private one instituted by the Minister with the full agreement of B.O.A.C. – it is understood that the investigating accountants are Messrs

Peat, Marwick, Mitchell & Co.

### LOCAL LOANS FUND

The Treasury have announced that as from October 20th, 1962, the rates of interest charged on loans advanced by the Public Works Loan Board to local authorities are as follows:

	Per	cent
Loans for not more than five years	5 <del>8</del>	$(6\frac{1}{4})$
Loans for more than five years but not more than fifteen years	5 <del>7</del>	(61/2)
more than thirty years	6 <del>1</del> 61	(6 <sup>3</sup> / <sub>1</sub> )

The former rates of interest are shown in brackets; they have been in force since October 6th, 1962. The rates of interest on existing loans are unaffected.

### LOCAL GOVERNMENT FINANCE STATISTICS

The cost of running local authority rate fund services, other than trading services, in the financial year 1960-61 was £1,795 million – an increase of £134½ million compared with the previous year. These figures are among details, published last week, of the income and expenditure of English and Welsh local authorities for the financial year 1960-61 presented by the Minister of Housing and Local Government.

Other changes noted in the statistics include ar increase of £24\frac{3}{4}\$ million in payments made by councitenants and those making use of other rate fund services. The income from rates rose by £46\frac{3}{4}\$ million to £696\frac{3}{4}\$ million. Government grants, apart from capital grants, rose by £50\frac{1}{4}\$ million to £755 million and expenditure

<sup>1</sup>Local Government Financial Statistics, England and Wales, 1960-61. H.M.S.O. Price 1s 9d net.

of the trading services again increased to £234 million £222\frac{1}{2} million in 1959-60).

Capital expenditure, at £577 million, was higher han in 1959-60 by nearly £45½ million. This expendiure includes nearly £83½ million for advances on nortgage to private individuals for house purchase. Debt, after deducting sinking funds and sums repayable for nationalized services, amounted at the end of he year to over £5,9894 million - an increase in the rear of some £361 million. The remuneration of local government officers and employees cost £9711 million - an increase of over £72 million.

#### ASSISTANT OFFICIAL RECEIVER APPOINTMENTS

The Board of Trade have announced that as from October 22nd, 1962, Mr Tom Wilks has been appointed in Assistant Official Receiver for the Bankruptcy District of the County Courts of Liverpool, Bangor, Birkenhead, Chester, Portmadoc and Blaenau Ffestiniog, Narrington, Wigan and Wrexham, and that Mr Henry Robertson is to be an Assistant Official Receiver for the 3ankruptcy District of the County Courts of Nottingiam, Boston, Burton-on-Trent, Derby, Leicester, Lincoln and Horncastle.

They also announce that as from October 29th, 962, Mr John Frederick Hirst is to be an Assistant Official Receiver for the Bankruptcy District of the County Courts of Birmingham, Coventry, Dudley, Iereford, Kidderminster, Leominster, Stourbridge, Valsall, Warwick, West Bromwich, Wolverhampton nd Worcester, and that Mr John Smith is to be an Assistant Official Receiver for the Bankruptcy District of the County Courts of Norwich, Great Yarmouth and King's Lynn and the Bankruptcy District of the County Courts of Ipswich, Bury St Edmunds and Colchester.

As from November 1st, 1962, Mr Geoffrey Roy Iaddrell has been appointed an Assistant Official Receiver for the Bankruptcy District of the County Courts of Southampton, Bournemouth, Newport and lyde (I.W.), Portsmouth and Winchester and the Sankruptcy District of the County Courts of Salisbury,

Dorchester and Yeovil.

### SEA-GOING BANK

'he National Commercial Bank of Scotland have tarted a novel banking service for the benefit of island armers and others in the North Isles of Orkney. A notor cruiser plies regularly between Kirkwall and the utlying islands - thus saving farmers, tradespeople nd fishermen from having to take the steamer to the )rkney mainland for banking facilities. Named the Itter Bank, it has been fitted up much like a bank nterior - and customers sit down to complete their ransactions.

### THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES Members' Library

he second cumulative supplement to the August 961 Short List of books in the library of the Institute as now been issued. Copies, which contain additions August 1962 will be sent to members by the ibrarian, free and post free on receipt of an addressed ιbel.

### THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

#### Members' Dinner

The Institute of Cost and Works Accountants held a dinner in Fishmongers' Hall, London, on October 25th. The President, Mr W. Bishop, c.a., f.c.w.a., was in the chair, and the guests included:

The Very Reverend E. S. Abbott (Dean of Westminster); Messrs H. Burke (President, The Institute of Production Riesis II. Bulke (President, The Institute of Production Engineers); V. R. Chennell, F.A.C.C.A. (Vice-President, The Association of Certified and Corporate Accountants); N. Doodson (President, The Institute of Municipal Treasurers and Accountants); Professor Ronald S. Edwards (Chairman, The Electricity Council); Mrs Eileen Hoare, O.B.E. (Deputy Chairman of the London County Council); Sir Harold Howitt, G.B.E., D.S.O., M.C., D.L., F.C.A. (a Past-President, The Institute of Chartered Accountants in England and Wales); Sir Norman Kipping, K.B.E., J.P. (Director-General, The Federation of British Industries); Messrs M. J. Lamb (Deputy High Commissioner for Rhodesia and Nyasaland); Thomas Lister (a Past-President, The Institute of Chartered Accountants of Scotland); Sir Denys Lowson, Bt (President, The Chartered Institute of Secretaries).

Colonel E. R. Mayer, T.D., D.L. (President, The National Association of British Manufacturers); Mr Cecil Mead (Chairman, The British Institute of Management); Councillor L. Pearl (Deputy Mayor of St Marylebone); Messrs S. J. Pears, F.C.A. (a Past-President, The Institute of Chartered Accountants in England and Wales); John S. Scott (The Prime Warden, The Fishmongers' Company); C. L. Accountants in England and Wates); John S. Scott (The Prime Warden, The Fishmongers' Company); C. L. Stephenson; T. H. Summerson, D.L., J.P. (President, The Association of British Chambers of Commerce); K. A. Usherwood, F.I.A. (President, The Institute of Actuaries); The Hon. A. J. Francois Viljoen (Minister for the Republic of South Africa); Messrs Robert P. Winter, C.B.E., M.C., T.D. Ville President, The Institute of Chapter of Accountants in (Vice-President, The Institute of Chartered Accountants in England and Wales); H. Woolley, C.B.E. (President, The National Farmers' Union).

The toast of 'The Institute of Cost and Works Accountants' was proposed by Sir Norman Kipping, K.B.E., J.P., Director-General, The Federation of British Industries, and Mr Bishop replied.

Mr D. E. Edmonds, F.C.W.A., a member of the Council of the Institute, proposed the toast of 'The Guests' and Col E. R. Mayer, T.D., D.L., President, The National Association of British Manufacturers, responded.

#### REGIONAL COST CONFERENCE

A Regional Cost Conference was held last Saturday by The Institute of Cost and Works Accountants at the Town Hall, Peterborough. The conference was opened by Mr C. E. Power, F.C.A., F.C.W.A., a Vice-President of the Institute, and papers were presented on 'Recent developments in farm costing', by Mr Ford Sturrock, B.SC., M.A., director, Farm Economics Branch, University of Cambridge, and 'Cost accounting in the food industry', by Mr L. E. Hodge, F.C.W.A., accountant, Batchelors Foods Ltd.

In his paper Mr Sturrock surveyed the development of farm cost accounting and emphasized the similarity of the problems faced by the farmer to those faced by the industrialist. High output alone, he said, was not a sufficient criterion of success and he went on to discuss the techniques designed to produce a balanced output of products yielding the maximum return on capital employed. He showed how marginal costing and linear programming can be used by the farmer to decide the best use of resources.

Using pea preserving as an example, Mr Hodge in

his paper, illustrated the problems involved in this very seasonal and competitive industry. The accountant, he said, could only give the greatest assistance to management if he is fully aware of all the circumstances and complications, and many larger companies were begining to appreciate the advantage of having an accountant with wide experience as part of their management team.

### LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS Luncheon Meeting

A luncheon meeting of the London and District Society of Chartered Accountants will be held at the Connaught Rooms, Great Queen Street, London WC2, on Wednesday, November 28th, at 12.30 for 1 p.m., when Baroness Burton of Coventry will be the guest speaker.

Members may bring guests and ladies are invited. Tickets at £1 2s 6d are available from the secretary, Mr J. W. G. Cocke, T.D., M.A., F.C.A., 2 Norfolk Street, London WC2.

### SOUTH-WEST LONDON DISCUSSION GROUP

The next meeting of the South-west London Chartered Accountants' Discussion Group will be held at the Kingston Hotel, Wood Street, Kingston upon Thames at 6.45 for 7 p.m. on Monday, November 5th. The discussions will be opened by Mr S. Every, M.A., F.C.A., and the subject will be 'Further aspects of the Jenkins Committee Report'.

### BIRMINGHAM AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS Coventry Area Branch

The first meeting in the 1962-63 session of the Coventry Area Branch of the Birmingham and District Society of Chartered Accountants was held on October 15th, when Mr Rolf Hellberg, F.R.I.B.A., gave an address on 'Modern trends in office design'. On Thursday, November 22nd, the Branch's annual banquet will be held at the Hotel Leofric, Coventry. Other meetings have been arranged as follows:

December 17th: Luncheon meeting at the Chance Hotel, Coventry: 'Reminiscences of a Tax Inspector', by Mr W. O. Reid, H.M. Inspector of Taxes.

January 18th, 1963: Dinner meeting at Saxon Mill, Gay's Cliffe, Warwick: 'Education for the profession', by Dr A. H. Marshall, C.B.E., B.SC. (ECON.), F.S.A.A.

February 18th: Luncheon meeting at the Chance Hotel, Coventry: 'Decimalization of the currency', by Mr H. B. Jackson, Barclays Bank Ltd.

March 22nd: Dinner meeting at Saxon Mill, Gay's Cliffe, Warwick: 'Limitation of surtax and estate duty liabilities by means of settlements', by Mr G. B. Graham, Barrister-at-law.

The honorary secretary of the Branch is Mr K. Sankey, F.C.A., 13 Eaton Road, Coventry.

### ACCOUNTANTS' CHRISTIAN FELLOWSHIP

The monthly meeting of the Accountants' Christian Fellowship for Bible reading and prayer will be held at 1 p.m. on Monday next, November 5th, in the vestry of St Mary Woolnoth Church, King William Street, London EC3. The scripture for reading and thought will be Hebrews, Chapter 12, verses 1 and 2.

### SOUTH EASTERN SOCIETY OF CHARTERED ACCOUNTANTS

#### Students' Residential Course

The thirteenth students' residential course arranged by the South Eastern Society of Chartered Accountants was held at the Royal Pavilion, Brighton, from September 24th to 28th (Intermediate course), and October 1st to 5th (Final course). There was an attendance of 160 students, mainly from students' societies within the Society's area, which serves Kent, Sussex, Hampshire and parts of Wiltshire and Dorset. A number of London students were also welcomed.

The course was introduced by Mr A. D. Langridge, F.C.A., President of the Society, who presided at the dinners. Mr J. A. Jackson, F.C.A., and Mr John Godfrey, M.A., F.C.A., members of the Council of the Institute, were the principal speakers at the Final and Intermediate course dinners respectively. The Society also welcomed students' society officers, and principals of articled clerks, to the dinners and other functions.

It is felt by the organizers that considerably more students will wish to attend future courses if the educational and social success of this one can be maintained.

### THE INSTITUTE OF INTERNAL AUDITORS Audit Assistants' Lecture Course

The London Chapter of The Institute of Internal Auditors is holding a course on internal auditing for members' assistants during November and December. There will be four discussion meetings and a talk on, and demonstration of, electronic computers. Details are as follows:

November 5th: 'The impact of electronic data processing on audit techniques', by Mr D. W. Hooper, M.A., F.C.A. (Past President of the British Computer Society, chief organizing accountant, National Coal Board).

chief organizing accountant, National Coal Board).

November 12th: "The internal auditor – friend or foe', by
Mr J. H. Protheroe, A.A.C.C.A., A.I.M.T.A. (The British
Oxygen Co Ltd).

Oxygen Co Ltd).

November 19th: 'Statistical sampling in auditing', by Mr P. W. Hoskin, A.C.W.A., F.C.A. (A.E.I. Hotpoint Ltd).

November 26th: 'Dutch Parliament', (Questions submitted by those attending and discussed by all present).

December 3rd: Visit to I.B.M. Organization: Talk on, and demonstration of, Unit record equipment.

Further information regarding the course may be obtained from the secretary of the Chapter, Mr H. G. Cox, The Monotype Corporation Ltd, Salfords, Redhill, Surrey.

### JOHN FOORD & COMPANY

56 VICTORIA STREET, LONDON, SWI

Telephone: Victoria 2002 (3 lines)

### REVALUATION OF ASSETS

WORKS, FACTORIES, PLANT & MACHINERY, Etc.

### Birmingham Chapter

The next meeting of the Birmingham Chapter of The Institute of Internal Auditors will be held at the Chartered Auctioneers' and Estate Agents' Institute, Regent House, St Philip's Place, Colmore Row, Birmingham 3, next Thursday at 6.30 p.m., when Mr L. E. Johnson, of Urwick Orr & Partners Ltd, will speak on 'Statistical sampling in inspection of quality control'.

### INSTITUTE OF ACTUARIES Retirement of Secretary

The Council of the Institute of Actuaries has announced that, for reasons of health, Mr A. D. Dale, F.C.I.S., relinquished the secretaryship of the Institute on October 31st, 1962, and is retiring. Mr Dale entered the Institute's service on August 1st, 1929, and succeeded Mr S. H. Jarvis on October 1st, 1939, as the Institute's chief executive officer.

Mr N. J. Page, M.C., F.C.I.S., Joint Secretary of the Institute, has been appointed Secretary in succession to Mr Dale.

### THE CHARTERED AUCTIONEERS' AND ESTATE **AGENTS' INSTITUTE**

### Thesis Competition

An open competition for original papers comprising between 5,000 and 7,000 words on the subject 'Financing professional partnerships of the future' is being arranged by the Council of the Chartered Auctioneers' and Estate Agents' Institute for the Guy Bigwood Award, 1963. A prize of fifty guineas will be awarded for the best paper submitted.

Papers should be constructive and practical in their approach to the subject and regard will be given by the adjudicators to the adequate use of appropriate exam-

ples to illustrate points put forward.

Entries for the competition should be submitted by March 31st, 1963, to the Secretary, Chartered Auctioneers' and Estate Agents' Institute, 29 Lincoln's Inn Fields, London WC2, from whom entry forms and the rules of the competition can be obtained.

### ANNOTATED TAX CASES

Part 3 of Volume XLI of the Annotated Tax Cases, edited by Mr Peter Rees, of the Inner Temple, Barrister-at-law, has now been published and contains reports with notes on the judgments of the following cases: Gordon & Blair Ltd v. C.I.R. (C.S.); Littlewoods Mail Order Stores Ltd v. C.I.R. (H.L.); De Voil v. Welford Gravels Ltd (C.A.); In re Bird (C.A.); Thomas McGhie & Sons Ltd v. British Transport Commission (Q.B.D.); C.I.R. v. Luke (C.S.); Frasers (Glasgow) Bank Ltd v. C.I.R. (C.S.); C.I.R. v. John

M. Whiteford & Son (C.S.); Jarrold v. John Good & Sons (Ch.D.); C.I.R. v. Verdon-Roe (Ch.D.).

The annual subscription to the Annotated Tax Cases is 50s post free; the publishers are Gee & Co (Publishers) Limited, 151 Strand, London WC2.

### SEVENTY-FIVE YEARS AGO

From The Accountant of October 20th, 1887 A Weekly Note

PERHAPS one of the most curious questions raised since the present Bankruptcy Act was passed came before his Honour, Judge GRIFFITH, of the Oldbury County Court, a week ago. Sec. 40, sub-sec. B, of that Act provides that all wages or salary of any clerk or servant, in respect of services rendered to the bankrupt during four months before the date of the receiving order, not exceeding £50, should (with other similar matters) be preferential claims on the estate. A chartered accountant of Birmingham audited, for a fixed fee, the accounts of the Bromford Ironworks of Mrs. Dawes, trading as John Dawes & Sons, who failed a few months since. The accountant in question seems to have been of opinion that the amount owing to him at the time of the suspension, in respect of the audit, might be claimed for as a preferential debt, under the provision of the Bankruptcy Act just mentioned, as, so his solicitor contended, he was a servant of the bankrupt and his claim was for service rendered. His Honour decided against the claim, with costs, and declined to grant an appeal, a decision which we take the liberty to think all men of sense, including ninety-nine out of every hundred members of the Institute, will perfectly agree with. We are astonished that any chartered accountant should, for a moment, claim to be put on a footing with servants. In ridiculing the idea the Board of Trade and Judge GRIFFITHS did what every member of the profession should be glad of. If the applicant was what he contends to have been, a servant of Mrs. Dawes, he had not, in our opinion, any right to be a member of the Institute. A more utterly inconsistent contention was surely never heard, and the fact that it has been put forth and publicly commented on, will give just annoyance to professional accountants, who recognise that their very status and living rests upon the assumption that they are independent accountants. They cannot fail to be conscious that a recognition by the court of the contention that they were servants would be utterly fatal to their claims to confidence, and disastrous to their true interests....

### LONDON STUDENTS' COLUMN

### News from the London Chartered Accountant Students' Committee

by A Student Member

'The London Students' Society is putting on the agenda for the conference of the Union of Chartered Accountant Students' Societies in December the relation of students' societies and technical colleges in connection with the introductory courses recommended by the Parker Report, the encouragement of transfer of articles, methods of wider professional education, and time off for sports.

Mr Llewellyn-Smith, Mr Khan and Mr Finning have been appointed the Society's delegates to the Conference.

### Vacancy

The vacancy on the committee, caused by the resignation of Mr B. K. P. Moll, has been filled by the cooption of Mr P. Duffell.

### Parker Report

It has been decided that paragraphs 6, 11b, 12 and 17 of the Institute's interim recommendations be reconsidered by the committee shortly before the special meeting of the Institute is called, with a view to arranging for the Society's comments to be presented by a speaker at that meeting, and that a letter be sent to the Institute to draw attention to problems arising out of the decisions which have already been taken.

#### Contra

During its first year, the four issues of the Society's new magazine seemed likely to cost more than £1,000. It was suggested that an increase of advertising revenue might relieve the financial burden of future issues and the committee decided that the experiment should continue for two more issues and that judgment on whether it was worth the cost be suspended in the meanwhile.

### **Investment Pool**

The committee has decided to suggest that the Society's scholarship funds be transferred to the new investment pool organized by the Institute, but to retain the general funds in a more readily realizable form, at least until the situation concerning the Society's need for new premises next year becomes clearer.

### Activities

The opening lectures of the general course in the autumn session have shown disappointing attendances. The mechanized accounting course and the introductory course have, however, got off to a good start.

The "Taverners' annual general meeting attracted only twenty-three members. However, a reshuffle

on the committee left members hopeful that the club would soon see a return to an active and constructive approach to members' problems, together with renewed vigour in the social field.

Contra's 'Open meeting' was effectively sabotaged by the recent one-day rail strike, and the Editorial Board are arranging for joint consultation before they try again in January!

#### **Future Events**

The usual Christmas 'Mock company meeting' will be held on December 4th, at the Chartered Insurance Hall. There will be ample opportunity to criticize the accounts and the board, and to throw out the retiring directors.

Members are requested to keep in mind that Wednesday night is debates night (in the Council Chamber of the Institute).

The annual dinner will be held at Grosvenor House on Monday, December 10th, and speakers will be Lord Godber, Mr Stewart-Smith (Chamberlain of London), Mr H. B. Lawson, M.C., B.A., LL.B. (President of The Law Society), and the President of the Institute.

The Christmas Dance will be held at Dunster House on Friday, January 4th, 1963. Tickets are now available at £3 (double ticket).

### Next Week's Meetings

Monday, 5.30 p.m., at the Institute, Moorgate Place, EC2. Lecture on 'Telling the tale to management', by Mr Christopher Bostock, M.A., F.C.A., F.C.W.A. Chairman: Mr W. K. Wells, B.A., F.C.A. (Hon. Treasurer of

the Students' Society).

Tuesday, 5.30 p.m., Lecture and demonstration of

Remington accounting machines (limited number). 6 p.m., "The Punters' monthly meeting. 7.30 p.m., at Guildford: Lecture on 'Losses and subvention payments', by Mr V. S. Hockley, B.COM., C.A., F.A.C.C.A.

Wednesday, 6 p.m., Lecture and demonstration of Burroughs Accounting Machines (limited number). 6 p.m., at the Institute: Debaters' 'Brains Trust'. 7.15 p.m., at Reading: Lecture on 'Investigations for purchase or sale', by Mr R. S. Waldron, F.C.A. Thursday, 5.15 p.m., at the Institute: Introductory course lecture on 'The conduct of a typical case in the Courts',

by Mr Patrick W. Medd (Barrister-at-law). 6 p.m., "The Taverners' monthly meeting.

Friday, 5.15 p.m., at the Institute: Introductory course lectures on 'Management accounts and costing', by Mr Kenneth G. Bishop, A.C.A. (chief accountant, Yardley & Co Ltd), and 'Partnership law', by Mr Patrick W. Medd (Barrister-at-law).

Saturday, 10 a.m., at Luton: Lectures on 'Profits tax' and 'Losses', by Mr L. A. W. Jordan, A.C.A.

### Boosting the Economy

TTH the total of registered unemployed in excess of five hundred thousand, with substantial surplus capacity in steel, shipbuilding, heavy and light engineering, the only question when the Parliamentary Opposition moved its censure motion last Monday was what measures for reviving the economy Mr MAUDLING would announce.

Initial reaction to the Chancellor's statement may be as important as the longer run effects thereof. Closer examination of his proposals suggests that they may depend for their effectiveness more upon their psychological impact than upon their direct effects. The increased capital allowances are desirable in themselves, if only to encourage a faster writing-down of plant and machinery. The increase, for example, in the investment allowance is effectively of the order of 50 per cent. This coupled with the higher annual allowances ensures that the maximum total allowance given in the first year of life of new plant and machinery will be 55 per cent. The minimum allowances will ensure that within the first five years industry will be able to write down plant and machinery by 91 per cent of its cost. This, as readers of the note 'New Taxes for Britain' on page 600 will recognize, will have the effect of bringing British practice in the writing-down of capital equipment more closely in line with that which applies in the member countries of the European Common Market.

The most effective stimulus to capital investment in manufacturing industry is the knowledge that a buoyant and expanding market exists. At present this is not the case. Furthermore, there is adequate unutilized fixed capacity in most industries to meet such expansion in demand as may reasonably be expected in the near future. The real value of the revised capital allowances lies in the fact that they may presage a new attitude towards the tax treatment of productive investment in the United Kingdom. In the minds of many industrialists there has lurked the fear that these rates are liable to change with every fluctuation in the economy. The CHANCELLOR's assurance of the enduring nature of the new measures is to be welcomed therefore, for it cannot be sufficiently stressed that industry should be given every encouragement to equip itself with the most modern plant and equipment. If any evidence for this argument is needed one has only to examine the experience of the Common Market countries. Closely allied to the introduction of higher investment allowances as a means of increasing the efficiency and competitive capacity of British industry is the welcome increase in the allowances in respect of scientific research expenditure.

Much more controversial is the CHANCELLOR'S proposal to cut purchase tax on new cars from 45 to 25 per cent. The justification for this preferential treatment is the expectation that any expansion of output in the motor-car industry will exert an all-pervading effect upon the ancillary industries of the Midlands and the south. This argument certainly carries more conviction than the suggestion that the tax relief will stimulate exports. Undoubtedly, however, the Chan-CELLOR has been influenced by the fact that a larger output of cars could be achieved from the existing capacity without further straining labour resources, and thereby generating renewed inflationary pressures. Indirectly the potential expansion of demand for new cars should encourage the industry to press on with its new factories in the depressed areas. In this context it was interesting to note that Mr MAUDLING intends to encourage the Board of Trade to pursue a more active policy in the matter of industrial location.

The reduction in the rate of purchase tax applicable to motor-cars doubtless anticipates the reduction next April of the 45 per cent rate to 25 per cent on the remaining classes of goods liable to this rate. This is not so much a matter of equity, as part of the avowed policy of amending the purchase tax. The widely disparate rates are undoubtedly a thing of the past and it could well be that in due course the tax will be transformed into a single rate tax.

There may well be grounds for thinking that the latest proposals still do not go far enough either to stimulate the economy overall, or to reduce the growing unemployment which is so much in evidence in the depressed areas. It is clear that more direct and positive measures will be needed to deal with that problem. Nevertheless, it is quite clear that Mr MAUDLING proposes to make haste slowly. Although the ever-present threat for sterling is no longer as marked, now that the autumnal pressures have passed, the danger that increases in incomes will outstrip the growth in production is all too obviously present. The latest offer to the railway workers, while not unreasonable in view of their relative position in the wages race, will almost certainly initiate new pressures from organized labour. It remains to be seen whether the National Incomes Commission can meet the challenge.

Details of the increased capital allowances have been announced by the Board of Inland Revenue as follows:

(1) Investment Allowance

(a) The investment allowance in respect of capital expenditure on new plant and machinery will be increased from 20 per cent to 30 per cent. The same increase will apply to capital expenditure on new mining works and on new scientific research assets (see also paragraph (2) below).

(b) The investment allowance in respect of capital expenditure on new industrial buildings and structures will be increased from 10 per cent to 15 per cent. The same increase will apply to capital expenditure on new farm and forestry buildings and works

(2) Scientific Research Assets

The investment allowance in respect of capital expenditure on new plant and machinery and new buildings and works for use in scientific research will be increased from 20 per cent to 30 per cent. Such expenditure which is at present allowed as to 60 per cent in the first year, and 10 per cent in each of the next four years, will in future be allowable in full in the first year.

- (3) Annual Allowances: Plant and Machinery The annual allowance for plant and machinery, which is at five-fourths of a basic rate calculated by reference to the anticipated normal working life of the plant and machinery will, in the case of new plant and machinery bought after November 5th, 1962, be subject to a minimum rate of 15 per cent actual (corresponding to a basic rate of 12 per cent) where the norma 'reducing balance' method is employed (section 281 Income Tax Act, 1952) or 6½ per cent actual (corresponding to a basic rate of 5 per cent) where the 'straight-line' method is employed (section 282).
- (4) PLANT AND MACHINERY: EFFECT OF PROPOSALS
  The combined effect of the proposals to increase the investment allowance from 20 per cent to 30 per cen and to provide a minimum annual allowance of 1 per cent (reducing balance method) will be that the total allowances given in the first year of allowance will be 55 per cent, as a minimum, namely, an investment allowance of 30 per cent, an initial allowance of 10 per cent (unchanged) and an annual allowance of 15 per cent.

The total minimum allowances over other period will be:

Per cent

In to and including the fifth year

Up to an	d incl	uding t	he fifth year	91
,,	,,	,,	seventh year	102
,,	,,	"	tenth year	113
••	•••	••	fourteenth year	121

(5) Effective Date

The necessary legislation will be introduced in nexyear's Finance Bill. It is the intention that the change outlined above will apply in relation to capital expenditure on new qualifying assets incurred afte November 5th, 1962, that is, in relation to sum becoming payable after that date.

### Policy for Incomes

ARD on the heels of Dr BEECHING's offer of a 5 per cent pay increase to the railway unions<sup>1</sup>, came the White Paper last Monday announcing the terms of reference and membership of the National Incomes Commission to be presided over by Mr Geoffrey LAWRENCE, Q.C. The commission is to have the status of a standing Royal Commission. All the members - referred to under 'Weekly Notes' in this issue - are distinguished in their respective ields and all have wide experience of negotiations on wages and ancillary matters. Nevertheless, it would be unwise to pretend that the mere appointment of the members of this commission, nowever distinguished they may be, represents nore than a first step towards the formulation of an incomes policy. The latter, as we have frequently stressed, remains the most important single problem in the economy. The most obvious ind outstanding weakness of the commission is hat reference to it by parties in dispute is opional and not compulsory, just as the Governnent may refer particular matters to it. Yet, this s hardly surprising in view of the trade union movement's initial reaction to Mr Macmillan's proposals for the commission.

Any attempt to forecast the potential value of NIC would be foolhardy in the extreme. What can be said with confidence, however, is that the new body represents the one faint hope of alting the cost-push inflation of recent years. It is therefore imperative that every effort shall be made to publicize its activities and to make lear to the public at large the nature of the problem which it must solve. With public opinion aligned in support of NIC, its supporters might well have the satisfaction of witnessing a significant contribution to Britain's economic revival.

The following are the commission's terms of reference:

(1) The parties immediately concerned may refer to the commission for inquiry any current claim or specific question relating to pay or other conditions of service or employment. (The Government concemplates that in cases where issues of special importance appear to arise it may if necessary itself take the initiative in calling on the parties to take this action.)

(2) The Government may refer to the commission for review any matters relating to pay or other conditions of service or employment where the cost is met in whole or in part from the Exchequer.

(3) The Government may refer to the commission for retrospective examination any particular settlement relating to pay or other conditions of service or employment (other than an award at arbitration).

(4) In considering any such reference the commission is required to have regard to any evidence which may be received from the parties immediately concerned or from other parties who appear to the commission to have a substantial interest in the issues arising or from or on behalf of the Government.

(5) In considering any such reference the commission is also required to have regard both to the circumstances of the case concerned and to the national interest, including in particular:

(a) the desirability of keeping the rate of increase of the aggregate of monetary incomes within the long-term rate of increase of national production;

(b) the desirability of paying a fair reward for the work concerned;

(c) the manpower needs of the service, industry or employment concerned, taking into account any regional or local differences in such needs, and the importance of securing the most efficient deployment and use of national resources including manpower;

(d) the policies and practices in the service, industry or employment concerned in such matters (where appropriate) as pricing, profit margins, dividends, efficient use of manpower and equipment and organization;

(e) the repercussions which a particular settlement in the case concerned might have in other employment.

(6) The commission is required to publish its findings on these matters and its recommendations together with reasons for them.

(7) Profits. – In addition the commission is required to have regard to the Government's pledge that if any undue growth in the aggregate of profits should result from restraint in earned incomes, that growth would itself be restrained by fiscal or other appropriate means. The commission is instructed to report from time to time on the need, if any, for such action to be taken.

(8) General or particular studies. – The commission is also empowered to undertake general or particular studies relating to all or any of the matters referred to in the foregoing paragraphs.

(9) Authority to call for information etc. - The commission is authorized under the Royal Warrant to call before it such persons as it judges likely to afford information relevant to its inquiries; to call

for information in writing; and to call for, have access to, and examine all such books, documents, registers and records as may afford the fullest information on the subject.

(10) The commission is authorized to sit at the

chairman's discretion in more than one division; to call in the aid of qualified assessors; and to visit such places as are expedient in the furtherance of its inquiries. The powers of the commission may be exercised by any three commissioners.

### Short-term Gains - XVIII

### SPECIAL TAXPAYERS and PROFITS TAX

AST week we began to examine paragraph 15 (3) of the Ninth Schedule to the Finance Act, 1962, which deals with the case where a debtor transfers property to his creditor in satisfaction of the debt.

Suppose a debt is satisfied in such circumstances that the creditor is not treated as disposing of the debt, i.e. where the debt is not on a security as defined in paragraph 11 of the Ninth Schedule and the creditor did not acquire the debt from a third party. Suppose further that the creditor takes property in satisfaction of the debt and then disposes of the property within the statutory period, so as to be chargeable to Case VII tax on the acquisition and disposal of the property. Under the general rule laid down by the first part of paragraph 15 (3) the profit would be computed on the footing that the creditor had paid market value only for the property, and not the higher face value of the debt. The second part of paragraph 15 (3) directs that nevertheless the chargeable profit is to be restricted so as not to be greater than if the creditor had paid a consideration equal to the face value of the debt.

Provision is made in the Finance Act, 1962, for special classes of taxpayer. We have already dealt with charities, and other bodies exempted by section 15 (1) (2) (3) (4)<sup>1</sup>. An ordinary assurance company having a life assurance fund is theoretically chargeable to tax under Case I of Schedule D in respect of its life assurance business. It follows that gains on the resale of investments would normally accrue as part of the profits of such a company's trade. By definition, therefore, section 10 (1) is inoperative to impose Case VII tax on such a company. However, in practice nearly all life assurance companies pay tax, not on a Case I basis but on

Section 15 (7) of the Finance Act, 1962, was introduced as late as July 2nd, 1962, its object being to protect the British Transport Com mission and its offshoots from Case VII liability which might arise by reason of the changes introduced by the Transport Bill. Under this Bill the Commission's assets are to be transferred to four new boards or to a holding company. The new boards and the holding company would acquire the assets on the vesting date provided for, and therefore, if they then disposed of the assets, or some of them, Case VII liability might arise. Equally, the Commission itself will be disposing of the assets on the vesting date, so that its recently acquired assets might attract Case VII tax. These dangers are avoided by means of section 15 (7).

the basis of being investment companies making management expenses claims under section 425 of the Income Tax Act, 1952. They are therefore very much in the position of mutual life assurance companies. However, mutual companies are not even theoretically chargeable to Case I tax. Accordingly, they do not have that ground for exemption from Case VII tax. This anomaly was pointed out to the Government at the Committee stage, and the result was the introduction of section 15 (5). This subsection expressly exempts from Case VII any gains which accrue to an assurance company from the acquisition and disposal of investments of its life assurance fund, but which, by reason of the mutual nature of the company's business (or part of it), do not accrue as profits of a trade. It is the function of a trustee or assignee in bankruptcy to acquire the bankrupt's assets and dispose of them as speedily as reasonably possible. Such acquisition and disposal does not attract Case VII tax (section 15 (6)).

<sup>1</sup> See The Accountant, August 25th, 1962.

We come now to the question of profits tax. It will be recalled that this tax is imposed on bodies of persons (mainly companies) which carry on a trade or business, and that an investment company is deemed to carry on a business for this purpose. Given that a company is thus within the profits tax net, then its Case VII gains and losses must also be brought into account in computing the profit for profits tax purposes. This is the broad effect of section 10 (7) of the Finance Act, 1962.

Having laid down this general rule, section 10 (7) as originally drafted then went on to set out some detailed provisions which proved to be woefully inadequate. At the committee stage the Government had to accept the voluntary assistance of Mr Geoffrey Stevens, f.c.a., M.P., who, by a pair of amendments, put the matter right (except on one point which required a further amendment at a later stage). The detailed provisions are contained in three paragraphs (a), (b) and (c) which lengthen the subsection to a page and a half.

Paragraph (a) makes it clear that not all Case VII gains and losses are to be included, but only those accruing from the acquisition and disposal of assets where income arising from those particular assets, to the disponor, would be brought into account as a receipt in computing the profits (including franked investment income) of the 'trade or business'. In the case of intra-group payments of interest, annuities, rents and royalties, section 42 (5) of the Finance Act, 1938, directs that such payments be ignored for profits tax purposes. Nevertheless, this provision is not to prevent the operation of paragraph (a). If such payments would be brought into account but for section 42 (5), the Case VII profits and gains on the underlying investments are also to be brought into account.

The chargeable accounting period for profits tax purposes may not necessarily coincide with a period of accounts. Paragraph (b) makes it clear that one must have regard to Case VII gains and losses accruing in the chargeable accounting period. The provisions for division and apportionment of the profits of a period of accounts contained in section 20 (3) of the Finance Act, 1937, are therefore not to apply in relation to such gains or losses.

Paragraph (c) deals with the case of a group of

companies where a 'grouping notice' is in operation, i.e. the profits (or losses) of the subsidiaries are grouped with those of the parent company, under section 22 of the Finance Act, 1937. The gains or losses under section 10 of the Finance Act, 1962, which by virtue of paragraph (a) have to be brought into account in computing a subsidiary's profits tax profits, are to be the same as if no grouping notice was in force. However, paragraph (c) then goes on to make modifications to this general rule.

A subsidiary's aggregate Case VII gains in a chargeable accounting period, after deducting the losses permissible under the Case VII legislation, are to be treated as if they were a Case VII gain accruing to the principal company in its corresponding chargeable accounting period, and falling to be included in its chargeable profits for profits tax purposes. But this is only for specific purposes, viz. deducting losses allowable to the principal company under Case VII legislation and also the purposes of subparagraph (ii) of paragraph (c). This sub-paragraph (ii) provides that where losses accrue to a subsidiary in a chargeable accounting period, so as to be allowable to the subsidiary under the Case VII legislation, but they exceed the Case VII gains if any, then the excess is to be allowed as a deduction in computing the subsidiary's profits and losses generally of that period. Sub-paragraph (ii) is not to apply unless Case VII gains (in excess of Case VII losses) are to be included in the principal company's computation of profit for the corresponding chargeable accounting period. Furthermore, sub-paragraph (ii) is not to produce a greater set-off against general profits of the subsidiaries than the net amount of Case VII gains included in the principal company's computation of the corresponding chargeable accounting period.

We conclude this review of the short-term gains tax with a few words about administration. The taxpayer must show his Case VII gains on his income tax return, and the ordinary provisions as to assessment and appeals apply. Paragraphs 3, 5 and 7 of the Ninth Schedule give to the taxpayer an election in certain circumstances, which have already been examined. Paragraph 19 lays down detailed provisions as to the manner in which such elections are to be exercised. These provisions are reasonably straightforward.

### Variation on the Balance Sheet Theme

by T. E. GAMBLING, B.COM., A.C.A. Lecturer in Accounting, University of Birmingham

It is clear that the Jenkins Committee recognize the difficulty that the published accounts of companies, as at present prepared, do not reflect the value of their undertakings with the accuracy which a layman might reasonably expect of them. The suggested remedy is that realizable values should be stated where these differ substantially from book value. It has always seemed to the writer that the historical development of double-entry accounting has taken a course which itself gives rise to many of the problems and inconsistencies with which accountants have to contend.

### **Present Cost of Old Ideas**

Speculation of this sort may seem to some to be a particularly futile hobby of the academic mind, but if it could be shown that 'accounting theory' or the accumulation of the historical development of accounting has played some part in such practical matters as, say, the *Duple Motor Bodies* case, it would appear that the results of early nineteenth-century theorizing (or the lack of it) can cost money today and actively distort the financial development of the future.

As was mentioned in an earlier article<sup>1</sup>, the balance sheet presented no problem to the Tudor merchant; it was no more than a trial balance prepared at long and irregular intervals after closing off such revenue accounts as he may have seen fit to employ. Especially since he would probably have debited his few 'capital items' to his stock, or as we would call it capital, account, he would never have dreamed of using his balance sheet as a definitive statement of hisfinancial position at a given point in time. Had he been called upon to do so, he would have prepared an inventory which would include items such as cash, debtors and creditors taken from the books, but which would otherwise have been a physical valuation of his assets. It may be that a good deal of the present difficulties stem from the first unknown book-keeper who thought it possible to create an automatic inventory out of the balance sheet figures.

The increasing size of business enterprise gave rise to the long-term continuing partnership and

<sup>1</sup> See 'A Flaw in the Jewel?' The Accountant, February 11th, 1961.

then the joint-stock company, and the need to hold the balance between a number of investors' interests for an indefinite series of transactions, or between management and the absentee proprietors, brought about the preparation of regular annual accounts consisting of a statement of the profits earned during the period under review and the position of the concern at the end of it.

### **Double Account System**

It is interesting to note that some of the earlier joint-stock ventures did not adopt the now usual form of balance sheet, but instead employed the so-called 'double-account' system; one's first reaction to this might be, 'Of course they used the double-account system, because the earliest (internal trading) corporations were canal, railroad and gas undertakings'. On the other hand, the nationalized bodies which now operate these industries have all abandoned the double-account system, while similar undertakings founded a little later on the Continent and in America appear never to have used it at all. From this it might seem that this system represented an earlier line of thought on the presentation of static information as to a company's position, which was soon superseded by the current method. If this were so it could be argued that canal companies. and railways adopted the double-account system not so much because it was particularly suited to their methods of finance and operation, but because as the first 'modern-style companies', they were founded at a time when the system enjoyed at least equal popularity with the present 'single-account' system.

The mushroom growth of joint-stock companies in the first half of the nineteenth century represented a raw and aggressive capitalism and in particular the resounding abuses of the 'Railway Age' undoubtedly covered this type of accounting with an air of disrepute from which it was never able to escape. However, the older system has certain virtues over the newer one which seem to have been overlooked. The shortcomings of the 'new' balance sheet arise because fixed assets are normally shown at their historical cost, less a provision for depreciation; the resulting figure is no more than the unrecovered portion of the expenditure carried forward to future periods and

yet by some alchemy it represents the 'value' of the asset to the firm. This leads on to a number of intellectual difficulties.

### Conflict of Ideas

First, there is conflict with the management accounting outlook on fixed assets as 'sunk costs'. An accountant may think of a capital item as an annual charge against profits of £1,000 for ten years, but from the point of view of the management it is just a payment of £10,000 right now. This is illustrated by the 'sources and applications of funds statement', which shows 'new plant' as an application of funds in the year of purchase and reveals depreciation charges and 'losses on sale' to be no more than paper transactions which have no effect on the 'cash flow' of the business (i.e. the profit before depreciation, less taxation and dividends).

Secondly, it follows that £10,000 spent on plant is just as surely spent as the same sum expended on wages, and one might see a justification for the allocation of the expense over the accounting periods that benefit from its use. Unfortunately, this treatment results in an erosion of capital in a period of depreciating currencies and it appears that what is required to be recovered from revenue is, in fact, the replacement cost of the asset. It is submitted that a large part of this difficulty proceeds from an incorrect understanding of the term 'capital expenditure'.

Thirdly, before expanding this last point, mention should be made of another management problem arising from attempts to use a balance sheet as an inventory. Balance sheet ratios often have a rather dubious reception from the practical pusiness man; their valid use with concrete values s obvious, but when the mixture of valuation pases met with in the average balance sheet is considered, figures based on such foundations nust indeed be viewed with reserve.

Finally, it is argued that at least some part of he dispute over the inclusion or omission of werheads in or from stock valuations is the idea hat the resulting 'stock figure' must in some way epresent the value of the inventory. If the probem is viewed as one of postponement of the neidence of certain expenditure on to future rading periods, the unlikelihood of treating any ixed overhead in this way becomes more apparent.

To return to the second difficulty mentioned bove, the basic feature of the old double-account ystem was a much more careful distinction etween capital and revenue expenditure, classiying expenditure on equipment for a project ever hitherto undertaken as capital items, but holding purchases of durable equipment that merely replace existing installations to be revenue. This philosophy is well adapted to an asset such as a railroad system where maintenance is obligatory and replacement by something completely different is, to say the least, an infrequent event; the situation is very different in a manufacturing industry where the average life of the assets is much shorter and technological changes will not only make for accelerated replacement of existing machinery, but also for the discontinuance of whole processes and even products. For this reason, no doubt, the single-account system was preferred because it treats all purchases of producer durables alike.

The fundamental difference between the capital expenditure of public utilities and that of, say, the light engineering industry is that the latter type of plant is rarely 'renewed' in the strict sense of the word, because it is not, in general, physically possible to purchase in 1962 an exact replica of an existing machine originally bought in 1952 or earlier. Since the products themselves have undergone development, any attempt to calculate 'elements of improvement' with the object of ascertaining the true cost of the replacement or any element of increased cost due to inflation can be no more than playing with figures. What has happened is that part of the original capital of the company, whether subscribed as equity shares, preference shares or debentures, has been irretrievably sunk in fixed assets almost immediately upon its receipt; since then additional equipment has been purchased, financed in part by more or less untaxed provisions for depreciation and for the rest from taxed reserves or the reduction of the working capital. It should be observed that the 'provisions for depreciation' used in this way are all the provisions on the whole plant and not merely those on the items supposedly being replaced.

### A Modern Adaptation

This is the aspect disclosed by the movement of funds statement and it may be that the old double-account system provides the most logical presentation of these transactions. Although the Companies Act envisages a single-account balance sheet it seems quite possible to adapt the double-account system both to the requirements of the Act and the everchanging equipment of light industry. Since it is desired to show the exact source of the funds absorbed in the existing plant, it is necessary to extinguish a source once the relevant asset goes out of use.

### ACCOUNTANT

The working capital is the residual item of finance and is provided by those parts of the original subscriptions and subsequent provisions and reserves not absorbed for the time being in the purchase of fixed assets. It is tempting to think of the item of stock-in-trade as having something of the nature of a fixed asset, but to do so is once again to make the assumption that items are invariably replaced. An attempt to

Authorized and issued share capital

Revenue reserves

distinguish elements of renewal in stocks would give rise to a series of judgments of Solomon, and it might seem better to visualize these items as payments in advance to be treated in pretty much the same way as an insurance premium paid in respect of some future period.

Here is an illustration of how the accounts of a small company might be restated in a modification of the double-account form:

at	March.	31st, 1962		
-	£ 0,000	Fixed assets - at cost		
21	B,000	less depreciation to date	• •	• •

Trade creditors Accrued charges Current taxation	• • • •	••	13,000 7,000 12,000		Stock and work in progress Debtors Payments in advance Cash	••	54,000 32,000 8,000 6,000	
Proposed dividend		•••	8,000	40,000		•		100,000

£183,000

X LTD SUMMARIZED BALANCE SHEET

This report is now restated under a revised 'double-account' system:

### BALANCE SHEET OF X LTD as at March 31st, 1962

I. Schedule of outstanding capital stocks								
80,000 Ordinary shares of £1 each, fully paid-up £25,000 6 per cent debentures (secured by a floating charge etc.)								
£23,000 6 per cent depentures (secured by a noating charge etc.)	••	••	••		25,000 £105,000			

#### II. Schedule of existing capital items - at original cost

	D	escrip	tion					I-3 <u>y</u>	rs	Age :	nalys II-	is 20 yrs	over 20 yrs	Total £
Freehold land and buil Plant and equipment Trade investments	dings	•	••	••	••	••	••	30,00 20,00		35,000		9,000 9,000	5,000 6,000	44,000 65,000 6,000
								£50,00	00	£35,000	£19	9,000	£11,000	£115,000
Financed as follows: (a) Capital stocks – less (I) expenditu (ii) Invested i	re on c	capital	items i				dispos	sed of	•••	• •		•••	£ 60,000 40,000	£ 105,000
(b) Provisions for th	الممد م		af a											5,000
(i) on existing (ii) on equipr	g capit	al equi	pment	٠	equipme	•nc ••	• •			••		••	32,000 30,000	
(c) Sales of capital e	quipm	ent no	longer	requi	ired	••	••	••				••	<del></del>	62,000 30,000
														97,000

It will be seen that no attempt has been made to place any values on the fixed assets; the object of the exercise is to draw up a balance sheet which conforms to the requirements of the Companies Act, but avoids the suggestion that the document is anything but a statement of receipts and payments on capital account.

### **Additional Information**

This method of presentation will require the inclusion of a number of points which are not normally disclosed at the moment:

- (i) The precise use of all capital sums raised will have to be recorded.
- (ii) The management will have to make it clear as to which sources they have utilized to finance the capital expenditure in any one year. This will normally show the following order of utilization:
  - (a) new capital;
  - (b) unabsorbed provisions for the renewal of assets now disposed of;
  - (c) provision as for the renewal of existing assets:
  - (d) capital reserves; and
  - (e) revenue reserves.

Finally, it will have been observed that it is proposed that an age-analysis of assets should be given. However, these additional matters should already be taken into account at some stage by the management and therefore do not represent nuch additional clerical work.

The writer is all too well aware that schemes of this sort are always suspect to those engaged in the day-to-day preparation of figures. They may say: 'These crackpot ideas are all very nice, but people understand the old way (or think they do!) and its not worth the bother; there are plenty of accounting problems more worthy of solution than this.' Nevertheless, if the difficulties in persuading the Inland Revenue to base capital allowances on amounts in excess of historical cost or their refusal to permit LIFO stock valuation can be attributed to a very natural belief that the balance sheet of a company must reflect some sort of value of the assets, it would surely be worth while to devote some time and effort to the correction of this myth. Stock valuation problems on the inclusion or noninclusion of overhead expenditure may be traced to this same 'valuation of inventory heresy'.

On another point altogether, it may be that some of the difficulty experienced over the pre-Jenkins years in the introduction of shares of 'no par value' may be attributed to the same cause. By demonstrating that funds sunk in fixed assets are no longer 'there' to be literally repaid, this new method of presentation might help to overcome any remaining difficulty and at the same time serve to make the issue of bonus shares out of capitalized reserves a little less sinister an operation to the non-accountant. Moreover, the clear distinction between capital and revenue resources, necessitating a formal transfer when

either capital funds are not fully expended and thus fall back into working capital, or conversely when revenue reserves are ploughed back in capital expenditure, may make new and more precise thought possible on the subject of illegal dividends and the repayment of capital generally.

### The Shareholders' Interest

One feature of the proposed system which is not likely to commend it to the business community, is that it demonstrates that the original share capital, by virtue of which the shareholders draw their dividends and exercise control, is usually no longer in existence in so far as it was spent on capital equipment that has been replaced. In this respect, shareholders are in the same position as holders of securities making up the National Debt; namely, all the shells have long since been fired, but the War Loan remains outstanding! The lessons to be drawn from the

concept that a company is usually self-financing once it has been primed, are not exclusively socialistic in character. It underlines the wisdom of the practice of confining equity shares to the provision of working (or risk) capital and raising funds for capital items by means of securities of some other sort.

The underlying aim of this article has been to suggest that some of the problems of accounting theory are of a purely semantic nature, arising from imperfections or misuse of the medium through which accountants try to express their thoughts. When so many very real economic, sociological and technological problems face business men and their financial advisers, it seems unfortunate that 'accounting research' should have so marked a preference for the fields of valuation, changing price-levels and methods of amortization where, at least in the opinion of one accountant, the difficulties are largely self-induced by the techniques employed.

#### UNITED STATES

### American Institute's New Offices

THE American Institute of Certified Public Accountants has removed from 270 Madison Avenue, New York, to new offices at 666 Fifth Avenue, New York 19, N.Y. Telephone: LT 1-8440.

### **Funds Statement Controversy**

COMMENT on the American Institute Research Division's Accounting Research Study No. 2, on Cash Flow Analysis and the Funds Statement, has revealed a considerable divergence of opinion. The committees of the American Petroleum Institute and the Panel of the Financial Executives Institute raised strong objections to treatment of the funds statement as a major financial statement. On the other hand, the Vice-President of the New York Stock Exchange greatly welcomed this treatment as a big step forward in financial reporting. He suggests a three-year trial and evaluation period before the Institute takes any final position in regard to it.

There was not unanimous approval of the suggestion that the funds statement be covered by the auditor's report. The Financial Executives Institute Panel think there is an implication that management's accountants cannot develop, when required, a funds statement in accepted form, derived from the

basic data in the audited financial statements, and they regard this as most unwarranted.

On the whole there seems to be no serious opposition to the suggestion that the statement should be broader than a mere reconciliation of cash or working capital, and a definition of 'funds' as 'all financial resources' has received approval though with some reservations. Nor has there been strong objection to the suggestion that the statement should begin with adjusted net income as 'funds provided from operations', depreciation and other adjustments being detailed in a footnote. The chief accountant of the Securities and Exchange Commission has indicated that the use of net income, rather than the General Accounting Office's recommended gross operating receipts and expenditures, is more likely to discourage the notion that amortization of prior years' capitalized charges may be ignored in the determination of income.

The Panel of the Financial Executives Institute disagrees sharply with the Study's statement that there is a strong presumption that the major portion of funds retained through depreciation accounting will be needed to finance replacements. They consider that funds derived from operations are homogeneous and that any presumption as to their disposition is unwarranted.

### HOLLAND

### International Bureau of Fiscal Documentation

THE annual report for 1961 of the International Bureau of Fiscal Documentation of Amsterdam, which is an independent and non-profit-making organization whose aim is to provide independent and objective information in the international tax field, records another satisfactory year.

The report is divided into three chapters, the first dealing with some fundamental tax problems of current interest, the second surveys some of the important developments in fiscal matters throughout the world, and the third chapter gives information on the activities of the Bureau.

Fiscal problems arising in respect of the relationship between countries which are economically developed and are exporting their capital and the development countries who are in need of capital are highlighted in the report. After outlining the resolutions passed by the Bureau at the 1961 congress of the International Fiscal Association (a report of which appeared in The Accountant of September 23rd, 1961) to this problem the report adds that it would be useful for companies to have the opportunity to accumulate their profits and reinvest them without paying heavy taxes. The countries with high taxes are increasingly endeavouring to prevent tax advantages of this nature which are contrary to the principles of their own laws. It is becoming increasingly clear, the report states, that the levying of taxes is no longer an exclusive national phenomenon, but that multilateral consultation between countries is needed to reach justified solutions which take into account the economic interests of all countries and of the taxpayers concerned. The Bureau's fortnightly review, European Taxation, first introduced early last year and originally intended for American corporations and tax counsels, has now reached the stage where it has many subscribers all over the world.

### OVERSEAS TAX DEVELOPMENTS

The following notes have been made available by the Inland Revenue Library (Foreign Section).

### **United States**

The publication by the U.S. Treasury Department of the Internal Revenue Service Revenue Procedure 62-21 ('Guidelines for Depreciation') does not entail any change in the basic methods of depreciation and does not supersede existing rules and procedures which may continue to be used. The new procedure is designed to simplify administration procedures and to enable taxpayers, provided certain standards are met, to claim tax lives consistent with actual replacement practices.

The new guidelines of useful life for about seventyfive broad classes of assets may be used without question by taxpayers for a three-year period. Thereafter their use will be accepted unless the taxpayer's replacement practice, as indicated by the reserve ratio test, is not in line with the depreciation claimed.

Specimen guidelines are:

Automobiles		3	years
Factories and office buildings		45	,,
Mining equipment		10	,,
Plant used in manufacture of mach	inery	12	"

The guideline lives are shorter than those laid down in the old Bulletin F but are not minimum useful lives; shorter periods can be adopted if the taxpayer can show that these are consistent with his actual replacement practice.

Change to guideline life. For assets which have already been depreciated to some degree, the new annual rate (cost price divided by the guideline life) is applied to the residual value of the asset.

Reserve ratio test. This is designed to measure the relationship between tax lives and replacement practice. It will enable the taxpayer to justify his depreciation practices including the use of lives below the guideline lives. It will only be used by the authorities in conjunction with established standards for imposing lives longer than those claimed by the taxpayer.

In applying the test the taxpayer's reserve ratio is first computed by dividing the depreciation reserves for a class of assets by (generally) the original cost of the assets, viz.

Depreciation reser	ves	 	45,000
Original cost		 	100,000
Reserve ratio		 	45 per cent

The asset ratio is then ascertained by comparing the cost of the assets with the cost of assets in the class one replacement cycle earlier, viz.:

Cost of present assets	 	100,000
Cost of previous assets	 	84,000
Asset ratio	 	T.TO

Assuming that it is desired to test a life (for the class) of nine years, then, from a table, the percentage rate of growth can be ascertained; in this example – 2 per cent.

Again from tables, the appropriate reserve ratio range for a test life of nine years with a 2 per cent rate of growth is, on the straight-line method of depreciation, 44-56 per cent. As the taxpayer's reserve ratio falls within these limits his use of a nine-year life and the straight-line method of depreciation is justified.

If, however, the taxpayer used the 'double declining balance' method, the appropriate reserve ratio range would be 56-64 per cent. As the taxpayer's reserve ratio is only 45 per cent he would be justified in adopting a shorter class life of (from an adjustment table) 7.5 years. This adjustment may be made automatically if the taxpayer had been using the 'old' life for at least half of that life.

# Changes in the Purchasing Power of Money-II

by W. E. PARKER, C.B.E., F.C.A.

#### Classification of Assets in the Balance Sheet

ECAUSE of the importance which I attach to the effect which changes in the value of money have on the monetary position (as distinct from the position in commodities) of commercial undertakings I question seriously the relative usefulness of the distinction which is generally drawn in Britain and America between 'fixed assets' which include plant and equipment that is used in the process of trading and 'current assets' which include the stocks of merchandise which are held for sale in the course of trading. Particularly in manufacturing concernsthere is often in practice only a fine distinction between items of plant which are used in producing the saleable products and items of materials and components which also are so used. The plant normally appears among the 'fixed assets' and the materials and components among the 'current assets', the broad distinction between them being the difference in the length of time over which in the ordinary course their use in the undertaking will be spread. There is a presumption that items of materials and components are used up quickly, while items of plant continue in use over a much longer period. While in general this presumption has ample validity to justify distinguishing plant from inventories, there are in my experience few manufacturing concerns in which one does not find that some of the plant is used up at least as quickly as some of the materials and components and even the saleable merchandise (e.g. stocks of spare parts) in the inventories. Even, however, if this amounts to no more than a marginal overlapping of the two categories of asset, it seems to me that in principle the distinction between plant on the one hand and materials and components on the other is not so great as to warrant the degree of emphasis which British and American accountants attribute to it. Both are 'goods' which are used, and sooner or later used up, in securing the sales, and each is indispensable to the trading process. Admittedly the periodic accounting for the consumption whether of plant or of inventories is more difficult where use extends over a number of periods, but this strikes me as being hardly a good reason for drawing such an emphatic distinction in the accounting presentation. As I see it, the expenditure on plant and on inventories is all of it expenditure laid out for the purpose of making merchandise available

The concluding part of a paper presented at the Eighth International Congress of Accountants in New York on September 24th. for sale. As the sales are made, so the expenditure, whether on plant or on inventories, needs to be set against the sale proceeds in a manner which will show whether the sales have given rise to a profit or loss. To me the distinction which monetary instability makes of paramount significance is not between assets of long life (fixed assets) and assets which are being continually 'turned over' (current assets) but between assets which are goods (notably premises, plant and inventories) and assets which are money (notably cash and accounts receivable).

### Difficulties in the Way of Accounting Progress

22. Whatever view one may take of all these matters. it is a fact that since 1951-52, when the statement by the American Accounting Association, the report of the American Study Group on Business Income and Recommendation 15 of the English Institute of Chartered Accountants indicated a substantial measure of agreement among them, not only on the nature of the problem of changes in price levels, but also on the lines of practical approach to it, there have been few signs of any real progress along those lines. In the meantime in my own country the value of money has continued to fall, by about one-fourth over the ten years which have since elapsed. The reasons for lack of progress are not difficult to enumerate. One of them is that, as a profession, we are not in a position to dictate to the business community. In my own country, at any rate, the responsibility for producing accounts of commercial undertakings, whether for tax purposes or to comply with corporation law, rests on the managements of these undertakings. The production of supplementary information to show even broadly the effect on such accounts of changes in the value of money requires time and effort, especially in the research needed in order to establish for the first time an opening position in terms of money of a common vintage. Time and effort are expensive and we are not in a position to insist on such expenditure. As advisers we can advocate, as auditors we can comment, and as professional bodies we can recommend and make representations, but that is the limit of our influence. The second difficulty is that, however responsive Governments or the proprietors and managers of business undertakings might be to our influence, wage earners who use good profits as one of their arguments for higher wages can hardly be expected, at least until they have come more generally to think of wealth in 'real' terms, to do other than

oppose new-fangled accounting devices which may reduce the 'good profits' which inflation seems to bring. I do not accuse the trade unions of such simple-mindedness, but they have to carry their membership with them. Governments too, in democratic countries, have to carry the electorate with them and for political and fiscal reasons are unlikely, unless forced by circumstances, to support or initiate steps which in conditions of inflation might have the appearance of offering the equity stockholder and the business tycoon a protection which is denied to the rest of the community.

23. These are difficulties which can only be overcome by the growth of understanding in all sections of the community, both national and international, of the implications of the fact that money, while an excellent medium of exchange, is a most unreliable store of wealth. I believe that this growth of understanding is taking place, though in differing degrees in different countries. The notion is well understood by those who have lived through a severe currency inflation; it is, quite naturally, least understood by those who have been accustomed to reasonable monetary stability. But there is one difficulty for which the remedy lies in our own hands. This is the difficulty of reaching a wider and more precise measure of agreement among accountants generally as to the manner in which changes in the value of money should be reflected in the accounts of commercial enterprises. It would be a real step forward if the discussions at our Eighth International Congress resulted in extending the area of agreement.

### Suggested Basis for Agreement Among Accountants

24. To that end I put forward for discussion the following propositions as indicating what I believe to be, for the present, the best practicable solution from the standpoint of the equity stockholder.

- (1) The problem of accounting for transactions which have been recorded in monetary units of the same currency but different purchasing power should be regarded by accountants as analogous to that of translating into terms of one currency transactions recorded in a number of different currencies. We have long been familiar with this problem in undertakings which trade in a number of countries with different currencies, and we have no hesitation in translating units of one currency into those of another by reference to rates of exchange between them. Within any one currency 'rates of exchange' can similarly be established between the monetary units of different dates by comparison of their respective purchasing power.
- (2) The manner in which accounts are presented and results are measured should be related to the standpoint of those for whom the presentation and measurement are being undertaken. Unless the contrary is known, the presumption

- underlying an investment in equity capital is that of continuance of the undertaking; accordingly provision must be made for maintenance of all the resources, including the monetary resources, which are essential to this continuance before the profit or loss can be ascertained.
- (3) The essential resources of an undertaking will not have been maintained at a level which secures its continuance unless any diminution of their purchasing power has been made good. The reflection of purchasing power in accounting statements involves modification of the accounting principles which at present have general acceptance in many countries.
- (4) It is out of the question to expect Government and the community generally to accept overnight a new accounting treatment of a situation which is not new. For the time being therefore accounts should in general continue to be presented on the traditional basis that items which represent forms of wealth other than money are translated into terms of money by reference to their historical cost in money of the value which prevailed at the time when the cost was incurred.
- (5) These 'traditional' accounts should however be accompanied or followed by supplementary accounts showing the effect on the results and on the entire resources of the undertaking of changes in the value of the money in which the accounts are expressed.
- (6) The supplementary accounts also should be based on historical costs but these should be expressed in, and for that purpose translated into, monetary units of current purchasing power. The items requiring this translation will be all those items in the accounts which are not money or obligations fixed in terms of money, and will therefore include premises, plant, inventories, goodwill and, on the other side of the balance sheet, the equity capital.
- (7) In so far as these 'historical cost' items (notably plant and inventories) are 'consumed' in the earning of income the historical cost of this consumption charged against the gross earnings should, in the supplementary accounts, be translated into terms of the monetary unit by reference to its value at the time of the consumption; the net earnings so determined will then reflect the true profit or loss on trading at that time.
- (8) In so far as these 'historical cost' items remain unconsumed at the end of the trading period the unconsumed balance of their historical cost should, in the supplementary accounts, be translated into terms of the monetary unit by reference to its value at the end of the period.
- (9) These translations will create a net difference on the supplementary accounts. The difference will represent, and should be shown as, the

amount by which the purchasing power of the equity capital has been augmented or eroded by the effect on the undertaking's monetary assets and obligations of changes in the value of money.

#### Note:

Where the resources employed in the undertaking consist in part of non-equity capital, i.e. non-participating share and loan capital whose rights are fixed in terms of money, the net difference on the supplementary accounts will comprise two elements, a charge (or credit) to income for the loss (or gain) in value of the monetary resources of the undertaking and a credit (or charge) to capital surplus for the gain (or loss) to the equity from the decrease (or increase) in the value of the monetary obligation to holders of the non-equity capital – see paragraphs 29 and 30.

25. The effect of this treatment of changes in the value of money can be illustrated, in its simplest form, by the following example. Assume that an undertaking is provided with one hundred units of money as equity capital with which to buy a piece of equipment. The equipment is to be used to provide services to customers. Over the first half of the equipment's useful life the services provided produce 80 units of money. Over the same period the value of money falls by one-third, so that by the end of the period 150 units of current money are needed to replace one hundred units of the original money. The results of this period and the position at the end of it are shown in the first column below on the 'traditional' basis of historical cost, and in the second column on the basis of translating the historical cost of the non-money items into the changed value of money in the period (for the statement of results) or at the point of time (for the closing position) to which the figures relate.

	Traditional	Adjusted

	130	155	
	-		
Equity capital	100	(b) 150	
Undistributed income	30	5	
	130	155	
		Electric	

Notes:

(a) Translated at the average rate of one hundred original units=125 current units,

(b) Translated at the closing rate of one hundred original units=150 current units.

In this example the only monetary resources which are essential to the undertaking are those representing the accumulation of the depreciation charged against the money income to allow for the using up of the equipment. The sixty two and a half units which on the 'adjusted' basis were set aside for this depreciation at the average 'exchange rate' of 125 were retained in the form of money and accordingly lost value. With a closing 'exchange rate' of 150 the loss was  $\frac{25}{125} \times 62\frac{1}{2} = 12\frac{1}{2}$ . This loss needs to be made good if the undertaking is not to be impaired.

26. If in the above example the value of money remained stable during the remainder of the useful life of the equipment - stable, that is to say, at the rate of 150 current units = one hundred original units - the charge against gross trading income for the remaining depreciation of the equipment would amount to seventy-five units. The undertaking would then be left with capital resources in the form of 150 units of money, representing  $137\frac{1}{2}$  (=62 $\frac{1}{2}$ +75) set aside out of gross trading income for depreciation of the equipment and a further twelve and a half set aside out of the balance of that income to make good the loss in the purchasing power of these resources. If the used-up equipment was then replaced by new equipment, whether identical or different, at a cost which was greater or less than 150 units, I should argue that the difference represented a change in the capital required for the undertaking, not (as the proponents of 'current cost' accounting might argue) a failure to make the right provision out of past earnings for its maintenance.

### Criteria for Measuring Changes in the Value of Money

27. I appreciate that one of the practical objections to making adjustments for changes in the value of money is the absence of any prescribed or universally accepted criterion of these changes. I admit the fact but do not regard the objection as serious. I hope it is clear from what I have already said that the criterion which I think appropriate is a general measure of purchasing power, not one related to the prices of particular goods or services; and, since I am approaching the problem from the standpoint of the man in the street as an equity stockholder, the relevant purchasing power seems to me to be that of money in the hands of the retail consumer. For supplementary accounts, which at this stage would be intended only for the better information of those who are relying on 'traditional' accounts, I should have no hesitation in using for undertakings operating in Britain British Government's official index retail prices. Even though this index is imperfect, it is widely regarded as a reasonable indicator of changes in the value of money to the general public.

In my view for these supplementary purposes any reasonable indicator of these changes can well be used. It seems to me most unlikely that, in a reflection of change, the margin of error would be material in comparison with the margins of error which are inherent in so many of the matters of judgment and estimate on which the preparation of accounts depends in any event. The supplementary accounts would disclose what index had been applied, just as in Britain it is customary, and indeed under the Companies Act a statutory requirement, to disclose what exchange rates have been used where it is necessary for accounting purposes to translate foreign currency into sterling.

28. There is also the practical objection that indices of purchasing power do not become available promptly enough, and that the preparation of accounts based on them would therefore have to be unduly delayed. This objection too does not impress me. I believe that disproportionate emphasis has been placed on the importance of publishing accounts very soon after the close of a financial period. Unreasonable delay would invite valid criticism, but a moderate delay is in my view desirable in order that past events may be seen in the proper perspective. What I do regard as important is that there should be a regular publication date, so that delay beyond that date does not give rise to anxiety and speculation. I see however no reason (apart from some additional expense) why those who wish to do so should not go to press with their 'traditional' accounts and let these be followed later by the supplementary accounts. The British official index of retail prices is published each month one month in arrear.

### Effect on Holders of Non-equity Capital

29. It has been my experience that, when the question of changing price levels is debated, it is generally assumed that, since with a falling value of money the determination of profits on a basis which takes full account of this fall will usually result in the reporting of lower profits, the adoption of that basis will prejudice those stockholders, for example holders of non-participating preferred stock, whose rights are fixed in terms of money. I do not agree. So far in this paper I have assumed in my illustrations that the whole of the capital employed in an undertaking is equity capital. In those conditions the amount which has to be provided out of monetary income to maintain the purchasing power of the undertaking's resources is the same amount as that needed to maintain the purchasing power of the capital provided by the equity stockholders. Where however only part of the capital is provided as equity capital, a provision out of monetary income to maintain the capital resources as a whole will be greater than the provision required to maintain only the purchasing power of the equity. The excess will represent a gain for the equity stockholders resulting from the fact that the claims of other providers of the capital are fixed in terms of money and therefore depreciate as the value of money falls. Although this gain must be retained in the business if the capital resources are not to be impaired, I am of the opinion that, in so far as it is not counter-balanced by any losses of the undertaking, it should be drawn on to meet any claims of the providers of non-equity capital which cannot be met out of income. If it were not so drawn upon, the gain accruing to the owners of the equity capital would improperly include a gain derived from defaulting on the fixed obligations to the non-equity stockholders.

30. The point can be illustrated by reference to the example which I have given in paragraph 25. If in that example one-half of the one hundred units of money provided as capital had been raised in the form of non-equity capital, the loss, on the 'adjusted' basis, of twelve and a half units in the value of the monetary resources of the undertaking would have been doubly compensated from the standpoint of the equity stockholders by a capital gain of twenty-five units from the depreciation of the claims of the non-equity capital. The closing position of the undertaking on the 'adjusted' basis would then have been as follows:

	·			Curren units	
Equipment, at cost less Cash	depred	iation	•••		75 80
					155
Subscribed capital					
Equity	ed in		of	(a)	75
money)	• •	••	•••		50
					125
Capital surplus	• •	• •	• •		25
Total capital resource	ces of t	he und	ler-		
taking	• •				150
Undistributed income	• •	• •	••		5
					155

(a) Translated at the rate of 150 current units = one hundred original units.

My argument is that in this example the amount which should be regarded as available to service the non-equity capital is not merely the five units of undistributed income but also the twenty-five units of capital surplus, that is, thirty units in all. It happens that this is the same amount as would have been shown to be available on the traditional basis of accounting. It does not follow that this would always be the case, but the existence of non-equity capital would always, on a falling value of money, give rise to a capital surplus and, since non-equity capital includes loan capital as well as non-participating share capital, this surplus may often more than counterbalance the additional charges which, on the 'adjusted' basis, a falling value of money imposes on the income account.

### Effect on the Accounts of International Undertakings

31. May I observe in conclusion that the adoption of the proposals which I favour would simplify many of the problems which we now encounter in producing accounts in one currency of transactions which have taken place in countries with different currencies. Most of these special problems arise on the translation of the monetary amounts attributed to the possession and consumption of goods and services bought with foreign currency. While the depreciation of equipment continues to be calculated on an historical cost unadjusted for changes in the value of money, we have yet to solve satisfactorily the problem which arises when, for example, because of a change in the rate of exchange between the foreign currency and the home currency, the trading results of the foreign

subsidiary or branch after charging depreciation show in terms of the foreign currency a profit but in terms of the home currency a loss, or vice versa. Similarly, while foreign property continues to be carried in the balance sheet at an unadjusted historical cost, we have yet to solve satisfactorily the problem on translation into the home currency of how to deal with a difference in exchange on long-term indebtedness for money which was borrowed in the foreign country to finance the purchase of the property. I submit that, if the cost in foreign currencies of goods and services were adjusted for changes in the purchasing power of those currencies, these problems would largely disappear and there would be prima facie justification for translating the adjusted costs into terms of the home currency at the current rates of exchange.

### Weekly Notes

### NATIONAL INCOMES COMMISSION

As mentioned in a leading article in this issue, the membership of the National Incomes Commission was announced in a Government White

Mr L. C. Hawkins

Paper on Monday. Of particular interest to the profession is the appointment to the Commission of Mr L. C. Hawkins, C.B.E., F.C.A., a member of the Council of The Institute of Chartered Accountants in England and Wales. Mr Hawkins has been connected with London transport services since 1929 and recently retired as one of the five full-time members of the London

Transport Executive, a post he had held since 1947. In 1955 he was chairman of a commission of inquiry into the public transport system of Singapore. Mr Hawkins has been a member of the Council of the Institute since the integration of The Society of Incorporated Accountants in 1957, and previously had been a member of the Council of the Society since 1947.

Mr Geoffrey Lawrence, Q.C., Chairman of the Commission, has been Recorder of Canterbury since 1952. He took silk in 1950 and was a member of the Royal Commission on Marriage and Divorce in 1951. He has also served as a member of the Review Body on Doctors' and Dentists' Remuneration.

Professor H. S. Kirkaldy, C.B.E., who will be deputy chairman of the Commission, has been Professor of Industrial Relations at Cambridge University and a Fellow of Queens' College since 1944. He was a member of the Industrial Disputes Tribunal from 1952–59 and is at present chairman of a number of wages councils under the Wages Council Act.

The fourth member, Sir Harold Benwell, a solicitor, has been Secretary of the Association of Municipal Corporations since 1944. He was previously Clerk of Lincoln County Council (Parts of Kesteven) and before that Town Clerk of the City of Lincoln.

The Commission's secretary will be Miss Mildred Riddelsdell, C.B.E., who has been an under secretary at the Ministry of Pensions and National Insurance since 1950.

### **BALANCE OF PAYMENTS STATISTICS**

In the latest edition of Economic Trends<sup>1</sup> issued last week, balance of payments figures are given which are supplementary to those published in the half-yearly White Papers. These are annual figures back to 1952 on a basis which is consistent with that used at the present time. Until now only figures from 1958 onwards have been available on this basis.

Like other official statistics which are commonly quoted, the quarterly statistics of the United Kingdom balance of payments are affected by seasonal factors. In order to get some idea of the underlying trend in the balance of payments an attempt has now been made to produce estimates from which seasonal factors are eliminated. These seasonally adjusted figures must still be used with care and treated as subsidiary to the unadjusted figures because they are

<sup>1</sup> H.M.S.O. Price 5s.

lerived from a limited run of years and the basic lata is still subject to error.

Comparing the seasonally adjusted estimate with he unadjusted ones shows that seasonal factors are avourable for this country on current account in the irst half of the year and unfavourable in the second ralf. The half-yearly seasonal variation is mainly in he invisible items for which the first half is favourable and the second half unfavourable. So far as visible mports and exports are concerned these are seasonally low in the third quarter but since seasonal nfluences are greater on exports than on imports, he net effect on the trade balance is adverse to the extent of about £25 million. This is largely made up n the fourth quarter when exports show a seasonal purt.

### STAMP DUTY ON GUARANTEE

F a purchaser enters into a written agreement under hand to purchase certain shares for a price o be finally determined later, and the agreement provides for a bank to guarantee payment up to \$750,000 of the purchase price, in the form of a lraft deed scheduled to the agreement, what stamp luty is payable on that guarantee when it is executed?

In Henry Ansbacher & Cov. C.I.R., in accordance vith their settled practice, the Inland Revenue laimed £1,875 duty under the first subhead of the read 'Mortgage' etc. in the First Schedule to the Stamp Act, 1891. They argued that the guarantee was 'the only, or principal, or primary security for he payment of £750,000, and therefore, attracted luty at 5s per cent of that sum. The taxpayer claimed hat the sale agreement, although itself exempt from tamp duty as being an agreement for the purchase of shares, was the 'principal or primary security', f any, and that the guarantee was a 'colateral or uxiliary or additional, or substituted security' within subhead 2 of the head 'Mortgage' for which the naximum duty is 10s.

Danckwerts, J., held that the guarantee did not all anywhere within the head 'Mortgage', and ssessed the duty at 10s (39 A.T.C. 10).

When the Inland Revenue appealed from this lecision, the Court of Appeal accepted the taxpayer's contention (40 A.T.C. 186). On November 1st the House of Lords upheld the Court of Appeal.

### WORKING CONDITIONS IN THE OFFICE

THE text has now been published of the Offices, Shops and Railway Premises Bill. It is expected hat this will affect more than a million premises and about eight million workers. Premises include about our hundred thousand offices, more than six hundred and fifty thousand shops and about thirty thousand ailway premises. The Bill sets out requirements on realth, safety and welfare.

The definition of a shop includes not only what are

conventionally thought of as places where retail or wholesale trade is carried out, but also launderettes. It will include premises where food is sold to the public for immediate consumption which will include public houses, cafés and public dining-rooms of hotels. On the other hand, private residential hotels or boarding-houses are excluded except where their offices and bars are open to the public. The Bill applies only to premises where people are employed and, therefore, excludes accommodation used only by the self-employed and it excludes premises where persons are usually employed for less than twenty-one hours a week.

General conditions are laid down about cleanliness and minimum temperatures. Suitable provision will have to be made for adequate supplies of fresh and ventilated air. There are also standards set for lighting, sanitary conveniences, washing facilities, first aid, fire precautions and exposure to dangerous machinery. No premises are to be so over-crowded so as to cause risk of injury to health and it is provided that after five years from the date at which the Bill is made law, staff (mainly those employed in offices) shall have forty square feet of floor space each. This is the area recommended in textbooks on the subject for those doing clerical work.

### NEW TAXES FOR BRITAIN?

Lirevocably towards adopting an added-value tax on the French pattern' and if Britain joins the European Economic Community then it 'seems unlikely that the period allowed for transition will be more than five years'. So concludes a new study of the impact upon the United Kingdom tax system of membership of E.E.C., prepared by *The Economist* Intelligence Unit for the National Association of British Manufacturers. The elimination of the purchase tax, as it is replaced by the added value tax, is a change which, in the opinion of the authors, would be to the advantage of British exporters and also of those industries at present most severely hit by the purchase tax.

The overall effect of even such a limited measure of tax harmonization would be to shift the balance of the United Kingdom tax system towards a greater reliance upon indirect taxes. It is especially noteworthy that the cost of social security upon the employer is very much heavier than in Britain and this is also passed on into the costs of production. It is generally agreed on the Continent that direct taxes upon industry work their way through higher prices on to the consumer.

One interesting point made in the booklet is that stock values are arrived at on a basis which is much more favourable to the manufacturer than is the United Kingdom FIFO system. In Belgium, for

<sup>1</sup> Taxes for Britain. Price 6s net.

example, the manufacturer is confronted by no statutory rules and is given considerable latitude.

Deductions for capital allowances are much more generous. According to figures, attributed to an American Treasury report, the average 'tax life' of industrial equipment in Belgium is only eight years, ten in France, Germany, Italy and the Netherlands, compared with twenty-seven years in Britain. Clearly, the validity of this comparison depends on the equipment chosen for purposes of the comparison, but the lesson seems clear.

Perhaps the most remarkable suggestion in the

report is that because 'the evasion of tax by small traders has reached a stage when the present system has become almost farcical', continental Revenue authorities should have powers to impose arbitrary assessments based upon evidence of the standard of living of the taxpayer. This would seem to be one feature of European tax administration that Britain can do without. As far as direct taxes are concerned, any harmonization will take time, but the figures given in the booklet suggest that individual direct tax burdens are lower in the E.E.C. than is sometimes made out to be the case.

### This is My Life . . .

by An Industrious Accountant

CHAPTER 145

OUR sales manager and I are good friends now; there was a time, however, when our mutual hostility was a byword in the office. It was his fault, of course – well, mostly, anyhow. His suggestions were often ill-judged, you understand, and when I tried to put him right (with as much tact as possible, naturally), he would become quite disgruntled. Admittedly, I was younger then, and in retrospect, woefully inept in handling such an alien species as the salesman.

The feud became embittered when I was summoned before our directors one afternoon and asked to explain the low percentage margin in the ladies' ready-to-wear section. It was budgeted to make 24 per cent gross profit; in fact, it had achieved 19 per cent. Possibly, suggested the managing director with rather sinister courtesy, I could indicate the reason for the short fall. After all, I had produced the figures; ergo, I should know the answer. He had the air of Richard Crookback about to say 'Off with his head'.

The other directors were the stern looks of men anxious to mete out summary justice immediately, Scotty, the sales manager, with perspiration on his brow, sat plucking nervously at his collar.

I must admit I gave them a blunt answer. No devious subterfuges, no shilly-shallying; just straight from the shoulder stuff. 'I can't explain anything', I said cheerfully. 'The figures give you the facts; the reasons are a matter for the men in the department. Unless you'd like me to arrange a post-mortem, analysing stock and purchases in each category against individual sales dockets, in order to check pricing irregularities – at the cost of a lot of expensive overtime, naturally.'

Scotty regarded me with a look of some dislike, I noted with surprise. He seemed to have a somewhat hunted look in his eye.

The deputy-chairman put forward a typically misguided idea. Why not have each departmental chief enter in a special book every price reduction or trade discount he allowed, he suggested. Obviously the tot at any stage should amount to the discrepancy in the percentage, thus satisfying everyone. Furthermore, inspection would enable the directors to assess the trend of allowances given, thus enhancing their control.

At first sight, it seemed a likely solution. Scotty endorsed it heartily; it would enhance his control over his subordinates also. All the directors congratulated the deputy-chairman; he accepted their plaudits modestly; you'd think he'd said something sensible.

It was left to me to be the single small voice in the wilderness. I said: 'Suppose the reductions don't tot to the discrepancy? Where are we then?'

Scotty was most insulted. He wanted to know if I was maligning his staff; was the implication that they'd malevolently and deliberately omit to note their own reductions, or worse still, that they were pilfering? The directors were outraged also; the deputy-chairman took particular umbrage. They practically cast me into exterior darkness, they even aspersed my arithmetic.

I'd better draw a veil over the succeeding months. All departments agreed to maintain detailed records alas, their tots never corresponded with anything the omissions in busy periods were almost automatic. Sometimes it was just a matter of forgetting the entry, sometimes involved or interrelated bargains to good customers were delayed for final authorization. Sometimes there were just no entries, they said unblushingly. The sales manager was convinced, and stooped so low as to assert, that our accounts figures were inaccurate; the deputy-chairman was hectoring and harassing; life was hell. No one had perception enough to appreciate my contention that it was Scotty's responsibility, not mine, to see that the reduction records were completed properly.

When the frustrated directors finally stopped asking for the figures, I joyfully stopped keeping them, by unanimous and tacit consent. But it was a long time before Scotty forgave me.

# Finance and Commerce

# Camp Bird

THIS week's reprint is from the accounts of Camp Bird Ltd for twenty-two months to February 28th, 1962, presented to the recently held general meeting of the company. It is a company with more than one interest but the one in which shareholders have shown most concern is the revival of the old Camp Bird mine in Colorado which has yet to justify, in profits, the money spent on it. 'General neeting' is important. It would appear that validity of proxies may depend on the correct description of the meeting for which they were given.

This particular episode in the company's history, n fact, provides another instance of the vital need in company administration to get things right. It is a point that has been urged in this column with practical example lately: that an objective, such as a change of directors, etc., which may have taken long hours in preparation of groundwork can fail when it comes to the crucial point, because the provisions of the Companies Act and/or the company's articles have not been observed.

### **Proxies**

In the Camp Bird case, there were nine resolutions on which a poll vote was required, the first being on the adoption of the accounts. Resolutions 2, 3, 4 and 5 were supported by Investors' Protection Facilities Ltd, 2 and 3 to remove the chairman and the company's one other director from the board, 4 and 5 to appoint Mr S. H. Hogg, D.S.O., M.C., F.C.A., and Mr J. H. Leaman.

Resolutions 6, 7, 8 and 9 coming from another quarter were for the appointment of four other gentlemen to the board, and were carried on the poll vote in approximate figures by something over 1.7 million to about 850,000.

On Resolutions 2, 3, 4 and 5, the company's announcement shows the situation: 'Having regard to the legal advice given to him concerning the technical error in the proxy card deposited by Investors' Protection Facilities Ltd and the irregularity in Mr Brackenbury's voting as shown by the scrutineers' certificate, the chairman felt compelled to invalidate the documents. At the same time in fairness to all shareholders, the chairman has instructed solicitors to place both matters before the Court for legal judgment, so that the scrutineers may be given a basis on which to finish the counting'.

'The appointment of Mr Brackenbury as the firstnamed proxy-holder on the cards issued by the company to all shareholders arose from an invitation by the company to Messrs Hogg and Leaman to appoint a proxy-holder independent of the persons involved in the four resolutions in question. Mr Leaman nominated Mr Brackenbury, and the company's solicitor, Mr S. Nyman, agreed to act as the second-named independent proxy-holder. Mr Brackenbury was accepted as the first-named proxy by agreement with the directors of the company on the grounds that this would reflect the directors' desire to be impartial in the exercise of proxy votes'.

# **Technical Error**

The nature of the 'technical error' came out in the discussion at the meeting: the proxies were made out for an annual general meeting and not for a general meeting; a simple point, and yet one on which, according to the chairman, legal advice had differed.

The rest of the story is told in the certificate by Messrs Amsdon, Cossart & Wells, Chartered Accountants, acting as the scrutineers. It shows by the voting figures that Resolutions 1, 6, 7, 8 and 9 were carried. The voting figures, it is stated, include the votes cast by Mr S. E. Taylor as a named proxy-holder on the form of proxy issued by Investors' Protection Facilities Ltd. An analysis of these particular votes showed no votes in favour and 747,760 against each resolution 'so that it is clear these resolutions were carried whether these particular votes are included or excluded'.

The scrutineers continue: 'We are unable to certify the results of the polls demanded on Resolutions numbered 2, 3, 4 and 5 because we need guidance as to how the votes cast by Mr Brackenbury are to be dealt with. Mr Brackenbury was the first-named proxy on each of two forms of proxy issued by the company. Some of these completed separate forms of proxy authorized the proxy-holder to vote for some or all of the resolutions, some authorized the proxy-holder to vote against some or all of the resolutions, while the remainder left it to the discretion of the proxy-holder as to how the votes should be cast on some or all of the resolutions'.

'Mr Brackenbury, however, merely signed the proxy poll card, having struck out the word "Against" on each of the Resolutions numbered 2, 3, 4 and 5. In the circumstances we are unable at present to decide what to do, and before proceeding any further, we require the point at issue to be resolved.'

'No question arises in respect of Resolutions numbered 1, 6, 7, 8 and 9 as Mr Brackenbury cast no votes thereon'.

In a way, it is rather a pity that Mr Hogg and Mr Leaman should have decided by the end of that week to withdraw completely to avoid involving the board and the company in embarrassment and further expense. A Court decision would have been enlightening. But the whole affair does show how necessary it is to pay the greatest attention to detail.

Incidentally, as the chairman pointed out, it matters not whether shareholders adopt accounts or not. They are still the company's accounts verified by the auditors.

# CITY NOTES

AVING belatedly made the moves which had been obviously necessary for months, the Chancellor of the Exchequer has effectively emphasized that once a year Budgets are probably a thing of the past in a rapidly changing world.

An annual Budget in so far as it presents, so to speak, the audited accounts and the chairman's report on the previous twelve months is one thing; but it is very much another to expect the Budget to deal effectively with the following twelve months any more than a company chairman can look ahead with any degree of accuracy in his annual statement to shareholders.

The regular use of 'subject to unforeseen circumstances' is just as much a part of the Chancellor's annual statement as it is of the company chairman's.

It is not necessarily a sign of error in the first instance if new decisions have to be taken midway through the financial year. If there is error in the latest moves then it lies in the fact that action should have been taken earlier. As things are, the new moves on capital investment may take longer to work through the economy than some present optimists hope.

### In-laws and Outlaws

by C. Northcote Parkinson. (John Murray, London 18s net.)

Professor Parkinson has never quite recaptured that first fine, careless, rapture which gave to the world his immortal law. In this respect, he resembles such worthies as Boyle and Gresham who are now mainly remembered for one blinding pronouncement. Professor Parkinson, however, differs from these pontifical types in that, happily, he is still very much with us and is still striving to consolidate his own celebrity. Perhaps he strives a little too hard. His latest offering, at any rate, gives this impression. The theme is how to get to and stay at the top, first by choosing the right father-in-law and then by employing certain arts and techniques in which cunning rather than brains is the essential administrative factor. His characters are models of City and society sophistication and, although his work is not in dramatic form, Professor Parkinson might yet become the Aristophanes of the Establishment if only he would be more selective and more self-critical towards his output. In Osbert Lancaster, he continues to have the ideal illustrator. The wedding group is a small but perfect masterpiece.

# German-English Glossary of Financial and Technical Terms

Fourth (enlarged) edition, by C. A. GUNSTON and C. M. CORNER. (Fritz Knapp Verlag, Frankfurt/Main. United Kingdom distributors: Patria Translations Ltd, 22 Cheyne Walk, Hendon Central, London NW4. £4 10s post free.)

To the uninformed, even though they may have some knowledge of conversational German, the item 'Rücklage für Abfertigungen gem. s. 6b EStG' in the balance sheet of an Austrian concern would be meaningless – and no dictionary, however elaborate, is likely to help very much. However, a quick glance at this glossary at once indicates that the sum set opposite the above words shows the reserve for staff service termination payments in accordance with Article 6b of the Austrian Income Tax Law.

It is a cliché that a language is a living and growing thing. But in the post-war world of exchange control, international financial agreements, and ever-growing complexities of finance and taxation, the rate of growth is phenomenal. Even so, the rate of growth of this glossary is still greater. The third edition covered 814 pages; this fourth contains well over a thousand. At the same time it is so well produced that the volume is clear without being bulky or heavy.

Mr Gunston is engaged in translating from German to English a mass of German financial material, and

he gives to the reader the benefit of his experience in this developing field. The book is in the highest degree practical. But it is also intellectually stimulating to see how the authors have tackled some of the more recondite German phrases.

### British Trade in the Common Market

by Colin Clark. (Stevens & Sons Ltd, London. 18s6d net.)

This work has been sponsored by the Aims of Industry group and is written by a leading economic statistician with the help of a research team. It deals with the main problems of British entry, in particular as they apply to British industry, although the positions and problems of British agriculture and the Commonwealth are clearly discussed.

The author foresees extensive cartelization of industry in Western Europe but hopes that the 'interbreeding of a strong strain of British empiricism with continental legalism will eventually produce a healthy offspring'. There is a useful account of the constitition of the E.E.C. and social and company legislation. The book is very reasonably priced and although it would not be this reviewer's first recommendation to the man in the street seeking guidance on the subject, he would certainly learn a good deal from Professor Clark and his collaborators.

# Principles of the Law of Damages

by Harry Street, Ll.M., Ph.D. (Sweet & Maxwell Ltd, London. £3 3s net.)

This new book, by a professor of English law who is also a solicitor, examines the problem of the assessment of damages, and the principles which have grown up from the very large number of cases on the topic. The author hopes his book will make some contribution to the development of the general principles and of means of assessing damages 'in as scientific a manner as the nature of the subjectmatter permits'. We feel sure it will. The accountant concerned with tax problems will find much to interest him. He will naturally be interested in what the book says about computation of loss of earnings, where the author refers somewhat sourly to an' anonymous 'university don who can collect easy money from television appearances' and therefore 'prefers to while away his time in the local inn'.

The observations about income tax principles should be read with some caution, however. The author uses the term 'capital' as characterizing lump-sum payments which are immune from Schedule E; but in relation to Schedule E the distinction between capital and revenue has no meaning. The question is whether the lump sum is an emolument of the employment or not. Some of the phraseology in the book shows a somewhat surprising looseness of language; for example, on page 96 (our italics): 'Where a vendor is in breach of his contract to sell property, and the purchaser buys, unknown to the

vendor, in pursuance of his business of redeveloping property the damages for breach of contract are not taxable because they will be a taxable receipt.'

# SHORTER NOTICES

'TAXATION' MANUAL, compiled under the direction of Percy F. Hughes. (Taxation Publishing Co Ltd, London. 30s net.) Few readers will be unfamiliar with this well-known work and this tenth edition will doubtless find new adherents among practitioners and students alike. It has been completely revised to incorporate changes in the law and practice up to and including the 1961 Finance Act; the last edition appeared in 1958. As in earlier editions there is an agreeable and concise but clear blending of legal exposition and model computations. The work is undoubtedly good value at its current modest price. Taxation in Western Europe 1962. Federation of British Industries. 30s net.) This is the sixth edition of the work which the F.B.I. first produced in 1957, a fact which provides eloquent testimony to its usefulness. In view of the great interest in this work the book is to be published regularly in June each year. The present edition contains details of the changes in Danish company taxation as well as chapters on the Eirean and Greek fiscal systems.

# NEDDY'S GREAT LOSS

# Industrialist Praises Work of Accountants

That no chartered accountant was a member of the National Economic Development Council was a great loss, said Viscount Caldecote, D.Sc., M.A., M.I. (MECH).E., M.I.E.E., A.F.R.Ae.S., at the annual dinner of the Bristol and West of England Society of Chartered Accountants, held at the Grand Hotel, Bristol, on Thursday of last week.

Lord Caldecote, who was proposing the toast of 'The Institute of Chartered Accountants in England and Wales', added:

'For my experience of your great profession is that you, and you alone, can bring out the facts from an appalling nuddle of woolly thinking.'

Lord Caldecote, who is deputy managing director of the British Aircraft Corporation Ltd, said engineers and chartered accountants always based their facts on agures. In this field of figures they had much in common, 'particularly in this age of computers and all those other gimmicks'.

### Common Problems

Commenting that it was unnerving for a 'humble engineer to stand before you', Lord Caldecote went on to say:

'No longer, I think, are engineers blinded by balance sheets nor chartered accountants "swindled" by science. I'hough we may understand each other a great deal better than we used to, I doubt very much if the outside world understands either of us.'

Both professions, he thought, had two problems. 'We both work with figures; we rely on them for our profession. But I wonder if we take enough trouble to explain them to laymen.'

Secondly, they had a reputation for being hardboiled and lacking in human sympathy.

'I do believe', he went on, 'some conscious effort is needed to explain these figures more clearly to the laymen so they may understand what they are about. Too often we couch our figures in some mysterious jargon.

'That we are hard-boiled, lacking in human sympathy, I utterly repudiate for both your profession and mine.
'Nevertheless, I am afraid it is an opinion widely held and

'Nevertheless, I am afraid it is an opinion widely held and I feel there is a public relations job to be done in that respect.'

The aircraft industry, said Lord Caldecote, had plenty of uncertainty. Not induced uncertainty from outside, but the inherent uncertainty experienced in any industry of rapid change. Chartered accountants, too, had this problem of rapid change. It was true to say that the more complex the industry, the more complex the problem — the more was the need for the clear thinking of the accountancy profession.

# The Institute's New Secretaries

Replying to the toast, Mr P. F. Carpenter, F.C.A., President of the Institute of Chartered Accountants in England and Wales, said that during his year of office the President tried to visit each district society and 'it is a great pleasure for him to do so'. It enabled him

At the dinner in Bristol (left to right): Mr Martin McLaren, M.P., Mr Brian Davidson; Alderman L. K. Stevenson, J.P., Lord Mayor of Bristol; Viscount Caldecote, D.S.C., M.A., M.I.MECH.E., M.I.E.E., A.F.R.AE.S.; Mr T. B. Pritchard, F.C.A., President of the Society; Mr P. F. Carpenter, F.C.A., President of the Institute; Mr S. W. Evans, O.B.E., J.P., Sheriff of Bristol.

to meet members and students, and to thank the local committees for all the work they did on behalf of the Institute.

Mr Carpenter said October 31st had been rather a sad day, for then Mr Alan MacIver, the Institute's Secretary for many years, had retired. But on November 1st, they welcomed their new Joint Secretaries, Mr C. A. Evan-Jones, M.B.E., who was present at the Bristol dinner, and Mr F. M. Wilkinson, who was on Institute business in Amsterdam.

'I think we are fortunate in having these two gentlemen as our Joint Secretaries', he said.

## Using the Universities

Mr Carpenter said that recently he attended the International Congress in New York and he had been impressed by the high regard with which the profession was held there. He thought they had the edge on the profession in Britain in the part the universities played in the training of accountants.

But he paid tribute to the work being done in this respect at Bristol and other universities, adding, 'I am sure that in the seven new universities being set up there will be further expansion in our work'.

As an Institute, said Mr Carpenter, they did their best to assist in problems facing the profession today.

'We do always endeavour to be constructive, not to propose change for the sake of having change, but on the other hand always to be prepared to examine new ideas in an objective way.'

Mr Carpenter told the 240 members and guests

present, that during his year of office he was endeavouring to see if they could make progress in domestic matters designed to assist members both in practice and industry; he referred to the educational programme, the small practitioner inquiry and endeavours to foster research.

It was essential, he said, that professional accountants should maintain their independent view.

### **Bristol's Vitality**

Mr Martin McLaren, M.P. for Bristol North West, proposing the toast of 'The City and County of Bristol', said that visits by corporation delegations abroad were a sign of the vitality of the present Bristol, showing its willingness to learn from others. There was, he said, every kind of progress to be found in the city and he instanced the interest being shown by the corporation in the Theatre Royal. This he believed would lead to much more interest in all the arts.

The Lord Mayor of Bristol, Alderman Leonard Stevenson, J.P., replying, commented on changes that had taken place since the start of accountancy. Taxation, for instance, had become so complicated that 'if you have any income at all you have to have accountants – and particularly in business.'

Mr T. B. Pritchard, F.C.A., President of the Society, proposed the toast 'Our Guests', to which Mr Brian Davidson, director, Bristol Aeroplane Co Ltd, and business director, Bristol Siddeley Engines Ltd, responded.

# A DUTY OF THE PROFESSIONS

# President's Remarks at Brighton Dinner

Proposing the toast of "The Institute of Chartered Accountants in England and Wales' at a dinner in Brighton of the South Eastern Society of Chartered Accountants on November 2nd, Sir Milner Holland, C.B.E., Q.C., B.C.L., M.A., said that the accountancy profession was one that all would acknowledge as performing a vital function in a complex society which became more complex every year.

The accountant, he said, guided the citizen through the many difficulties which beset him in the field of income tax, and in many other fields as well. The natural result of the high standards the profession had set for itself was that many members of the profession were found in positions of high responsibility – this was so in the United Kingdom more than in any other country of the world.

Sir Milner paid tribute to the Institute as a body which afforded to its members guidance not only in the maintenance of high standards of efficiency, but high standards of professional conduct as well. He mentioned, too, the great activity, liveliness and industry of the South Eastern Society, referring to a number of meetings which had been held during the year.

Described by Sir Milner as 'an extremely popular and able member of the Institute', Mr Percy F.

Carpenter, F.C.A., President of the Institute, responded to the toast.

One of the pleasant features of a President's year of office, he said, was to be able to visit the district societies. Particularly pleasant, said Mr Carpenter, had been his meeting with the South Eastern Society's students that afternoon, and he was glad to see a number of them present at the dinner. He congratulated the officers and members who did so much for the Society, saying that he was filled with admiration at the way interest in the Society's activities was maintained throughout a very large area.

"The public image of the chartered accountant', the President continued, 'stands as high as it ever has done, and that image will only stay at that level through the conscious efforts of our members.' He added that the Council of the Institute tried to do all it could to encourage members to give good and even better service to clients.

The President said that the Institute kept a very close watch on legislation, and made representations to see that the Finance Act clauses were as intelligible as they could be – and these representations were generally well received.

Thanking Sir Milner for his very kind remarks about the profession, Mr Carpenter said he thought that not

only the accountancy profession, but all the professions, had a duty to the country to maintain their high standards. It was apparent from the newspapers, he suggested, that standards today were not generally improving, and it was the duty of the professions to try to improve these standards.

Proposing the toast of 'Our Guests', the President of the South Eastern Society, Mr A. D. Langridge, F.C.A., specially welcomed those who had travelled long distances to be present. Responding, Mr Francis F. Haddock, T.D., President of the Sussex Law Society, said that it was obvious from the toast list that there were very close ties between the legal and the accountancy professions.

In an amusing speech Mr Haddock recalled that his own accountants did a 'wonderful balancing act' with his accounts. He thanked the hosts for their very generous hospitality, and joked: 'We guests do hope you can afford it. We know how poor you must be from the trifling fees that you charge!'

# Irish Institute's Dinner in Belfast

Mr R. E. McClure, M.B.E., F.C.A., President of The Institute of Chartered Accountants in Ireland, presided at the annual dinner of the Institute held at The Grand

Central Hotel, Belfast, on October 25th.
Replying to the toast of 'The Institute of Chartered Accountants in Ireland', proposed by the Rt Hon. Mr W. B. Maginess, Q.C., LL.D., M.P., the Attorney-General, Mr McClure, said that the accountant of today had departed from the role of auditing historical accounts from past records and had now become the general practitioner' of the business world to whom business men brought their worries and troubles. Chartered accountants, he said, must become less concerned with the profits of the past and more concerned with the prophecy of the future.

There were suggestions being made, Mr McClure, continued, that members of the profession should amalgamate their practices into smaller units. This ould not please everyone as it would mean a lessening personal contact with clients. There was also the ggestion that they should have some form of conultative service for members such as that in the legal hd medical professions.

### The Company

he toast of 'The Guests' was proposed by Mr F. O. F. Alden, F.C.A., Vice-President of the Institute, and the Lord Mayor of Belfast, Alderman M. K. Wallace, nd Mr T. J. Healy, President of the Belfast Insurance nstitute, replied.

Among those present at the dinner were:

Mr Patrick Bourke (President, The Institute of Bankers Ireland); Mr Percy F. Carpenter, F.C.A. (President, The institute of Chartered Accountants in England and Wales); Ir J. Edwards, O.B.E. (Registrar of Companies, Northern eland); Mr W. E. Harrison, F.C.W.A. (a Vice-President, the Institute of Cost and Works Accountants); Mr W. J. efferson (President, The Incorporated Law Society of Northern Ireland); Mr T. J. Magee (President, Belfast Chamber of Trade); Mr L. N. Mathers, B.A. (Chief Inspector of Taxes (Northern Ireland Branch)); Mr G. G. Overend (President, The Incorporated Law Society of Ireland); Mr A. J. Robinson (President, Belfast Chamber of Commerce); Mr Edgar Spencer, F.A.C.C.A. (President, The Association of Certified and Corporate Accountants); Mr J. C. Stewart, C.A. (President, The Institute of Chartered Accountants of Scotland); Mr H. C. Treffers (President, The Nederlands Instituut van Accountants); and Mr Philip R. Walker (President, Dublin Chamber of Commerce).

# Residential Conference

The second residential conference of the Irish Institute was held at The Slieve Donard Hotel, Newcastle, Co. Down, from October 26th to 28th. Papers presented were: "The future role of the professional accountant', by Mr Thomas Kenny, F.C.A.; 'Methods and procedure of accounting in the Netherlands', by Mr H. Gerritsen, honorary secretary, Nederlands Instituut van Accountants: 'The chartered accountant and industry decline or renaissance?', by Mr William Murray, M.A., B.COM., C.A., and Mr D. S. A. Carroll, A.C.A.

Mr Kenny, in his paper, said that the prerequisite for entry into the profession should be an ability for logical thought and not merely a skill at working with figures. In a reference to the European Common Market, he said students should have a working knowledge of at least two continental languages and advocated the need for some instruction on the general

laws applicable to companies in Europe.

Specific areas where accountants could contribute were given by Mr William Murray in his paper. Accountants had the qualifications to play a larger part in developing new and appropriate means of helping control public expenditure, especially where the form and presentation of estimates and exchequer accounts were concerned. He also said that accountants could do a great deal more in assisting the farming community to make the most of their opportunities and there was also ample scope in rendering assistance to management in transport and building sectors. The Institute, declared Mr Murray, was at the cross-roads as a leading professional body. It must recognize the revolution in administrative theory which was taking place and that there was a great need for more cooperation between the Institute and the universities. Mr D. S. Carroll also addressed the conference on this subject after which there were group discussions.

# SCOTTISH CHARTERED ACCOUNTANTS' DINNER IN LONDON

The forty-fifth annual dinner of the Association of Scottish Chartered Accountants in London was held at the Savoy Hotel, last Monday, with Mr T. G. B. Matheson, c.A., Convenor of the London Local Committee of the Scottish Institute and Association Chairman presiding. The dinner began with pipers of the London Scottish playing in members and guests. Then, of course, there was the traditional piping in of the haggis.

### The Growth of the Institute

Sir John Senter, Q.C., proposed the toast of "The Institute of Chartered Accountants of Scotland'. He traced the growth of the Institute in Scotland from the mid-nineteenth century, through the period when professional advertising was in vogue and to the growth in its work and membership which was aided by two world wars.

Sir John thought that representatives of industry would agree that the hard core of the profession remained in professional practice and through them professional standards were engendered and established.

Two of the many extensions of the accountant's activities were in the fields of costing and taxation. 'Of costing I know nothing. Of taxation I increasingly realize I know practically nothing', he told an amused audience.

Concluding, he remarked that judgment was a difficult and interesting question and one of the conundrums of life was how far judgment was something innate which could not be acquired, or was something which could be improved with training and experience.

He had the greatest respect for the Institute for the work it had done and the standards set in establishing experience and training. When the European Congress of Accountants meet in Edinburgh next year under the Institute's auspices he was sure it would be a landmark and that the Institute's most important contribution to it would be those qualities of experience, training and standards.

Replying to the toast, Mr James C. Stewart, c.A., President of the Scottish Institute, pointing out that it was Guy Fawkes night, recalled that a distinguished predecessor of his with the same name came south to London in 1603.

Within two years he had created such feeling in the mind of a certain section of the populace that they attempted to blow up the Houses of Parliament into the air or the Thames. The curious thing was that the House could have been expected to be occupied by Englishmen, he said, amid laughter. He drew the

conclusion that the conspirators were blowing up the Englishmen to make room for more Scotsmen!

## Thinking Ahead

Mr Stewart went on to observe that 'in 1494 – two years after Columbus discovered America – an Italian published a book on which accountants still claim to found almost the whole of their profession – the theory of double-entry book-keeping'. 'It's time we began to think on more modern lines than that,' he added.

At the Institute's Summer School this year a member delivered a paper which brought some fresh air into 'this business of "What are accountants trying to do?".' The speaker was accused afterwards, said Mr Stewart, of having advocated abolition of the balance sheet altogether. 'Nevertheless I bring up this merely to show that at least after all these years The Institute of Chartered Accountants of Scotland is still producing people who can think ahead.'

Proposing the toast of 'Our Guests', Mr Matheson said he particularly welcomed Sir John and Mr R. E. McClure, M.B.E., F.C.A., President of the Irish Institute. Mr McClure had come to the dinner almost as soon as he stepped off a plane from Amsterdam.

### Branch of Irish Institute in London

Replying to the toast, Mr McClure delighted his audience by teasing them about the Scotsman's traditional meanness. He had an idea that they rather gloried in that reputation!

He recalled that last week the Irish Institute entertained in Belfast the Scottish President and Secretary at the Institute's annual dinner. Then he exhorted guests from industry, trade and commerce to take counsel with their accountants when making important decisions.

'Today a number of us find ourselves faced with the inroads of the professional management consultant', said Mr McClure. 'He can make inroads perhap because of his freedom to advertise and solicit business All too often the client is over-persuaded by the ros picture which he paints but I think if we can educat our clients properly there is no need for us to be fearful.'

Mr McClure announced that very shortly a London association of the Irish Institute was to be formed 'We are taking a small leaf out of your book', he said 'and we hope at some future date that through the new body we may be able to repay some of your hospitality.'

The dinner ended with members and guests singing 'Auld Lang Syne'.

JOHNSON, Certified Accountant, of 22 Worcester Street, Stourbridge, Worcs, announces hat as from November 1st, 1962, he has taken into partnership his son, Mr David John Crump Johnson, A.C.A. The practice will continue to be carried on inder the name of Stanley C. Johnson & Son at the above address.

Messrs Russell & Mason, Chartered Accountants, of 139 Temple Chambers, Temple Avenue, London EC4, announce that as from November 1st, 1962, they have taken into partnership Mr P. L. GITTINS, A.C.A., who has been with them for a number of years. The name of the firm remains unchanged.

MESSRS SABA & Co announce that as from October 1st, 1962, they have established a branch office in Nicosia, Cyprus, at Homer Avenue 2A: telephone 75434, cable address Sabaco, Nicosia. The office is managed by their regional partner, Mr Phidias C. Kypris, Ll.B.(LOND.), A.A.C.C.A.

Messrs Thorne, Lancaster & Co, Chartered Accountants, of Hillgate House, 24 Old Bailey, London EC4, announce that as from November 1st, 1962, they have taken into partnership Mr C. R. Cann, a.C.A., and Mr G. L. Hudson, a.C.A., who were previously members of their staff. The name of the firm remains unchanged.

Messrs Woolger, Hennell, Scott-Mitchell & Co, Chartered Accountants, of London and Glasgow, announce that, in conjunction with Messrs Wardhaugh & McVean, Chartered Accountants, of Glasgow, they have formed a new firm styled Woolger, HENNELL, WARDHAUGH & Co to carry on their Glasgow practice, as from November 1st, 1962. The address of the new firm is Ashfield House, 402 Sauchiehall Street, Glasgow C2. Telephone: Douglas 2438. The partners are Messrs A. R. Brackenridge, F.C.A., K. W. S. CLARK, F.C.A., and P. R. TAYLOR, F.C.A., resident in London and those resident in Glasgow are Messrs W. H. Marshall, C.A., J. G. McVean, M.B.E. (MIL.), T.D., M.A., LL.B., C.A., and W. D. B. CAMERON, C.A. The name and address of the London firm remains unchanged. Mr D. B. T. LATTEY, M.A., A.C.A., was admitted as a partner in London on November 1st, 1962.

### **Appointments**

Mr E. E. Binns, F.C.A., has been appointed joint managing director of Associated Dairies and Farm Stores Ltd.

Mr W. H. Ferrar, F.S.A.A., has been appointed an alternate director of De Beers Industrial Corporation.

Mr David Horn, F.C.A., secretary and chief accountant of Argus Press Ltd, has been appointed a director of the company.

Mr E. W. Lumb, F.C.A., has been appointed a director of Blakey's Boot Protectors Ltd.

Mr J. C. Owen, F.C.A., has been appointed to the board of Eva Brothers Ltd, retaining his appointment as group accountant to Eva Industries Ltd.

Sir Julian Pode, F.C.A., chairman of the South Wales Committee of Lloyds Bank Ltd, has been elected to the main board of the Bank.

Mr A. Young, M.A., C.A., has been appointed secretary of Storey Brothers & Co Ltd, in succession to Mr L. R. Andrews, F.C.A.

# NEW ZEALAND TRADE COMMITTEE Mr Henry Benson, C.B.E., F.C.A., appointed London Chairman

Two committees, in London and New Zealand respectively, have been appointed to investigate a number of matters relating to the export of meat, dairy produce and fruit from New Zealand. Mr Henry Benson, C.B.E., F.C.A., a member of the Council of The Institute of Chartered Accountants in England and Wales, will serve as chairman of the London committee and the other members are Sir Austin Anderson, past chairman, Orient Line, and a director of Westminster Bank Ltd; Mr F. D. Arney, C.B.E., past general manager, Port of Bristol Authority, and Mr A. R. Frethey, director and retiring London manager, Bank of New Zealand.

Appointed by the three statutory boards which control the export of meat, dairy produce and fruit from New Zealand, together with the four shipping companies which have a special interest in New Zealand trade, the committees' terms of reference include reviewing the possibility of introducing economies in the shipping service; improving the procedures of both exporters and importers, and economies in methods of loading and discharging cargoes.

### COMPANY INVESTIGATION

Mr Richard M. Honeybone, F.C.A., a chief accountant, Board of Trade, has been appointed under section 165 (b) of the Companies Act as inspector to investigate the affairs of Milletts Holdings (St Pauls) Ltd.

# B.O.A.C. INQUIRY

Last week we stated that we understood Messrs Peat, Marwick, Mitchell & Co to be the firm which was conducting the inquiry into the financial affairs of the British Overseas Airways Corporation, although at that time the firm had not been officially identified.

In the course of the debate on the second reading of the Air Corporations Bill last Tuesday, the Minister of Aviation said that he had invited Mr John Corbett, F.C.A., to investigate B.O.A.C.'s position and prospects. The Minister described Mr Corbett as 'an accountant of the highest personal standing, and a senior partner in one of our leading firms which has done valuable work for the Government'.

Mr Corbett's report is expected to be presented to the Minister next spring.

# EFFECTS OF AUTOMATION

Mr Desmond B. Hirshfield, F.C.A., director of the Trades Union Unit Trust and a partner in the firm of Hesketh, Hardy, Hirshfield & Co, Chartered Accountants, of London, is a member of the council of a new foundation established to promote the study of the human effects of automation.

# ASSISTANT OFFICIAL RECEIVERS APPOINTMENTS

The Board of Trade have announced that the following appointments took effect from November 1st, 1962:
Mr James Michael Buttimer to be an Assistant Official Receiver for the Bankruptcy District of the County Courts of Brighton, Eastbourne, Hastings and Tunbridge Wells.

Mr Ernest Arthur Ashcroft to be an Assistant Official Receiver for the Bankruptcy District of the County Courts of Bristol, Bath, Bridgwater, Cheltenham, Frome, Gloucester, Swindon and Wells and the Bankruptcy District of the County Courts of Exeter, Barnstaple and Taunton.

Mr Frank Augustus Lanaway to be an Assistant Official Receiver for the Bankruptcy District of the County Courts of Nottingham, Boston, Burton-on-Trent, Derby, Leicester, Lincoln and Horncastle.

# GRADUATED NATIONAL INSURANCE

The provisions for the collection of graduated national insurance contributions are based on the regulations governing the collection of income tax under the P.A.Y.E. system, and new regulations¹ have now been made in consequence of the recent consolidation of the P.A.Y.E. regulations. They contain one new provision which concerns the power of collectors of taxes to certify amounts of unpaid graduated contributions in the same way as unpaid P.A.Y.E. income tax. The regulations came into force on November 1st, 1962.

# JERSEY CHARTERED ACCOUNTANTS' DINNER

The annual dinner of the Jersey Association of Practising Chartered Accountants was held at the Hotel L'Horizon, Jersey, last Saturday. Mr W. T. Scarborough, F.C.A., was in the chair and the principal guests were: The Bailiff of Jersey, Mr R. H. Le Masurier, D.S.C.; The President of the Institute, Mr P. F. Carpenter, F.C.A.; Mr J. W. G. Cocke, T.D., M.A., F.C.A., The Secretary of the London and District Society of Chartered Accountants; and Mr G. H. Hamon, The Jersey Comptroller of Income Tax.

Mr Carpenter replied to the toast of 'The Institute and President', which was proposed by the chairman, and Mr Cocke and Mr Hamon replied to the toast of 'The Guests', proposed by Mr L. A. Picot, F.C.A.

# SOUTHEND-ON-SEA CHARTERED ACCOUNTANTS' GROUP

The annual general meeting of the Southend-on-Sea Chartered Accountants' Group was held at the West Cliff Hotel, Westcliff-on-Sea, on October 25th. The chairman reported a satisfactory year and that membership now numbered eighty-two. Satisfactory reports were received from the treasurer and the secretary, and the secretary reported that the annual dinner of the Group has been arranged for Thursday, December 6th at the Middleton Hotel, Southend-on-Sea. The following officers were elected for the ensuing year:

Chairman: Mr S. Porter, F.C.A.
Vice-Chairman: Mr L. W. Free, F.C.A.
Hon. Secretary: Mr M. A. Wren, A.C.A., 10 Warrior
Square, Southend-on-Sea.
Treasurer: Mr H. E. Hard, F.C.A.
Press Officer: Mr E. W. Matthams, F.C.A.
Assistant Press Officer: Mr F. A. Waller, A.C.A.
Committee: Messrs L. M. Keen, F.C.A., and G.
Cunningham, A.C.A.

<sup>&</sup>lt;sup>1</sup>The National Insurance (Collection of Graduate Contributions) Amendment Regulations 1962, S.I. No. 2374, H.M.S.O. Price 8d.

# THE BRITISH COMPUTER SOCIETY New President

Mr R. L. Michaelson, F.I.A., F.I.S., controller of administration of Elliott Automation Ltd, is the new President of The British Computer Society in succession to Mr D. W. Hooper, M.A., F.C.A. Mr Michaelson, who joined the Society on its formation in 1957, has taken an active part in many of its activities and last year served as chairman of the executive committee.

## **Annual Report**

The fifth annual report of the Society for the year ended April 30th, 1962, shows that membership continues to rise and now numbers 2,500 compared with 2,240 in the previous year. An event of note during the year, is the part which the Society took in the organization of the 1962 International Federation of Information Processing Congress held in Munich, by establishing a British programme committee to give assistance to the I.F.I.P. programme committee. The report goes on to mention that the interests of analogue computer users of the Society have been met by the formation of an Analogue Computing Committee which is to co-ordinate its work with that of the International Association for Analogue Computing.

### ANNUAL REPORTS ON VIEW

The annual reports and accounts of forty-five public companies and societies are on display from this week until December 1st at an exhibition at the Design Centre, London, organized by the Council of Industrial Design in association with the British Federation of Master Printers.

The forty-five reports have been chosen on the basis of excellence in graphic design and presentation coupled with a high standard of printing. Two of the reports on show are from companies that have won one of *The Accountant* Annual Awards in past years—Harveys of Bristol Ltd, and The Prestige Group Ltd.

### **GUIDE TO SHARE OWNERSHIP**

The first in a series of booklets designed to make the channels of investment known to the public has been issued by the Wider Share Ownership Council of which Mr Maurice Macmillan, M.P., is chairman. Entitled, Seven Ways to Invest, the booklet sets out the seven different methods of obtaining shares—through a stockbroker, bank manager, investment trust, unit trust, investment club, endowment assurance and employee-shareholding schemes.

Two appendices to the booklet set out six specific company schemes for employee shareholding, all widely different, but each of special merit. Appendix A comprises four such schemes operating in the United Kingdom – those of Aims of Industry, Imperial

Chemical Industries, Associated Electrical Industries and Rugby Portland Cement. Appendix B gives details of American thrift plans operating in the United States, and the Thomson Newspapers scheme for an employee investment company in Canada.

Copies of the booklet are obtainable free of charge from the Wider Share Ownership Council, 4 Angel

Court, London EC4.

# LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

# **Common Market Meetings**

The second in the series of three meetings on the European Common Market arranged by the Committee of The London and District Society of Chartered Accountants will be held next Tuesday at 5.30 p.m. at The Chartered Insurance Institute, 20 Aldermanbury (near Guildhall), when The Hon. Arthur Maxwell Stamp, director of Philip Hill Higginson, Erlangers Ltd, will speak on 'The Common Market's challenge to the City.'

The final meeting in the series, also at The Chartered Insurance Institute, will be held at 5.30 p.m. on Thursday, December 6th (not Tuesday, December 4th as previously announced), when Mr J. Kraayenhof, Past President of the Netherlands Institute of Accountants will speak on "The practice and the profession of accountancy within the Common Market'. Both addresses will last for approximately half an hour and about the same amount of time will be devoted to questions and discussion.

### CITY DISCUSSION GROUP

The next meeting of the Chartered Accountants' City Discussion Group will be held at the Tiger Tavern, I Tower Hill, London EC3, on Wednesday next, November 14th at 6 for 6.30 p.m., when discussion will be opened by Mr Geoffrey Stevens, F.C.A., M.P., on the Government's financial policy.

### MANAGEMENT ACCOUNTING CONFERENCE

The Liverpool Society of Chartered Accountants, in co-operation with The Merseyside Productivity Association, is holding a three-day residential management accounting conference at The Blossoms Hotel, Chester, from November 30th to December 2nd. The conference has been organized so that accountants and business executives may meet together to discuss current means whereby the service rendered by accountants can be further developed and used to increase efficiency and reduce costs.

Those attending the conference will be divided into syndicates which will meet informally after each lecture to discuss the subject-matter and formulate questions which the lecturer will answer at a further session.

MOTOR — FIRE — CONSEQUENTIAL LOSS

MOTOR UNION

INSURANCE COMPANY  $\mathbf{L}^{ ext{TD}}$ 

10 ST JAMES'S STREET, LONDON, SW1

The address of welcome will be given by the President of the Liverpool Society of Chartered Accountants, Mr S. Morris, F.C.A., who will also preside throughout the conference. Three papers will be presented: 'Application of a computer in industry', by Mr A. J. Platt, F.C.A., Pilkington Bros Ltd, 'Practical aspects of storekeeping', by Mr A. Simms, divisional purchasing and stores controller, National Coal Board, and 'Raising money', by Mr A. R. English, F.C.A., general manager, Industrial and Commercial Finance Corporation Ltd.

Mr A. V. Widdowson, chairman of The Merseyside Productivity Association, is to deliver some concluding

remarks at the end of the conference.

Application forms, which should be returned not later than November 19th, are available from the conference secretary, Mr G. L. Clegg, c/o The Norwest Construction Co Ltd, Liverpool 21.

# THE INSTITUTE OF INTERNAL AUDITORS London Chapter

The next meeting of the London Chapter of The Institute of Internal Auditors will be held on Wednesday next, at The Kingsley Hotel, Bloomsbury Way, London WCI, at 12.30 p.m. The speaker will be Mr J. D. Russell, M.A., F.C.A., partner, Binder, Hamlyn & Co, and his subject will be 'Fraud and defalcation'.

### STAMP MEMORIAL LECTURE

A Stamp Memorial Lecture on 'Some thoughts on central banking', by The Rt Hon. Lord Cobbold, will be given on Tuesday next, at 5.30 p.m., at the University of London, Senate House (entrance from Russell Square or Malet Street, WC1).

The chair will be taken by Sir Frank Lee, G.C.M.G., K.C.B., Master of Corpus Christi College, Cambridge. The lecture is addressed to students of the University and to others interested in the subject. Admission is free, without ticket.

### OFFICE MECHANIZATION CONFERENCE

'Mechanization and the model office' will be the title of a one-day conference to be held on Saturday, November 17th, at the Solihull College of Further Education, Blossomfield Road, Solihull, Warwickshire.

The opening address of welcome and an outline of the subjects of the conference will be given by Alderman E. N. Hiley, M.B.E., Chairman of the Governors of the College. Addresses will include "The effect of office mechanization on commercial courses in further education," by Mr F. C. Thurling, B.A.(HONS.), A.C.I.S., Head of Commerce Department, Erith Technical College; "The A.B.C. of A.D.P.', by Mr A. Morris, M.A. (technical consultant, Addo Ltd); and

'Systems for the model office', by Mr R. C. Hurnell (director, Percy Jones (Twinlock) Ltd).

The closing address will be given by Mr A. J. Parkinson, M.A., Principal of the College, who will preside throughout the day.

# THE CHARTERED ACCOUNTANT STUDENTS' SOCIETY OF LONDON

The following meetings of The Chartered Accountant Students' Society of London will be held during next week:

Monday, 5.30 p.m., at the Institute, Moorgate Place, EC2: Lecture 'On being a personal adviser', by Mr E. Kenneth Wright, M.A., F.C.A. (a Vice-President of the Students' Society). Chairman: Mr Brian Manning, C.B.E., D.L., J.P., F.C.A. (a Vice-President of the Students' Society).

Society).

Tuesday, Visit to Ford's Motor Works (limited number).

Wednesday, 5.30 p.m., Lecture and demonstration of
National Accounting Machines (limited number).

Thursday, 5.15 p.m., at the Institute: Introductory course lecture on 'Company law', by Mr P. W. Medd, Barrister-at-law.

6.30 p.m., at the Institute: Debate with the Midland Bank on 'Decimalization of the currency'.

Friday, 5.15 p.m., at the Institute: Introductory course lectures on 'Audit practice and methods', by Mr W. K. Wells, B.A., F.C.A. (Hon. Treasurer of the Students' Society); and 'The law of banking', by Mr P. W. Medd, Barrister-at-law.

6.30 p.m., at Ilford: Lecture on 'The audit of mechanized accounts', by Mr H. O. H. Coulson, F.C.A.

The London Articled Clerk's Diary for 1963 may now be bought at the library (price 4s, by post 4s 6d).

# READING CHARTERED ACCOUNTANT STUDENTS

'Auditing – investigations for purchase or sale' was the subject of an address given by Mr R. S. Waldron, F.C.A., at a meeting of the Reading Branch of The Chartered Accountant Students' Society of London, held last Wednesday. Other meetings arranged for the 1962 session are:

November 22nd: 'Company accounts – amalgamations, absorptions and capital reconstruction schemes', by Mr B. Rose, F.C.A.

December 5th: 'The stock exchange and London money market', by Mr A. J. Whiteside, Barrister-at-law.

December 19th: 'Accounting for management', by Captain M. R. Aries, c.a.

All the above meetings will be held at The Great Western Hotel, Station Road, Reading, commencing at 7.15 p.m.; and refreshments will be available. Social functions organized by the Branch include a Christmas Dance to be held on December 13th, at The Grosvenor House Hotel, Caversham. The Branch honorary secretary is Mr B. S. Bush, 102 London Road, Reading.

# Cash v. Earnings Basis

NE of the major problems that has faced accountants in public practice since 1939 has been the need to finance the inflationary element in uncollected fees and work in progress. This involves not only salaries and overheads which are reflected in work in progress or awaiting payment but provision for taxes. To the extent that any increase in outstanding fees includes the value of partners' time and a return on their capital, as well as the pure profit element, the Revenue automatically demand an increase in their collections of income tax and surtax where accounts are prepared on the earnings basis. In such cases, therefore, professional men find themselves in the position of having to finance not only an inflation in current asset values which provides no increase in real net yields; they also have to finance the Revenue's cash share of enhanced paper profits.

This situation is averted, however, by those practitioners who adopt the cash basis whereby accounts and the assessments based on them reflect only actual receipts, an arrangement both equitable and convenient and one long accepted by the Revenue without demur. The cash basis has the further advantage for the partners in an expanding practice that the incidence of tax on the profits from new business is deferred by the fact that such profits are not brought into account for tax until realized in cash. It will therefore be with some concern that the profession will learn that it faces a wind of change in the decision on November 9th in Wetton, Page & Co v. Attwooll. This case came before Mr Justice UNGOED-THOMAS in the Chancery Division in consequence of a decision by the Special Commissioners on appeal upholding assessments made under Schedule D on a firm of chartered accountants for the four years 1954-55 to 1957-58. These assessments had been made on the earnings basis for those years, whereas the firm had previously been assessed to tax on the cash basis, and indeed the Revenue had not challenged the use of the cash basis in the year following those in dispute.

In the absence of a detailed statement of the facts, it is too soon to weigh the factors which led the Revenue thus to blow hot and cold. It is clear, however, that the establishment as a principle of law of the Revenue's right to jump from the cash to an earnings basis at will, can only lead to the utmost confusion and uncertainty. Even those partnerships in which the members are required by the terms of their agreement to retain in the firm funds sufficient to meet their future liabilities to income tax and surtax, could find themselves in serious financial difficulties if suddenly

faced with Revenue demands based on fees uncollected or not even rendered.

More serious still is the possibility that the assessments over a period of years might exceed, perhaps substantially, the actual profits realized. Thus a debt created in a year treated on the earnings basis would attract no relief if subsequently proved bad in a year dealt with on the cash basis, while fees already taxed as earned could be taxed again when received. These possibilities appear to follow from the ratio of the decision in Wetton, Page & Co v. Attwooll. Mr Justice Ungoed-Thomas is reported to have said it was clear from the decided cases that his duty was to consider only the particular years before him and to decide whether for these years an earnings basis was the appropriate method to adopt. The emphasis thus laid on the character of income tax as an annual tax appears to reflect the dicta of LAWRENCE, L.J., in Attorney-General v. Metropolitan Water Board (6 A.T.C. 879; 13 T.C. 294). His lordship is reported to have continued with the statement that although two methods of assessment could not be adopted for any one tax year, there was nothing to prevent different methods of assessment being used for different years. The change from a cash basis to an earnings basis was justifiable; the subsequent reversion to a cash basis might be a matter for complaint but did not fall to be considered in the present case.

The authority for the latter observations evidently lies in the case of D. & G. R. Rankine v. C.I.R. (31 A.T.C. 20; 32 T.C. 520). This concerned a firm of civil and mining engineers where accounts had been prepared on a cash basis for calendar years and which was dissolved in July 1944. In the last few years of its existence additional fees were earned in respect of special valuations under the Coal Act of 1938 and the greater part of these fees were paid in the six months following dissolution. The inspector was acquainted with the position but assessments were agreed on the cash basis for 1942-43 and 1943-44. A subsequent attempt by the inspector to reassess those years on the earnings basis by means of additional assessments was rejected by the Court of Session on the grounds that the basis of assessment had been freely negotiated. We feel, however, that some doubt may have been shed on the ratio of this decision by the wide

interpretation of the inspector's powers of discovery favoured by the House of Lords in Cenlon Finance Co Ltd v. Ellwood (41 A.T.C. 11). Clearly the use of varying bases of assessment would lead to the result that aggregate assessments would not be in accordance with aggregate profits. A similar problem arose in Bombay Commissioner of Income Tax v. Ahmedabad New Cotton Mills Ltd (8 A.T.C. 575) where it was not sufficient to take the closing valuation of stock for the previous year if the method of ascertaining the current year's results required an alternative basis of valuation. Errors in stock valuation occur not infrequently and the normal practice appears to be to submit claims under section 66 of the Income Tax Act, 1952, for years found to have been over-assessed while accepting additional assessments under section 41 for years underassessed. Such a procedure is inappropriate, however, where no question arises of errors as such.

It was to be hoped that the introduction of section 32 of the Finance Act, 1960, had disposed of the anomalies latent in the cash basis where a cessation occurs, as shown by the Rankine case. In Wetton, Page & Co v. Attwooll the learned judge gave his decision in favour of the Revenue and it now seems that not only has the propriety of the cash basis not been confirmed by the Finance Act, 1960, but the whole question of its operation has been thrown once more into the melting-pot. To treat each year of assessment as entirely independent of the preceding and following years seems to us to be out of touch with reality. Admittedly at the hearing of the Wetton case before the Special Commissioners, the Revenue are reported to have stated that if the earnings basis for the year 1958-59 turned out to be lower than the cash basis, they would demand payment of tax on the lower basis. However reliance on concessions of this nature is clearly unsatisfactory. We feel the time has now come to give statutory force to the taxpayer's right to adhere to the cash basis, once adopted, while to meet the danger of any possible abuse it is suggested that a change to the earnings basi could be made at the instance of either the Revenue or the taxpayer, provided that written notice to that effect is given, say, twelve months before the commencement of the year of assess ment for which the new basis is to operate.

# Implementing Parker

HE report elsewhere in this issue of the November meeting of the Council of The Institute of Chartered Accountants in England and Wales contains a second statement on the recommendations (published in May of last year) of the Parker Committee set up in 1958 to consider the education and training of articled clerks. In its previous statement, in our issue of August 11th last, the Council dealt with exactly alf of the seventy recommendations made by the committee. Now it considers in further detail certain of these relating to the revised subjectnatter of, and eligibility for, the Institute's examinations and sets out in two appendices the yllabuses for the new Intermediate and Final examinations. A third appendix defines the eligibility of clerks for both the old and new examinations during the transitional period.

The subjects for both examinations are as envisaged by the Parker Committee and already ccepted, with only transpositions of certain papers between Parts I and II of the Final examination, by the Council. While, therefore, he general philosophy of the committee that xaminations should provide a test of practical ompetence and that specialization during the period of articles should be avoided is fully pheld, the proposed contents of the Advanced accounting III and General papers confirm that ven the basic complement of professional nowledge expected of an aspiring member is eing carefully tailored to suit the needs of the mes. It is noteworthy, also, that the Council and ne committee are in complete accord as to what ne trend of that knowledge is because the detailed yllabus for these two 'new' papers, now pubshed by the Council as a guide to candidates and utors of their intended scope, comprises - with nly minor amendments - Appendices E and F of he committee's report which outlined the ssential points of contact which the accountht should have with business management.

Among the other items with which the Council eals at this stage are remuneration and study ave. There is a distinct connection between these two amenities of an articled clerk's life and while the Parker Committee made it plain that,

in the case of remuneration, absolute uniformity was not practicable or even desirable, it considered that more information as to the ruling rates being paid should be made readily available to principals and to careers advisers. The Council agrees to this recommendation and proposes to incorporate the inquiry as part of the survey now being undertaken by the district societies of the current levels of professional fees and charging rates. As regards study leave, the Council accepts the suggested retention of the maximum allowance of twelve months but proposes, in the case of a clerk exempt from the Intermediate examination. to fix the maximum at eight months. The Parker Committee's recommendation which prescribed a general minimum of six months study leave over the whole period of articles is also accepted.

It would appear that three main matters raised by the Parker Committee have still to be resolved by the Council. One of these is the possibility of supplementing the existing study arrangements by short tutorial courses, to be provided by local technical and commercial colleges, by way of introduction to each of the Institute's examinations. The Council, in its first statement, intimated that it would like to promote such a scheme on an even wider scale than that envisaged by recommendation (46) of the Parker Committee Report. It now reiterates this view but points out that some time must elapse before the extent of the services available can be assessed.

The two other major questions still under consideration are the proposals that each practising member, before signing on his first articled clerk, should satisfy a panel of senior Institute members as to his suitability to assume the responsibilities and obligations of a principal; and that clerks on becoming articled should contribute to an Education Fund out of which the whole of the Institute's expenditure on student activities would be financed. The Council proposes to make further statements in due course and emphasizes once again that, as changes in the Institute's constitution would have to be made before certain of the recommendations could be ratified, no member or student should in the meantime take anticipatory action.

# **Business Codes**

by PETER BAILY

An article discussing the uses, pros and cons, construction and types of codes in business.

HE straightforward and obvious way of referring to people and things is to call them by their names. Despite this, we live in a coded world. Our cars and telephones have code numbers; our houses may soon have coded addresses; we ourselves have National Health code numbers and several others, for instance bank account codes. At work we operate with many codes from the red paint which identifies fire-fighting equipment to accounts codes, wage numbers, cost classification codings, product codes, besides part numbers, credit ratings and materials codes. Why?

Short description is often the main reason. A telegraphic address such as 'Stanlife, Leeds' is a lot shorter than the full postal address, yet both enable the same post office to deliver a message to the same place. To save writing time, to provide a definite filing order, often to give effect to a systematic classification, and to combine complexity of reference with shortness of symbol—these are the main reasons for coding.

## **Bad Codes Worse than None**

Codes are not hard to devise, but it is asking for trouble to throw a code together anyhow in the totally erroneous belief that any code is better than none. Codes should be devised to solve the problems which have made their adoption desirable without engendering new problems. If a main purpose is to save writing time, it would not be sensible to adopt a code which nobody can remember, since time saved in writing may be more than lost in looking up code keys.

Furthermore, we live in a fast-changing world, and codes must allow for this. They should be designed to accommodate future developments as well as current requirements. Suppose we decide to code all stock items. We may do this very simply by listing all items, arranging the list in a rational order, and numbering down the list. Brass rod 1 in. diameter appears as code 1049, and brass rod 1½ in. diameter as code 1050; and all is well until it is decided to stock brass rod 1¼ in. diameter. We would like to give this new item a code which fits into the sequence at the

right place, between 1049 and 1050, but we have left no room. So we have to put the new item right at the end of the line – and quite soon all semblance of rational order disappears.

Classification codes ought to overcome this difficulty; but a large electrical manufacturer adopted an elaborate decimal classification code using nine-figure symbols for his products a few years ago, only to find to his cost two years later that the code did not have enough elbow-room, or 'hospitality' as the experts call this characteristic, to accommodate additions to the range at the right positions. That code was devised by the chief engineer. Let us hope that the chief accountant would have done better.

### Colour Codes

What elements are available for building codes? We can use colours if all we want is an identification code. There is a British Standards colour code for painting steam pipes, air pipes, cranes. fire-fighting gear, and such. Colour codes are often used to distinguish the different specifications of steel in a factory stores. High-alloy steel costs several times as much as mild steel but looks just like it to the naked eye. Consequently a store which saws off slices from stock bars to make issues needs some identification system which lasts right through a bar, like the name in Blackpool rock. A stripe of coloured paint down the full length of the bar will identify it even when there is only a stub left. With six colours, a single band will identify six kinds of steel and a double band will identify thirty-six kinds. Few firms go further than this with colour codes, although a surprising lot of information can be conveyed with colours.

But most codes are required to give unique and specific shorthand descriptions or nicknames which can be used to refer to the items as well as identify them, and for these the only elements available are letters and numericals. Be it noted too, that there are only twenty-six letters. Heathenish symbols such as Greek, Russian or Hebrew letters must be avoided, since they are unknown and unpronounceable to most of us. Capitals, lower case and italic letters must not be used as if they were different, since they are pronounced the same. Punctuation marks should not be used except as spacers. As for numerals, there are just ten of these as elements; Roman numerals do no extend the range because they are simply group of letters. The British Museum uses Roman numerals in its classification system, but this is hardly an example to follow. (One would have thought the Museum would have better differen-

tiated between its exhibits and its current procedures.) The choice we have is between codes using numerals only, codes using letters only, and codes using both.

# Alphabetic v. Numeric Codes

Numeric codes seem to be more common; the reasons no doubt include the limitations of some simple accounting machines, besides ignorance and unreasoning prejudice. In making the choice we come up against a major watershed between codes for people and codes for machines; the criterion for visual recognition differs from that for machine selection.

Brief code words, easy to recognize and quickly written, which can be achieved with alphabetic codes, are a great advantage for people; but not for machines. It can be proved mathematically that the most efficient codes for machine selection are either binary or trinary – that is, they have either two elements, like the Morse code with its dot and dash, or three elements. For most purposes these would give very long code words. To code only 1,000 items in binary, we should have to use tenfigure numbers.

Binary codes are used by all the present generation of electronic computers because they are the most efficient, and often the only practicable codes for these machines; but they are useless for people because the code words are too long to write out or remember. Several firms therefore use for their materials codes (usually the biggest coding job in a manufacturing or wholesaling firm) an alphabetic code with a binary translation. An example is the one used by Boots the chemists, who employ four-letter code words: for instance, CIOB for Kodak promide paper.

For ordinary use numeric codes have a decimal base. This obviously gives shorter code words than a binary base, since ten choices of element are available for each place instead of two. To code a thousand items with ten code elements would give three-figure code words instead of the ten-figure binary symbols.

# Advantages of Alphabetic Codes

Alphabetic codes give shorter symbols still, ince we now have twenty-six choices for each place in a code word. There are 676 two-letter words. There are not far short of half a million four-letter words. Some of these would not be suitable for use in a materials code, but even excluding the four-letter words best reserved for

crises, there are still over forty-five times as many left as there are four-figure numbers. In general there are 2.6n times as many n-letter code words as there are n-figure numbers.

Alphabetic codes have other advantages. Often the words can be made pronounceable by proper choice of vowel and consonant. The French have done a good deal of work on this; the argument is that a word you can speak, such as BALUXA, stays in the memory better than a shorter but unpronounceable one such as TXTRF. Often, too, the letters in a code word can be chosen to remind people what the symbol stands for: S for steel, A for aluminium, B for brass.

If both letters and numerals are used interchangeably, the possible choice of elements for each place is further increased, though not to thirty-six, since either the letter O or the numeral o, and either the letter I or the numeral 1, would need to be excluded, and perhaps others, too, to avoid confusion. But in practice letters and numerals are not often used interchangeably. The experience of the motor-car registration people as well as of telephone authorities shows that it is easier to remember a long symbol made up of one group of letters followed by one group of figures, for instance, AVX703, than one in which letters and figures are mixed up, for instance, A7Vo3XV. The letters in a telephone number are simply mnemonics and do not shorten the symbol at all: examination of a telephone dial will show that ADI and BEG and 234 come to the same thing.

# **Code Construction**

It is possible to calculate the number of elements required to code a given number of items to get code words of a given length. If we denote the length of a code word—the number of elements it contains—by a and the base of possible elements by b, and the number of items by c, then:

 $c = b^a$ 

Hence,  $\log c = a \log b$ .

Hence,  $a = \log c/\log b$ .

If we intend to code 10,000 items using a decimal base, b is 10 and c is 10,000. Hence the length of code word is given by:

 $a = \log 10,000/\log 10 = 4/1 = 4.$ 

We shall need four-figure numbers. If we want to code a million items using an alphabetic code,

 $a = \log 1,000,000/\log 26 = 6/1.415 = 4.25$ 

The average length of code word will be just over four letters.

We could use five-letter code words if we

wanted every code word to have the same length, but why should we? Reading and writing codes is work; an efficiently designed code minimizes this work, and one way to do it is by making the most popular code words the shortest. The length of a code word should in theory vary inversely with the logarithm of its frequency of use.

Having chosen our code base, the ne

Having chosen our code base, the next problem is how to construct code words, and how to assign them to items; shall 60950 stand for fish, flesh, or fowl? The three standard approaches are, firstly, mnemonic – choosing code words which remind us of their meanings; secondly, random – assigning code words arbitrarily; and thirdly, to base the coding on a systematic classification.

Mnemonic codes are widely used in engineering factories for coding stock. They are used, for instance, for the exchange letters in a telephone number. But they are hard to apply when the number of items is great; already in the U.S.A. the adoption of subscriber trunk dialling is leading to the abandonment of mnemonic

exchange coding.

Random codes are also popular – perhaps more so than they deserve to be. They are often used by accountants for applications which might be better served by classification codes. An example of a random code is one used for the several thousand different colours and shades to which yarns are currently dyed by a textile factory. Any new shade is assigned the next number in sequence. We can tell absolutely nothing about colour No. 10,045 from its number; all we can tell is where to find it in the colour register.

### Classification Codes

Standard classification of regular stock items has many advantages for organization which carry a lot of stock, especially when there is more than one establishment. It assists greatly in variety reduction. It speeds and simplifies purchase action. It helps stop the duplication of stock under different names which inflates inventory and forfeits quantity discounts. Classification codes are derived by dividing the times into classes and numbering each class; then subdividing, and so on.

Librarians have laboured mightily on classification codes. They are storekeepers, of course, but nearly every piece in their stock is a different item, and for learned works a full description would be both lengthy and multi-faceted. Library codes therefore present a greater challenge than most stores codes, and have drawn a correspondingly better response. Bliss, Berwick Sayers, Vickery, the great Indian abstractor and jargon inventor, Ranganathan, are some of the names well known to the specialist in library taxonomy; but all of us have heard of Dewey.

Melvil (he was christened Melville, but to save time shortened his name by two letters) Dewey was born in 1851 and survived undaunted to 1931. He devised (no doubt partly in the time saved by shortening his name) a decimal classification code for the whole of human knowledge so simple and mighty that it has been translated into ten languages, including Chinese. The Universal Decimal Classification or UDC is a later version identical to the first three places, which has been adopted by the British Standards Institute and is published as BS1000.

If used to code the contents of a factory stores, the UDC would give symbols of excessive length. Much better to devise your own code on the same principle. We could divide the stock into nine classes, for instance: class 1, raw material; class 2, made-to-order production parts; class 3, off-the-shelf parts used for production; class 4, works supplies; class 5, office supplies; class 6, packaging; class 7, jigs, fixtures, permanent tooling; class 8, work in progress; class 9, byproducts. We reserve the numeral o for items which do not fit into the main classification general items. Next we subdivide each class; class I might be split into steel bar, sub-class I; steel sheet, sub-class 2; bronze tube, sub-class 3; and so on. The coding for any bronze tube will begin with 13. We sub-divide further; steel bar to specification En 32 might be 111, steel bar to specification En 36, 112. And so on until we come to individual items.

We could use letters instead of numerals to label the classes, and then we could split into twenty-six instead of nine classes at each section. Instead of one class for raw materials with subclasses for different materials, we could then have a different class for each material – B for bronze, S for steel, and so on.

Classification codes have three main advantages. First, with practice, people remember the main class labels, so that code numbers become meaningful and hence easier to remember. Secondly, new items can be allotted numbers which fit into the sequence at the right place; a well-designed classification code can be very 'hospitable' or have plenty of elbow-room.

Thirdly, extraordinary savings are regularly reported to have resulted from the adoption of such codes for materials. It is the systematic classification rather than the code itself which

makes this possible. One concern found it was using thirty-two different names for thirty-two plain discs of sheet metal.

# **Self-checking Codes**

If, in writing the description of something out in full, a word is misspelt, the meaning is still usually clear enough. But code words are so boiled down that the slightest error can be serious. Accuracy bonuses to machine operators have been tried to prevent such errors.

The next best thing to preventing errors is to arrange for them to announce themselves promptly. If you dial 60590 instead of 60950 on your telephone, you find that you have dialled a wrong number almost as soon as the call is answered. But if someone writes 60590 instead of 60950 in a stock recording system, it may be months before the error comes to light and meanwhile a train of

further errors will be smouldering away – orders placed too early or late, costs wrongly allocated – culminating perhaps in some colossal and ridiculous bloomer which gets into the papers and adds to the mirth of nations.

With a view to stopping this, computer men have been introducing controlled redundancies into their codes in such a way that random errors are more likely to reduce a coding to nonsense than give it a wrong meaning, or that a simple numerical check will disclose that something is wrong. Numerical codes can be arranged so that the sum of the digits is always odd, or always even, or is a multiple of 11 or 23. Historically-minded accountants will recognize this as a revival of an old book-keeping practice: the use of check numbers, the number of pence necessary to make a figure divisible by 13, which were posted with amounts so that additions could be checked.

# The European Common Market

by SIR GRAHAM CUNNINGHAM, K.B.E., LL.B.

A talk given to members of the London and District Society of Chartered Accountants on October 30th at the first of a series of three meetings on the Common Market

THINK it is wise to start with some definitions. The first—a very simple one—what is a customs union? It is an agreement be ween two or more States whereby they will ave no tariffs at all on goods entering from one State the other, and they will have a common tariff on ll goods entering into their area. It generally takes a natter of at least twelve to fifteen years for that ideal to come about. You cannot drop tariffs overnight. That would considerably disrupt both trade and adustry. It is done gradually, and twelve to fifteen ears is generally reckoned to be the time it takes for hat to come about. That is something significant to which I will refer a little later.

Now there is a free trade area – my next definition. If free trade area has no tariffs among those who have greed to come into that area, but they still maintain heir own individual tariffs to all outside. You see he difference? There is a common tariff to all utsiders in the case of a customs union; but with a ree trade area, all the members retain their individual ariffs.

Then we come on to a common market, which is hat we are now concerned with. A common market, nd I might say here that the European Economic

Community is something more than a common market, is both a customs and an economic union. There are no artificial tariffs at all as between one member of the union and another; no restrictive practices, no monopolies, no subsidies. This is something more than merely dealing with tariffs; it is a much wider aspect of union. Again, a common market of that kind is reckoned to take about twelve to fifteen years to come about.

Sir Graham Cunningham, formerly chairman of Triplex Holdings Ltd, the well-known safety glass company, has held a number of other company chairmanships and was also deputy chairman of Cyril Lord Ltd until his retirement at the end of December 1961.

Those are my three definitions and they are distinctions which are important in considering this matter.

### Post-war Reconstruction

Now we come to history. After the war, everybody was considering the need for post-war reconstruction, especially the countries now in the European Common Market, because they had been overrun and occupied by German troops almost entirely. The result was that a whole lot of communities, organizations and policies were discussed.

Probably the first of the effects of those discussions came from America, when the United States, seeing the devastation and the position of many of the backward countries, started Marshall Aid. It was a grand vision and was the first move towards doing something to rehabilitate the countries devastated

by war.

But, before Marshall Aid really became effective, the three small countries comprising Benelux – Belgium, the Netherlands and Luxemburg – got together and announced the formation of a joint customs union. That was in 1947, and that was really the start of the Common Market.

At the same time Marshall Aid was proposed by the United States and seventeen European countries got together to form what was called the O.E.E.C. – the Organization for European Economic Cooperation. That was formed for the sole purpose of carrying out and implementing the provisions of Marshall Aid. An offshoot was EPU – the Economic Payments Union – which was really a kind of banking organization for O.E.E.C. and started operations in 1948.

In 1949 there was a great deal of talk about the Council of Europe. I believe Sir Winston Churchill was a great supporter of it in those days, as well as Anthony Eden and various other people. There was a great deal of talk but it did not, so far as I know, come to very much; except, of course, that it did show the willingness and the anxiety of the European countries to get together in some form or another—political, economic or social.

### **Britain Stays Out**

Next came the European Coal and Steel Community, comprising the countries now forming the Common Market—the Benelux countries, together with France, Western Germany and Italy. They formed the European Coal and Steel Community for the purpose of eliminating violent competition among themselves and, I remember, the United Kingdom was asked if it was prepared to join. We did not join, and I think in those days, in the light of circumstances, we were right to come to that conclusion, although in the event it is a pity we did not join. But we were, and still are, the cheapest producers of steel in the world, except I believe for Australia, and Australia

does not export. If we had joined it would have put up our price of steel because they have a common price in this Coal and Steel Community. We were very short of coal in those days; and that was another problem for us in considering whether we could throw our coal in, in line with the European Six, and what we should do about steel.

In the light of those circumstances Britain said 'No, we do not think we will join', but we did get permission to have an observer who sat in on all their deliberations. In fact, it was my old friend, now deceased, Sir Cecil Weir, who went over there with the rank of Ambassador.

The European Economic Community is a broad and permanent idea. It is a permanent idea of a large economic community which gave rise to the Treaty of Rome. It took years of deliberation and it is a much wider conception than any of us had contemplated when the European Coal and Steel Community was formed. The E.E.C. started in 1958, and consists of a Commission, which is a Council of Ministers having power to make executive decisions. Only this morning I read in the first paragraph of the main news of The Times: "The Common Market Commission announced its intention today of establishing the Customs Union by January 1st, 1967.' That is three years before the end of the transitional period laid down by the Treaty of Rome.

Now I have told you what a customs union is, and that is part of the E.E.C.; the Common Market is a customs union. They have been progressing towards a customs union since the Community was formed in 1958, and when they started they contemplated that there would be three four-year periods at the end of each of which they would lower their tariffs among themselves. That would have meant 1958, 1962, 1966 and 1970; and now by saying 'Look, we will get down to a complete common market with no tariffs between us by 1967' they have anticipated their original intentions by three years. And that decision was made by the European Economic Commission – a meeting of ministers of the six countries.

There is also, as part of the Common Market, a European Parliament which meets at Strasbourg and there is a Court of Justice which meets a Luxemburg. Hence you see that this economic community is social and political as well as economic. The Times has come to my help again, because in today's issue it says:

"The first issue of the Common Market Law Reports is being published today. The need for suc a series in English is apparent whether or no Britain enters the Common Market. The European Court of Justice, sitting at Luxemburg, has wid powers of interpreting the three treaties.'

The three treaties are the Coal and Steel, Euraton and the Common Market, the width of the Common

Market Court's jurisdiction being comparable rather vith that of the International Court at The Hague; he reason being, of course, that the Court interprets reaties rather than the law as do our British Courts of law.

I mentioned Euratom, for apart from having a ommunity in relation to coal and steel, the E.E.C. as established another one in relation to atomic nergy; but I am not going to deal with it further ecause it does not really concern us at the noment.

# **Second Thoughts**

n 1960, after the formation of the Treaty of Rome n 1957, and the Community starting operations in 958, Britain began to wonder whether she should ave joined in, and what she should do about it. Tarious bodies – the Federation of British Industries, he Chambers of Commerce, the Government and thers – all started scratching their heads and rondering what should be done. So there emerged that is called EFTA. – the European Free Trade trea – made up of Great Britain, Sweden, Norway, Denmark, Austria, Switzerland and Portugal – that the Seven'.

Then, of course, against that there has been a ertain amount of talking among some of the Middle ast countries as to whether they cannot form either free trade area or a common market; and there ave also been suggestions (which have come to othing) about the Commonwealth group forming n area of their own.

So much for definitions and history. We have come p from the post-war era to today when, as you know, tritain has made application to join the Common Tarket. You may also have seen that Ireland has not nade application to join the Common Market, they ave asked permission to make application to join. There is a distinction because the European Community will not let anyone apply to join the Common Tarket unless they feel they have an economy which worth while considering; and so an applicant first as to get permission to apply. So, if you think I am taking a mistake by saying that Ireland has not yet oplied, I have not; they have asked permission to pply and that is being considered by the Council of Inisters at the present time.

You see how careful they are and the vetting that sees on before a country is allowed to join in the ommon Market. Britain has got through the earlier ages, as you well know. They think we are good sough to come in, if we can come to terms with sem, and that is satisfactory at any rate.

### **Common Market Aims**

That are the aims of the Common Market? In the rst place, the main aim is complete freedom of ade between members, and that they hope to achieve y January 1st, 1967. They hope to have a common

tariff wall against all other people and a common commercial policy towards third parties - a common commercial policy with regard to restrictive practices, with regard to monopolies and so forth. They want complete abolition between the members of all obstacles to the free circulation of persons, services and capital. That means that social services and benefits should be the same in all countries within the community. And, of course, a common agricultural policy. They have not yet settled on that among themselves, let alone with this country, and that is one of the stumbling blocks at the present. They also want what they call a harmonization of social policy - that is, equal pay for men and women for the same work, holidays with pay - and in short what really comes down to a United States of Europe. That is what they are aiming at. It is a great conception; a very grand conception; it is something far more than mere economics and trading. It is a real knitting together of all those countries, and it means, eventually, something more than that.

# Some Implications of Membership

There are, however, certain points in relation to this Common Market which are worth observing. One is that the present members are all joined together by land. But Britain is surrounded by sea. That makes a lot of difference. As regards tariffs, the country of origin of goods is frightfully important, and we would probably have to give guarantees and have to accept observers from 'the Six' to see that our Customs people strictly play the game. I have no doubt that in a very short while we should be accepted as watching and guarding against abuses; however, when all the countries are on the same piece of land it is much easier to keep a check, for the Customs are all round and the personnel can be interchangeable. But Britain is over the sea, and that does make that little bit of difference.

Then there are the professions. What about your own profession? I do not know too much about it, but I think I can say this without giving offence to anybody, that the standard of the professional accountant in Holland is very high - and in Belgium, too. Germany is good; France, I think, comes next; in Italy the set-up is rather different. You know more about that than I do, but if Britain goes into the Common Market it will mean, I think, that all people who are accepted as ranking as qualified accountants in their own country would expect to be accepted as qualified accountants in this country because you have got to have a commonality. If that applies to the accountancy profession, it will apply to doctors, and I see that doctors have been considering this very thing at their conference recently. As to the lawyers, we are up against something a bit different because in some countries of 'the Six' the lawyers and the barristers are amalgamated – there is fusion. This is not so in this country and I know that The Law Society and the Bar Councils have been

considering that aspect of it. The chartered surveyors, I believe, are in rather a good position because I am told there are no chartered surveyors on the Continent, so they have got it all to themselves. What the position of architects is I do not know. However, I am just touching on this question and I may be making some mistakes about it; but this gives an idea of some of the implications facing our professions if we enter the Common Market and I am quite sure that all professional bodies, if they have not already started, will soon be considering where their own members stand in relation to this position.

There is also the question of subsidies. If, for instance, railways are subsidized and cost tens or hundreds of millions perhaps a year to maintain, it really means that everything on those railways is being subsidized and the Government is paying something to keep the freight rates down instead of the freights paying for the running of the railways. That would mean, therefore, that the movement of goods in this country was not equivalent to the movement of goods on the Continent because of a subsidy. Again, take a Government-owned aircraft flying over to France; if it was subisdized by the British Government, the goods that were being carried would not be paying their full whack of freight. Those things will have to be sorted out so that there is not too much subsidy by one foreign Government to give a preference in the price and cost of goods as against another when there are no tariffs to adjust in between.

The question of patent law is also something which will have to be examined. There have been international agreements in relation to patents before and they may have to be more internationalized so far as this country is concerned. The question of monopolies and the Restrictive Practices Act will unquestionably have to be modified and there will have to be legislation so as to make sure that our arrangements are similar and match up with the arrangements on the Continent.

## Commonwealth Problems

Now I want to touch on the Commonwealth. With regard to the importation of raw materials, I think I can say in general terms they are no problem. They do not enter into any of the discussions, because raw materials coming in will not be affected by our joining the Common Market, whether they come from the Commonwealth or anywhere else. As to tropical products, there is very little trouble about those either.

But when you come to the temperate foodstuffs and manufactures then, of course, you are up to your neck in it! Temperate foodstuffs comprise such things as mutton, butter, eggs and the like and, of course, New Zealand is probably the most vulnerable of all in relation to temperate foodstuffs and their importation into this country under the preferential tariff. We have got to accept the brutal fact, however, that

the proportion of Commonwealth imports and of our exports to the Commonwealth are both declining and have been declining for some time. At the same time, the Commonwealth countries have been setting up subsidiary industries of manufacture and they have put in tariffs and quotas against this country, as well as against the rest of the world, for their own protection. I am not complaining about the Commonwealth countries doing that; it is an obvious thing they had to do. But the Mother Country has got to live as well, and so naturally one has got to say, 'Well, it is all very well thinking of the Commonwealth countries, but we have also got to think of Great Britain'.

Those are certain facets; there are others pulling in the opposite direction, but let us face up to the reality of this thing: the Commonwealth countries very naturally have all been arguing their own point of view. I am trying to present our position in broad terms, and if we try and meet everybody's point of view in the Commonwealth, this poor old Mother Country might be left out in the cold. We have to support the Commonwealth—there is no doubt about it—and I do not say for a moment that I am arguing either for or against the Common Market. I am only trying to present some fairly obvious pointers.

# More Competition – But More Exports

The Common Market countries maintain a total population of the order of 170 million, Britain has roughly fifty million. That makes a total consumer population of 220 million, which is a greater population than that of either the United States or Soviet Russia. I think the United States has about one hundred and seventy-eight million and Soviet Russia about two hundred million. Now, combined manpower is an extraordinarily important thing; it is a force of production and consumption which makes for prosperity as long as they are above the starvation line.

If, then, Britain joins the Common Market, what involved? Let me touch on a few things. There wi obviously be more competition in the home marke from the Continent; but on the other hand, we sha have new export opportunities to the Continer because there will be no tariffs against us, or common tariff as between one and the other unt 1967. There will be a need on the part of our manu facturers and exporters to redirect their expor thinking. They will have to think, for example, standards in the Common Market and various other things; but there will be new opportunities given; us for purchasing on the Continent, and possibly switch some of our present sources of supply fro other foreign countries to the Common Market ar that should be to our considerable advantage. That from the trade point of view.

Then we must look at it from the business point wiew. Unquestionably we would very quickly have t

have bi- or tri-lingual instructions on everything we produced and sent out. There will be a need for greater standardization because we shall have to conform to European standards as well as our own, and that is where the British Standards Institution is loing such splendid work in trying to get international standardization for so many things. That ought to make longer runs on our production ines.

There will, of course, be certain changes in our lesigns and specifications to meet continental equirements; there should be larger units through malgamations between ourselves and our former ompetitors and possibly our partners on the continent, and in any case there should be a great leal of co-operation — if not actual unity — with ontinental firms. I think that we shall quite quickly equire common measurement as well as a common oinage. Those are things which I think will follow not we are in the Common Market.

# **Higher Food Prices**

In the labour position, there will undoubtedly ave to be consultations among the unions on their ttitude towards labour and production methods. 'here will unquestionably be a labour reaction to igher prices. It has been said that the cost of living ill go up; in a way it will, but in another way it will ome down. I think probably the cost-of-living index ill not be altered, although the price of food, nitially at any rate, is likely to go up. You see, there is Government subsidy at the present time of the rder of about £1 million a day to the farmers. We ay this to the farmers each year to keep farm prices own and keep our farmers going. On the Continent ley do not have a Government subsidy; there is a msumer subsidy, and that, of course, puts up the rice of food to the consumer. That would put the price of food in Britain if there is a common ricultural policy.

Against that, a whole number of goods which we all be able to import into this country should be leaper; television sets, washing machines, and rious other things. There will be greater comtition and prices of those products should come win, and they are all included in the present index retail prices. So, by and large, the cost of living ould not go up but I think the price of food will; id there will probably be a new wage policy which e unions would have to negotiate in line with the ommon Market provisions on equal pay and social rvices.

Horticulture, apart from agriculture, to some extent ay be adversely affected. There will, of course, be eater competition; however, British horticulturists e ahead in many things and will no doubt hold eir own.

I now want to deal with another matter and that is e extraordinary fact that while these developments ve been taking place, between forty and fifty countries in the world have signed a treaty called GATT - General Agreement for Tariffs and Trade - by which it is agreed, in effect, that no one would put tariffs up; in fact through consultation with one another all would gradually tend to bring them down. Yet, in spite of that far-reaching agreement, this European Common Market has grown up. Why? A lot of people say it should not have done; that GATT could have done the job. I do not think it could, however. One feature about GATT was that while the Americans agreed to it, Congress would not ratify it, so it does not apply to them. That means that the United States can still put their tariffs up against us if they like; although, I may add, a Bill was passed and ratified by the President only this last month, whereby he now has greater powers to reduce American tariffs than the President has ever had before, which is important for this country. But that is getting a bit away from GATT; America never really joined GATT. She was never really bound by it.

Nevertheless, GATT only dealt with economics—with tariffs—whereas this Common Market is something much bigger, of much wider conception; much grander. Its aim is to bring the countries of Europe together as a community.

# Outlook for Industry

Finally, here is a list of some of the industries which may be favoured if Britain joins the Common Market; also some which may expect a mixed outlook and some which may be least favoured. The industries which it is said will be favoured if we enter into the Common Market will be tractors, commercial vehicles, electric computers, textile machinery, men's clothing, woollen cloth, iron and steel, office machinery and chemicals. That is a fairly wide selective list.

Those with a mixed outlook – those which just do not know how they will fare – include machine tools, general engineering (such as pumps and earth moving equipment), furniture, pottery and glass.

The manufactures which it is thought will suffer to some extent include cotton textiles, leather goods, footwear, cameras, toys, scientific instruments, watches and clocks – all things which continental countries are pretty good at, and so naturally the British industries in these fields may feel the draught. However, it is provided in the Treaty of Rome that if in any country an industry is particularly hardly hit, if there should be any industry which really would go right out completely because of the circumstances of the Common Market, the Government has the right to give that industry certain help and to subsidize it. Otherwise Governments must not, of course, subsidize any industry because that would be giving it an unfair advantage.

I hope these observations may be of some assistance in appreciating and perhaps understanding the implications of this difficult but most important subject.

# Weekly Notes

636

# RESIGNATIONS FROM THE COUNCIL OF THE INSTITUTE

THE resignations of Mr Donald V. House, F.C.A., and Mr C. U. Peat, M.C., M.A., F.C.A., from the Council of The Institute of Chartered Accountants in England and Wales were received with regret at the meeting of the Council held on November 7th, a report of which appears elsewhere in this issue.

The Council thus loses two Past Presidents who have rendered outstanding service in many spheres. Mr House joined the Council in 1942, Mr Peat in 1944, and so have been in the centre of affairs during a period when the membership of the Institute has nearly trebled. More important still it has been a period during which the Council has been much more closely in touch with members generally throughout the country. This is due as much as anything else to the development of the summer courses with which Mr House has been so closely identified. He served. as chairman of the summer course committee from its inception in 1947 until 1953 and was chairman of this year's course at Oxford. Mr House has also served on many other of the Council's committees, being chairman of a number of them. He was Vice-President of the Institute in 1953 and President in

Mr Peat is the bearer of a most distinguished name in the accountancy profession and is one of the very few accountants who have taken an active part in parliamentary affairs. He was Conservative M.P. for Darlington from 1931-45 and during the last war was firstly Private Secretary to the President of the Board of Trade, then Joint Parliamentary Secretary to the Ministry of Supply and subsequently served as Parliamentary Secretary to the Ministry of National Insurance. Mr Peat was elected to the Council in 1944 and has served as a member of the General Purposes Committee, District Societies Committee and Articled Clerks Committee. He was Vice-President of the Institute in 1958 and President in

The accountancy profession owes both these distinguished men a considerable debt of gratitude.

# STOCK VALUATION AND THE INLAND REVENUE

THE House of Lords' decision in Ostime v. Duple Motor Bodies Ltd (40 A.T.C. 21) has emphasized that there can be more than one valid basis of valuation of stock-in-trade for the purpose of computing profits under Case I of Schedule D. Clearly the Inland Revenue cannot insist on a trader retaining

the same valid basis for all time, particularly as techniques of stock valuation improve. On the other hand, there could be some scope for manipulation. The Council of the Institute of Chartered Accountants in England and Wales sought the views of the Inland Revenue on the topic of changes in the basis of stock valuation and this has brought forth a note from the Inland Revenue which is reproduced on another page. We need hardly say that the pronouncements in the note do not have the force of law, but the statement will nevertheless perform a most useful service to the profession and to trade and industry generally.

# SCHEDULE E EXPENSES AND THE HEADMASTER

F a headmaster attends lectures on history for the purpose of preparing lectures to be delivered by himself at his school, do the lecture fees paid by him constitute an expense incurred wholly and exclusively in the performance of his duties as headmaster? On November 8th, Mr Justice Ungoed-Thomas held (according to *The Times*, November 9th) that they did not. Mr Thomas David Brooks, headmaster of Tintwistle Church of England School, Hyde, Cheshire, took a course on history at Burton Manor Residential College of Adult Education. He was required to give lectures on history at his school and he could not attend the College during school hours. He took the course to improve his knowledge, finding it easier than studying textbooks. However, his contract as headmaster did not require him to attend such a course. The General Commissioners allowed his claim to deduct the £9 but the tax inspector appealed on the ground that Mr Brooks was not performing his own duties when he attended the lectures; his duties consisted of teaching, not attending lectures. The Court accepted this argument and allowed the Crown's appeal.

# PAYMENTS FOR TECHNICAL EDUCATION ALLOWED

IN 1946 the Income Tax Acts were altered in orde to permit a trader to deduct, in arriving at hi taxable profit,

'any payment to be used for the purposes of technica education related to that trade at any university o university college'

and at approved technical colleges (Finance Act, 1946 section 29). Technical education was to be deemed to be related to the trade if, and only if, it was technical education of a kind specially requisite for person employed in the class of trade to which the trade belonged. The section was re-enacted by section 14 of the Income Tax Act, 1952. On November 7t Mr Justice Ungoed-Thomas affirmed a decision of the Special Commissioners putting an interpretation on section 140 which can hardly be welcome to the Inland Revenue.

Mr T. G. Berry, a farmer, of Ashes Farm, Long-ridge, claimed a deduction for the fees paid by him for the full-time education of his two sons at the Lancashire County Institute of Agriculture at Winmarleigh College. The two sons had formerly been employed by him as farm labourers. The Inland Revenue argued in vain (according to *The Financial Times*, November 8th) that the section ought to be construed as being confined to payments for which he trader received some commercial return. His ordship accepted the taxpayer's argument that the ees need not be paid to the College direct, as long as hey were paid for the purposes of the technical education. The fees were accordingly allowed.

# CONTRACTING ADDITIONAL EMPLOYEES OUT OF STATE PENSIONS

N an appeal to the National Insurance Adjudicator by the Bath and Wells Diocesan Board of Finance ADJ/APP.8), the question arose whether it was roper for the Registrar of Non-participating Employnents to add a fresh employment to an existing ertificate of non-participation, by variation of such ertificate, or whether it was necessary for the mployer to make a new formal election with a view to he issue of an entirely new certificate of non-particiation confined to the fresh employment in question, nd leaving the pre-existing certificate on foot quoad he existing employments. The former is the more onvenient and economical course and the Adjudicator reld on September 29th, 1962, that there was nothing o prevent it, either in the National Insurance Act, 959, or in National Insurance (Non-participation lertificates) Regulations, 1959.

At the same time the Adjudicator held that the ariation could not be antedated. He also held that the loard of Finance was the employer of the secretary to be Dilapidations Board of the same diocese, the last ecision being based on the terms of section 9 (3) of the Ecclesiastical Dilapidations Measure, 1923.

### CONTRACTING OUT: LATE APPLICATIONS

No our issue of May 26th last, under the heading 'No back-dating for pension schemes', we reported decision of the National Insurance Adjudicator onfirming that the Registrar's certificate of non-articipation in the graduated pension scheme under the National Insurance Act, 1959, cannot be ante-ated. On June 15th last, the Adjudicator gave two milar decisions in cases where the employer had assed the necessary documents to the insurance ompanies acting for them, but the insurance companies had not passed these on to the Registrar in due me. In the first case, J. Kerswill & Sons Ltd told s insurers, the Northern Assurance Company Ltd, wards the end of 1960 that, as from the commencement of the statutory scheme in April 1961 it desired

to contract out certain of its employees. The employer completed all the necessary documents and sent them to Northern, as its agent, to pass on to the Registrar. Northern did not pass them on until October 1961, however, and the Registrar refused to antedate his certificate to before October 1961. The Adjudicator has now held that he has no power under the Act to direct any antedating, notwithstanding the fact that the employer was not in any way at fault (ADI/APP/3).

In the second case, the firm of Edmund Buckley & Co desired to contract out by means of a scheme through its insurers, the Phoenix Assurance Co Ltd, which company made inquiries of the Registrar, on the firm's behalf, as early as January 16th, 1961. The firm completed the necessary document, and handed it to the local office of Phoenix, in March 1961, but Phoenix did not pass it on to the Registrar until November 1961. As it was not at fault, the firm asked that the certificate of non-participation be antedated to April 1961, in order to avoid double contributions, but the Adjudicator held that he had no power to do this (ADJ/APP/4).

### MORE ABOUT OMBUDSMAN

THE British branch of the International Commission of Jurists (called Justice) has now circulated to all M.P.s a reply to the Lord Chancellor's statement in the House of Lords on the Ombudsman idea. The statement was also circulated by the Attorney-General on November 8th, 1962, in the House of Commons.

The statement said that the Government had considered the proposals made by Justice for increasing the powers of the Council of Tribunals and that a Parliamentary Commissioner should be appointed to look into cases of maladministration. The Government's view is that they would conflict with the principle of Ministerial responsibility to Parliament. In their view there is already adequate provision under the Constitution and parliamentary practice for the redress of any genuine complaint.

Justice's retort has been that there has never been any suggestion that such appointments as the Comptroller and Auditor-General infringes on the doctrine of Ministerial responsibility and that no one suggested at the time of the Crichel Down inquiry that the investigation into the activities of the Ministry of Agriculture was inconsistent with ministerial responsibility. Indeed, said Justice, the disclosures of the inquiry put that doctrine into operation since the Minister of Agriculture resigned. It has already been pointed out in Press criticism of the Government statement that a Parliamentary Commissioner would hardly interfere with the prompt and efficient dispatch of public business (as the Government aver) since such a Commissioner would be concerned with only a minute fraction of public business, and that in any case the prompt attention to allegations of maladministration should take precedence over efficiency and speed of administration.

### SELLING STANDARD SHIPS

CAMMELL LAIRD & CO (Shipbuilders & Engineers) Ltd, have offered to Norwegian shipowners a list of six standardized ships for their consideration. This was done recently in Bergen in Norway and the list ranged from a small short sea vessel to oil tankers and bulk carriers of over fifty-five thousand tons. The offer included possible financial terms to eligible customers including credit ranging to ten years or more. In addition, the company is prepared to consider what it calls 'semi-barter' deals covering part payment for a ship in commodities such as cotton. It might even make an investment in a standard ship, taking a 5 or 10 per cent interest and so entering the shipping world itself.

Mr Robert Johnson, chairman and managing

director of the company, said that they were prepared to visit potential clients in any part of the world whenever there was an opportunity of doing business. All the ships offered would be powered by diesel engines of alternative manufacture. Mr Johnson said that the ships would be substantially lower in price than comparable ships built to owners' specifications. He indicated also that quick orders would get particularly attractive prices.

This is not the first offer of a standard ship made from a British yard, but it is the first of a range of ships so offered. The idea of a standard ship has not appealed very much to shipowners so far, but the offer is a courageous one and an imaginative sales effort from a company which has recently spent large sums in made with a read-

in modernizing its yards.

# This is My Life ...

by An Industrious Accountant

CHAPTER 146

WAR, as Sherman remarked succinctly, is hell. So, too, is the salary problem. People don't get paid enough - they say; they don't get paid fast enough; they have a permanent grievance.

My trouble started simply enough, not in the cutand-thrust of cross-table argument over increments and ceilings, but in the simple mechanics of the monthly payments. It hardly seems possible, but that's how it was.

Salary payments are normally routine events. Time was when I followed my predecessor's habit of laboriously writing out all the cheques by hand, though later arranging for my private secretary to type the dates and names and mandates as a labour-saving device. In hushed secrecy I inserted the amounts and then obtained the appropriate signature before issuing the envelopes on the last day of the month. Little enough work was done in the next hour, I observed, as executives of all levels hastened out on the flimsiest of excuses to the bank.

My portly departmental accountant used to be the worst offender. Early married, and loaded with hire-purchase debts to the utmost limit of precarious solvency, that cheque meant all-in-all to him. Time and again on the penultimate afternoon each month his beseeching eye gleamed round the door. 'Any chance they're signed yet?' he'd whisper plaintively. The following morning his itching palm would appear in silent appeal across my desk almost as I sat down. In the passage outside a carefully nonchalant queue of the less affluent was forming unobtrusively. Few of these cheques were outstanding for long.

There was one disastrous day when the deputychairman, a character far from sensitive to the problems of lesser mortals, went off to play golf one thirty-first of January, leaving the salary cheques locked in his private safe. It had been a long and belt-tightened wait since the Christmas extravagances; the queue grew restive. The muttering grew to a grumbling and the grumbling grew to a mighty rumbling; riot was imminent. I had to take drastic steps to solve the problem, but that, as Kipling used to write, is Another Story.

After that we scrapped the ancient fetish of secrecy and passed cheque preparation down the line, reserving to me only the very top brass. Then there was P.A.Y.E. with its attendant train of miseries – codes and deductions and duplicate advices. Now we pay nearly half the staff by bank transfer. This necessitates earlier payments, which please everyone, though my D.A. still haunts the passage like Hamlet's ghost.

my D.A. still haunts the passage like Hamlet's ghost.

Then, recently, I innocently mentioned my intention of paying out December salaries the Thursday before Christmas, and Prinny, our personnel director, waxed indignant. Much too early, he objected, dismissing with a snort my claim that pay is, in fact, equitably and morally due in midmonth. Two weeks in arrear, two weeks in advance I adumbrated, and called on our auditor for support

That gentleman took the point facetiously, remarking that the problem wasn't giving Prinny any grey hairs. Then it was that I put my big foot right in it. 'Oh, he takes good care not to acquire grey hairs', I smiled. My aim was only to pay tribute to the director's calm, panic-free, efficiency and equanimity, but Prinny suddenly went puce.

'I don't know what you think you mean by that remark', he grunted sourly. I noticed suddenly the fresh golden glow on his gleaming curls; for the firstime I realized that he had a regular rinse as well as perm. I stuttered and reddened in turn; there was painful silence; our erstwhile friendship was shaken

Mercifully our auditor saved me by referring sadly to his own balding dome, thus distracting the director, or I might have paid dearly for my tactless ness.

# Finance and Commerce

### P.L.A.

EXTRACTS from the March 31st, 1962, accounts of the Port of London Authority which comprise this week's reprint provide an interesting variation from the usual company accounts. This year's P.L.A. report and accounts look startlingly modern compared with 1961. It is not merely a question of form and layout, shape, size or paper; it is a complete transformation. Side by side, the past looks quite old-fashioned.

Size, previously foolscap, is now eleven inches deep by eight and a half inches. The cover, magazine style, is high-gloss and opened out to seventeen inches wide gives a fine picture of ships in dock. Many other pictures show ship and dock scenes, and the centre opening provides two maps, one of the Thames from Teddington to the Nore, the sixty-nine miles under P.L.A. administration, and the other a plan of the docks from London down to Tilbury.

For the accounts, of course, precise form is prescribed by statutory instrument but the presentation has been made attractive and the figures easy to follow by good layout, the use of blue ink for narrative and current figures with the comparison in black.

Following the accounts are charts and statistics showing the work done by the port; trade handled, tonnage of goods, stocks of goods in the Authority's warehouses, five years' trade figures with 1962 in larger type – a very useful idea – and statistics of assets.

# Present Values

As required in accounts of this nature one of the statements is of capital expenditure. Here is shown the original £23,027,113 in connection with the acquisition of the undertaking, plus £30,492,185 for subsequent improvements less £5,153,407 for war damage total losses. In sum total, there is just on £51 million involved. The annual report notes that it has recently been estimated that if the Authority's eplaceable assets were to be constructed today, the lost would be nearly £200 million and that leaves out and, excavations, etc.

The point is made that on this basis, interest and sinking fund charges would need to be some ten imes the comparable figure in the accounts. 'The Authority's charges would have to be much higher

and capital would then be seen to be as significant as labour in the Authority's operations.' The report deals both with the efforts of the Authority to keep port charges as low as possible and of the inevitable increase in charges to put the port's finance on a sounder basis. The year actually resulted in a deficiency of £718,527, the largest ever in a peacetime year.

The report contains many items of incidental interest, such as, for instance, that during the year nearly five thousand tons of miscellaneous driftwood

were collected by the P.L.A. staff.

# City Centre

I'T may sometimes be wondered just what Mr 'Average Shareholder' makes of accounts like those, for example, of City Centre Properties Ltd. This observation is not a criticism of the accounts as such, but an expression of a feeling that, faced with a consolidated balance sheet totalling over £80 million and a consolidated revenue account that brings in £5,673,238 for rents receivable, the average man is out of his depth.

The same can, of course, be said of many other of the big multi-million companies that make up the business firmament. Which prompts the thought that perhaps it is more the personalities, and the results they achieve, in which the average investor places his trust. Here, in City Centre, is the Cotton-Clore property empire. Chairman is Mr Jack Cotton; deputy-chairman is Mr Charles Clore; and one of the two vice-chairmen is Mr Frederick William Lindgren, F.C.A.

The group owns properties in 280 cities, towns and boroughs in the United Kingdom. Pictures in the annual report include the 'topping out' ceremony last May on the Pan-Am building in New York, 830 feet up. Many of the new 'skyscrapers' in London and the provinces belong to City Centre – or Cotton-Clore – and there is a long list of outside interests with which the company is linked. Joint companies have been formed with pension funds like those of I.C.I., Imperial Tobacco and Unilever; and with such big interests as the British Transport Commission.

# Camp Bird

REFERRING to the point of Camp Bird proxy validity in this column last week it was stated that 'this particular episode in the company's history, in fact, provides another instance of the vital need in company administration to get things right.' It should be made clear that the comment was intended in general terms. The form of proxy which gave rise to the confusion was not the fault of the secretarial department of the Camp Bird company. The fault lay in the form of proxy issued by Investors' Protection Facilities Ltd.

# Report of the Auditors to the Port of London Authority

As Auditors appointed by the Ministry of Transport under Section 109 of the Port of London (Consolidation) Act, 1920, we report that we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Authority so far as appears from our examination of those books. We have examined the above Balance Sheet and annexed Revenue Accounts which are in agreement with the books of account. In our opinion, and to the best of our information and according to the explanations given to us, the said Balance Sheet, and the Revenue Accounts, together with the notes thereon, respectively, give a true and fair view of the state of affairs of the Authority as at 31st March 1962, and of the operating results for the year ended on that date.

5 London Wall Buildings, London, E.C.2.

# CITY NOTES

So long as it can keep free of political and international 'alarums and excursions' the stockmarket seems to have a reasonable prospect of settling in to better times. Inevitably the change from recession to improvement is likely to be a ragged affair.

Hopes for the future are going to come up against the facts of the past. Buyers of equities on a long-term recovery basis will be sharply reminded that industrial profits have been, and still are, under pressure.

The equity market, however, seems to find some encouragement from the signs that the authorities are returning to the task of prompting lower long-term interest rates. The task was rudely upset by the Cuba developments when, in a week, the gilt-edged market virtually lost the ground so laboriously gained over the previous two months.

At the peak of the gilt-edged rise, Corporation  $5\frac{1}{2}$  per cent loans were being offered at only one point discount on par. The Corporation loan queue was moving quite quickly through the market but the door was closed when the market fell.

It is likely to open again before long, provided the market prompting process proves successful. Some local authorities are known to have had their names down on the borrowing list for five years.

Overall, with buyers, the stock-market prospect looks at least a little less discouraging than it did. There are grounds for confidence, but in the longer, rather than the shorter, term.

# Current Law

# Winding-up Opposed: Petitioner to Pay Costs

In Re Riviera Pearls Ltd ([1962] 2 All E.R. 194, note) the company was already in voluntary liquidation when a judgment creditor (another limited company) sought a winding-up order on the ground that the respondent was insolvent and unable to pay its debts, and that it was just and equitable that it be wound up. The petition was opposed by the company and by the majority in value of the creditors, who supported the continuance of the voluntary liquidation.

Pennycuick, J., said that when there was an existing voluntary liquidation, and a creditor petitioned for a compulsory winding-up, he must show some reason beyond the mere existence of his debt why the Court should make an order. In the present case no evidence had been filed for the petitioner except a formal affidavit verifying the petition. It was accepted that the petition must, in view of the opposition to it, be dismissed, and, in the absence of further evidence,

the petitioner was ordered to pay the costs of the petition.

This case illustrates further the fact – apparent from Re A. E. Hayter & Sons (Portchester) Ltd ([1961], 2 All E.R. 676), already referred to in these columns) – that an unsuccessful petitioner will not be likely to recover costs unless he had good reason for presenting his petition and made his reason for so doing entirely clear.

# Petition by Judgment Creditor

In Re William Hockley Ltd ([1962], 2 All E.R. 111) a judgment creditor (itself a limited company) sought a winding-up order on the ground that the respondent company was insolvent and unable to pay its debts. The petitioner had recovered judgment on December 29th, 1961, and its solicitors had been informed by the sheriff's officer on January 22nd, 1962, that he held two prior executions against the company and that the available effects would not realize, under a forced sale, sufficient to satisfy all executions. Nevertheless, on February 6th the company paid to the sheriff a sum sufficient to discharge the judgment debt. On the following day the sheriff's officer notified the judgment creditor's solicitors

accordingly and informed them that a cheque would be sent on February 21st, this date representing the end of the period of fourteen days during which the sheriff is required, under section 326 (2) of the Companies Act, 1948, to hold the proceeds of an execution, or money paid to avoid sale, against the possibility of a winding-up supervening during that period. On the same day the judgment creditor presented its petition. The petition was not supported by any other creditors, nor were there any opposing creditors.

Pennycuick, J., refused to make an order, because, in default of an order, the petitioner had an unconditional right to payment by the sheriff's officer. The petitioner asked for costs on the ground that it was, at the time when the petition was presented, a contingent creditor within section 224 (1) of the Act. Pennycuick, J., held that the petitioner was not a contingent creditor, because the judgment debt was extinguished by payment to the sheriff; thereafter the petitioner could never again have a claim against the company whilst a going concern for the debt. Accordingly, it must pay the costs of the petition.

## Delivery of Goods on Sale or Return

THE plaintiff in Poole v. Smith's Car Sales (Balham) Ltd ([1962], 2 All E.R. 482) was a dealer in motorcars. At the end of August 1960 he delivered two cars to the defendant company under an agreement which the Court of Appeal found to be one of delivery 'on sale or return', within the meaning of rule 4 of section 18 of the Sale of Goods Act, 1893, which provides that:

'When goods are delivered to the buyer on approval or "on sale or return" or other similar terms the property therein passes to the buyer:

 (a) When he signifies his approval or acceptance to the seller or does any other act adopting the transaction;

'(b) If he does not signify his approval or acceptance to the seller but retains the goods without giving notice of rejection, then, if a time has been fixed for the return of the goods, on the expiration of such time, and, if no time has been fixed, on the expiration of a reasonable time. What is a reasonable time is a question of fact.'

One car was duly sold and paid for in September. In October the plaintiff asked for the return of the other car, and made repeated and unsuccessful requests until November 7th, when he wrote a letter to the defendant company in which he said that if the car was not returned by the 10th, it would be deemed to have been sold to the defendant. The car was not returned by the 10th, and when at last returned it was in bad condition. The plaintiff rejected it and brought an action in which he claimed either £325 as the price of the car sold and delivered, or the return of the car or £325, its value, and £74 for its detention and use.

The Court of Appeal (allowing an appeal from the judge of the Mayor's and City of London Court) held that there had been a sale of the car and the plaintiff

was entitled to the price. The Court took judicial notice of the fact that the seller's market for second-hand cars is not so good in October and November as in July, August and September, so that a reasonable time for the return of the car in question had expired, certainly in November.

### **Election Between Benefits**

If a testator purports to dispose of property of another, and at the same time gives that person property of his own, the doctrine of election requires that the person concerned must elect whether he will keep his own property and surrender an equivalent value of the benefits given to him by the will, or take entirely under the will. The testator in Re Mengel's Will Trusts, Westminster Bank Ltd v. Mengel and Others ([1962], 2 All E.R. 490) by clause 2 of his will made the following dispositions in favour of his wife if she should survive him by thirty days:

'(a) I give devise and bequeath to her free of all duties all my personal and household goods and effects for her own use and benefit absolutely and (b) I give devise and bequeath all the remainder of my property of whatsoever nature and wheresoever situate to my trustees upon trust... for my said wife for and during her life.'

Although he died domiciled in England the testator was domiciled in Denmark at the date of his marriage and the Danish law of community of assets applied to all property of the spouses acquired during the marriage and not disposed of during their joint lives.

Buckley, J., found that the testator could not have intended, in disposing of 'all my personal and household goods and effects', to bequeath an undivided interest in the personal property and household goods and effects which were his ostensible property, but must have purported to dispose of the whole property in such 'personal and household goods and effects' as would have belonged to him had he not been subject to the Danish law of community of property. As it was, the subject-matter of the bequest was not wholly his, the doctrine of election applied, and his widow was bound to elect between the benefits conferred on her by the will and the benefits conferred on her by Danish law. In regard to the life interest in residue, however, his lordship saw no reason to treat the reference to 'all the remainder of my property' as extending to anything which was not in fact the testator's property, so that in regard to it his widow was not put to her election. By clause 3 the testator gave, subject to the provisions of clause 2 and to the extent only that they might not be operative, '(i) To my niece . . . my library of books. (ii) To my nephew . . . my collection of etchings and mountain photographs.' Buckley, J., held that, reading clauses 2 and 3 side by side, it was reasonably clear from the context of clause 3 that the testator did not regard the library or the etchings and photographs as being 'personal and household goods and effects' and accordingly they did not pass to the widow underclause 2(a).

# Taxation Case

A full report of the case summarized in this column will be published, with a Note on the Judgment, in the 'Annotated Tax Cases'.

C.I.R. v. Henry Ansbacher & Co

In the House of Lords - November 1st, 1962 (Before The Lord Chancellor (Lord Dilhorne), Lord Reid, Lord Morris of Borth-y-Gest, Lord Hodson and Lord Pearce)

Stamp duty - Purchase of stock units - Guarantee - Whether collateral auxiliary, additional or substituted security - Whether only or principal or primary security - Stamp Act, 1891, Schedule I - Finance Act,

1949, section 35 (1).

The respondent purchased ordinary stock units of the Oriental Telephone and Electrical Company Limited. The consideration was the payment by a stated date of the sum of 61s for every stock unit, and the payment of another sum which was dependent upon the amount of the compensation receivable from the local government.

By clause 10 of the agreement, which was not under seal, a sum became payable to trustees for the shareholders in the respondent company, and under clause 11 the appellant procured that that payment should be guaranteed, to the extent of £750,000, by

the National Bank Limited. A guarantee to this effect was executed by the bank. It was expressed to be supplemental to the sale agreement, and the bank guaranteed, to the extent of £750,000,

'the due and punctual payment to the trustees of whatever sum shall in the event be payable to the trustees on the second completion date under the

terms of clause 10 of the said agreement'.

The second completion date was the date when the final payment for the stock had to be made. By virtue of section 35 (1) of the Finance Act, 1949, the sale agreement was exempt from stamp duty.

The appellants assessed the amount of stamp duty on the guarantee at 5s per cent, that is to say, at £1,875, and contended that the case was within the

heading,

'mortgage, bond, debenture, covenant... Being the only or principal or primary security... for the payment or repayment of money, or within the description, being a collateral, or auxiliary, or additional or substituted security... where the principal or primary security is duly stamped'.

The respondent contended that the correct amount of

duty was 10s.

Held (affirming the decision of the Court of Appeal): the guarantee was a collateral, auxiliary, additional or substituted security to a security not within the description 'mortgage, bond, debenture, covenant', and was not an 'only, principal or primary security'; and was liable to a stamp of only 10s.

# **Data Processing Discussion Group**

SIR, - I am writing to suggest that the time may be ripe for a Data Processing Discussion Group to be formed under the auspices of the London and District Society of Charered Accountants.

There has been a very rapid expansion in the use of mechanical and electronic equipment for accounting purposes. It is estimated, for instance, that there will be about two hundred computers in use in this country for business purposes by the end of this year and that this will grow by about one hundred a year during the next few years. It is also believed that the predominant uses of these machines are accounting ones and that some 50-60 per cent of all types of 'mechanical' accounting equipment are installed in London and its environs.

For these reasons, I believe that there may now be considerable support for a discussion group of this kind among members of the Institute in the London area. Would those members interested please write to me at the address below? Yours faithfully,

4 Copthall Avenue, London EC2. J. P. HOUGH.

### **Audit of Pension Fund Accounts**

SIR, – In recent years some accountants have asked trustees to include a note on each balance sheet that the actuary's last quinquennial valuation report disclosed a surplus or deficiency of a stated amount and I am wondering if this is not a very dangerous practice.

By including a reference to the actuary's valuation report, I suggest that the members of the fund have a right to assume that the auditor has examined the report and is satisfied with it; but in fact the auditor

is not competent to pass judgment on it.

Further, an actuary prepares his valuation report from information supplied by the trustees of the fund or their secretary, and if by accident or design, say, the pensionable service or salary of some members is shown as less than actual, the liability of the fund to its membership will be understated, and although a surplus is mentioned on the balance sheet there could, in fact, be a large deficiency. In this event, I suggest that the members would have a claim against the auditor, especially if he could not prove that he had taken reasonable steps to ensure that the information given to the actuary was correct. So far as I know, there is usually very little (if any) direct contact between the actuary and the auditor of a pension fund.

Yours faithfully,

Oxted, Surrey.

R. S. MOORE, A.C.I.S.

### General Store: Gross Profit

SIR, - I have recently been concerned with the accounts of a village general store and I wonder if any of your readers could give me an indication of the gross profit percentage that could be expected from this type of business at the present time.

For information the annual turnover is approximately £15,000, mainly from the sale of groceries, tobacco and sweets.

Yours faithfully,

EDWIN.

### Internal Control with a Computer

SIR, — I have read with interest Mr R. Mitchell's article on 'Internal control with a computer'. (November 3rd issue). In the course of his article Mr Mitchell gives an example of parity checks on transfers. From his example it would seem that this is no check on the parity, as even parity is used. Even parity was used on a number of computers, but the majority of computers in production at present use odd parity. Similarly, a parity bit is added to each character on most machines in order to indicate which character is incorrect should an error arise.

If even parity is used, should the information transfer completely fail on a single stream, the information transferred would be acceptable to the computer, as it would pass an automatic check. See Example 1 below.

On the other hand, if odd parity is used the check would fail completely. See Example 2.

Example 3 indicates the use of a character parity or separate parity stream on the information indicating the greater reliability of this feature, or vertical parity as opposed to the longitudinal parity mentioned in the article.

A combination of vertical and longitudinal parity is sometimes employed, as in Example 4, for greater security. On a character machine usually six streams plus a parity stream are employed; on some machines additional parity streams are introduced to enable the computer to automatically trace and correct failures as they occur. The necessary logic to enable this to be done is, however, extremely expensive, and the cost has to be equated with the cost of having to re-process information due to a parity failure. In all this equipment it is the economics of the hardware which must be taken into account when designing the system.

Yours faithfully, Hove, Sussex. J. W. MITCHELL, A.C.A.

[Mr R. Mitchell writes: I am grateful to my namesake for pointing out the limitations of even parity, i.e. a stream failure satisfying the logic. Even parity will do little more than detect the dropping of a single bit which, I believe, is the most common fault. My example was by way of illustration of the parity check technique and was not intended to suggest that even parity was the only, or the best, parity check.]

Stream No.		On	e wo	rd ste	ore		Check bits			On	e wo	rd ste	re			Check Bits

Example 4. - Combined vertical and longitudinal parity, showing double parity failure indicating incorrect bit misread.

# THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES SPECIAL AND ORDINARY MEETINGS OF THE COUNCIL

At special and ordinary meetings of the Council held on Wednesday, November 7th, 1962, at the Hall of the Institute, Moorgate Place, London EC2, there were present:

Mr Percy F. Carpenter, President, in the Chair; Mr Robert P. Winter, C.B.E., M.C., Vice-President; Mr J. Ainsworth, C.B.E., Mr J. F. Allan, Mr W. L. Barrows, Mr T. A. Hamilton Baynes, Mr J. H. Bell, Mr H. A. Benson, C.B.E., Sir William Carrington, Mr G. T. E. Chamberlain, Mr D. A. Clarke, Mr J. Clayton, Mr C. Croxton-Smith, Mr E. Hay Davison, Mr W. G. Densem, Mr S. Dixon, Mr W. W. Fea, Sir Harold Gillett, Bt, M.C., Mr J. Godfrey, Mr G. G. G. Goult, Mr P. F. Granger, Mr L. C. Hawkins, Mr J. S. Heaton, Mr J. A. Jackson, Mr H. O. Johnson, Sir William Lawson, C.B.E., Mr H. L. Layton, Mr R. B. Leech, M.B.E., Mr E. N. Macdonald, D.F.C., Mr R. McNeil, Mr J. H. Mann, M.B.E., Mr R. P. Matthews, Mr W. Bertram Nelson, C.B.E., Mr W. E. Parker, C.B.E., Mr S. J. Pears, Mr F. E. Price, Mr L. W. Robson, Sir Thomas Robson, M.B.E., Mr J. D. Russell, Mr R. G. Slack, Mr D. Steele, Mr J. E. Talbot, Mr A. G. Thomas, Mr A. H. Walton, Mr V. Walton, Mr M. Wheatley Jones, Mr E. F. G. Whinney, Mr J. C. Montgomery Williams, Mr E. K. Wright, Sir Richard Yeabsley, C.B.E.

### The late Sir Harold Montague Barton, F.C.A.

The Council received with much regret notice of the death of Sir Harold Montague Barton, F.C.A., London, a member of the Council from 1928 to 1957 and President for the year 1944-45.

### Resignations from the Council

The Council received with much regret the resignations of Mr Donald Victor House, F.C.A., London, and of Mr Charles Urie Peat, M.C., M.A., F.C.A., London, from their membership of the Council. Mr House had been a member of the Council since 1942 and was President for the year 1954-55. Mr Peat had been a member of the Council since 1944 and was President for the year 1959-60.

### **Audits of Building Societies**

The Council has approved a revised statement on 'Audits of Building Societies' to replace the statement issued in December 1960. The revised statement, which will be issued with the next supplement to the Members' Handbook, takes account of the consolidation of the Building Societies Act, 1960, and earlier Acts into the Building Societies Act, 1962. A copy is being sent to each member (or firm in which members are partners) known to the Institute to be auditor(s) of a building society. A copy will be supplied without charge on application by any other auditor of a building society. Copies in booklet form are available for purchase on application to the offices of the Institute at the price of 5s per copy, post free. (Remittances must accompany orders.)

### **Treasury Scale**

As announced in September, substantial amendments have been made to the Treasury scale of fees for

professional work carried out by firms of accountants for Government departments. The revised scale is effective from April 1st, 1962. The Council decided that copies of the revised scale be distributed to all members.

### Stock Exchange: Accountants' Reports for Prospectuses

The Council authorized for insertion in the *Members' Handbook* a memorandum by the Council of the Stock Exchange, London, regarding reports by accountants with respect to profits, assets and liabilities for purposes of prospectuses, offers for sale, advertised statements and circulars.

### Inland Revenue Practice with regard to a change in the basis of Stock Valuation

The following note has been received from the Board of Inland Revenue in answer to inquiries made by the Institute as to the procedure now followed by the Inland Revenue in cases where there has been a change in the method of computing the amount at which stock-in-trade and work in progress are brought into account:

### CHANGE IN BASIS OF STOCK VALUATION

1. The Revenue accepts any method of computing the value of work in progress and finished stock, which is recognized by the accountancy profession, so long as it does not violate the taxing statutes as interpreted by the Courts. Such a basis is referred to in this note as a 'valid basis'. The expression 'non-valid basis' is used to denote a basis which does not accord with the standard of acceptability referred to in the first sentence of this paragraph, and includes a valuation which, although in form made on a recognized basis, pays insufficient regard to the facts. Having regard to the principle of consistency, there would need to be good reason for any change in an existing valid basis.

### Change from one valid basis to another valid basis

- 2. Where a change from one valid basis to another valid basis is accepted, certain consequences normally follow. The opening stock of the basis year of change is valued on the same basis as the closing stock. Whether the change is to a higher level or to a lower level, the Revenue normally does not seek to revise the valuations of earlier years. It neither seeks to raise additional assessments, nor does it admit relief under the 'error or mistake' provisions.
- 3. It is not possible to define with precision what amounts to a change of basis. It is a convenience, both to the taxpayer and to the Revenue, not to regard every change in the method of valuation as a change of basis. In particular, the Revenue encourages the view that changes which involve no more than a greater degree of accuracy, or a refinement, should not be treated as a change of basis, whether the change results in a higher or a lower valuation. In such cases the new

valuation is applied at the end of the year without amendment of the opening valuation.

4. What constitutes a good reason for a change in the existing basis is a question to be answered by reference to the facts of each case. Possible examples of such justified changes are that of a company absorbed by a group and adapting its basis to the group's principles, or a concern adjusting its basis to conform to some alteration in the nature of its trade.

### Change from a non-valid basis to a valid basis

5. When a change in the basis of valuation is first made from a non-valid basis to a valid one, the new basis is applied to both the opening and closing values of the year of change. In addition a review is made of past liabilities, but in cases where there is no question of past irregularities (that is, fraud, wilful default or neglect) the Revenue would not in any event seek to recover tax for past years on an amount greater than that involved in the uplift of the opening valuation of the year of change.

### Summer Courses 1962

Emmanuel and Sidney Sussex Colleges, Cambridge Christ Church and Pembroke College, Oxford

The Chairman of the Summer Course Committee reported on the proceedings at Emmanuel and Sidney Sussex Colleges, Cambridge, from July 18th to 22nd, 1962, and at Christ Church and Pembroke Colleges, Oxford, from September 13th to 18th, 1962, and stated that the President had sent letters of appreciation to the speakers, to the governing bodies of the four colleges and the others concerned with the conduct of the courses. The Chairman reported that the programmes and full texts of the addresses for each course had been reproduced in booklet form, price 5s each, similar to those prepared for previous summer courses. An order form had been distributed with the October issue of Accountancy and an appropriate notice inserted in The Accountant.

### Summer Courses 1963

The Council has approved the holding of a course at Christ Church and Merton College, Oxford, from July 11th to 16th, 1963, and a course at Emmanuel College, Cambridge, from September 18th to 22nd, 1963.

#### **Eighth International Congress of Accountants**

The Chairman of the Overseas Relations Committee reported on the Eighth International Congress of Accountants held in New York from September 23rd to 27th, 1962, which was attended by about three hundred members of the Institute.

The Council decided that the following resolution be conveyed to the President of the congress:

'The Council of The Institute of Chartered Accountants in England and Wales congratulates the organizers on the great success of the Eighth International Congress of Accountants and wishes to express its warm appreciation of the hospitality shown to those who attended from the Institute. In particular the Council wishes to thank the President of the congress, Mr Arthur B. Foye, and his colleagues on the organizing committees and also the officers of the congress, including the Secretary, Mr John L. Carey.'

### The American Institute of Certified Public

It was reported to the Council that the President had delivered to the President of The American Institute of Certified Public Accountants the congratulations and best wishes of the Council on the occasion of the seventy-fifth anniversary of the incorporation of The American Institute of Certified Public Accountants in 1887 as The American Association of Public Accountants

### The Canadian Institute of Chartered Accountants

It was reported to the Council that the President had sent to the President of The Canadian Institute of Chartered Accountants the congratulations and best wishes of the Council on the occasion of the sixtieth anniversary of the incorporation of The Canadian Institute of Chartered Accountants in 1902 as The Dominion Association of Chartered Accountants.

#### France

Ordre des Experts Comptables et des Comptables Agréés The Council received a report from the President on his attendance at the seventeenth national congress of the Councils of the Ordre des Experts Comptables et des Comptables Agréés at Dijon from October 19th to 21st, 1962.

### **Increases in Examination and Exemption Fees**

In the annual report for 1961 the Council stated that the Institute's present resources and income will require substantial augmentation to meet expenditure on accommodation and expansion in the scope and extent of the Institute's activities; and that recommendations would be placed before members in due course. The Council's proposals regarding members' subscriptions (which will require alteration of bye-laws) will be announced later and the Council will also give its attention to the question of a registration fee on entry into articles. In the meantime the Council has decided to bring the examination and exemption fees more closely into line with the relevant expenditure, and accordingly each of the following fees is being raised to the amounts shown below:

With effect from January 1s				£	5	d
Certificate of exemption fro examination	m the	··	nary	6	6	0
Entry fees for the May 196 examinations	53 and	subsequ	<i>lent</i>			
Preliminary examination				8	8	0
Intermediate examination						
Final examination		• •		10	10	0

### Prize and Scholarship Funds

The Council has resolved that Chartered Accountants Charities Ltd be appointed trustee (in place of the Institute) of the prize and scholarship funds of which the Institute was trustee.

### Report of the Committee on Education and Training

Note. – Students are requested NOT to apply for copies of the following statement. It will be distributed as soon as possible to all members of students' societies.

At its meeting on August 1st, 1962, the Council

authorized the publication of a first statement of the decisions which it had reached on certain of the recommendations in the Report of the Committee on Education and Training. The Council has now authorized the publication of this second statement. Other recommendations in the report are still under consideration and the Council will make further statements in due course.

In authorizing publication the Council again emphasizes that in the cases marked with an asterisk amendments to the supplemental Royal Charter and/or the bye-laws will be required and that these will be submitted to members in the form of resolutions at a special meeting early in 1963. If these resolutions are adopted by members the amendments will be subject to approval by the Privy Council. Where, therefore, decisions are dependent upon such amendments, no member or student or prospective student should take any course of action based on the assumption that these particular recommendations will be implemented.

As this second statement is a continuation of that dated August 1st, 1962, which covered paragraphs numbered 1 to 40, the following paragraphs are numbered to follow that statement. Where a reference is made in the statement to a recommendation in the Report of the Committee on Education and Training, the number of the recommendation is given in brackets.

### Remuneration of articled clerks

41. The Council has accepted the principle of recommendations (66) to (69) that information should be collected as to the emoluments of articled clerks by way of salary, bonuses and other payments or material benefits.

In the record of proceedings of the Council meeting held on August 1st, 1962, the Council stated that replies received through district societies to a previous inquiry indicated the willingness of members to give information anonymously to the Institute on matters such as fees, remuneration and charging rates. The Council announced its decision that, as soon as possible, a questionnaire should be addressed to all practising members on such matters.

The opportunity is being taken to undertake the inquiry relating to articled clerks as part of this wider survey.

### Study leave

\*42. Recommendation (65) proposes, and the Council has accepted, the retention of a maximum allowance of twelve months' study leave during articled service. The Council has also directed its attention to the maximum allowance for articled clerks who receive exemption from the Intermediate examination; most, but not all, such clerks are at present governed by a maximum allowance of six months. The Council will propose to members alterations in the bye-laws to provide that the maximum allowance of study leave for every clerk who receives exemption from the Intermediate examination shall be eight months.

43. Recommendation (65) also proposes an increase in the minimum period of study leave. The Council proposes to revise as may be appropriate the relevant prescribed provisions in articles.

44. As stated in paragraph 18 of its statement of August 1st, 1962, the Council has decided to examine the scope for assistance from technical and commercial colleges on a wider scale than is envisaged in recom-

mendation (46). Some time must elapse before any decision is reached. It will be necessary to provide for the position of articled clerks in the meantime and, in any event, to distinguish those who receive exemption from the Intermediate examination.

\*45. Accordingly, it is intended that the prescribed provision in articles shall provide study leave of at least four weeks immediately before the first occasion on which a clerk presents himself for each examination together with any study leave to attend courses which may in due course be established. (A two-part Final examination is assumed.)

### Syllabus for the new Intermediate examination

46. Set out in the first appendix is the syllabus for the new Intermediate examination which it is proposed to introduce in September 1964.

### Syllabus for the new Final examination

\*47. Set out in the second appendix is the syllabus for Part I and Part II of the new Final examination which it is proposed to introduce in May 1965 and November 1965, respectively.

### Eligibility for examinations

\*48. In the third appendix the eligibility of articled clerks for both the old and the new examinations is set out in tabular form as follows:

Schedule 1 (OLD examinations): clerks entering into articles between January 1st, 1962, and May 31st, 1962.

Schedule 2 (NEW examinations): clerks entering into articles between January 1st, 1962, and May 31st, 1963.

Schedule 3 (NEW examinations): clerks entering into articles after May 1963, who will be required to sit for the NEW examinations.

### Educational standard for entry into articles

49. In paragraphs 25 to 27 of its statement of August 1st, 1962, the Council announced revised conditions for the standard of entry into articles; these conditions were set out in detail in the appendix to that statement. Consideration has been given to the standard of passes in the recognized examinations in Scotland and Northern Ireland, and the Council has decided as follows:

(a) Scotland

(i) that in the following examinations two passes at the higher grade will be accepted as equivalent to one pass at the advanced level in the general certificate of education examination and that three passes at the higher grade will be accepted as equivalent to two passes at the advanced level:

Senior leaving certificate (Scotland)

Scottish leaving certificate

Scottish universities preliminary examination.

(ii) that in the above examinations a pass at the higher grade in English together with a pass at the lower grade in English will be accepted as equivalent to passes at the ordinary level in English literature and in English language in the G.C.E. examination and that a pass at the higher grade in Mathematics together with a pass at the lower grade in Mathematics will be accepted as equivalent to passes at the ordinary level in two separate mathematical subjects in the G.C.E.

· examination.

### THE ACCOUNTANT

(b) Northern Ireland

(i) that a pass at the advanced level in the Senior certificate examination of Northern Ireland will be accepted as equivalent to a pass at the advanced level in the G.C.E. examination;

(ii) that a pass or a pass with credit at the ordinary level in the Senior certificate examination of Northern Ireland will be accepted as equivalent to a pass at the ordinary level in the G.C.E. examination.

The necessary amendments will be incorporated in the revised regulations which will be set out in the next edition of the booklet General Information and Syllabus of Examinations, to be published at the end of November 1962.

### Term of service under articles

\*50. In paragraph 11 of its statement of August 1st, 1962, the Council announced proposed amendments to the Royal Charter and bye-laws to reduce to four years the term of service under articles for those who obtain a prescribed minimum of passes (including two at the advanced level) in the general certificate of education examinations and who commence service at the age of 18 years or later. If these proposals become effective the Council will for this purpose accept passes in the examinations in Scotland and Northern Ireland as being equivalent to passes at the advanced level in the G.C.E. examination on the basis set out in paragraph 49 above.

### Registration of Articles

The Secretary reported the registration of 490 articles of clerkship during the last month, the total number since January 1st, 1962, being 2,259.

#### Admissions to Membership

The following were admitted to membership of the Institute:

Feeley, Cyril Vincent, A.C.A., a1962; with Holmes-White,

Herbert & Co, 776 Barking Road, London E13. Goddard, Anthony Michael, A.C.A., a1962; 24 Windmill Road, Headington, Oxford.

Gourlay, John Cowden, A.C.A., a1962; 'Martlets', Park Lane, Knebworth Herts.

Hillman, Lloyd, A.C.A., a1962; 24 Fitz James Avenue, London W14.

Hudswell, Ronald Frank, A.C.A., a1962; 28 St Michaels Crescent, Luton, Beds.

Hydrie, Mohammed Abu Muzaffar Hasan, A.C.A., a1962; 12 Concanon Road, London SW2.

Oratis, John Paul, A.C.A., a1962; 7 Leithcote Gardens, Streatham, London SW16.

Taylor, Christopher John Grammer, A.C.A., a1962; High Cross House, Kirkburton, near Huddersfield.

a Indicates the year of admission to the Institute.

aS Indicates the year of admission to The Society of Incorporated Accountants.

Firms not marked † or \* are composed wholly of members of the Institute.

- † Against the name of a firm indicates that the firm, though not wholly composed of members of the Institute, is composed wholly of chartered accountants who are members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.
- Against the name of a firm indicates that the firm is not wholly composed of members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.

Tidmarsh, Anthony Clive Bickerton, A.C.A., a1962; 'Furzefield', West End Lane, Haslemere, Surrey. Verey, Trevor Ronald, A.C.A., a1962; with Price Waterhouse & Co, Koninginnegracht 86, Den Haag, Holland.

### **Fellowship**

The Council acceded to applications from twelve associates to become fellows under clause 6 of the supplemental Royal Charter.

### **Incorporated Accountant Members becoming Associates**

The Council acceded to two applications from the following incorporated accountant members for election as associates under clause 6 of the scheme of integration referred to in clause 34 of the supplemental Royal Charter:

Conlon, Kieran Joseph, B.A., A.S.A.A., a1959; with Howell, Wade & Co, 10 Gray's Inn Square, London WC1. Farkas, Fritz Erwin, A.S.A.A., aS1956; with R. H. March, Son & Co, Baltic House, Mount Stuart Square, Cardiff.

### **Members Commencing to Practise**

The Council received notice that the following members had commenced to practise:

Agballah, Hyacinth Okoli Petrus, A.C.A., a1962; Petrus Agballah & Co, 39 Zik Avenue, Uwani, Enugu, Nigeria. Alexander-Passe, Harry, A.C.A., a1959; Alexander-Passe, Berke & Co, Cheshire Court, 142 Fleet Street, London

Barnett, Michael, A.C.A., a1961; Cohen, Arnold & Co, Ling House, Dominion Street, London EC2, and 8 City Road, London EC2.

Barrow, (Miss) Elizabeth Dixon, A.C.A., a1954; R. L. Wyllie & Co, 34 Lowther Street, Whitehaven, Cumber-

Bragoli, Bruno Kenneth James, A.C.A., aS1956; \*Chagnon, MacGillivray & Co, 46 Jackson Street East, Hamilton, Ontario, Canada.

Burrough, Graham Frederick, A.C.A., a1957; M. W.

Burrough & Co, 10 South Street, Bridport, Dorset. Budd, John Derek, A.C.A., a1960; de Paula, Turner, Lake & Co, Imperial House, Dominion Street, London EC2. Campsie, Thomas Booth, F.C.A., a1951, aS1948; Hodgson, Harris & Co, National Provincial Bank Chambers, Market Place, Boston, Lincs, for other towns see Hodgson, Harris & Co.

Capey, James Hugh, F.C.A., a1949, aS1948; Hodgson, Harris & Co, 53 Eastcheap, London EC3, for other towns see Hodgson, Harris & Co.
Chetwynd, Richard Walter, A.C.A., a1962; †Singleton, Fabian & Co, Lee House, London Wall, London EC2.

Cluett, Norman Vivian, A.C.A., a1962; 2A Ronald Park

Avenue, Westcliff-on-Sea, Essex.

Cohen, Arnold Judah, A.C.A., a1962; Cohen, Arnold & Co, Ling House, Dominion Street, London EC2, and 8 City Road, London EC2.

Collings, William Glydon, F.C.A., a1940; Mona House, Uplyme, Lyme Regis, Dorset.

Dexter, David Alexander, A.C.A., a1960; \*Potts, Twells & Co, 22/23 Market Place, Loughborough, Leics.

DuBuisson, Peter William Grostête, A.C.A., Fabian & Co, Lee House, London Wall, †Singleton, London EC2.

Dunn, Raymond, A.C.A., aS1956; Holland, Dunn & Co, 24 Galloway Road, Fleetwood, Lancs.

Ellis, Christopher Douglas, A.C.A., a1960; 23 Conway Gardens, Mitcham, Surrey.

Fisher, Bernard James, A.C.A., a1962; S. McCombie & Co, Barclays Bank Chambers, Hitchin, Herts.

Fletcher, John Robert, A.C.A., a1961; H. Overton Salt & Co, 52 High Street, Sutton Coldfield, and at Birmingham.

Flower, John Francis, B.Sc. (BCON.), A.C.A., a1961; George Flower & Son, 64 Sandringham Gardens, North Finchley, London N12.

Fuller, Frank Edwin, F.C.A., a1925; 16 Rugby Road,

Worthing.

Gilchrist, Alec, A.C.A., a1959; Poulsom & Co, and John Larkin & Co, National Bank Building, 24 Fenwick Street, Liverpool 2.

Godfrey, Edward Charles, A.C.A., a1956; Thornton Baker & Co, 8 West Walk, Princess Road, Leicester, and at

Northampton and Spalding.

Green, Kenneth Peter, A.C.A., a1959; Greene, Clements & Co, 20 Bloomsbury Square, London WC1, and at Enfield. Greenhalgh, William Michael, A.C.A., a1961; W. M. Greenhalgh & Co, Morley House, 29 South Street, Farnham, Surrey.

Haase, Ludwig Otto Gerhard, A.C.A., a1958; 12 Brooklane Field, Harlow, Essex.

### Re-admission to Membership

Subject to payment of the amounts required by the Council, three former members of the Institute were re-admitted to membership under clause 23 of the supplemental Royal Charter and two former members under bye-law 38. One application under clause 23 was refused.

### Resignations

The Council accepted the resignations from membership of the Institute of:

Catley, Clare Leslie, F.C.A., aS1938; 95 Castle Road, Scarborough.

Hutcheson, James Blair, F.S.A.A., aS1931; 56 Hillview Terrace, Edinburgh 12.

Kemp, Walter Lowther, F.C.A., a1904; Old Hall Cottage, Holland Road, Frinton-on-Sea, Essex.

Webb, (Miss) Daphne, A.C.A., a1958; Apt B, 2064 Westbury Road, Ottawa 3, Ontario, Canada.

#### Deaths of Members

The Council received with regret the Secretary's report of the deaths of the following members:

Barton, Sir Harold Montague, F.C.A., London, a member of the Council from 1928 until 1957 and President 1944-45. Barratt, Herbert William, F.C.A., Birmingham. Cresswell, James, F.C.A., Addiscombe. Denning, Norman Langley, F.C.A., Bristol. Lockett, Charles Jackson, F.C.A., Manchester. Lynas, John, F.C.A., Stockton-on-Tees. McCall, Stuart Scott, F.C.A., Bristol. McNeil, George, F.C.A., London. Plewman, Thomas Leslie, F.C.A., Bedford. Powell, Frederick Arthur, F.C.A., Four Oaks, Warwicks. Round, Arthur Reginald, F.C.A., Dudley. Rountree, Arthur Fitzgerald, O.B.E., J.P., F.C.A., Oldham. Taylor, Edward, F.C.A., Jersey. Whatley, Archibald, F.C.A., London.

#### Presentation of Prizes

Whitaker, Lawrence, F.C.A., Canterbury.

Following the meeting of the Council on November 7th, the President formally presented prizes and

certificates of merit to the successful candidates in the May examinations who were able to attend. Relatives and friends of prizewinners were invited to the ceremony, which was held in the Oak Hall at Moorgate Place and was followed by tea.

In the course of his address Mr Carpenter said:

I would like to welcome you all to the Oak Hall of the Institute.

Among a President's duties, there are few more pleasurable than presenting prizes and certificates of merit to the candidates who have been outstandingly successful in our examinations.

I feel, and I am sure that the Council as a whole feel, that it is very fitting that we should publicly congratulate those who have made such a promising start to their careers.

who have made such a promising start to their careers.

I think it is true to say that in all probability you owe your success to three major factors.

success to three major factors -

Firstly, by possessing natural ability above the average -

this you owe to your parents.

Secondly, by having been well taught or by having been taught to teach yourselves – this you owe to your school-masters, your tutors, your principals, your office colleagues and your Students Societies.

And thirdly to your having done a considerable amount of hard work. This of course you owe primarily to yourselves, helped I trust by the encouragement of your parents and

colleagues.

To those who have passed the Intermediate examination I extend my warm congratulations and hope that you will go on to equal or to greater success in your Final. As you know every successful candidate in the Intermediate examination is told his place in the pass list with a view to enabling him to assess how well he has done, but for obvious reasons in the Final examination only those receiving certificates of merit have this information. The other successful candidates have to rely on their own judgment as to whether they just missed a merit certificate or were 'last with others'.

To those who have passed their Final examination, I would say that in our profession there are exceptional opportunities for men and women of high intelligence and who are willing to work. You undoubtedly still have a great deal to learn and as you advance in the profession, as I am sure you will, I hope you will not forget the debt you owe to your parents and to those who have helped you.

In particular I hope you will in future associate yourself closely with the Students Societies, District Societies, and with the Institute. The service which these bodies can render is largely due to the tremendous amount of voluntary work done by our members and as I know from my own experience there are few more satisfying and rewarding activities than service to one's chosen profession.

#### FIRST APPENDIX

### to Council Statement of November 7th, 1962

REVISED SYLLABUS FOR THE INTERMEDIATE EXAMINATION

(First examination September 1964)

#### SUBJECTS

(Three hours are allowed for each paper)	No. of questions
Book-keeping and Accounts two papers	4 to 6 (each paper)
AUDITING	6 to 10
GENERAL PAPER	
For detailed syllabus see below.	•

#### Notes:

(i) Questions will NOT be set on the following: executorship accounts, executorship law, estate duty, consolidated accounts, statements of affairs, liquidators' accounts or cost accounting.

(ii) Whilst there is no separate paper on taxation, candidates will be expected to have elementary knowledge of the law and principles of income tax and their

simple application.

Questions will NOT be set involving the computation of capital allowances, a knowledge of surtax, profits tax, excess profits levy, penalties, assessment of capital gains or foreign income, double taxation relief, residence or domicile.

(iii) The number of questions set in each paper will

vary between the limits indicated.

(iv) The syllabus is intended as a general guide to the questions which will be comprised in each paper. It must be understood that it does not necessarily exclude the setting of questions in kindred subjects not specifically referred to. Questions will NOT be set on new legislation until it is actually in operation.

(v) Where a question in any paper requires a knowledge of law, candidates are expected to know the principles which have been established by certain cases but they will not be penalized for not stating the name by which a particular case is known; neither will they necessarily be expected to quote cases as authority for their answers.

### **Detailed Syllabus**

GENERAL PAPER

- including the elements of English law.

Office routines; the purchase, sale, storage and carriage of goods (home, import and export); mercantile, commercial and insurance terms; the use of banking accounts and of cheques and bills of exchange; Stock Exchange terms and the practice in the purchase and sale of securities.

Elements of English law. The nature, origin and development of common law, equity and statute law; the system of case law; the functions of the various Courts of Justice; the judges and main officers concerned with the administration of the law; the elements of the law relating to property (real and personal), torts and contracts (including agency). Questions will NOT be set on constitutional law, criminal law, probate, divorce and admiralty law, emergency legislation, the practice of the Courts, specific statutes and decided cases.

### SECOND APPENDIX

to Council Statement of November 7th, 1962
REVISED SYLLABUS FOR PARTS I AND II OF
THE FINAL EXAMINATION

### SUBJECTS

(Three hours are allowed for each No. of paper)

No. of questions

#### Part I

(First examination May 1965)

Advanced Accounting I . . . . . 4 to 6
This paper will include one major and
one or two minor questions on executorship.

(See also note (i) below.)

Taxation I	4 to 8
ENGLISH LAW I	8 to 12
English Law II	12
Part II	

(First examination November 1965)	
ADVANCED ACCOUNTING II (See note (i) below.)	4 to 6
ADVANCED ACCOUNTING III (For detailed syllabus see below.)	5 to 9
AUDITING	6 to 10
Taxation II	5 to 9
GENERAL PAPER  - including the elements of economics.  (For detailed syllabus see helan)	6 to 10

### Notes:

(i) Questions involving sole traders and partnerships may be asked in either or both of the Advanced Accounting I and Advanced Accounting II papers. Questions relating exclusively to taxation or estate duty will NOT be included in either paper as these subjects will be covered elsewhere. Questions involving group or consolidated accounts will NOT be asked in the Advanced Accounting I paper.

(ii) The number of questions set in each paper will

vary between the limits indicated.

(iii) The syllabus is intended as a general guide to the questions which will be comprised in each paper. It must be understood that it does not necessarily exclude the setting of questions in kindred subjects not specifically referred to. Questions will NOT be set on new legislation until it is actually in operation.

(iv) Where a question in any paper requires a knowledge of law, candidates are expected to know the principles which have been established by certain cases but they will not be penalized for not stating

the name by which a particular case is known; neither will they necessarily be expected to quote cases as

authority for their answers.

#### **Detailed Syllabus**

The detailed syllabus for the Advanced Accounting III paper and the General Paper is published below solely in order to give candidates and their tutors some indication of the scope of these papers.

### ADVANCED ACCOUNTING III

The use of accounts by management including the preparation, presentation and interpretation of accounting data for that purpose.

The form, preparation and uses of information for control including forecasts and budgets for capital and revenue receipts and expenditure, profit and cash. Reporting on the financial aspects of proposals for capital expenditure and investigations relating thereto.

The recording and analysis of accounting and statistical data in relation to stocks of materials, work in progress, labour and other direct and indirect expenses. Job, product, process, standard, depart-

mental and marginal costing.

The presentation and use of costing data for control purposes; forms of operating statements and methods of portraying financial results; measures of effectiveness and analysis of changes. The interpretation and use of statistics, graphs and break-even charts for the portrayal of financial results and operating statements and for managerial control.

The analysis and interpretation of accounts including costing and financial statements and the draft-

ing and presentation of reports thereon.

Office methods and equipment including mechanized methods as applicable to the financial, costing and factory records.

It is intended to publish in due course an illustrative reading list for this paper.

#### GENERAL PAPER

- including the elements of economics.

Prices, Production and Income

Production - allocation of resources: diminishing and increasing returns; relation of production to consumption and capital formation; economic development.

The price mechanism - supply and demand; com-

petition and monopoly.

Division and allocation of the national income wages, profits, interest and rent; spending and saving.

### Money and Finance

Money and banking - the role and nature of money; the banking mechanism; inflation and deflation; the Bank of England and the joint-stock banks; money market and insurance institutions, their functions and

Finance - the provision of corporate finance: the capital market including the Stock Exchange; new issues; reconstructions and amalgamations; investments; the financial structure of companies; the sale and purchase of businesses.

Goodwill; valuation of assets; methods of valuation of stocks and shares; distinctions between different classes of companies and other undertakings.

Taxation - theory of taxation; fiscal policy; finances of the State and of local authorities.

### Industry and Trade

Industrial organization; industrial monopoly and restrictive trade practices; nationalized industries; commodity markets; employment and unemployment.

External trade, including its organization and finance; the balance of payments; international investment; foreign exchanges; regional trade and financial groupings; international economic organizations.

This paper may also include problems connected with any of the above matters on which chartered accountants may be consulted professionally.

It is intended to publish in due course an illustrative reading list relating to that part of the General Paper involving an elementary knowledge of economics.

November 17th, 1962

### ACCOUNTANT

### THIRD APPENDIX to Council Statement of November 7th, 1962

Eligibility for Old and New examinations

This appendix sets out, in tabular form, the eligibility of articled clerks for both the OLD and the NEW examinations as follows:

Schedule 1 (OLD examinations):

Clerks entering into articles between January 1st, 1962

and May 31st, 1963.

Schedule 2 (NEW examinations): Clerks

Clerks entering into articles between January 1st, 1962

Schedule 3 (NEW examinations): and May 31st, 1963. Clerks entering into

Clerks entering into articles after May 1963 who will be

required to sit for the NEW examinations.

### Schedule 1

(OLD examinations)

A clerk entering into articles before June 1963 (as set out in paragraph 32 of the Council's statement of August 1st, 1962) may elect

either (i) to sit for the OLD Intermediate examination under the existing rules of eligibility until the last examination in May 1965 and either for the OLD Final examination (available up to November 1966) or for the NEW Final examination;

or (ii) to sit for the NEW Intermediate examination under the revised rules of eligibility from the first examination in September 1964 and thereafter for the NEW FINAL examination (see note (5) below).

A clerk serving four year articles which commence after March 1st, 1963, and a clerk serving five year articles commencing after March 1st, 1962, will be required to sit for the NEW FINAL examination.

Where the clerk elects under (ii) above the dates of the NEW examinations are given in Schedule 2 on page 656. Where the clerk elects under (i) above the following table shows the earliest dates of the OLD examinations for which he may apply to sit.

Date of	O	LD Intermedia	ate		OLD Final	
commencement of articles	3 years	4 years (see note 1 below)	5 years	3 years	4 years	5 years (see notes 2 and 3 below)
Jan. 1st, 1962 to Feb. 28th, 1962 (see note 2 below)	May 1963	Nov. 1963	May 1964	Nov. 1964/ May 1965 (see note 2 below)	Nov. 1965	*Nov. 1966
Mar. 1st, 1962 to May 31st, 1962 (see notes 2 and 3 below)	May 1963	Nov. 1963	May 1964	May 1965	May 1966 (see note 2 below)	
June 1st, 1962 to July 31st, 1962	Nov. 1963	May 1964	Nov. 1964	May 1965	May 1966

<sup>\*</sup>Last OLD examination available.

#### Notes

(1) A clerk serving four year articles may first apply to sit for the OLD Intermediate examination after the completion of eighteen months' service under articles; for the purpose of the OLD Intermediate examination the service of any clerk is deemed to have commenced on the first day of the calendar month in which in fact it commenced.

(2) A clerk may first apply to sit for the OLD Final examination (last available November 1966), provided that:
(a) he has completed his term of service under articles or the examination is held within the last three months of his service under articles;

and (b) two years have elapsed since the time of passing the OLD Intermediate examination (one year in the case

of a clerk serving three year articles.)

By way of example, to be within the last three months rule referred to in (a) above, a clerk entering into articles in 1962 or up to March 1st, 1963, must have commenced his service under articles not later than the following dates.

Of D. Bird manifestant falling within the commenced his service under articles not later than the following dates.

articles 3 years 4 years 5 years	commencing articles February 24th, 1962 March 1st, 1962 March 1st, 1962	three months  November 1964 (four further examinations available) November 1965 (two further examinations available) November 1966 (last available examination) Persons entering articles after March 1st, 1962 MUST sit the NEW examination
3 years 4 years	August 25th, 1962 August 31st, 1962	May 1965 (three further examinations available) May 1966 (one further examination available)
3 years 4 years	March 1st, 1963 March 1st, 1963	November 1965 (two further examinations available) November 1966 (last available examination)

(3) A clerk serving five year articles whose service commenced after March 1st, 1962, must sit for the NEW Final examination but a clerk serving five year articles whose service commenced not later than March 1st, 1962, may apply under the last three months rule to sit for the OLD Final examination in \*November 1966, subject to having passed the OLD Intermediate not later than November 1964.

(4) A clerk serving four year articles whose service commences after March 1st, 1963, must sit for the NEW Final examination but a clerk serving four year articles whose service commences not later than March 1st, 1963, may apply under the last three months rule to sit for the OLD Final examination in \*November 1966, subject to having passed the OLD Intermediate examination not later than November 1964.

(5) As stated in paragraph 32 (j) of the Council's statement of August 1st, 1962, a clerk who sits for the NEW

Intermediate examination shall be required to sit for the NEW Final examination.

### Schedule 2 (NEW examinations)

A clerk entering into articles before June 1963 (as set out in paragraph 32 of the Council's statement of August 1st, 1962) may elect

either (i) to sit for the OLD Intermediate examination under the existing rules of eligibility until the last examination in May 1965 and EITHER for the OLD Final examination (available up to November 1966) OR for the NEW Final examination;

(ii) to sit for the NEW Intermediate examination under the revised rules of eligibility from the date of the first examination in September 1964 and thereafter the NEW FINAL examination (see note 1 below).

Where a clerk elects under (i) above the dates of the OLD examinations are given in Schedule I on page 655. Where a clerk elects under (ii) above the following table shows the earliest dates of the NEW examinations for which he may apply to sit.

Date of	NEW	Interme	diate	NEV	V Final P	art I	NEW Final Part II

<sup>†</sup>First available examination.

#### Notes:

(1) As stated in paragraph 32 (j) of the Council's statement of August 1st, 1962, a clerk who sits for the NEW Intermediate examination shall be required to sit for the NEW Final examination.

(2) An articled clerk who has been exempted from the Intermediate examination may not first sit for Part I of the Final examination until he has completed eleven months' service under articles; for this purpose the service of any clerk is deemed to have commenced on the first day of the calendar month in which, in fact, it commenced.

<sup>\*</sup>Last OLD examination available.

### Schedule 3

### (NEW examinations)

A clerk entering into articles after May 1963 is required to sit for the NEW Intermediate and Final examinations (see paragraph 32 of the Council's statement of August 1st, 1962).

The following table shows the earliest dates of examinations for which he may apply to sit.

Date of	In	termedia	ate	Fi	nal Part	Ţ	Final Part II			
commencement of articles	3 years	4 years	5 years	3 years (see note below)	4 years	5 years	3 years	4 years	5 years	
June 1st, 1963 to	Sept.	Mar.	Mar.	†May	Nov.	Nov.	May	May	May

Cost Accounting principles and practice: . . . managerial control for . . . business operations; by J. W. Neuner: 6th edition. Homewood, Ill. 1962. (Richard D. Irwin, 64s.)

Dynamic Business Management; by H. Norcross. 1962. (Business Publications, 35s.)

Essays in the Theory of Economic Growth; by Joan Robinson. 1962. (Macmillan, 18s.)

Inventories: a guide to their control, costing and effect upon income and taxes; by R. A. Hoffman. New York. 1962. (Ronald Press, presented by the author.)

Taxation Guide 1962-63 . . .; by J. D. Jenkins. Bradford. 1962. (Typescript, 22s 6d.)

A Guide to Operational Research; by W. E. Duckworth. 1962. (Methuen, 20s.)

# NORTHERN CHARTERED ACCOUNTANTS' DINNER

# MORE ACCOUNTANTS IN THE FIELD OF PUBLIC ENTERPRISE

Over three hundred members and guests attended the annual dinner of the Northern Society of Chartered Accountants held at Newcastle upon Tyne on November 9th, with Mr J. C. Benson, F.C.A., President of the Society, in the chair.

Proposing the toast of 'The Institute of Chartered Accountants in England and Wales', Dr William Reid, C.B.E., Ph.D., B.SC., chairman of the Durham Division of the National Coal Board, placed the diners in three categories – those they liked, those they had to like and those they may have to like – but said that by the end of dinner they would all be alike.

### Valuable Asset

The field of public enterprise, said Dr Reid, was coming increasingly under the rule of the accountant and in the mining industry there was a gradual rise in the number of professional accountants employed.

The major difference as compared with before was the appointment of professionally qualified finance advisors at every level of control. Sceptics might say that that was the reason for the industry losing money, but there were other reasons for that, and the services of a skilled professional accountant were indeed a valuable asset in any organization. He was very glad as chairman of a divisional board to have an experienced accountant at his side.

The Durham Division had a working capital of £104 million, an annual capital expenditure of £67 million and an annual revenue of £120 million, and that meant a very big task for a financial director in capital control, in budgeting forward, in the interpretation of costs and in sharing the responsibility of complying with national policies and directives.

It was not every accountant who could do this. His approach had to be a much broader one than that of a public accountant, and there must be some appreciation of the difference between the ideal and the practical. He had to have a spirit of adventure — at the same time to make judgements born of experience.

The Institute, continued Dr Reid, was a great organization, well respected in commerce not only in this country but throughout the world. Their professional standards were very high and made a very great contribution to the British reputation for a square deal throughout the world.

### Over Thirty-six thousand Institute Members

Replying to the toast, Mr P. F. Carpenter, F.C.A., President of the Institute, said that there were now just over thirty-six thousand members of the Institute. The Council was exceedingly busy and apart from routine matters, they had a number of special projects in hand,

such as the Parker Report on educational training. In this, as Dr Reid had said, they had to draw a distinction between the ideal and the practical. There was also the syllabus of new examinations and other decisions regarding the implementation of the Parker Report which had now been announced.

With the coming of seven new universities, said Mr Carpenter, it might well be that the recommendations of the Parker Report would have to be looked at again in five or ten years' time, when a larger supply of graduates would undoubtedly be available to the profession, as well as to the country as a whole.

The President went on to say that the Council was also dealing with the small practitioner inquiry and another matter receiving attention was the extension of the Institute's research activities.

### **Higher Subscriptions?**

In conclusion, Mr Carpenter said that he wished to mention that the members of the Finance Committee of the Institute were 'a little bit worried' about ways and means. There was a big programme ahead and it was most likely that there would be a suggestion that the very moderate subscriptions might well have to be slightly increased.

Perhaps, he added, the situation wasn't quite similar to the one in which Churchill said, 'A detailed method of spending the money has not yet been thought out, but we are assured on the highest authority that if only resource and energy is used there will be no difficulty in getting rid of the stuff'!

Proposing the toast of "The Guests', Mr K. J. Sharp, T.D., M.A., J.P., F.C.A., secretary of the Cumberland Branch of the Northern Society, said that the inclusion of his name in the toast list and the list of guests had nothing to do with the system of double entry. It was a matter of custom that the secretary of the Cumberland Branch should have as the sole 'perk' of his term of office the privilege of attending the dinner free of charge and then, as a junior official of a vassal State, must welcome the other guests.

These fell into three categories – those who had been useful, those who were being made use of and those whom they wished to make use of in the future. Broadly speaking the first two categories consisted of official guests and clients. He had been told by a business man, whom he was thankful was not a client, that he had never seen an accountant pay anything out of his expense account, and that was possibly the reason why they had a dinner.

Mr Sharp said that they were glad to welcome Mr Evan-Jones, one of the new joint secretaries of the Institute, but, he added, amid laughter, it must not be assumed that the double volume of paper now likely

### THE ACCOUNTANT

Replying for the guests, Mr M. N. Craigs, M.A., a Newcastle solicitor, said that he claimed to be the only

to be sent out was going to be read by all who guest at the top table who represented nobody and nothing but had had a free dinner in consideration for making a speech. He was happy to say that the guests had been most admirably wined and dined.

### STRENGTHENING THE PROFESSION

### NORTH YORKS AND SOUTH DURHAM CHARTERED ACCOUNTANTS' DINNER

The annual dinner of the North Yorkshire and South Durham Branch of the Northern Society of Chartered Accountants was held at the King's Head Hotel, Darlington, on November 2nd. The Chairman of the Branch, Mr C. D. Humphreys, F.C.A., A.C.W.A., F.T.I.I., presided.

The toast of 'The Institute of Chartered Accountants in England and Wales', was proposed by Mr E. G. Fairburn, a director of Tyne-Tees Television. Mr Fairburn said that accountancy was one of the professions that had a great part to play in the future. As professions went, accountancy was young, but as society moved forward and became more complicated the need for specialization grew. One of the most important things the profession had to consider today, said Mr Fairburn, was to control its speed of growth. The profession had not yet reached the limits of its capacity, but the time had come when consideration should be given to strengthening its position. Many people who called themselves accountants had no qualification, except perhaps 'a general experience'. He expressed the view that he would like to see one single body of accountants in the United Kingdom with powers of training, powers of control and with a central registry so that no one could practise as an accountant without his name being on the register.

### Training for the Profession

With regard to the training of accountants, he said hat it was not a good thing for the profession for 70ung men to come into it without being given a sense of responsibility and appreciation of its value, which should be foremost in their minds. 'It was not enough hat young men should be brought in from school with a high degree of training and then 'put at a desk and given a bottle of red ink and a clerks' wages'. If the profession was to be strengthened something ought to be done to tighten up the initial training, he declared.

Mr Fairburn then referred to the Common Market, and said that in the great vista that was opening there was going to be a great need of accountancy. The time was coming, he hoped, when there would be the opportunity for accountants to spread their influence into Western Europe. The chartered surveyors were sending specially selected representatives to Europe so that they would be prepared. Those industries which had gone to the trouble of sending representatives abroad to find out the position would be better placed to take their opportunities in the general reorientation of Western Europe.

They must take advantage of all the opportunities which would present themselves in the very near future, and that future was going to be very important for this country, to Western Europe generally and possibly the world. The building up of a group of nations with a population of well over two hundred million was something to think about,' he concluded.

#### Planning for the Future

Responding to the toast, Mr R. P. Winter, C.B.E., M.C., T.D., D.L., F.C.A., Vice-President of the Institute, also stressed the importance of planning for the future. The profession, he said, must look forward and not back. They must face the Common Market and all that it meant.

During this month National Productivity Year would be inaugurated, and this was an opportune moment for accountants to take stock and see how they could help their clients in industry to meet all the demands. They must keep themselves up to date in new technologies to give better service.

'There was a tendency before the war', Mr Winter continued, 'to feel that a young man who qualified and entered industry had left the profession, but we now realize that a young man in industry is just as important as the practising member.'

He said that he would welcome some scheme where an articled clerk could spend some time working on theory, and the method of combining the two aspects - practice and theory - was another problem the Council was examining.

Mr D. B. Ward, M.B.E., F.C.A., proposed the toast of "The Guests', and Mr G. W. Nattrass, President, The Insurance Institute of Middlesbrough, responded.

### Computer for Manchester Corporation

THE Corporation of Manchester has ordered a LEO III computer and is believed to be the first city in the United Kingdom to order a large-scale transistorized magnetic tape computer for local government use.

Due to be installed in the city centre in the late spring of 1964, the computer will take over and extend the work of the Corporation's existing computer installation. It will run the payroll for some twenty-one thousand five hundred weekly and nine thousand five hundred monthly paid employees and handle other work including pensions, payment of accounts, expenditure analyses, general rates and water charges, and quarterly rents. LEO will also provide costings for labour, transport and materials, and prepare statistics such as records of health visits, traffic census, births, etc.

LEO III is completely transistorized and able to carry out calculations in decimal, sterling or weights and measures without any need for conversion. It uses magnetic tape and also has punched-card and paper tape equipment. Results can be printed on a high speed line printer at a rate of up to one thousand lines a minute.

### Off-line Printing Configuration

DEVELOPMENT of a new, low-cost, off-line printing configuration, for use with the Honeywell 800 in computer applications having heavy print-out requirements, was announced recently by the Honeywell E.D.P. Division. The new equipment consists of an off-line printer control unit used with a high-speed printer and either a standard or economy magnetic tape transport.

The off-line printing configuration, including the

high-speed printer, an economy tape unit and the printer control unit, can be hired for £1,401 per month. The sales price is £70,305. Delivery time is twelve months from date of order.

The Honeywell high-speed printer operates at a rate of 900 lines a minute. A total of 160 print positions per line are available. Of these, 120 positions may be 'active' in any given print run. The standard density magnetic tape unit has a data of 96,000 decimal digits per second. The economy tape unit reads or writes at 48,000 decimal digits per second.

### Report on Office Automation

AN interesting progress report in booklet form entitled Office Automation (H.M.S.O., price 5s) has been prepared by Dr W. H. Scott, of the Department of Social Science, University of Liverpool, for the European Productivity Agency of the Organization for Economic Co-operation and Development. It deals with some of the sociological and psychological studies of the way in which the introduction of electronic computers affects office workers.

Research was carried out in five O.E.C.D. member countries (France; Germany, the Netherlands, Sweden and the United Kingdom) in a variety of firms including banks, insurance and offices of manufacturing companies. The studies cover the 'pre-change' situation, with a description of the work, staff attitudes and working conditions before the installation of computers. The situation as it develops during the change-over is considered, from the taking of the decision to the actual installation, with all the attendant difficulties. The report concludes with some enlightening observations as to the future, forecasting staff cuts, transfers, and changed relations between management and office staff.

The report makes no claim to be a detailed, theoretical one, rather it aims to illustrate the changes of all kinds inherent in the installation of electronic equipment in offices. Its main appeal will be to those employers, executives and operatives who have a say in the installation of computers.

### E.D.P. System for Yorkshire Electricity Board

A view of the KDP10 electronic data processing system opened last week at the new data centre of the Yorkshire Electricity Board at Seacroft, Leeds. The present intention of the Board is to centralize the consumer accounting work of its sub-areas replacing existing punched-card installations by electronic systems.

The installation will be employed on the processing of data relating to about twenty-five thousand consumer accounts and printing out the bills ready for dispatch. It will also produce up-to-the minute information on a wide variety of matters available from the detail contained in the consumer records.

## Notes and Notices

### PROFESSIONAL NOTICES

MESSRS COOPER BROTHERS & Co and COOPERS & LYBRAND announce that they have opened an office at P.O. Box 73, Central African Road Services Buildings, Great East Road, Fort Jameson, Northern Rhodesia.

Messrs Buckley, Hall, Devin & Co, Chartered Accountants, announce that as from November 1st, Mr S. H. Hall, M.A., A.C.A., has been admitted as a partner in their London and Hull practices, and Mr Dennis Finfer, c.a., in their London practice, from which Mr George E. Cartwright has retired.

MR WALTER HOLMES OURY, F.C.A., announces that his elder son, Mr BRIAN ROBERT OURY, A.C.A., has recently joined him in partnership, and in future the practice will be carried on at 62 High Street, Slough, and 38 High Street, Maidenhead, under the style WALTER H. OURY & CO.

Messrs Geo. Little, Sebire & Co, Chartered Accountants, of Adelaide House, London Bridge, London EC4, announce that they have admitted into partnership, as from October 1st, 1962, Mr Alastair R. McCrae, c.a., a senior member of their St Albans office staff and that Mr Vivian Fox Brown, f.c.a., retired from the partnership on that date, having taken up a commercial appointment.

Messrs Spicer & Pegler, Chartered Accountants, announce that consequent upon the redevelopment of the 19 Fenchurch Street area, where their offices are situated, they are moving on November 17th, to St Mary Axe House, 56-60 St Mary Axe, London EC3. Telephone: Avenue 3070.

### **Appointments**

Sir Gerard d'Erlanger, C.B.E., F.C.A., deputy chairman of the Provident Mutual Life Assurance Association, is to become chairman on January 1st next.

/ Mr G. Kirkman, A.C.A., has been appointed secretary/accountant of English Tools Ltd, and A. & F. Parkes & Co Ltd.

Mr K. S. Smith, c.A., accountant, of Mocatta & Goldsmid Ltd, has been appointed a director of the company.

### ASSISTANT OFFICIAL RECEIVER APPOINTMENT

The Board of Trade have announced that as from November 5th, 1962, Mr Walter Scaife has been appointed an Assistant Official Receiver for the Bankruptcy District of the County Courts of Birmingham, Coventry, Dudley, Hereford, Kidderminster, Leominster, Stourbridge, Walsall, Warwick, West Bromwich, Wolverhampton and Worcester.

### DOUBLE TAXATION: REPUBLIC OF SOUTH AFRICA

The double taxation convention with the United Kingdom and the Republic of South Africa relating to taxes on income was ratified on September 27th, 1962, and has now been published as the Schedule to an Order in Council numbered S.I. 1962, No. 2352.

### MEMORIAL SERVICE Sir Harold Barton, F.C.A.

A memorial service for Sir Harold Barton, F.C.A., whose death was announced in our issue of October 27th, will be held at the church of St Botolph Without, Bishopsgate, London, on Tuesday, December 4th, at 12 noon.

### MAURITIUS SUGAR INDUSTRY INQUIRY

Mr C. J. M. Bennett, F.C.A., a partner in the firm of Barton, Mayhew & Co, Chartered Accountants, has been appointed, with Dr Thomas Balogh, a Fellow of Balliol College, Oxford, as Chairman, to inquire into the Mauritius Sugar Industry. The terms of reference of the two-member Commission include the examination of the present basis of the apportionment of sugar accruing to planters and millers; the present system of credit facilities available to planters; and the cost of production, in field and factory, having regard to the need for ensuring that a fair share of the proceeds of the industry, in the form of wages and salaries, accrues to all the workers engaged in the industry.

### BUILDING AND CIVIL ENGINEERING INQUIRY

Mr P. A. Barnes-Graham, C.A., has been appointed a member of a working party set up by the Minister of Public Building and Works to 'examine the significant differences between the organization and practices for building and civil engineering in Scotland and those in England and Wales, and to make recommendations with a view to promoting greater efficiency'. Mr Barnes-Graham is secretary of Brownlee & Co Ltd, of Glasgow.

### **POST-WAR CREDITS**

Under the Post-War Credit (Income Tax) Amendment Regulations 1962, post-war credits are now payable to men over 60 and women over 55. Claim forms may be obtained at any post office; when completed, they should be sent to the appropriate tax office. The new regulations implement the Chancellor's recent announcement on post-war credits referred to in our issue of October 13th at page 487.

### IN PARLIAMENT Schedule A

Brigadier CLARKE asked the Chancellor of the Exchequer if he will give consideration to the abolition of Schedule A Tax as already promised by Her Majesty's Government.

Mr MAUDLING: I am glad to repeat the undertaking given by my right hon. and learned friend the Member for Wirral (Mr Selwyn Lloyd) that provision for ending the charge to tax under Schedule A on owner-occupiers of residential property will be included in next year's Finance Bill. As my hon. friend said, it will depend on revenue considerations whether this can be done in a single operation in one year.

Hansard, Nov. 6th, 1962. Written Answers. Col. 41.

### Rates: Revised Assessment

Mr LIPTON asked the Minister of Housing and Local Government and Minister for Welsh Affairs when ratepayers will be told what their revised assessments will be in 1963.

Sir K. Joseph: Rating authorities will get the new lists on December 21st, and will arrange for them to be open to inspection. Ratepayers will not, of course, know what they have to pay until rating authorities make their rates two or three months later.

Hansard, Nov. 6th, 1962. Oral Answers. Col. 776.

### Investment Allowance: Hotel and Catering Industries

Sir N. Cooper-Key asked the Chancellor of the Exchequer whether the recent concessions regarding investment and initial allowances apply to the hotel and catering industries.

Mr Barber: The proposed increase in the investment allowances for capital expenditure on new plant and machinery incurred after November 5th will apply to such expenditure incurred for the purposes of any trade, including the hotel and catering industries. The proposed increase in the investment allowance for new industrial buildings will not affect these industries. My right hon. friend has not proposed any change in the initial allowances.

Hansard, Nov. 6th, 1962. Written Answers. Col. 41.

### **Building Societies: Income Tax**

Sir C. OSBORNE asked the Chancellor of the Exchequer what would be the approximate annual cost of freeing all building societies of income tax payments; and what proportion of their receipts from interest on loans for house purchase is absorbed by income tax.

THE FINANCIAL SECRETARY TO THE TREASURY (Mr ANTHONY BARBER): It is estimated that to exempt building societies from income tax apart from the tax they pay in respect of share and deposit interest going to investors would cost £11 million, or about 6 per cent of their receipts from interest on loans.

Hansard, Nov. 6th, 1962. Oral Answers. Col. 792.

### Income Tax: Recovery

Captain Kerby asked the Chancellor of the Exchequer how many legal actions were instituted in 1961 for the recovery of income tax; how many of such actions were successful; how many failed; what was the cost of such actions; how much cash they recovered; and in how many cases successful defendants were repaid their costs.

MR BARBER: 2,530 writs were issued in 1961 for the recovery of income tax. In nearly half these cases the tax was paid before judgment. None of the actions failed, but a very few of them may have been discontinued to remedy some technical flaw as a preliminary to starting the action afresh: in such cases the Inland Revenue is liable to pay any necessary or proper costs incurred in the discontinued action.

In addition local proceedings for the recovery of income tax were taken in about forty-six thousand

I regret that the other information requested is not available.

Hansard, Nov. 9th, 1962. Written Answers. Col. 116.

### SCOTTISH INSTITUTE'S NEW DIRECTORY

The Official Directory, 1962-63, of The Institute of Chartered Accountants of Scotland, now published, shows that membership at July 31st, 1962, numbered 7,077 compared with 6,928 in the previous year. An analysis of this total reveals that there were 3,671 members in Scotland at July 31st, of whom 1,086 were 'in practice on their own account or as partners in firms'. Members in the United Kingdom other than Scotland numbered 2,236 (257 in practice as principals or partners), and there were 1,170 members abroad (197 in practice as principals or partners).

The Directory, which extends to 605 pages, contains the usual alphabetical and topographical lists of members, together with details of the membership of the Council of the Institute and the Standing and

Local Committees for 1962-63.

### **Computer Course**

Thirty-six members of The Institute of Chartered Accountants of Scotland attended an advanced computer course organized by the Institute at the Turnberry Hotel, Ayrshire, from last Saturday to Thursday of this week. The course was arranged for the benefit of the younger accountant in industry whose firm has installed or is likely to install a computer. The members who participated had all previously attended one of the three introductory computer courses run by the Institute.

A session on 'E.D.P. equipment and applications' included a review of principles and equipment, principles of programming and card systems; and a further session on 'Impact of E.D.P. on the organization' dealt with pre-installation planning, controlling the computer and future systems development. The speakers at both these sessions were from International Computers and Tabulators Ltd, and IBM United Kingdom Ltd. Other addresses were given as follows:

'Impact of E.D.P. on the organization—user experience', by Mr John M. Amour, C.A., of Lloyds & Scottish-Finance Ltd, and Mr Ronald Peddie, B.A., C.A., of The United Steel Companies Ltd.

'Impact of E.D.P. on the accountant – accounting & auditing problems', by Mr D. W. Hooper, M.A., F.C.A., of The National Coal Board, and Mr F. Clive de Paula, T.D., F.C.A.

'Data transmission', by Mr G. Dale, Inland Telecommunication Department, G.P.O.

'Demand of the computer on the accountant of the future', by Mr T. W. McRae, C.A., P. D. Leake' Research Fellow 1961-62.

There was also a general question time session conducted by Professor Robert Browning, C.B.E., M.A., LL.B., C.A., Professor of Accounting at the University of Glasgow, and convener of the computer course committee.

### THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

#### President's Luncheon

The President of The Institute of Cost and Works Accountants, Mr W. Bishop, C.A., F.C.W.A., gave a luncheon party yesterday (Friday), at 63 Portland Place, London. Those present were:

Mr A. Abel-Smith, T.D., J.P. (managing director, J. Heyry Schroder & Co Ltd); Mr A. L. G. Lindley, C.G.I.A.,

M.I.MECH.E. (chairman and managing director, The General Electric Co Ltd); Mr J. P. Martin-Bates, M.A.(OXON.), F.B.I.M., F.C.I.S., J.P. (Principal, Administrative Staff College, Henley-on-Thames); Mr J. A. R. Pimlott, C.B. (Under Secretary, Branch of Further Education, Ministry of Education); Mr J. W. Platt, M.A. (chairman of the United Kingdom Advisory Council on Education for Management); Mr Edward Powell (managing director, The Chloride Electrical Storage Co Ltd); Mr J. Borsay, F.C.W.A.; Mr W. Coutts Donald, C.A., F.C.W.A.; Mr C. E. Power, F.C.A., F.C.W.A.; Mr W. L. Spalding, B.S.(ECON.), C.A., F.C.W.A., F.C.W.A., F.C.W.A.; Mr Derek du Pré (Secretary of the Institute).

### COURSES FOR MANAGEMENT

I'wo two-day courses on 'Budgetary control and standard costs' and 'Profit control' are to be held at I'he Midland Hotel, Manchester, from November 20th-21st and November 22nd-23rd respectively.

The first course, which will be presented by Dr fames M. S. Risk, B.COM., PH.D., C.A., F.C.I.S., F.B.I.M., will include subjects dealing with sales and output, standards and budgets, standard product costs and actual results and comparisons. The second course, it which the speakers will be Mr E. Brian Bishop, C.C.W.A., F.C.I.S., and Dr Risk, will include an examnation of marginal costing, break-even analysis and profit engineering.

Further information regarding the courses is available rom Management Courses Ltd, 8 St George's Terrace,

London NW1.

#### ANOTHER RISE IN MUNICIPAL DEBT

The eleventh Return of Outstanding Debt at March 31st, 1962, compiled by The Institute of Municipal Treasurers and Accountants, shows that the total debt for which all county boroughs, counties, London County Council, metropolitan boroughs and the City of London authorities were responsible

### 'TAXATION OF SHORT-TERM CAPITAL GAINS'

by Percy F. Hughes

Illustrated by well over one hundred practical examples of interest both to practitioners and students.

PRICE 30/- NET

TAXATION PUBLISHING CO LTD 98 Park Street, London W1

amounted to £3,238 million compared with £2,986 million the year previously. More than half the new total was accounted for by housing in which the outstanding debt last March stood at £1,826 million against £1,713 million a year earlier. Education accounted for £774 million compared with £701 million; trading services for £168 million compared with £159 million and other services £470 million against £413 million.

The publication also contains sample statistics of 215 non-county boroughs, 206 urban district councils and 129 rural district councils. Particulars of the methods by which loans were raised are shown in the summary.

#### CENSUS OF PRODUCTION FOR 1062

As already announced (*The Accountant*, September 8th issue) the Census of Production to be taken in 1963 for the year 1962 will be a sample inquiry and will relate only to sales and work done, capital expenditure, and stocks and work in progress. An order prescribing the matters about which returns may be required has now been made by the Board of Trade. Undertakings producing coal, gas, electricity, oil-shale, crude or refined petroleum or shale oil products are exempted from making Census of Production returns. (Information corresponding to that collected in the Census will be obtained from these undertakings by the Ministry of Power.)

### THE LEEDS, BRADFORD AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

### **Annual Golf Meeting**

The annual golf meeting of The Leeds, Bradford and District Society of Chartered Accountants was held at Ganton Golf Club on October 12th, and was attended by forty-nine members of the Society.

The results turned out to be a family affair. The Blackburn Cup, played off handicap, was won by Mr A. M. G. Smith with 39 points, and his son, Mr G. H. Smith retained the Halliday Cup for the best gross score with a return of 76. The leading scores were as follows:

Blackburn Cup			Points
A. M. G. Smith (6)	 		 39
G. H. Smith (2)	 		 37
S. Jones (5)	 		 37
M. G. Crawford (15)	 		 37

### THE INSTITUTE OF ACTUARIES' YEAR-BOOK

The 1962-63 Year-Book of The Institute of Actuaries, now published, shows that membership of the Institute on July 31st, 1962, numbered 2,459 — an increase of 112 on the previous year's figure. An analysis of the membership shows that 1,071 were Fellows, 379 Associates and 991 Students. Of the 1,071 Fellows, 463 were with British assurance offices, sixty in consulting practice, forty-nine in industry and commerce, and thirty in Government service; of the remaining 469, there were 294 employed overseas — the majority with dominion and foreign assurance companies and in Government service.

### THE ACCOUNTANT'S DIARIES

The Accountant's Diaries for 1963, now on sale, contain completely revised information in the foolscap desk diary and the pocket diary.

The foolscap diary, which has three days to a page, includes information on professional fees, company liquidation and bankruptcy time-tables, income tax and surtax rates, schedule of depreciation allowances, inland revenue duties and many other sections of use to the profession. The pocket diary contains similar

information, together with London, Edinburgh, Belfast and other provincial town maps.

The foolscap diary and the octavo desk diary (which has two days to a page, but is without information pages), appear in new covers of attractive maroon lettered in white and the pocket diary is in a new and improved red binding case lettered in gold.

The prices of the diaries, and of pocket refills and cases including postage and purchase tax are as follows:

•		
	205	6 <i>d</i>
No. 6 Desk Diary (octavo)	145	3d

De Luxe Cases for Refills. Good quality leather,		

lettered in gold on front, lined with silk 18s od The diaries are obtainable from the publishers,

The diaries are obtainable from the publishers, Gee & Co (Publishers) Limited, 151 Strand, London WC2.

### WOMEN CHARTERED ACCOUNTANTS' DINING SOCIETY

The annual dinner of the Women Chartered Accountants' Dining Society will be held at the Palmerston Restaurant, Bishopsgate, London EC2, on Friday, December 7th, at 7 for 7.30 p.m.

### SEVENTY-FIVE YEARS AGO

From The Accountant of November 1971, 1887

Manchester Accountants' Students' Society

Extract from an address given by Mr E. M.
BEARDSALL, President of the Society.

... It will be known to most, if not all of you, that the Institute of Chartered Accountants in England and Wales held a meeting in Manchester in October last, at which papers on several important subjects were read, and interesting discussions followed. A similar meeting was held in June last in London, and the proceedings of both these meetings have been published, and will well repay a careful perusal.

Amongst the subjects brought before the Manchester meeting was the position of "Chartered Accountants as Auditors of Companies," on which a paper by Mr. ERNEST COOPER, F.C.A., was read, on October 15th. In the course of this paper he summarizes the main qualifications of an auditor as follows:

- 1.-Independence.
- 2.—Knowledge of bookkeeping and accounts.

- 3.—Knowledge of the law affecting companies.
- 4.—General knowledge of business.
- 5.—Acquaintance with the internal working of a variety of concerns.

And he points out how unusual it is to find all these qualifications, except amongst the ranks of professional accountants. This fact is becoming more generally recognized, and the appointment of professional accountants as auditors, although by no means universal or even general, is on the increase; and it is not without interest to note that the Admiralty have recently appointed the president of the Institute (Mr. FREDERICK WHINNEY) to investigate and report upon the accounts of their departments, giving him at the same time power to call in the assistance of another professional accountant, (not a member of his own firm). This appointment must be gratifying to accountants as a body; and doubtless much public benefit will result from the employment of a competent, (and non-official) accountant, to unravel and arrange the present complicated and mystifying system of departmental accounts. . . .

Profession

# Tax and the Defaulting Client

T is one of the vicissitudes of a solicitor's professional practice that his dealings with a client only too often coincide with a difficult and sometimes critical period in the client's career, whether he is purchasing or selling property, or worse still, engaged in litigation. The solicitor's role is by no means confined to giving purely legal advice or drawing up legal documents; the client often rests heavily upon him for more general advice. And since the client is often beset at such a time by a more or less temporary shortage of cash (to add to his anxieties) there is often a good deal of pressure on the solicitor to provide financial assistance in some way or another. In this background, one would expect that where the client defaults, it would not be difficult for the solicitor to induce the Revenue to agree to the deduction of the loss in computing the solicitor's taxable profit. The actuality is sadly different, and therefore one welcomes all the more the decision of Mr Justice Pennycuick in Jennings v. Barfield & Barfield (41 A.T.C. 219), in the hope that it marks the turningpoint in the history of this particular topic.

It has been to the misfortune of solicitors generally that the classic authority is the House of Lords decision in Hagart and Burn-Murdoch v. C.I.R. (8 A.T.C. 50). A decision adverse to the taxpayer, it has set the standard for the Revenue attitude for losses in this field; particularly in the case of solicitors<sup>1</sup>, although its facts were far outside the ordinary run. The taxpayers were Writers to the Signet and they were consulted in 1932 by clients who intended to form a company for the experimental manufacture of a new alloy. The taxpayers carried out the legal business and became the company's law agents, the only relationship being that of solicitor and client. During 1923 and 1924 the taxpayers lent the company various sums totalling £2,615 without any security; not even a written promise to repay. At the same time, two individual partners acquired shares in the company, but this was purely in their individual capacities, and the fact does not seem to have influenced the Courts one way or another. The whole £2,615 became irrecoverable and was written off, but the tax inspector refused to allow this bad debt.

On appeal it was proved that the firm was in the habit of making advances to clients, when required, without security; and six examples were given. The General Commissioners asked

<sup>&</sup>lt;sup>1</sup> See, e.g., Rutherford v. C.I.R. (18 A.T.C. 273.)

whether further inquiry was desired as to the firm's practice in regard to advances but the tax inspector said he did not wish such an inquiry. The Commissioners allowed the appeal, but were reversed by the Court of Session, whose decision was upheld by the House of Lords. In Morley v. Lawford (7 A.T.C. 428), where a firm of contractors successfully claimed the deduction of a sum paid under a guarantee, Lord Justice Greek distinguished the Hagart case, saying:

'it may well be that an expenditure may be so disconnected from the purposes of the business and the nature of the business that even though it was intentionally undergone for the purposes of the trade, profession or business still it cannot be deducted. But I fail to see how that can possibly apply to the facts of this case, where it is clear to demonstration that the object of the appellants was in order to get a contract the getting of which was the very business for which Messrs Lawford & Co exist.'

With all respect to the memory of the learned Lord Justice, it is difficult to see how the first sentence quoted above can apply to the facts of any case. How can expenditure which is intentionally undergone for the purpose of the business be unconnected with the business?

Another guarantee case, however, went against the taxpayer (Homelands (Handforth) Ltd v. Margerison (22 A.T.C. 445)). An estate development company agreed with builders for the sale of its land in plots to purchasers of houses built by the builders on the plots. The builders needed finance and their solicitors required the company to guarantee the repayment of advances made by the solicitors to the builders. The Revenue refused to deduct moneys paid under the guarantee and lost by the company. Mr Justice Macnaghten, upholding the refusal, said he did not see how the Commissioners could come to any conclusion other than that the money was not 'wholly and exclusively laid out or expended for the purpose of the trade'. It is perhaps fair to assume that the taxpayer did not cite the Morley case, for there is no mention of it in the report, and it seems difficult to distinguish it.

In a case decided two years later, where *Morley was* cited, but his own decision in *Homelands Ltd* was apparently not cited, Mr Justice Macnaghten came to the opposite conclusion, in remarkable contrast to his cate-

gorical pronouncement in the Homelands case (Lunt v. Wellesley (24 A.T.C. 293)). Mr Wellesley had decided to carry on the vocation of artistic film producer and to this end acquired the film rights of a novel which he dramatized for filming. A company was formed to produce the film, and he was one of the directors. As failure to complete the production would be disastrous to his professional reputation he advanced f.1,500 to the company to enable it to complete, and also guaranteed the company's bank overdraft. He lost the £1,500 and had to pay another £1,253 under the guarantee. The General Commissioners held in his favour that the £2,753 was money expended wholly and exclusively for the purposes of his profession and were accordingly deductible. Mr Justice Macnaghten held that there was evidence on which they could so find, and for good measure he added that he himself would have so found. He also rejected the Revenue contention that the expenditure was capital.

An attempt to distinguish the Hagart decision failed in Bury & Walkers v. Phillips (30 A.T.C. 16), where a firm of solicitors had been making advances to builders for some sixty years, of which some one hundred loans at a time might be outstanding. The firm argued that its business included the lending of money, or alternatively that it carried on the separate trade of a moneylender. However, the Commissioners rejected both contentions, and the High Court refused to interfere.

In the light of this history, it can hardly be said that the appeal of Messrs Barfield & Barfield was brought under favourable auspices. This firm of solicitors was acting for a client who had arranged to sell his house and to buy a piece of land to facilitate the sale. He had also arranged to acquire a motor showroom and a house. The solicitors received a message from his bank that he needed an overdraft to complete the acquisition of the showroom, pay a deposit on the house, and provide funds for his business The bank asked the solicitors if they would guarantee the overdraft and the solicitors agreed to do so, up to £500. The client went bankrupt and the solicitors had to pay £412 under the guarantee, which they claimed as a business expense. For thirty years it had been

their practice to give guarantees for clients in such transactions, but this was the first time they had had to pay. Evidence to the same effect was given by another firm of solicitors. Similar evidence was tendered from another firm but the inspector said he was satisfied it would not carry the matter further.

The Commissioners allowed the appeal, and rejected the inspectors' arguments that they were precluded from doing so by section 137 (a) (e), (f), of the Income Tax Act, 1952. The inspector appealed to the High Court, where Mr Justice Pennycuick said early in his judgment that unless he was compelled by authority to do otherwise, he would decide that the General Commissioners were justified in the conclusion they had reached. He then held that

the findings of the Commissioners established that the giving of guarantees in favour of clients was a general or ordinary activity of solicitors in the course of carrying on their practices. It was certainly not a universal practice, nor even one followed by the majority of solicitors, but in his lordship's view there was no need to go as far as that in order to distinguish the case before him from the *Hagart* case.

It cannot be long before solicitors are challenging the refusal of deductions for money actually advanced to clients and lost. It is true that some distinction was drawn by Mr Justice Pennycuick but we venture to doubt whether there is enough difference between the two things to warrant entirely different treatment for tax purposes.

### Personal Reliefs on Accumulated Income

USEFUL provision in the case of, e.g. infants' settlements, is section 228 of the ▲Income Tax Act, 1952, which provides hat where income is accumulated for the benefit of a person contingently on his attaining a specified age or marrying, he may, on the coningency happening, claim personal reliefs in espect of the accumulating income, and thus ecover some of the tax borne by the trustees. The Inland Revenue originally took the view that elief was confined to cases where the claimant became entitled to the accumulated income itself, out in Dale v. Mitcalfe (6 A.T.C. 816) the Court of Appeal awarded relief to a beneficiary who equired only a life interest in the accumulations vhen the contingency happened. Notwithstanding hat she was not entitled to the accumulations as such, she was able to retain the tax paid on them.

This principle has now been applied to the ase where the beneficiary acquires only a proected life interest (Lynch v. Davies, November 6th, 1962). Under such an interest, if he attempts o alienate the income, or goes bankrupt, the peneficiary forfeits his right to be paid all the ncome and becomes merely an object of a liscretionary trust of that income along with his amily etc.

In coming to his decision, Mr Justice Ungoedl'homas rejected two arguments of the Crown. One was that since forfeiture could occur before the beneficiary attained the specified age, therefore, beside the contingency of attaining a specified age, there was an additional contingency, viz. not suffering a forfeiture. It followed. according to the Inland Revenue, on the authority of C.I.R. v. Bone (6 A.T.C. 670), that the requirement of the section as to the specified contingency was not satisfied. The Revenue's second argument was that, since the claimant had only a protected life interest and not a full life interest, it could not be said that income was being accumulated for his benefit, within the meaning of the section. In support of this proposition they cited C.I.R. v. Maude-Roxby (29 A.T.C. 271) where the Scottish Court of Session stated that the accumulation must be for the 'exclusive' benefit of the claimant.

The learned judge said that a protected life interest was a single interest which still existed after a forfeiture. Therefore it was not contingent on avoidance of forfeiture, and accordingly there was no double contingency. Furthermore, he refused to draw a dividing line between a full life interest and a protected life interest for the purpose of deciding whether the accumulation was for the claimant's 'benefit'; one was just as much a benefit as the other. This will be good news not only to beneficiaries who look forward to a protected life interest, but also to other beneficiaries whose future interest falls short of a life interest.

### Europe's Square Mile?

N what final conditions Britain may enter the European Common Market no one yet knows. Meanwhile, prudent men in industry, in the professions, in commerce and in the City are already seeking to assess the implications of British participation for their own fields of activity. An especially useful illustration of current thinking is provided by the Hon. ARTHUR MAXWELL STAMP's recent address on 'The Common Market's Challenge to the City' to the London and District Society of Chartered Accountants.

As an ex-adviser of the Bank of England and now a director of the City house of Philip Hill, Higginson, Erlangers Ltd, Mr Stamp's views undoubtedly carry a good deal more weight than some of the comment that finds its way into print on the case for and against British entry to the E.E.C. An important, and probably the most telling, of the many points he made, is the implicit recognition that economic policy will to a considerable extent be dictated by other than purely national considerations. Given the degree of economic integration visualized under the Treaty of Rome, 'the drive towards centralized control of the financial mechanisms will ultimately prove irresistible'.

Britain, if she enters, said Mr STAMP, would soon find a situation where there was complete freedom from all types of exchange control and probably freedom for its citizens to hold gold. At the same time, fixed exchange rates between the member countries would have to be maintained and each member would be under an obligation to pursue policies aimed at exchange stability. It is perhaps not fully realized in the United Kingdom, by what the speaker referred to as the 'economically illiterate' electorate, just to what extent successive post-war British Governments have been prepared to sacrifice exchange stability, and not least the stability of the purchasing power of sterling, on the altar of over-full employment.

There was a widespread tendency to assume that by virtue of the City's prestige and its long experience it will automatically dominate the other financial centres of Europe which are as yet smaller, less diversified and, in some cases, less efficient. In this connection, Mr STAMP made two points. 'Business', he said, 'will go to the centre which brings together lenders and borrowers most economically and efficiently. To put it brutally, if costs in London are higher than elsewhere, the business will flow elsewhere.' Secondly, he pointed out that certain factors contributing to London's share of the available business were peculiar to the present circumstances of the British economy. Just as foreigners were deterred from coming to London in the face of exchange controls and various regulations as well as ignorance of the London market, so some of the business transacted in the London market would probably disappear elsewhere but for those self-same controls.

In the course of his address Mr STAMP emphasized two important defects in the London stock-market which reduced its attractions vis-àvis European markets for prospective dealers. The first was the United Kingdom practice of deducting tax at source from dividends and certain interest payments regardless of the liability of the dealer to United Kingdom tax. It is no answer to this problem to assert that the tax may be reclaimed. The second is the high cost of dealing in London. According to Mr STAMP, brokerage in London is twice as high as in Belgium, which in turn has the highest rate in the E.E.C. The effect of stamp and other costs combined was that a rise of 7 to 10 per cent in prices was needed before a purchaser of stock could expect a profit; the corresponding figure in the E.E.C. markets is 2 per cent.

However, the City is not so beset by time-honoured restrictive practices as are some sectors of British industry, that one cannot hope that it will prove itself more adaptable than most to the impact of the Common Market. In this context as Mr Stamp concluded, accountants as professional advisers or administrators have a key role to play, for on them will rest the responsibility for initiating many of the measures necessary to take advantage of the new situations as they develop.

### THE ACCOUNTANT

## Income Tax Debts and Bankruptcy

by W. H. D. WINDER, M.A., LL.M.

OR bankruptcy purposes a bankrupt has been looked upon as continuing to carry on business, even though he has in fact ceased trading, so long as any debts of the business remain outstanding. It has been judicially stated that under the Bankruptcy Act trading does not cease when 'the shutters are put up', but continues until the sums due are collected and all debts paid. The point can be of vital importance because one of the conditions under which a creditor is entitled to present a bankruptcy petition is that the debtor 'within one year before the presentation of the petition' has 'carried on business in England' (Bankruptcy Act, 1914, section 4 (1)). Thus, even if before the operative year the debtor has ceased to trade in the ordinary sense, he may not be safe from bankruptcy process on this ground. This rule has been extended by the Court of Appeal in the case of In re Bird (41) A.T.C. 137) from an outstanding business debt proper to an outstanding liability for income tax.

Payment of income tax is one of the obligations. imposed on a trader, and the Court declined to distinguish between an income tax debt and an ordinary trade debt for the purposes of bankruptcy jurisdiction under the one year rule. The debtor had in fact ceased trading several years before the presentation of a bankruptcy petition by the Crown.

### 'Has Carried on Business'

The debtor's original business had been that of a bookmaker. He had failed to disclose to his tax inspector that he had been carrying on this business since 1932. In 1956 he admitted the fact. In 1957 the payment offered on his behalf by his accountants, to settle the liability for income tax arrears, was refused by the Inland Revenue Commissioners; a month later he went to Jersey where he lived ever since. In January 1960, the Crown obtained judgment against him for £3,622 due for income tax between 1935 and 1954. That judgment was obtained in default and in September 1960 the Crown issued a bankruptcy notice. A bankruptcy petition followed, dated October 19th, 1960, and the debtor was adjudicated bankrupt on February 24th, 1961. Leave to serve the debtor with process out of the jurisdiction had been obtained in each case, but he had ignored the proceedings.

An order followed for his public examination with which he did not comply and on April 20th, 1961, he was arrested in Jersey for contempt of Court and brought to England. He applied to the High Court to have the adjudication of February 24th, 1961, annulled and the bankruptcy notice set aside on the ground that under section 4(1)(d)of the Bankruptcy Act, 1914, a creditor was not entitled to present a bankruptcy petition against him because within a year of the presentation of the petition he had not 'carried on business in England'. This argument was rejected both by the bankruptcy registrar and the Court of Appeal.

The adjudication took effect.

A long line of judicial authority concerned with married women and the bankruptcy laws supports this somewhat unexpected conclusion. Married women were first brought within the bankruptcy law by the Married Women's Property Act of 1882 if the wife was 'carrying on a trade separately from her husband'. In the case of In re Dagnall ([1896] 2 Q.B. 407) Vaughan Williams, J., said that whether a person is carrying on a trade or not is a question of fact and that 'as long as a woman trading separately from her husband had not paid the trade debts which she had incurred, so long she was continuing to trade. It seems to me that trading is not completed until you have performed all the obligations that the fact of trading imposed upon you'. This decision has been followed in subsequent cases.

The matter was even extended by the Court of Appeal in In re Allen ([1915] 1 K.B. 285) to a debt which was not in the ordinary way a trade debt but a debt sounding in damages for negligent driving by an employee. So long as that was outstanding it was held to be good for the purpose of the rule in considering whether the trader was still carrying on her trade. Lord Justice Swinfen Eady used the phrase:

"... an obligation incurred while the debtor was carrying on her business. It is a trade obligation caused by the negligence of one of the debtor's servants, a liability which every person employing servants must expect to incur'.

### **Profits Tax Debt**

This principle of interpretation of the bankruptcy legislation was not extended beyond the debts of married women until 1950 when a further question

was agitated as far as the House of Lords in the case of *Theophile v. Solicitor-General* ([1950] A.C. 186). It was held that a debtor continued 'carrying on business in England' within section 1 (2) of the Bankruptcy Act until all trade debts were paid and that a sum due from the debtor to the Crown in respect of excess profits tax was a trade debt. According to Lord Justice Harman in the recent case, this constitutes an extension of the rule which had existed up to that time.

'It is not true to say that tax in a sense is a trade debt. It may be a debt arising out of the fact that you have been carrying on trade, and, of course, every trading company pays its tax year by year and shows it in its books in the proper way. But it is a different thing to trade debts which up to then had been used as the test.'

But Harman, L.J., added that Lord Porter's speech in *Theophile v. Solicitor-General* 'makes it quite clear that in his view liability for excess profits tax was for this purpose an equally good talisman to test whether a man had ceased to carry on business in England'.

The following is an extract from Lord Porter's speech:

'In all the cases referred to, the debts which were to be paid or collected were strictly trade debts, and it is maintained that in that respect they differ from the case under appeal in that the debt claimed by the Crown to be due is in respect of excess profits tax and that such a debt is not a trade debt but a sum due for taxes and no more connected with the appellant's business than income tax or any other tax liability. Whatever else may be said about excess profits tax, however, it is imposed upon the debtor because he has been trading, and I do not see any reason for confining trade debts to those incurred in buying or selling. In re Allen shows that they extend to liabilities incurred in incidental matters which occur during the course of carrying on the trade, including a liability for the careless driving of a servant resulting in an accident.'

### No Difference between Profits and Income Tax

Counsel for the debtor in *In re Bird* had to try to distinguish between excess profits tax and income tax in order to prevent the *Theophile* case being binding on the Court of Appeal. He argued that excess profits tax is ineradicably connected with the trade of the debtor. If he did not trade, and if he did not make profits beyond the standard profits, he could not possibly have excess profits tax to pay and, therefore, the two are inseparably bound up and the one arises solely out of the other. Different, counsel argued, is income

tax because income tax, as it is levied under several heads or schedules, one source of income may cancel out another; losses in trading may be set off against income from investments and so forth. This means that you never can tell at the moment you 'put the shutters up' how much income tax at the end of the financial year you will have to pay, whereas at that moment you do know, or could know if you had your accounts made up to date, how much excess profits tax you would have to pay. Therefore, the argument ran, the two taxes are not on the same footing, income tax being a congeries of liabilities arising out of various activities.

This ingenious distinction did not find favour with the Court of Appeal. The great preponderance of the judgment debt of £3,622 did arise under Case I of Schedule D; that case is concerned with the profits of a trade, so one can, as Harman, L.J., saw it, point to that and say: 'This is an obligation which the fact of trading imposes upon you.' He concluded thus:

'That is a very simple test and it applies to Schedule D income tax, as it seems to me, no less than to excess profits tax, and to try to draw a distinction between them in a bankruptcy matter would be a disastrous refinement which I for one am not prepared to countenance.'

Would that some other disastrous refinements both of bankruptcy law and of income tax law had suffered similar condemnation.

### **Debt for Accountants' Fees**

A question which it was not necessary for the Court formally to decide was whether the moneys owing at the date of the petition to accountants employed by the bankrupt to negotiate with the Inland Revenue concerning his tax liability constituted a trade debt for the purpose of this bankruptcy jurisdiction. The accountants claimed £175 which arose in connection with their work between the years 1954 and 1957. Although it was not necessary finally to decide the matter, Lord Justice Upjohn concluded that it was an available debt which could be relied on for the purposes of section 4 of the Bankruptcy Act, 1914. Harman, L.J., said that he inclined to the same view and Diplock, L.J., preferred to express no view.

The bankrupt had kept no books, or at any rate disclosed no books.

'In due course', said Upjohn, L.J., 'when the' Government had caught up with him some twenty years later from the commencement of his trade, he was, of course, compelled to submit to demands

by the inspector, and he sought the assistance of a firm of accountants to advise him upon the matter. It seems to me quite irrelevant that all the accountants could do was to make an assessment of the capital situation of himself and his family from time to time because, in the absence of proper books, that was the only available method of trying to reach some idea of what the annual profits from his business were. Here were the accountants brought in to assist the bankrupt in dealing with his income tax affairs, principally in connection with his business.'

It is quite true, as was pointed out in the udgment, that in the case of *Smith's Potato Istates Ltd v. Bolland* (27 A.T.C. 131) Lord of order said that the fees of accountants brought in o deal with income tax assessments are unlike he fees of accountants preparing the ordinary

trading accounts and cannot be treated as expenses for the purposes of Case I of Schedule D. Lord Porter was saying that the fees payable to accountants for dealing with income tax matters are not money wholly and exclusively laid out and expended for the purposes of trade. But In re Bird seemed to Upjohn, L.J., to be quite a different case. The bankrupt knows that one of the obligations which his trading will impose upon him is the payment of tax and, as a practical matter in order to agree the tax with the inspector of taxes, it is quite usual to resort to the assistance of accountants. That is one of the obligations that he had to enter into in order that the tax might be agreed and so, like the tax, falls within the principle stated by Vaughan Williams, J., in the case of In re Dagnall.

# The Accounting World

### TOPICS OF PROFESSIONAL INTEREST FROM OTHER COUNTRIES

### CANADA

### Increasing Demands on the Accountancy Profession

A survey of the diamond jubilee year of the Canadian Institute in the September issue of *The Canadian Chartered Accountant* concludes with comments on the undeniable evidence of the profession's remarkable advances in status and range of activities over the years. It warns, however, of the danger that some accountants may not realize the extent to which the bareads of economic life are becoming more closely yoven internationally, so that they may not be preparing for the day when their services to industry, both in the national and international fields, will be needed to a far wider degree than is provided at present.

### UNITED STATES

### **Restudying Accounting Principles**

In an Accounting Research Study entitled A Tentative Set of Broad Accounting Principles for Business Enterprises, Dr Robert T. Sprouse, of the University of California, and Dr Maurice Moonitz, Director of Accounting Research of the American Institute, follow rigorous rules of logic in reexamining the basic postulates of accounting and the principles which they support. A commentary by Mr Paul Grady, c.P.A., takes a more pragmatic approach. He is a member of the project advisory committee of the American Institute of Certified Public Accountants, and the new accounting research programme is clearly faced with the problem of whether the aim

should be to develop principles which eliminate inconsistencies and then try to reconcile them with practice, or, following Mr Grady, to describe current practice and then try to eliminate the inconsistencies.

Mr Grady sees good accrual accounting as holding the solution to most of the dingy areas of accounting practice. Dr Sprouse and Dr Moonitz also favour a more rigorous application of accrual accounting principles, but they urge that some of the principles now 'generally accepted' are incompatible with sound accrual accounting. Thus, they say, if 'cost or market, whichever is lower' is proper for valuing inventory, so is 'cost or market, whichever is higher', where the higher market can be measured with equal objectivity. Hence they suggest that the generally suggested principles of conservatism and realization may be incompatible with the basic principle of accrual

Mr Grady says that some months ago the Accounting Principles Board agreed that the assumption in accounting that fluctuations in the value of the dollar may be ignored is unrealistic. He calls this recognition of the necessity for price level adjustments the greatest forward step ever taken in accounting. The study project still has to deal with such matters as criteria for determining what are substantial fluctuations and for selection of indices, but the gap is now closed which has existed between acceptance of LIFO inventory valuation and rejection of fixed asset depreciation on anything but historical cost. He suggests, therefore, the following basic concepts and objectives for financial accounting: (1) the purchasing power of equity capital invested in an enterprise, whether by assets contributed by stockholders or by retained earnings, must be maintained in statements

of financial position; (2) periodic business income is to be determined by the matching of revenues and related costs and expenses, all in homogeneous current monetary units.

### **PAKISTAN**

### New President of Pakistan Institute

MR M. M. AHMAD, Secretary, Ministry of Commerce, Government of Pakistan, has been elected President of The Institute of Chartered Accountants of Pakistan for 1962-63.

### OVERSEAS TAX DEVELOPMENTS

The following information has been supplied by the Foreign Section of the Library of the Board of Inland Revenue.

#### France

The following provisions are included in Law No. 62-873 of July 31st, 1962:

### Depreciation

An initial allowance of 50 per cent in the year of acquisition etc. may be taken by undertakings investing in buildings for scientific and technical research purposes. This provision applies to buildings acquired etc. on or after January 1st, 1960.

Industrial and commercial buildings completed before January 1st, 1966, the construction of which has been authorized by special arrangement with the Ministry of Finance etc., may benefit from an initial allowance of 25 per cent. (Not to be taken together with that for scientific research buildings.) Industrial buildings qualifying for either of the initial allowances outlined above, completed after July 31st, 1962, and whose useful life does not exceed fifteen years, may be depreciated by the reducing-balance method.

### Profits from participations

Where a French company receives dividends from a French or foreign subsidiary only the following percentage parts of the net dividends are liable to company tax in the parent company's hands:

Degree of participation			Per cent taxable
Less than 35 per cent			20
35 per cent to 50 per cent			10.
50 per cent and over			5
No new taxes are provided	for in	the 196	3 Budge
out some reduction of the	rates of	fincor	ne tax

promised.

#### Luxemburg

Under the provisions of a law of June 2nd, 1962, the investment allowance given in respect of new investments in plant and machinery or assets of a social character acquired in the years 1962 to 1964 and

whose cost price exceeds 10,000 francs, has been amended. The allowance is:

30 per cent on the first 2 million francs of new investment

20 per cent on the next 230 million francs of new investment

To per cent on the excess over 250 million francs. However, where complementary investment (net increase in fixed assets) exceeds 250 million francs in the year, the allowance may be taken at the flat rate of 20 per cent if this is more beneficial. The allowance is spread equally over the year of acquisition and the

following three years.

New industry relief. Under the same law, new approved industries, the establishment of which is commenced not earlier than 1962 and completed not later than 1965, may, under certain conditions, obtain exemption from income (corporation) tax and the local trade tax on 25 per cent of their profits for the first eight years of operation. Existing undertakings introducing new manufactures may also benefit from the exemption on condition that the exemption does not exceed 2.5 per cent of the cost of the new assets or, where the value of the new assets exceeds 300 million francs, 20 per cent of the total profits of the undertaking.

### Portugal

A new code on the application of capital enters into force on January 1st, 1963. The tax previously entitled 'Imposto sobre a Aplicação de Capitais' will be called 'Imposto de Capitais'.

The general rate of tax is reduced to 15 per cent (previously 16 per cent) and dividends distributed by companies subject to income tax under Contribuição Industrial, will be taxed at 5 per cent (previously

12 per cent).

Sections 'A' and 'B' of the tax are retained. In section 'A', interest arising from loans granted to facilitate credit sales are exempt. In section 'B', the scope of the tax on dividends received by shareholders is widened: it now extends to managing as well as non-managing share (cota) holders. Deposit interest is exempt. Profits distributed by holding and finance companies to its members are exempt, in so far as they arise from interest and dividends on Government securities. Companies may now transfer reserve funds to working capital without attracting tax.

#### India

The Income Tax Rules have been reprinted and issued as the Income Tax Rules, 1962, effective from April 1st, 1962. The only significant change apart from renumbering is that provision is made for the higher rebate on life assurance premiums for authors, actors, etc., the limit in these cases is the lesser of 33\frac{1}{3} per cent of professional income plus 25 per cent of other income or Rs8,000 plus 8\frac{1}{3} per cent of professional income up to a maximum of Rs12,000.

## Financial Reporting and the World Economy

### with Particular Reference to Reporting to Outsiders

by R. O. A. KEEL, F.C.A.

### I. Introduction

THAT is meant by financial reporting? I interpret the term to mean the reporting by an enterprise of the financial aspects of its activities and of the manner in which its funds are atilized. Naturally, such reporting is effected in very diverse ways by many different types of concern.

2. With such a range for financial reports I hope I may be forgiven for confining comment mainly to a particular and most important sector. In interpreting the theme of this Congress I have concluded that an accountant attending this gathering, coming from countries with systems of free enterprise, is most likely to be primarily concerned with financial reports of commercial enterprises. It is probably the published annual report and accounts of a public company (i.e. a company whose stocks and shares are quoted on a recognized stock exchange) that demand his greatest attention. Such companies have investors from many sections of the community in which they are active, and in more and more cases not only do they operate on an international scale, but investment in them too is developing beyond their country of origin.

In Great Britain in addition to public companies certain private companies, basically those which are not owned wholly by private or family interests, have to file their annual report and accounts at the Board of Trade, where they are open to public inspection. To a lesser extent these are also of interest to outsiders - particularly creditors and would-be acquirers of those concerns. The contents of these statements are, however, practically in all cases restricted to the bare legal requirements. Reference in this paper is therefore mainly directed towards the public company.

- 3. The accountant uses his expertise in the production of financial reports:
  - (i) as an independent professional man providing a service;
  - (ii) as an adviser or an employee of
    - (a) Government departments and organizations;
    - (b) public and private companies and organizations:
    - (c) individuals.

In the preparation and presentation of financial reports he makes a characteristic and particular contribution to the best conduct of trade, both locally and internationally. Such trading, by enabling people and peoples in all their various circumstances to labour to the maximum of their ability, will assist A paper presented at the Eighth International Congress of Accountants in New York

toward improvement in the world economy. Further, it is through the best prosecution of production and trade (using these terms in their broadest sense) that the vast capital resources, so desperately needed in the world today, will be provided.

4. Financial reporting is a major means of communication in presenting the activities of commercial enterprises both great and small. It is a cornerstone in the trading structure, helping to bridge the gap between producer and user, between owner and manager and between commerce and Government. There is no doubt in my mind that more effective and more enlightened financial reporting has a considerable contribution to make in our civilization in the universal effort towards a fuller and better life for mankind.

### II. The Objectives of Financial Reporting

5. In reporting the financial results and the financial situation of an enterprise there are three main objectives:

First, an account of stewardship (where the steward is other than the proprietor) illustrating the way in which the resources have been used, the effects of that usage on those resources and the manner in which such resources are held.

Second, a demonstration of the efficiency of the use of capital, showing the advantages of owning an interest in the capital and the possibilities for any further capital to be raised; and indicating the security of funds, the scope for the enhancement of

Mr R. O. A. Keel, F.C.A., the author of this International Congress paper, is managing director of Heinemann Publishers Ltd, one of the Thomas Tilling group of companies of which he was formerly secretary. He was admitted to membership of The Institute of Chartered Accountants in England and Wales in 1948. At the Institute's 1961 Oxford Summer Course he presented a paper on 'Prob-lems of a group on the acquisition of companies'.

retained resources and the level of periodic payments as dividends upon the capital.

Third, a statement of the moneys due to those other than the proprietors, setting out the extent to which and the manner in which amounts due to creditors are matched by the net assets.

- 6. The development of financial reporting, in attempting to fulfil the above objectives, has encouraged the following further aims:
  - (a) to build up confidence in financial statements, particularly where these are audited, so that trust may be more readily placed by the owners of the capital invested in the company for the delegation and carrying out of the many, varied and often considerable tasks which arise in the prosecution of modern commerce;

(b) to attract the sums which are required to be subscribed in the development of existing and

new ventures;

 (c) to direct moneys and other resources to those activities and concerns that merit support because of their comparatively better record in review and in prospect;

(d) to ensure the reward of the successful and the censure of those that fail through the discipline which the accountability of financial reporting exerts over both stewardship and effective working; and

(e) to encourage a greater volume and smoother flow of trade by the engendering of confidence

between parties in credit dealings.

- 7. Financial reports should portray events and situations. What are the events that feature in these statements? Essentially, they are ways in which the business has moved from one situation to another, over a given period of time. Since normally the main purpose of a commercial concern is trading and the employment of its assets for profit, the major event to be reported is the result of these activities. In stating the result, items of significance affecting the statement will need to be separately set out so that there may be a proper appreciation of the relative effectiveness of the activities particularly from accounting period to accounting period and over a series of such periods.
- 8. There are also other events to be reported. These occur mainly upon the movement of capital funds into and out of the business, and upon changes in the patterns of investment in assets and of the funds which they represent.
- 9. Anybody with an investment in a company or a right against it will be keenly interested in the state of its affairs in relation to his particular risk. A statement of the financial situation should establish the manner and amount in which assets are held and indicate the means by which these have been financed.
  - 10. The matters reported may relate to
  - (i) recent events;
  - (ii) the most recently surveyed situation;
  - (iii) a series of past events or situations;
  - (iv) a projection of future events or situations;
  - (v) an adjusted series of past events on the assumption of an amended basis of operation.

The statements that emerge can take many forms, and but in Great Britain they are basically:

- (i) the profit and loss account (trading results and the distribution of income);
- (ii) the balance sheet (funds and the way they are represented by assets);
- (iii) the source and use of funds statement;
- (iv) the prospectus (request for new moneys).

Such reports are produced in varying degrees of detail and complexity, often supplemented by notes, tables, schedules and descriptive commentary.

### III. The Readers of Financial Reports

- nn. Financial reports are written to be read, but many are inadequately designed for the requirements of the reader. It may therefore be salutary to consider the reader. Readers outside the company fall into a number of quite distinct categories investors, creditors, the Government, customers and suppliers, the Press and accountants.
- 12. Since situations in our civilization are often complex, it is not surprising that it is difficult for the layman to appreciate many of the financial aspects of those situations. One of the most important parts of the art of the draftsman of published financial statements is presentation in a clear and precise form which has a maximum of significance and a minimum of detail. In this way the message is conveyed more effectively. However, some jargon and special methods of presentation are unfortunately unavoidable if precision is to be achieved. This understandably has brought forth an army of advisers, commentators and interpreters, each class of reader having its own special brand of mentor. Press comment in particular has found a special place for those seeking information.
- 13. The following question often arises: How fall should a set of published accounts or any other document portraying financial information cover the interests of all the readers likely to be concerned? Many answer this question by confining themselves to bare legal requirements and to presenting a picture which caters for the needs of the most immediate reader who, in the majority of cases, is the owner of an interest in the capital, viz. the shareholder. Others provide a mass of confusing but fascinating data for everyone, from the shareholder to the buyer of the company's products and beyond. May I leave this question with you for your discussions?
- 14. Returning in a little more detail to the categories of reader:

### (i) Investors

Investors are of two kinds – current owners of the equity and preferential forms of share and loan capital, and prospective investors. It must be presumed that the present investor has some knowledge of the company and therefore his requirements will not be the same as those of an intending investor.

The latter will require much more information on the past history and profit records of the company a fact which is reflected in the usual contents of a prospectus for the issue of new capital. Information will in many instances be interpreted for the investorby his professional advisers.

In Great Britain the growth of insurance companies and of the pension scheme movement has meant that interests of a particular type are appearing which have well defined likes and dislikes in such matters as incidence of tax, patterns of income growth and trends of capital appreciation. It is also of interest to note that trustees with powers of investment which have been restricted by the Trustee Act, 1925, to Government stocks and other fixed interest securities have now been given wider powers by the Trustee Investment Act of 1961. This enables half of the trust fund to be invested in equities of British companies having a paid-up capital of at least fi million and an uninterrupted record of dividend payments on all issued capital for at least the previous five years.

The interests of investors do of course vary considerably; consider, for example, the individual investor, the unit trust, the investment trust, the commercial concern with trade investments and the holding company. The years since the passing of the Companies Act of 1948, which introduced a new era in financial reporting in Britain, have seen a flood of mergers, acquisitions and take-overs. Much of this has come about because of the reading of financial reports upon companies that have set out more clearly the possibilities for these companies.

### (ii) Creditors

The term creditor embraces a wide variety, in terms of amount, security, interest and repayment. To the extent that the debt is permanent the right is akin to hat of the investor. In other instances the creditor-reader is keenly concerned that adequate assets exist to meet his particular claim on the business – in fact the greater the adequacy (or cover) the better. He is also concerned for the state of liquidity of that part of the assets that should be available to meet his claim. The extent to which the profits of a company have exceeded the prior charges for interest on loans – not for one year alone but over a series of years – also has a significant influence on the confidence of the relevant loan creditors.

As the investor has his adviser so has the creditor. Inquiry agents, debt collecting agencies, banks and nany others play a vital part in providing information on credit status. Although many details are obtained issewhere, much valuable commentary is elicited from financial reports. Many creditors, in particular enders of money such as banks and finance houses, will ask for financial reports even where these are not published or filed at the Board of Trade Company Registry. Such requests will both precede the making of a loan and be repeated during the currency of the lebt.

### (iii) The Government

Government in Great Britain comprises a number of different sorts of reader. The results of the great nationalized corporations – the railways, the airlines, parts of the road transport system, gas, electricity, coal and others – come under the direct scrutiny of Parliament. The whole of the commercial system is appraised, and in due course assessed, by the Inland Revenue for the purpose of income tax and profits tax. The Board of Trade acts as an instrument for statistical survey and report. This is effected in order to inform both the community and the Government, to assist the latter in commenting upon past economic policy and to render guidance in the formulation of economic plans.

### (iv) Customers and suppliers

The contents of financial reports are of interest to and indeed are often directed at customers, potential customers and suppliers. Some reports practically amount to straight advertising of products – perhaps not a desirable trend – while others aim to build prestige and an image in the public mind. Business may be influenced just as much by the financial reputation of a company as by the commercial value of its products or services. This is particularly so where there are to be guarantees on products, where service is to be provided or where repeat orders are likely to occur. Customers as well as suppliers may seek financial information on the lines indicated for creditors before establishing trading relationships.

### (v) The Press

Press comment upon financial reports is widespread and growing: even the tabloid newspapers are taking up this newsworthy subject. Perhaps the growth of insurance companies and of pension schemes and their considerable investment in industry and commerce has much to do with this, and also the general realization of the vital role played by our great companies in the lives of all the people. There is often real drama if not in the lines of the reports then certainly between them.

There are three types of Press, to each of which clarity in the financial report is essential to prevent misinterpretation. First, there is the financial Press, which is a specialized Press writing for a public which it assumes to be comparatively well informed on financial matters and capable of understanding accounts. Their readers are present and prospective investors who take an interest in their investments. There is also the general Press writing for a less informed public who may also be investors or prospective investors but they are not expected to be so conversant with financial matters. The third category embraces the trade papers and the local Press. These journals perhaps take a rather specialized or local view of a company's activities and results, which undoubtedly are of sincere interest to their readers.

### (vi) Accountants

The accountant as a reader of financial reports is a seeker of new ideas. He should endeavour to draw upon as wide a selection as possible of sources to equip himself for his daily tasks of drafting accounts and advising clients. In my view any accountant who is not an avid reader of accounts and reports, of commentary and of criticisms of them, is likely to be left behind in the best practices of draftsmamship and finance as they affect published financial reports.

### IV. Background to Financial Reporting in Great Britain

15. The history of company legislation in Great Britain shows the increasing importance attached to publicity in connection with accounts. The midnineteenth century saw the introduction of the principle of limited liability. The law relating to companies was codified in 1862 - exactly one hundred years ago - but the appointment of auditors for all companies did not become mandatory until 1900. In the present century committees have been appointed from time to time to look into company legislation, and these have resulted in the Companies Act of 1908, 1929, and 1948, each requiring more financial information to be disclosed. In 1908, companies other than private companies had to file a balance sheet annually at the Companies' Registry. It was only in 1929 that the law required both a balance sheet and a profit and loss account to be filed and laid before the company in general meeting every year. Certain details to be included in the balance sheet were laid down, but the form of the profit and loss account was not the subject of regulation.

16. The latest Act affecting financial reports of companies was enacted in 1948. It deals with balance sheets, consolidated balance sheets, profit and loss accounts, consolidated profit and loss accounts and directors' reports. The statements to be prepared and their content prescribed, representing the minimum requirements. Manner and timing of circulation and publication are also laid down. The responsibility for the preparation of all these documents rests with the directors.

17. The basic requirement of the 1948 legislation as it relates to accounts is that they shall give a 'true and fair view' of the state of affairs of a company and of its profit or loss. The Board of Trade, however, has powers to relax or modify the requirements of the Act in regard to certain information to be given, other than the basic requirement just mentioned, for the purpose of adapting them to the circumstances of a company. In my experience these powers have been used with sound judgment and have not been construed as a mandate for major variation in the requirements, but for assisting presentation in difficult and exceptional circumstances, as for example where a major upheaval in the organization

of a business has made the inclusion of normal comparative figures inappropriate.

18. In addition to the Companies Act there are other Acts of Parliament that lay down regulations for the accounts of special types of corporation such as building societies, insurance companies (which are also regulated by the Companies Act), companies incorporated under Royal Charter or special Act of Parliament and nationalized undertakings.

19. A new Companies Act is now contemplated. A committee under the chairmanship of Lord Jenkins has been receiving evidence since early in 1960. Along with other bodies my own Institute has put forward submissions on accounts, among other matters, which propose extension of the information to be reported and modifications of present requirements in the light of experience since 1948. It has recommended among many other items that subject to certain provisos disclosure of turnover should be compulsory. Representations have been made by a large number of bodies and persons in the United Kingdom with experience and interest in accounts, and further points of current concern include the following:

- (a) the need to clarify the distinction between fixed and current assets, and to fix the legality or otherwise of the distribution of profits realized on the sale or arising upon the revaluation of fixed assets;
- (b) the disclosure of cost of sales as well as of turnover;

(c) the publication of quarterly statements of a company's earnings:

(d) the substitution for amounts of fixed assets based on historic cost, which some claim to be a misleading basis, of amounts more closely relevant to current values. (This would have its repercussions on depreciation charges. My own Institute has regarded the retention in Great Britain of the historic cost basis as having on balance many significant advantages);

(e) the provision of information on the activities of a company and its subsidiary and associated companies, together with the publication of the

names of those companies;

(f) the giving of details of interests in the assets and profits of companies in which more than 10 per cent of the equity is held, but which are no subsidiary companies.

20. With legislation existing in Great Britain prescribing the presentation and content of accounts the stock exchanges have imposed little additional regulation on accounts for companies making use of the facilities of the market. However, the making of an offer for a controlling interest in a company take-over bid) is an occasion when a financial report may be required to be prepared and circulated to the persons involved. Where the value of the shares to be acquired or the earnings attributable to them exceed respectively 5 per cent of the net assets of the acquiring concern or 10 per cent of its profits, the stock exchanges normally insist that detailed informations.

mation on the prospective financial situation, the trading outlook and the working capital arrangements of the acquiring company, and on the past results and present situation of the business to be acquired be provided. Although other details of the deal are required by law, this accounting data is not legally mandatory at present.

21. The Institute of Chartered Accountants in England and Wales over the last twenty years or so has produced a series of recommendations and notes for guidance on matters of concern to the accounting profession. These have included indications as to the best practice in the preparation of financial reports. They are subject to public discussion and are reviewed and reissued in the light of experience and changing conditions. The earlier statements had a profound influence on the accounting provisions of the 1948 Companies Act. The current statements embrace, among many other items, notes on accounting principles and interpretation of company legislation on accounts. Recommendations are kept under continuous review and amended or added to when experience shows that this is necessary.

22. The pressure for more and better financial reporting in Great Britain is both strong and continuous. The accounting profession is not alone in this activity. The specialist accounting Press, the financial columns of the general Press and the financial, economic, banking and political journals are all equally alive in this matter. Bodies such as the Society of Investment Analysts and the Institute of Economic Affairs have published papers. Since 1954 two annual awards have been made by the weekly journal The Accountant, one to a large and one to a smaller company, for the year's best set of annual accounts. The number of entries for these prizes increases year by year.

### V. Types of Report and their Content

23. For a public company in Great Britain financial teporting falls into two main categories – occasional and periodic statements.

24. Issues of new capital for cash and offers for acquisition or merger represent occasional events upon which statements will be issued. A prospectus for a lnew share issue to the public is regulated by the Companies Act, and to a small extent by the stock exchanges. Details required to be included in the prospectus are considerable - though I understand far less than those required to be disclosed in the United States - and the documents themselves are videly circulated and advertised in the Press. Statements published upon issues of new shares, the ubscription for which is restricted to existing members (rights issues), are controlled only by stock exchange regulations and not by law. However, it is possibly that some legal requirements on this matter may be included in a new Act that seems bound to follow the report of the Jenkins Committee. It is

noteworthy that stock exchange requirements on rights issues demand a statement from the directors, on current prospects brought as far up to date as possible. Where a prospectus is not involved disclosure of the purchase consideration and anticipated yield upon acquisitions and mergers is not at present mandatory and practice on this varies considerably.

- 25. There is a growing practice to publicize companies generally. Although not strictly a financial report, none the less such publication may refer to a company's record, resources, activities and policies. It has for its purpose the creation of a better understanding of a company and its constituent parts, particularly by investors, customers, suppliers, associates in business and employees. Responsibility for the information lies with the directors, as do the decisions on form and content.
- 26. Periodic financial reports issued by public companies include the following quarterly and half-yearly statements, preliminary announcements of results on their adoption by a board of directors, the annual report and accounts and a report of proceedings at the annual general meeting. In all these documents there would seem to be the need for certain aims:
  - (a) Maximum disclosure consistent with the best interests of the company, its shareholders, its employees and national security.

(b) Minimum of detail consistent with the proper explanation of events and situations under review.

- (c) Clarity, simplicity and consistency of presentation to promote ease of assimilation on the part of the reader.
- (d) Attractiveness of layout to engender interest, whereby the matter presented may be the more forcibly conveyed.
- 27. Although encouragement is being given to the issue of quarterly and half-yearly statements, in Great Britain there are no regulations compelling their publication. Those that are produced cover a statement of profit before and after tax, comparative figures for the previous full year and for the comparable period under review in that year and often a general statement on current trading and dividend prospects for the whole of the current year. Occasionally turnover is also included, but balance sheet figures are not appended and the statement is usually unaudited. The number of companies providing this service is small but growing. However, it should be recognized that there are companies (such as those with major projects extending over many years, e.g. the building of atomic power stations) who have difficulty enough in presenting fair annual results, let alone more frequent statements.
- 28. When the board of directors of a public company in Great Britain meets to approve accounts and to decide upon recommendations on dividends and other relevant matters, the stock exchanges require

that a preliminary announcement containing specified details be issued in advance of the circulation of the annual report. Such an announcement must include all dividend, interest or cash bonus decisions, net profit and tax figures for the year with comparisons and group figures where appropriate, and any other information necessary to enable an appraisal of the position of the company to avoid a false market in its shares. By way of example, Thomas Tilling Ltd, the parent company of my own group, lists in this preliminary announcement the principal acquisitions and realizations of interests made during the year under review, and indicates their financial effect.

- 20. Before coming to the all-important annual report and accounts, perhaps a word or two about the extent of circulation of that document and others may not be amiss. The law in Great Britain requires that the annual report of a company be sent to all members and debenture-holders. The stock exchanges mayalso require a company to circulate information to its members on a significant acquisition of another business. Further distribution and advertising is a matter of policy. Most large public companies advertise their chairman's review together with abbreviated information on the year's results. Many offer to provide copies of the annual report on application. Tillings has a long list of non-shareholders who have asked to be supplied with the annual statement.
- 30. What should be included within the covers of the annual report and accounts? British practice suggests the following main items:
  - (i) the chairman's review (which is not a statutory statement);
  - (ii) the statutory report of the directors (usually a short and strictly formal statement);
  - (iii) the profit and loss account ('consolidated' where there is a group);
  - (iv) balance sheets (both parent and 'consolidated' balance sheets are required by law);
  - (v) notes on the accounts;
  - (vi) the auditors' report.

The chairman's review is of prime importance from the layman's point of view and for giving a clear guide to the results, policy and prospects of the company, and it is for these reasons often placed early in the list. The profit and loss account is broadly looked upon as having more significance than the balance sheets and often precedes them in the order. Practice on the order generally as between accounting and other information is fairly divided. My own company tends to keep accounts together in the latter half of the annual report with general and descriptive matter (which is often of greater interest to the lay reader) at the front.

Further items that appear in annual reports include:

 (i) the notice of the annual general meeting, accompanied (often as loose inserts) by notices of any extraordinary general meetings,

- explanatory matter on such meetings and proxy forms;
- (ii) a list of directors and officers of the company giving their executive positions where apposite:
- (iii) a list of the companies in a group;
- (iv) photographs and illustrations of activities and personalities;
- (v) a statement of the results of the year in brief;
- (vi) an analysis of profit, showing the contribution of significant sectors of the company;
- (vii) a long-term record, of results and funds together with ratios, usually over ten years;
- (viii) an analysis of share ownership;
- (ix) statements of sources and uses of funds.

Before dealing with some of these items in more detail, I would again emphasize the value of good presentation through the proper consideration of such matters as size of document, quality of paper, style and colour of print and design of page layout.

- 31. The chairman's review or address is often included in the annual report, though on occasions it is withheld until the annual general meeting. Circulation in the latter case is then often made after the meeting. In the former case a report of the meeting itself, including more up-to-date information on the progress of the company, is sometimes issued. The review itself provides commentary on the year just passed, on the elapsed part of the current year and on the future. Many chairmen discuss the general economic and political situations in which the company has operated and is about to operate, relating the company's results to the effect of those situations. Certainly in Great Britain such published commentary is an invaluable and objective source of up-to-date information for others engaged or about to be engaged in similar fields. Sometimes, unfort nately, this is the very argument used by chairme for refusing to give any really useful information in their statements. Where the company is active in a number of distinct fields it is usual for consideration to be given under those heads. Financial information given by the chairman will not repeat the details given in the accounts, but he may explain the dividend policy, emphasize major items in the accounts, refer to capital plans and indicate in duly circumscribed terms the prospects for profits and dividends. Tillings also appends a statement of the aims and considerations which direct the policy of the board. Sometimes the more personal approach of the chairman's review is replaced by an extended and more detailed report of the directors. However, as noted earlier, this report is often strictly formal and quite short, being confined to the statutory requirements of dealing with the state of the company's affairs appropriations of profit and any material changes in the company's business or subsidiaries.
- 32. The main purposes of the annual accounts themselves are to state the profit or loss from the year's trading; to set out the financial situation at the

ad of the year; and to compare the figures with lose of the preceding year, explaning changes other han from trading since the last financial report. In ritain accounts have to be produced to the company a general meeting, made up to a date not more than ine months before (twelve months if there are sterests abroad). Most companies produce them ell within that time. The value of accounts is much educed if they appear too long after the balance neet date.

- 33. Statutorily there is only need to state by way of ote, if not otherwise shown, any material respects in hich any items shown in the profit and loss account re affected by any change in the basis of accounting. 'he purpose is to reveal the extent of any distorting fect upon profits of such a change, e.g. in the basis f valuing stock-in-trade (inventories in American rms). This may be adequate for comparing the equence of results of a single business. It has to be ecognized that the proper comparison of results of a umber of different companies may be prevented by ne adoption by them of varying accounting policies, ne bases and effects of which are not disclosed. On ractical grounds, particularly in a large and varied roup, the detailed disclosure of accounting policies lay not add much to the situation.
- 34. To keep the accounts simple, clear and free of straneous material, much detailed information as elegated to notes. Such notes necessarily form an itegral part of the accounts.
- 35. Disclosure of the provision for depreciation of xed assets is a statutory requirement. The annual harge must be stated, and if this is other than by way f depreciation or renewal provision or if there is no rovision, then the method used or the fact that no rovision has been made must be stated. Accumuted depreciation applicable to the main fixed asset assifications, based on cost or on a revaluation which has been reflected in book values, is deducted on the face of the balance sheet or, if there are numerous lasses of asset, in the notes to the balance sheet.
- 36. Stock-in-trade is classified as a separate item nder the group heading of current assets. The irectors have a duty to state if in their opinion ocks (or any of the current assets) have not a value on salization in the ordinary course of business at least qual to the amount shown on the balance sheet. My wn Institute has suggested that the basis of valuation of stock should be stated. Where due to complexity this is not practicable, it is recommended that n assurance be given that the bases used are ppropriate and have been applied consistently.
- 37. There has been some variation in the style and orm of accounts over recent years. The 'vertical' ayout seems best adapted for the profit and loss count, so as to show successively total sales and ther income and its cost, net profit and the taxation: bears and appropriations of taxed profits. The ertical balance sheet supports the trend towards

simplification and explanations for the lay reader. However, the total assets shown by one side of the traditional two-sided balance sheet are readily equated with the funds provided and borrowed as shown by the other side and present, it would seem, a sound argument for this form.

- 38. Reference has already been made to some of the items of supplementary information which may be included with the accounts in the annual report. One or two further remarks may be appropriate at this point. Where a company is of a complex character in its trading activities, then for a proper appreciation of its accounts it will probably be necessary to append additional details in explanation of the results, the present situation and prospects. This may be done in the chairman's address in narrative form; or by listing the main companies or divisions in the group, indicating their importance in terms of their contribution to profits and of their proportion of the assets of the group (perhaps also noting their activities, location of operation and chief executives); or by dividing the profits and turnover, and also the assets on a geographical basis where this is of more significance.
- 39. The wider ownership of shares in companies is leading to inquiries about the manner of ownership of the more significant public companies and some lesser ones too. Already a few companies provide an analysis of shareholdings, giving numbers and percentages according to size of personal holdings and under other categories. Prevalence of holdings by nominees can seriously affect the validity of such analysis. Under present British law with one minor exception, the fact that shares are held by a nominee on behalf of another need not be recorded by a company nor need the beneficial holders be disclosed in a company's register of members.
- 40. Statements of sources and uses of funds, both for the year under review and over longer periods, are appearing more frequently. Certainly the financial Press pays considerable attention to cash flow. The layman is being educated rather slowly to the value of this statement. In Great Britain its production is neither statutory nor the subject of much encouragement, but it is beginning to appear in more and more accounts.
- 41. I would make a plea for the inclusion of information on two items of particular importance in these days of acquisition, merger and general growth: first, the showing of the contribution to profits of new interests acquired between accounting dates, and second, the demonstration preferably in the long-term record of the return on equity capital.

### VI. Statistical Uses of Financial Reports

42. Through the study of financial reports, i.e. company accounts, over a sufficient number of years and from an adequate number of companies, statistical interpretation may be effected on a national or

even an international scale, for the resolution or at least the illumination, of a variety of economic problems. Such study does in fact take place in Great Britain having been initiated by the National Institute of Economic and Social Research in 1950. The work is being continued by the Board of Trade, and regular information is published quarterly. The initial National Institute study covered five years' accounts of some 3,000 public companies, and these were analysed in total and under twenty-one industrial groupings. Many companies gave assistance in this work. The results were issued in book form under the title *Studies in Company Finance*.

- 43. The Companies Act of 1948 introduced for the first time mandatory production of consolidated or group accounts. As many major British undertakings are operated as groups of companies, it was only after this Act that financial information of real value was made available. While much of the interpretation in the Studies has been of relationships within the accounts, developments in the business situation from year to year have not received so much attention. In the conclusions to the Studies it is stated that one of the main obstacles to commentary upon the changing scene is the inadequate information provided by many companies in their accounts, particularly the lack of turnover figures. It is of interest that the totalled figures for the 3,000 concerns were set out in three types of table:
  - (i) composition of net income and its disposal; (ii) composition of net assets and the funds
  - represented;

(iii) sources and uses of funds.

Comment was made under the following headings:

- (i) dividend policy and income appropriation;
- (ii) self-financing;
- (iii) capital issues; (iv) bank credit;
- (iv) bank credit; (v) trade credit;
- (vi) size, growth and concentration; (vii) specific industrial classifications.

Some of the many indicators used are particularly worth noting — liquidity, gearing of capital and relevant income, saving and investment, and income ratios.

44. The conclusions drawn from the National Institute Studies make most interesting reading. The variety of experience and behaviour of companies was very great, and little homogeneity was discernible even between the accounts within a particular industry. Behaviour and structure tended to vary most directly with size.

In the period 1949-53 it was found that:

(a) investment expenditure was not necessarily geared to funds arising from internal sources;

(b) contrary to popular impression, there was not a restricted access in Great Britain to the capital market, and there were no inhibitions about using that market – indeed, the largest and

- fastest growers made the greatest use of the capital market;
- (c) the largest companies tended to grow most rapidly;
- (d) finance of expansion was as much involved with finance of trade credit as of other tangible assets:
- (e) bank credit was not of significance, again contrary to popular opinion.
- 45. In these comments upon the statistical aspects of financial reporting I would refer to the attempts: which have been made to compare international experience. The British figures have been ranged against those of the United States and Australia. For the period 1949-53 the following points have been made, and I quote them by way of example of the sort of deductions to be made in this field. In Australia large sums were raised both by share issues and from debentures; much less reliance was placed upon retained profits; and dividend policies were liberal. In the United States, while bond issues were of comparable importance to debenture issues in Britain, issues of shares were comparatively of less significance. Life assurance company purchases of securities were substantial in both countries. In the United States fixed asset investment was proportionately greater than in Great Britain, while investment in stocks (inventories) was of less importance. The trade credit pattern in Australia and in Great Britain was similar, but United States companies received more than they extended during the period.
- 46. The survey of company financial reports in general, both nationally and perhaps internationally, will probably enable and in fact has enabled (certainly in Great Britain) the bringing of guidance to Government, to representative industrial organizations, and to individual companies. In recent years the British Government has been concerned with dividend restraint, capital issues control and the supervision of the flow and availability of credit generally. The review of financial reports facilitate appraisal of the success or failure of these policie and indicates possible future action. The prope formulation of company policy, particularly or finance, can be helped by observation of the factor and conclusions reached both in financial report themselves and in special studies of them.

### VII. The Future

47. Throughout the foregoing paragraphs I hav attempted to reflect the viewpoint of a Britisl accountant on the importance and place of financi reporting in the world economy. Naturally, I have quoted widely from the background and development as it has occurred and is occurring in Great Britain You will be aware that much is proceeding at the present time, both towards the enactment of new legislation and for the adoption of the best extrastatutory practice. There have been many gaps in meaning the statutory practice.

commentary for the simple reason of lack of time. I hope, however, that I have touched adequately on a sufficient number of points to indicate to you the way our thoughts are going. I hope also that I have raised matters and raised them in a way that will provoke discussion.

48. We are living and I believe we are going to live in a world where the international boundaries that divide us are going to fade fast, certainly in terms of knowledge and standards of practice in our profession. Let me quote the example of Europe. There, the widening impact of the Common Market is sure to bring with it an exchange of technical skills and an uplifting of standards. On the training of the future accountant, my own Institute at the present time is in the midst of considering the improvements which are needed in education for membership. The

professional syllabus is bound to place stress upon the matter of financial reporting, in many respects the supreme outward example of the accountant's professional skill.

49. In considering the future of the world economy the conclusion emerges that there is a relative shortage of capital available for all the many tasks that demand to be performed. In such circumstances the concern that deserves support will aim to present through its financial report its image and activities and its claim to capital. Such a report will need to be up to date, responsible, enterprising, comprehensive, graphic and lucid, and in the words of the British Companies Act true and fair. In the electronic world of the future it could be, of course, that the circulated printed word may be supplemented or eventually replaced by a medium giving sound and even vision!

# Weekly Notes

### ACCOUNTANTS' REPORTS FOR PROSPECTUSES

AS noted in the report of the proceedings of the Council of The Institute of Chartered Accountants in England and Wales in our last issue, the London Stock Exchange has revised its memorandum regarding reports by accountants in respect of prospectuses, which was first issued in October 1954. The new memorandum is reproduced in full on other pages of this issue, and the principal alterations are referred to below:

Stock and work in progress (Paragraph 10 (i)): This paragraph refers to a new form of letter which will be required from accountants concerning the valuation placed on stock. The letter required is more explicit than that required under the previous memorandum. In future, stock must be stated to be valued in accordance with generally accepted accounting principles which have been applied consistently.

Equalization of Taxation (Paragraph 10 (iii)): The comparison between depreciation and capital allowances is now completely altered. Comparison is now to be on the basis of written-down value for tax purposes against the book values as shown in the balance sheet. The previous method has been to compare depreciation and capital allowances on an annual basis which has given rise to some confusion, since a number of variations of this method are possible.

Overseas Interests (Paragraph 12): This is a new requirement, following questions which the Share

and Loan Department has in fact been asking companies for some time.

Long-term Hire of Plant (Paragraph 13): In view of the possible growth of this type of activity, it has been thought desirable to draw accountants' attention to the point and in appropriate cases to ensure that adequate information is given to the public.

Net United Kingdom Rate of Taxation (Paragraph 14): This is now included for the first time as it is felt that it is information of interest to potential investors.

The memorandum has been redrafted and the layout simplified. It should, however, be noted that no change has been made to the layout of the statement of adjustments.

#### ENGINEERS AND THE NEXT BUDGET

THE season when advice is offered to the Chancellor of the Exchequer on his next Budget, like Christmas, seems to start earlier every year. A memorandum from the Engineering Industries Association, through its Financial Problems and Taxation Committee, this week advocates exemption from profits tax where the profit does not exceed £5,000, with an abatement of one-third of the difference between the profit and £20,000. It also advocates an upward revision of the maximum remuneration for controlling directors and a drop in the rates of tax (including income tax).

The memorandum also pleads for equality of treatment, in the matter of retirement benefit schemes for sole traders, partners and controlling directors, as compared with employees; and for capital allowances on commercial buildings. The Association considers that the duty on heavy oil should be repealed, and the rates of purchase tax

reduced.

### PUBLIC SERVANTS' PAY

IN its latest broadsheet, Political and Economic Planning have made a detailed study of the wage problems in the public sector which employs more than one-fifth of the civilian working population of Great Britain. The broadsheet brings out that the most persistent problem for the unions in this field has been the difficulty of maintaining income levels comparable to those in equivalent private employment, while for the Government the major problem has been to reconcile its role as an employer with its wider responsibilities not to allow wage increases for its own employees which might be detrimental to the nation's economy.

For the future, if the Government's incomes policy is to be developed, three questions will arise. The first is how the wages policy is to ensure that public servants do not suffer a pay disadvantage as was the case in previous wage control periods, e.g. 1948 to 1950 and 1957 to 1958. Although the Government has stated that the principle of fair comparisons has unfortunate economic consequences, so far as is known no practical alternative has been advanced.

The second question concerns the role of arbitration when a wages policy is operating and the third concerns the fixing of wages for public industries, such as the railways, which are showing a loss.

The broadsheet suggests that it might be worth while having a permanent body, possibly the new National Incomes Commission, to consider the answers to these problems.

### COMPENSATORY PUBLIC INVESTMENT

PUBLIC investment in Great Britain in 1963-64 is expected to total £2,060 million; the final figure may well be increased by some £70 million of additional investment in electricity at present contemplated. The importance of this factor in the national economy is indicated by the increase over the period 1955-56 to 1963-64 from £1,275 million to the forecast figure above.

Public investment is made up of two main groups of expenditure. Just under half is devoted in the coming year to the nationalized industries and the public corporations and of that total about 45 per cent or £438 million is allotted to the electricity boards. The British Transport Commission will receive £153 million and the Post Office £139 million. The other part, just over half the total, is allotted to public service investment such as roads £149 million, education building £198 million and housing – the largest item – which takes £348 million.

The most significant fact to emerge from the latest White Paper on Public Investment in Great Britain,

<sup>1</sup> Wage Policies in the Public Sector, Political and Economic Planning, London. Price 4s.

published last week<sup>1</sup> is the decision to expand the capital outlays in the public sector by about £130 million as compared with 1962-63. In the words of the report 'the Government have thought it appropriate to relax some of the more severe restraints imposed last year upon the growth of public investment'. This policy is in keeping with the principles laid down in the 1944 White Paper on Employment Policy (Cmd. 6527) which stated that fluctuations in the volume of private investment would be compensated by corresponding increases in the public sector.

The implementation of this policy is timely, but it is earnestly to be hoped that the localized pressure upon limited labour resources in the constructional trades which such plans can easily generate will not deter private investment, or if this takes place, force up costs unduly. Once a major scheme of public works is launched, it cannot be cut back or delayed without cost.

### A BANKER REFLECTS

N this year's Stamp Memorial Lecture, Lord ACobbold, until some eighteen months ago Governor of the Bank of England, explains his view of the Bank's role vis-à-vis the Government, the commercial banks, and the public.2 On the first he notes that the 'directions' clause of the Bank of England Act, 1946, which gives the Treasury power to compel the Bank to pursue a particular course of action, has the merit of at least making it quite clear where the ultimate responsibility for financial policy rests. On the second he is at pains to stress the importance of frequent and informal contact between the members of the money and capital markets on the one hand and the Governor on the other, thus implicitly acknowledging the value of Mr (later Lord) Norman's 'tea parties', as they were known. He has rather less to say on the Bank's public image, but recognizes the harm that was done in the past by the excessive and foolish secrecy which surrounded high finance.

One point of especial interest is his rejection of the proposal that there should be a frequent interchange of personnel between the Bank and Treasury. In his opinion such a policy would merely fuse their opinions, when what is needed from the Bank's staff in its dealings with the Treasury is an independence of view based upon a detached appraisal of the situation. Nevertheless, such exchanges of opinion, however they may conflict, are best kept private. Not for Lord Cobbold, is the violent, much publicized disputation between the Bank and the Government which arises from time to time in less urbane societies.

For the foreign student of British affairs in particular, Lord Cobbold's delightful talk will serve as a model of the British way of doing things at top level.

### DOCUMENTARY EVIDENCE AT TAX APPEALS

THE vast majority of tax appeals to the Commissioners, General or Special, turn on questions of fact. Although section 59 of the Income Tax Act, 1952, gives power to the Appeal Commissioners to require the attendance of witnesses to give oral evidence, the Income Tax Acts nowhere confer power on the Commissioners to require any person to attend for the purpose of producing a document in his possession or power. The difficulty is got over in practice by the Commissioners obtaining from the Crown office a subpoena duces tecum which can be enforced by the Queen's Bench Division of the High Court. It has never been the practice to seek judicial leave for this, nor to specify the required documents

before the issue of the subpoena. It is considered sufficient if the documents are specified with reasonable distinctness after the issue of the subpoena.

This practice was attacked by a tax appellant, Mr Robert Frederick Soul, of High Street, Olney, Bucks, who brought an action for damages against the Revenue for wrongfully obtaining subpoenas out of the Crown Office without the leave of a Judge. He also complained of the omission to specify the documents, and argued that the subpoenas were invalid. The Revenue countered by successfully applying for Mr Soul's statement of claim to be struck out, as disclosing no cause of action. This week he appealed to the Court of Appeal against the striking out, but his appeal was dismissed.

### This is My Life ...

by An Industrious Accountant

CHAPTER 147

COMMUNICATIONS are notoriously a thorny problem in any accounting department. Personally, I always seem to be doing the wrong thing about them. When I first came to my present job, a chaotic lack of system was accepted cheerfully as normal, an attitude uncomplainingly derived from my predecessor's old-fashioned autocracy. I let it run for a time. My individual subordinates dropped into my room in a regular daily rotation; we talked things out and made joint decisions; they implemented them later in their own way.

That was all right in the old days when managers issued centurion-like edicts 'Go, and he goeth', and obedience was automatic. But nowadays we need cooperation and close-knit teamwork to ensure maximum efficiency. These subordinates in their turn were not always explaining our decisions down the line, I found. That time we changed the creditors' records, for example, when the departmental accountant initiated it without warning the staff, the junior section-head thought he'd be redundant and nearly had a breakdown. Or when the office manager peremptorily rotated the chief dictaphone typist with the shorthand supervisor, without the benefit of prior consultation, one had hysterics in the cloakroom and the other gave immediate notice. Hell hath no fury like a woman unwarned.

So I arranged weekly group meetings and at first they went fine. Communications improved vastly. We had the departmental accountant, temperamentally allergic to undue effort, the office manager, nervily nursing grievances about the ineptitude of the rising generation, and the costs man, bursting with constructive but ill-judged suggestions. The registrar and the internal auditor joined us also, of course; the latter usually had fascinating glimpses of

hitherto-unknown enormities in other departments.

Unfortunately, these meetings went on too long, as they inevitably tended to cover too much ground. After a while the members felt that A.'s problems were really of little concern to B., C.. and D., except in outline, and got bored. The cost accountant has thick glasses and I think he used to go quietly to sleep behind them on sunny afternoons. Also when the departmental accountant was on sick-leave, his assistant deputizing for him regularly stated in worried fashion that such-and-such was absolutely news to him, but absolutely, old man, thus branding his chief as being lamentably at fault in his communications.

So I tried holding sectional meetings at regular intervals. The attendance would include any of the particular section-heads mentioned above, and their two or three immediate subordinates, and we went into rather more detail. Results were very good at first. Then, somehow, the discussions tended to deteriorate. The trouble was that in cases of procedural disagreement loyalties were divided; when the section-head maintained a viewpoint his assistants were often reluctant to differ from him; they took a passive and slightly suspicious role. They were careful of their words, backward in coming forward. I knew why of course. In one case at least, that of the cost accountant, he's a petty tyrant in his own field. He allows little or no criticism from his staff and it could fare ill with the one who failed to keep a united front before the natural enemy. Meaning me, naturally.

The office manager, on the contrary, irks his team by his niggling and tends to get involved in bitter repetitive exchanges which never seem to get anywhere. His shorthand supervisor, I suspect, is a throwback to Dracula; she takes pleasure in backbiting people.

So recently I haven't been holding any meetings at all. Theoretically a poor procedure, so far it's working rather well. Except that the office manager tells me that communications are terrible in our department, and that all the chaps want meetings again.

# Finance and Commerce

### Qualcast

THIS week's reprint is from the accounts of Qualcast Ltd, a name so well known as the biggest lawn mower manufacturer in the world that it is not generally realized that it is also the leading name in the United Kingdom for repetition light castings. Light castings, in fact, is the more important side of the business, which goes back to the ironfoundry producing stoves and grates established by the great-grandfather of Mr Vincent Jobson, the chairman, in Sheffield in 1801 and moved to Derby, the Qualcast headquarters, in 1849.

Mr Jobson's aphorisms at the foot of each page of his annual report and accounts have so often enlivened this column with humour and common sense that it is a fitting tribute, as he approaches his 76th birthday, to reprint the accounts – and the little

proverbs.

The Suffolk Iron Foundry (1920) Ltd and its 'Punch' mowers was brought into the group in 1960. In the year under review, the capital of Charles H. Pugh Ltd, of Birmingham, was acquired from August 1st, 1961, for 1,100,000 Qualcast shares; its accounting date was changed to June 30th and figures for eleven months have been included in these accounts.

### Optimist

Despite the opportunity available to him, Mr Jobson, as a boy, was something of a 'misfit' and went off ploughing his own furrow: grocers' assistant, working photographer and travel – in the West Indies, United States and Canada. But by 1912 he was back in Derby, and about 1920 was linking his future with the motor manufacturers with castings for cars.

Mr Jobson is a confirmed optimist – as his remarks on page 9 of his report clearly indicate: 'Definitely, I am not a pessimist, I can see no reason to be. We have just brought into production a new semi-automated foundry, with a potential of 10,000 tons a year, and we anticipate filling it. The trend, a happy one for the future of the country, is towards increased leisure time, and catering for this trend should provide a profitable avenue for expansion of business.'

How the business has expanded in the last decade

is shown in a comparative table of capital and profits. Total capital employed has risen from £1,851,999 to £8,981,146, assisted on July 1st, 1960, by a fixed asset revaluation giving rise to a surplus over book value of £2,226,373 which was placed to capital reserve. From 1949 to 1961, seven scrip issues increased a holding of one hundred shares to 1,143.

### **Poll Point**

RECENT events in the company world have provided accountants with a wealth of practical experience. Francis Sumner (Holdings) was forced into taking a poll vote on the composition of the board and the acceptance of a new firm of auditors. To the company it was a matter of great consequence because the board had only been in its present form since about last February, after some years of strife and unsettlement.

At the meeting on October 19th, the voting position was that the board had the support of approximately 800,000 votes and the opposition of about 1.6 million votes, leaving about 2\frac{3}{4} million votes uncommitted. The opposition obtained proxy support without disclosing that the aim would be to oust the board, the nominations of the proposed directors being deposited at the company's office at the last moment before the meeting.

Mr C. C. Miller, F.C.A., the chairman, maintained that the position should be set before all the share-holders, not least those who had not committed themselves, and fixed November 13th as the date for the poll, which had to be taken within twenty-eight days from the meeting at which it was demanded.

### Instruction

The first obvious point was that those shareholders who had already given proxies could not, in effect, undo them. The only way open to them, if they wanted to make certain their views were expressed through the ballot box, was to attend personally at the poll, a practical impossibility for many people with busy lives to lead at a distance from the scene.

Members were informed, however, with the notice of the poll, that it was still open to them to write to their proxy holders instructing them as to how they desired their votes to be exercised, or even to instruct

them not to vote at all.

Then came Sir Sydney Littlewood, a shareholder and a Past President of The Law Society, in support of the board. He reminded members that though they may have given their proxies to the opposition before they knew that it planned a board upheaval, they could not legally revoke. Nevertheless, he wrote, they could still authorize him to instruct Mr B. J. Brady, the opposition leader, that their proxies should be used in favour of the board and against Mr Brady's nominees.

### QUALCAST LIMITED

### Auditors' Report

### TO THE MEMBERS OF QUALCAST LIMITED

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion, proper books of account have been kept by the Company so far as appears from our examination of those books. We have examined the annexed Balance Sheet which is in agreement with the books of account. In our opinion and to the best of our information and according to the explanations given us, the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner so required and gives a true and fair view of the state of the Company's affairs as at 30th June, 1962.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Company and its Subsidiaries with the audited Accounts of those Companies, certain of which have not been audited by us. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared in accordance with the provisions of the Companies Act, 1948, so as to give a true and fair view respectively of the state of affairs and of the profit of Qualcast Limited and its Subsidiaries.

### CITY NOTES

NCE again international political developments have intervened in the stock-markets. A rally in the equity markets based on hopes that Government re-expansion moves will do the economic trick, has fallen foul of the developments in the Indian border war.

It may be as well that the rally has been subjected quickly to such a test. The impression was developing that an equity boom was round the corner. Even accepting the best results from a reduction in purchase tax on cars and from more generous investment allowances and even anticipating fresh Government measures, there was little firm basis for maintenance of the pace of the equity advance.

In the gilt-edged market there is now an interesting exercise in tactics. The official moves to force down long-term interest rates stopped at the time of the Cuba crisis and, although the market subsequently recovered to some extent, there has been no sign of any return of official prompting in the long-term end of the market.

Undated stocks are now some three points below heir pre-Cuba peaks, but successive days of marking down of prices have so far not encouraged any return of official support nor any indication of official policy.

The Building Societies' Association, meanwhile, is obviously still undecided about the true interest rate rend and has still refrained from recommending ower interest rates. The Association's decision might be unpopular but it is understandable and, in the ircumstances, correct.

### Changes in the Purchasing Power of Money

SIR, – In his most interesting paper on 'Changes in the purchasing power of money' (*The Accountant*, November 3rd and 10th) Mr W. E. Parker argues that all goods and other assets held by a firm should be revalued to take account of changes in the purchasing power of money. I find myself only partly in agreement with him. In particular, I question the validity of his conclusion at the end of paragraph 18, which reads:

If therefore it proved expedient for savings bonds to be held by a going concern as a means of maintaining its undertaking [by which I understand making provision for amortization and the replacement of assets], I should say that without question the accounts presented to the stockholders ought to incorporate the effect on the equity capital of changes in the purchasing power of the bonds so held.

Suppose a firm purchases a machine for £1,000 with an estimated net replacement cost at life expiry in 1972 of £2,000. And suppose the firm, in order to provide for its renewal, purchases in each year of the machine's life, bonds maturing in 1972 with a total redemption value of £2,000. If this proved sufficient to cover the cost of renewal, would not the revaluation of the bonds by reference to, say, a fall in the purchasing power of money prior to redemption amount to double counting? Similarly, bonds accumulated in order to amortize a loan would not need revaluing, since changes in the purchasing power of money are not going to effect the size of the loan or the interest charges on it. Nor, to return to the machine example, would there be a case for the revaluation of the bonds, even if the amount provided at life expiry fell short of the net replacement cost, since the whole of the proceeds on redemption would become available as a contribution to the cost of renewal.

There may be a case for revaluation where the bonds are accumulated by way of pure amortization other than of a loan or other debt owing to an extraneous organization, provided there is no intention to renew a tangible fixed asset or a leasehold; but even then, I suggest it is a pretty slim one.

Yours faithfully,

Bushey Heath, Herts. E. J. BROSTER.

SIR, – Those who are concerned with this very important problem, and who have studied Mr W. E. Parker's paper in your issues of November 3rd and 10th, may be interested in a seminar on replacement value accounting to be held at The Polytechnic, Department of Management Studies, during the week beginning January 21st, 1963.

The seminar will be led by Professor Abram Mey, who retired last year from the Chair of Managerial

Economics at Amsterdam University.

Professor Mey, who is a member of the Nederlands Instituut van Accountants, was previously Director of the State Budget in Holland, and was responsible for preparing the first State balance sheet for that country after the last war. He has been working on the problems of price level changes since the early thirties, and is well known for his lectures and articles on the subject.

Yours faithfully, KENNETH S. MOST, LL.M., F.C.A.

The Polytechnic, Department of Management Studies, London W1.

### Opportunism and the Accountant

Sir, – The article entitled 'Opportunism and the accountant', by Mr A. H. Taylor, M.C., A.A.C.C.A., in your issue of October 27th, contains a great many statements which are, not to put too fine a point on

it, highly questionable.

The general theme, however, appears to be that budgeting and management accounting generally have replaced 'opportunism' in business. Surely it is realized, if not from experience, at least from the multitude of textbooks, lectures, pamphlets and courses on the subject, that the main and overriding purpose of budgeting is to spotlight the need for swift management action, or 'opportunism' as it is here called. The early results of budgeting and management accounting in countless installations have been to reveal the vulnerability of businesses and to alert managements to the need for constant 'opportunism' and forward planning.

Mr Taylor calls for a 'new race of accountants', one of whose duties will be, it is stated, 'to predict the future'. One can appreciate how valuable such persons would be (and not only in the financial field). I would suggest, however, that the present race of accountants are quite adequate, provided they know their

subjects.

Yours faithfully, T. K. MULLIN, F.C.A., A.M.B.I.M.

Cheam, Surrey.

[Mr A. H. Taylor writes: Your correspondent's interesting letter is as provocative as my article was intended to be. I agree that budgeting should 'spotlight the need for swift management action' but a budget variance will only indicate the extent to which

the original intention has or has not been achieved. A budget, unless immediately revised, will not reflect new opportunities for making profit which may arise from day to day. That is the kind of opportunism which demands a new emphasis in the service accountants offer industry.]

### Decimalizing the Currency

Sir, - To the many words that have been written on this subject, may I add a few in favour of a composite scheme, namely:

One major unit (the 'fiver') = one hundred shillings. One shilling = twelve pence.

There are a few points arising from most of the schemes proposed and introduced so far:

- (a) Why must we abandon our unique ability to divide amounts by twelve?
- (b) Why is it generally assumed that the minor unit should not itself be divided into halves, thirds, quarters or twelfths? Otherwise, should inflation overtake the 1-unit coin, it means that a 21unit coin would bear a more convenient relationship to the 10-unit coin than a 2-unit coin, but that would involve introducing a coin of two significant figures.
- (c) Why should we be restricted to a one-pause system? Mr T. H. Husband has very effectively shown the advantages of a two-pause system in your issue of May 26th, 1962.
- (d) Also, in the now popular 10s/cent scheme, the similarity between a cent and a penny is too great and would probably cause more confusion than the appreciable difference between the penny and the 2.4d cent of the £1 scheme.

In addition to overcoming these objections, the fiver-shilling-pence' scheme has the following main advantages:

- (a) It retains the very valuable ability to divide accurately amounts by threes and twelves, and to obtain the exact price in pence of articles priced in shillings by the dozen.
- (b) If £5 is divided into 1,200 it has 28 whole number factors, while divided into 1,000 it only has 14 such factors.
- (c) No difficulties exist for transactions and prices involving shillings and pence only, hence noinflation due to adjustment of exact amounts.
- (d) The conversion of amounts over £1 is fairly simple, unlike the factors of 12 and 24 which appear somewhere in any other scheme. Also in practice, amounts up to about £5 are often quoted in shillings at present.
- (e) Far fewer problems arise under this scheme than under any other from the inevitable use of old currency for basic prices and a final conversion into new currency. In India, food prices are still quoted in annas and only the eventual total in

rupees and annas converted into rupees and naye paisa at 6½ n.p. to the anna (approximately!).

(f) Two of the three present units are retained, which no other scheme does, while the 10s/cent scheme abandons all three.

- (g) No coins need be changed, apart from withdrawing the half-crown, because it has two significant figures, and possibly introducing a 5s coin of a different colour or shape from the silver range and much lighter than the present (rare) crown, to bridge the gap and give a 1, 2, 5 sequence. There is no half-crown in Australia. The changeover in notes is of name of  $f_{ij}$  and  $f_{ij}$ only, and notes have a much shorter life than coins anyway.
- (h) Coin-using machines will not be affected.
- (i) Little advance notice is needed.
- (j) The larger major unit means a reduction in the number of figures in statistics and published accounts.
- (k) The major unit is restored to about the 1914 value of the pound. A reduction in the value of the major unit is undesirable as it emphasizes the effects of inflation and could even solve all decimalization problems as in France.

The disadvantages compared with other schemes are relatively insignificant:

- (a) The change in major unit means that for comparative purposes, statistical records will need conversion.
- (b) The £5 will be larger than any other major unit, but then so is the £1 and 10s. If it is necessary to have a comparable unit, then the shilling is in the same order as most European currencies and amounts under a shilling are hardly likely to worry trade on an international level.
- (c) Accounting machines can only be used for amounts of fivers and shillings, using the machine in round pounds temporarily. Amounts including pence can however be recorded by using f, s d equivalents prior to conversion.

Yours faithfully,

Sydney, Australia.

P. D. LONG.

### Thistles in the Barley

Sir, - Readers may be amused by the following copy of a letter we received recently from a client in connection with queries left with him:

'Dear sir,

On going over my papers again and thinking back, it was put in Barley but came up so full of Thistles it was cut and the best of it we fed to the hens, the other we burned.

> Yours truly,' Yours faithfully, THORNTON BAKER & CO.

Bedford.

### Accountants' Reports for Prospectuses

A memorandum from the Stock Exchange, London, regarding reports by accountants with respect to profits, assets and liabilities for purposes of prospectuses, offers for sale, advertised statements and circulars

### Requirements

- 1. Appendix 34 to the Rules of The Stock Exchange, London, requires *inter alia* (serial 36) that all prospectuses (the document) should include a report by qualified accountants (the accountants) on the company with respect to:
  - (a) its profits or losses in respect of each of the ten completed financial years immediately preceding the issue of the document, or if it has been incorporated less than ten years in respect of each of the years since its incorporation;

(b) its assets and liabilities;

- (c) the aggregate emoluments of its directors during the last year and a comparison with the amount payable under the arrangements in force at the date of the document; and
- (d) such other matters which appear to the accountants to be relevant. 'Prospectus' is defined in Introductory Note (i) to Appendix 34 and includes circulars required under serial 119 relating to material acquisitions by a company.
- 2. A similar report has to be furnished (serials 37 and 56) with respect to the profits, assets and liabilities, etc. (but not directors' emoluments), of a business being acquired or of a company being acquired which will then become a subsidiary and no part of whose securities are already quoted. If the business or new subsidiary has not been in existence for ten years the period is restricted accordingly.
- 3. In the case of groups of companies, the requirements envisage a statement of the company's net assets and a statement usually in consolidated form, of profits and losses and assets and liabilities of the group.

### **Computation of Profits**

4. Neither Appendix 34 nor the Companies Act, 1948 (the Act), lays down the basis on which profits or losses are to to computed. It is the practice, however, for the accountants to indicate in the report the basis which has been adopted. This normally states that the profits or losses have been arrived at after charging all expenses, after dealing with such items as depreciation, amortization, directors' remuneration, interest, etc., on defined bases, and after making such adjustments as are appropriate.

### Statement of Adjustments

5. Provision is also made in Appendix 34 (serials 47 and 65) for a written statement (the statement of adjustments) signed by the accountants setting out the adjustments made by them in arriving at the figures shown in their report and giving the reasons therefor, to be available for inspection by the public.

### Method of Setting Out the Statement of Adjustments

6. In order that the Share and Loan Department of the Stock Exchange (the Department) can obtain what is required in sufficient detail and on a reasonably uniform basis, the statement of adjustments as regards profits and losses should be divided into two sections as follows:

### SECTION 'A'

This section should begin with the net increase or decrease in the balance at credit or debit of profit and loss account shown by comparison of the balance sheets at the beginning and end of each of the financial periods under review; the net increase or decrease in the balance on profit and loss account for each of the last two years should normally be capable of ascertainment from the accounts which are required to be made available for inspection under serials 47 and 65 of Appendix 34. There should then be shown and added to or deducted from this amount:

- (i) the items which are required by the Act to be stated separately in the profit and loss account, notes being included to disclose any further information required by the Act to be disclosed by way of note to the profit and loss account;
- (ii) interest charges, analysed under appropriate headings, in addition to those payable on debentures and other fixed loans (which are covered by item (i) above);
- (iii) material revenue items which have been dealt with otherwise than through the profit and loss accounts.

The sum finally arrived at in this section would normally be the profit or loss for the year before taking account of interest and of items which the Act requires in any event to be stated separately.

### SECTION 'B'

This section should commence with the final figure of profit or loss shown in Section 'A' and should show in detail the adjustments made thereto in arriving at the profits or losses shown in the accountants' report and giving the reasons therefor.

7. As regards assets and liabilities, if the final total amount of the net assets in the report differs from the total amount of net assets dealt with in the latest audited balance sheet, and the relevant adjustments are not set out in the report, a statement should be submitted showing the adjustments made and reconciling these totals.

### Statements of Adjustments of Holding Companies

8. If the company is a holding company, the statements of adjustments may deal with the consolidated figures of the company and of its subsidiaries or with the figures of the separate companies or groups of companies comprising the holding company and its subsidiaries. In the latter case, a summary combining the figures so as to arrive at those shown in the accountants' report should be submitted.

### Submission of Statement of Adjustments to the Department

9. The statement of adjustments, a draft of which must be submitted at least ten days prior to the date on which it is proposed to publish the document, should be accompanied by a letter from the accountants to the Department which should confirm that all adjustments which are appropriate for the purposes of the report have been made to the profits and losses (in respect of each year under review) and to the net assets and that no other adjustments have been made.

### Letter to be Submitted to the Department Concerning Certain Accounting Matters

10. There should be submitted to the Department by the accountants a letter confirming the following three matters:

### (i) Stocks and Work in Progress

That, save as indicated in their report, they have obtained sufficient information about the stock-takings and have examined sufficient records and other evidence to enable them to form the opinion that throughout the period under review stocks and work in progress were properly ascertained and, in arriving at the reported profits and losses, were brought into account on bases in accordance with generally accepted accounting principles which were applied consistently.

### (ii) Depreciation and Amortization

That they have satisfied themselves that the provisions for depreciation and amortization charged in arriving at the reported profits and losses, considered in conjunction with any qualifications or notes included in their report are in their opinion reasonable having regard, *inter alia*, to:

- (a) assets in respect of which it has been or will be the company's practice to make no provisions for depreciation or amortization (which policy would require to be referred to in their report) and
- (b) any revaluation of fixed assets either already incorporated into the company's accounts or to be incorporated therein.

### (iii) Equalization of Taxation

That the net book value of the fixed assets appearing in the report in respect of which depreciation and/or amortization will require to be provided out of future profits does not exceed by a material amount the corresponding amounts on which capital allowances will be obtained for taxation purposes, or, in the event of there being a material difference, how this has been taken into account, unless it is apparent from the document (e.g. by setting up a tax equalization account which is deducted in arriving at the net assets or by including a suitable explanation in the accountants' report or elsewhere in the prospectus and making an appropriate adjustment for the non-allowable proportion of depreciation in computing the tax payable on the profit figures included in any forecast future profits).

### Period Covered by the Report

11. Although the report is required to deal with the he profits or losses of each of the preceding een

financial years, application may be made to cover a shorter period where it is considered that inclusion of the earlier years may be irrelevant or misleading.

### **Overseas Interests**

12. Where a material proportion of the profits arises overseas or a material proportion of the assets are situated overseas, the report or the document should give the best practicable indication of the amount and situation or source of such assets and profits. In the case of businesses with overseas interests, the basis on which overseas currencies and overseas taxation have been dealt with should, if the accounting treatment of these matters is material, be set out in the report.

The Department would also normally require the document to contain an adequate explanation with regard to any restrictions affecting the remittance of profits or repatriation of capital from the countries concerned

### Long-term Hire of Plant

13. Where contracts exist for the hire of plant to the company for a period of over one year which are substantial in relation to the company's business, details should be supplied to the Department, who may require details to be disclosed in the document.

### Net U.K. Rate of Taxation

14. If the net U.K. rate of taxation applicable to dividends payable by the company would be materially lower than the standard rate, an estimate of the anticipated net U.K. rate applicable to the dividend forecast should be included in the document.

### **Directors' Emoluments**

15. Appendix 34 requires the accountants to deal in their report with the aggregate emoluments of the directors of the company for whose securities a quotation is sought. The exact comparison to be given must depend on the circumstances of each case and the comparison should normally deal with the emoluments of any person who is a director at the time of the report. The emoluments for this purpose should follow the definition contained in Section 196 of the Act.

### **Additional Information**

- 16. For certain types of company the Department may require information to be given in the document additional to that which is normally provided. Examples would be:
  - (a) Building, contracting and similar companies engaged in carrying out contracts of a long-term nature, where these form a substantial proportion of the business. In such cases the method of taking credit for profits and of arriving at the amounts at which stocks and work in progress were brought into account should be defined in the document.

In such cases the Department would require the letter from the accountants to state also that in their opinion the methods used are in accordance with generally accepted accounting principles which have been consistently applied.

(b) Hire-purchase finance companies where the

methods of valuing debts and taking credit for profits should be defined in the document. In such cases the department would require the letter from the accountants also to confirm that the valuation of hire-purchase debts and the method of taking credit for profits have been on bases which in their opinion are in accordance with generally accepted accounting principles which have been consistently applied.

### General

It is emphasized that neither Appendix 34 nor this memorandum are exhaustive and that further information may be required, or the required information varied by the Department where it is deemed to be relevant. In cases of doubt the accountants should consult the Department through the company's brokers, in consultation with the Issuing House, where one is concerned.

### Swedish Accountants' Fiftieth Anniversary

The fiftieth anniversary meeting of the Föreningen Auktoriserade Revisorer (Swedish Institute of Authorized Accountants), was held in Stockholm last week. Official guests from the United Kingdom were Mr James C. Stewart, c.a., President of The Institute of Chartered Accountants of Scotland, and Mr E. H. V. McDougall, Secretary of the Scottish Institute; Mr Percy F. Carpenter, F.C.A., President of The Institute of Chartered Accountants in England and Wales, and Mr C. A. Evan-Jones, M.B.E., Joint Secretary of the Institute. Representatives from Germany, Belgium, Denmark, Holland, Norway and Finland were also present.

Professor O. Sillén, one of the six founder members of the Swedish Institute, and now the doyen of the Swedish profession, attended the meeting. Professor Sillén was one of the Swedish Institute's three representatives at the 1933 International Congress on Accounting held in London, when the membership of the Institute numbered seventy public accountants; the present total is still no more than 300.

### Sweden's Industrial Growth

The principal address was given by Dr Marcus Wallenberg, a leading Swedish industrialist, on the subject 'Swedish industry – past achievements and future progress'. Dr Wallenberg stated that only Japan and the United States had a more rapid economic expansion in the years 1862 to 1912 than Sweden, although in that half century more than eight hundred thousand Swedes had emigrated. But it was between 1912 and 1962 that Sweden first became one of the most highly developed economies in the world.

Sweden's economic progress was for the most part founded on the expansion of manufacturing industry. In the past fifty years, industrial production had risen by an average of 4 per cent a year, but the figures for the trend of total industrial production concealed a continuing structural change. Any one branch of industry experiences ups and downs in a period as long as fifty years, Dr Wallenberg stated, but the branches which had expanded strongly during the whole of the period were iron, steel and metal manufacturing, pulp and paper, and the electricity supply industry. For the textile and ready-made clothing manufacturers there had been periods of recession, and the sawmills and the shoe and leather industries could be said to have relatively stagnated.

Dr Wallenberg touched on the factors of production. In the past ten years the increase in employment had been almost entirely confined to the 'white-collar' section, whereas the number of manual workers had been pretty well unchanged even though the working

week had been shortened. The contribution of fixed capital – machinery, buildings, etc. – had thus increased more rapidly than that of labour. In this context the key words were: standardization, specialization, work and method study, product development and location of industry.

Dr Wallenberg went on to talk of the dynamic elements in business activity—invention and technology were basic factors in economic development, he said, but enterprise had also a strategically decisive place in the process. Decisions about when and how to invest, when to abandon or change a line of manufacture, when to cultivate a market had to be taken by the entrepreneur. The presupposition of creative business enterprise was the availability of risk capital. There had been many improvements in Sweden in the sphere of money policy, but, largely as a consequence of tax policy, the supply of new, risk capital remained restricted. This limited the creative enterprise which was essential in a dynamic economy.

Looking into the sixties, Dr Wallenberg expressed the view that companies would sell more energetically, especially in export markets, and that modern data processing methods would be more commonly introduced. He was convinced that it was possible to avoid a serious depression during the sixties, if the finance ministers and central bankers in the Western countries could collaborate effectively.

### Aid for Under-developed Countries

In conclusion, Dr Wallenberg spoke about the industrialization of the under-developed countries. Their industrialization could cause these countries to require greater quantities of capital goods from the industrial nations of the West, the economies of which could be stimulated in this way. If the under-developed countries progressed in a way which provided them with greater internal resources, their present needs, with their vast populations and their great and unmeasured needs, could give a powerful boost to the economies of the West.

'I believe', said Dr Wallenberg, 'that if such a development were to take place, Swedish industry would be in a condition to use the opportunities for rapid growth which would be created. We have a very rich supply of "know-how" for the production of capital goods, and often for those goods which are in particularly keen demand when an economy has to be built up from the start. For this reason it is of especial interest to the Swedish economy that ever-increasing contributions should be made to build up the under-developed countries.'

### THE UNIVERSITIES AND THE PROFESSION

### Manchester Chartered Accountants' Dinner

Over four hundred members and guests attended the annual dinner of the Manchester Society of Chartered Accountants held at the Midland Hotel, Manchester, on November 15th. Mr G. W. Murphy, J.P., B.A. (COM.), F.C.A., President of the Society, was in the chair and together with Mr P. F. Carpenter, F.C.A., President of The Institute of Chartered Accountants in England and Wales, received the company.

The toast of 'The City and University of Manchester' was proposed by Mr Murphy who said they were all keenly aware that in the many fields of social and scientific endeavour great advances had been made by the university and the corporation. It was his privilege to express appreciation for the special services in education given by the university and Manchester Education Committee.

'We need educated young people to staff our profession and supply it with new members. We must have a continual flow of university-trained men to uphold our standards of performance.'

Young people joining the profession from the universities, he went on, had made brilliant advances. They were today occupying positions of the highest responsibility which included educational, professional and commercial appointments.

'We have had students from many parts of the United Kingdom, the Commonwealth and foreign countries in my university department. They have later been trained by Manchester practitioners, and their subsequent careers have been as distinguished as was their university progress.'

### Mr Murphy continued:

'For fifteen years I have debated, discussed and disputed with my professional colleagues and the subject of this dispute has always been the same. It is the study and teaching of accounting in English and Welsh universities. It is now an accepted discipline in every university in the United Kingdom. I beg your pardon, there are still those ancient citadels on Isis and Cam. Though the wind of rumour gives gentle murmurs that even those old bastions are beginning to crumble'.

### Management Skill

It was not the first time Manchester had been in the vanguard. As chartered accountants they claimed a knowledge of management accounting. This, naturally, included budgetary skills, cost control techniques and management ratios.

It was difficult to allocate scarce means among competing ends, especially when the objective of allocation was to maximize the attainments of those ends. It must be perplexing to try to reconcile the general policies which the university and the corporation wished to pursue with the financial resources available, and their efforts and management skill during a period of disturbingly unpredictable political and reconomic activity were sincerely admired.

Responding to the toast on behalf of the city, the Lord Mayor, Alderman R. E. Thomas, J.P., said there was no greater measure of harmony anywhere else in

the country than between civic authorities, the university, commerce and the professions in the city of Manchester. Today, they were living in exciting times. One could see the old disappearing and the new appearing. There was a wonderful development in the educational field.

In his response on behalf of the university, Professor W. Mansfield Cooper, LL.M., Vice-Chancellor of the University of Manchester, said the university was part of the city and was proud to be. The phrase 'town and gown' had never had any significance in Manchester.

### **Greater Co-operation**

Proposing the toast of "The Institute of Chartered Accountants in England and Wales", Dr J. M. Whittaker, M.A., D.SC., F.R.S., Vice-Chancellor of Sheffield University and President of the Joint Standing Committee of the universities and the accountancy profession, said there should be greater co-operation between chartered accountants and the universities. It was important to get people in the profession with the highest state of education and for them to bring that education to bear on their problems.

Responding to the toast, Mr P. F. Carpenter, F.C.A., President of The Institute of Chartered Accountants in England and Wales, said they had listened to Dr Whittaker with interest and no doubt in the next ten years many of his words would come true.

The President recalled that Manchester was one of the oldest of the Institute's district societies. He was rather impressed with Manchester's response to the invitation to help overseas boys to come to this country and be trained by members of the Institute.

Mr Carpenter said he had been privileged to represent the Institute when the Lord Mayor of London on the previous day inaugurated the National Productivity Year. This was not sponsored by the Government but was a campaign by industry for industry which was to be greatly commended.

Referring to the recommendations contained in the Parker Report on education and training for the profession, he said no one would regard them as a lowering of standards. Indeed, many were designed to improve standards in the profession. While certain of the recommendations in the report might be thought to be pedestrian, there had been a determination to put forward proposals which were practical. He had no doubt that within five or ten years there would be fresh thoughts in the light of changing circumstances. The basis of entry into the profession must be kept up with the whole of the educational system. There were two minority reports by members of the Parker Committee, one of which advocated greater co-operation with universities. There was undoubtedly great scope in the profession for men and women of high qualifications.

The proceedings concluded with a vote of thanks to the chairman proposed by Mr J. V. Eastwood, Vice-President of the Manchester Society.

### Notes and Notices

### PROFESSIONAL NOTICES

MESSRS CHAPMAN & NEWBERY, Chartered Accountants, of P.O. Box 482, Beyoğlu, Istanbul, announce that they have moved their offices from 239 Istiklal Caddesi, Beyoğlu, to 96 Gumussuyu Caddesi, Taksim. The post box address, cable address and telephone number remain unchanged.

Messrs Robson, Morrow & Co, of London, and Messrs W. H. O'Donnell & Co, of Limerick, Messrs Magennis, Burns, Griffin & Co, of Cork, and Messrs P. A. DUGGAN & Co, FORSYTH & Co, PETERSON, Morrison & Co, Purtill & Co, Briscoe, Smith & Co and JOHN WOODS & Co, all of Dublin, announce the formation of a separate partnership under the name of Robson, Morrow & Partners. The partners in the new firm are: Mr Francis Trevor Hunter, Mr PETER GEORGE TARGETT, Mr ROBERT IAN MORRISON, Mr JAMES MULLARNEY, Mr PATRICK McGILLIGAN, Mr John Christopher O'Connor, Mr Nicholas JOSEPH O'CONOR, Mr WILLIAM HUGH O'DONNELL, Mr David Nelson Rowe, and Mr Cornelius Frederick SMITH. The firm will practise for the time being from the address of Messrs Briscoe, Smith & Co, 4 Grafton Street, Dublin 2.

Messrs Nicholson, Fraser & Co, Chartered Accountants, of 14 Dartmouth Street, London SW1, announce that as from November 15th, 1962, they have admitted into partnership Mr David B. Nicholson, A.C.A., who has been a member of their staff for a number of years.

Messrs Westcott, Maskall & Co, Chartered Accountants, of London, and Messrs Hunt, Hopkins & Lorimer, Chartered Accountants, of Portsmouth, jointly announce that as from November 1st there has been a fusion of their interests; and that in future the practices will be carried on under the style of Westcott, Maskall & Co, Westcott, Maskall & Partners and Hunt, Hopkins & Lorimer.

Messrs J. Wild & Co, Chartered Accountants, of 72–76 Blackburn Street, Radcliffe, Manchester, announce that Mr Noel J. Ince, A.C.A., and Mr George A. R. Lomax, B.A.(Com.), A.C.A., have been admitted into partnership.

### **Appointments**

Mr Andrew Barrowman, B.L., B.COMM., C.A., has been elected to the board of Associated Fisheries Ltd.

Mr William Clark, F.A.C.C.A., M.P., a member of the Council of The Association of Certified and Corporate Accountants, has been elected joint secretary (with Mr Maurice Macmillan, M.P.,) of the Conservative Party Finance Committee.

Mr G. A. Lemon, F.C.A., controller of Sperry Gyroscope Co Ltd, has joined the board of the company. He will continue to act as controller.

Mr David A. Perkis, F.C.A., has been appointed a director of Woolcombers Ltd.

Mr T. D. Redhead, F.C.A., has been appointed deputy chairman of Ballito Hosiery Mills Ltd.

### ASSOCIATION OF CHIEF FINANCIAL OFFICERS

Mr Reginald Stacey, M.B.E., F.I.M.T.A., A.A.C.C.A., finance officer, Sheffield No. 1 Hospital Management Committee, has been elected chairman of The Association of Chief Financial Officers in the Hospital Service in England and Wales for the year 1962–63. Mr Basil G. Spencer, F.S.A.A., F.I.M.T.A., F.H.A., finance officer, Tunbridge Wells Group Hospital Management Committee, has been elected vice-chairman of the Association.

### IN PARLIAMENT

### **Building Societies: Interest Payments**

Mr MILLAN asked the Chancellor of the Exchequer by how much the annual yield of income tax and surtax is reduced by allowances for building society interest paid by owner-occupiers.

Mr BOYD-CARPENTER: The tax allowances in respect of building society interest paid by owner-occupiers are in substitution for the relief they would have obtained if the normal rules had applied and they had been entitled to deduct income tax from the interest. The yield of tax is thus not reduced by the allowances to which the hon. Member refers.

Hansard, Nov. 15th, 1962. Written Answers, Col. 68.

### Tax Allowances: Life Assurance and National Insurance

Mr Ross asked the Chancellor of the Exchequer what is the annual cost of life assurance relief for personal income tax purposes.

Mr BOYD-CARPENTER: About £60 million for 1962-63.

Mr Ross asked the Chancellor of the Exchequer what is the annual cost of the relief for National Insurance contributions and of the deductions allowed for contributions to superannuation schemes, respectively, in terms of the yield of personal income tax and surtax.

Mr Boyd-Carpenter: In 1962-63 about £100 million in respect of National Insurance contributions.

### JOHN FOORD & COMPANY

WORKS, FACTORIES, PLANT & MACHINERY, Etc.

of insured persons and about £50 million for contributions by employees to superannuation schemes.

Hansard, Nov. 15th, 1962. Written Answers, Col. 69.

### Retirement Annuities: Tax Relief

Mr MILLAN asked the Chancellor of the Exchequer how many insurance policies making provision for retirement annuities for the self-employed and controlling directors are now currently ranking for taxation relief under the provisions of the Finance Act, 1956; and what is the annual relief of tax.

Mr Barber: In all, there are about 170,000 policies making provision for retirement annuities which rank for tax relief under the Finance Act, 1956; the tax relief involved is about £8 million. Some of these policies relate to employees who do not hold a pensionable office or employment; and it is not possible to say how many of them relate to self-employed persons and controlling directors.

Hansard, Nov. 15th, 1962. Written Answers, Col. 69.

### **Investment Allowances**

Mr MILLAN asked the Chancellor of the Exchequer what is the current annual cost of investment allowances in terms of taxation yield, not allowing for the increases in the rates of the allowances recently announced.

Mr Barber: About £155 million based on the 1962 levels of expenditure.

Hansard, Nov. 15th, 1962. Written Answers, Col. 70.

### **DOUBLE TAXATION: JAPAN**

The Double Taxation Convention with Japan, which was signed on September 4th, was published last week as the Schedule to a draft Order in Council.

### THE ASSOCIATION OF IRISH CHARTERED ACCOUNTANTS IN LONDON

The President of The Institute of Chartered Accountants in Ireland, Mr R. E. McClure, M.B.E., F.C.A., and the Secretary, of the Institute, Mr William Stuart Orr, B.A., LL.B., A.C.A., were guests at a dinner held in London on November 12th to mark the formation of a new district society of the Institute, to be known as The Association of Irish Chartered Accountants in London

At a meeting following the dinner Mr A. N. Harper, F.C.A., was elected chairman of the new society and the following committee was appointed:

Messrs Alfred Jones, A.C.A.; J. G. Kenny, A.C.A.; P. V. C. McGrath, A.C.A.; E. J. McKelvey, A.C.A.; C. H. Nicholson, F.C.A.; A. D. Shanagher, A.C.A., and Mr R. W. Billington, A.C.A., honorary secretary.

Members of the Institute who take up appointments in the London area are invited to communicate with Mr Billington at the following address: c/o McCann, Bentley & Co, Chartered Accountants, 1-2 Hanover Street, London W1.

### THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

### **London Cost Conference**

Exports, the costs, the risks and the rewards' was the theme of a London Regional Cost Conference held last Saturday by The Institute of Cost and Works Accountants at the Connaught Rooms. The principal speakers were Mr F. M. W. Hird, F.C.A., F.C.W.A., Immediate Past President of the Institute, and Sir Archibald Forbes, G.B.E., C.A., chairman of the Central Mining & Investment Corporation Ltd and a former president of the Federation of British Industries. The Rt Hon. Lord Robbin of Waldingham, P.C., addressed delegates at the conference luncheon.

In his paper, Mr Hird said that it was ironic that there should be more talk and attention paid to exports at a time when the distinction between them and home trade was likely to diminish over the years. His own company, he said, had been exporting for nearly a century and they had come to regard the United Kingdom as just one of the countries in which they had to sell. In his opinion, an exporting company was less subject to violent fluctuations in trade than one producing for the home market alone. After outlining the intricacies of export documentation, Mr Hird said that the anxiety as to whether or not a foreign customer would pay for the goods was often most acute with those who exported least. Dealing with insurance, Mr Hird said the best known was that provided by the Export Credits Guarantee Department. Whilst the department had achieved considerable success with its service to customers he felt that it still had some way to go before exporters found the cover given, and the cost of it, satisfactory. One particular objection which he had put to the department was that there should be an arrangement whereby the commercial risk should be separated from the political risk, i.e. the customer's nation disallowing proceeds to be remitted. Mr Hird said that the reason given to him was that a separate insurance for a political risk would be regarded as a subsidy for exports and that was something the Board of Trade had strongly resisted due to its efforts to persuade other countries to give up any form of export subsidy. It was an unfortunate state of affairs, he declared, particularly when there were many overseas customers willing to trade with us, but trade was overshadowed by the anxiety of some Government moratorium or suspension of payments.

Sir Archibald Forbes gave some interesting views on the importance of exports to the United Kingdom's economy, and the problems faced by the exporter in the fields of finance, pricing and competition. He also dealt with the influence of Government policy on exports and the situation in relation to existing international agreements.

### STOKE-ON-TRENT CHARTERED ACCOUNTANTS' DINNER

The annual dinner of the Stoke-on-Trent Area Branch of the Birmingham and District Society of Chartered Accountants was held at The North Stafford Hotel, Stoke-on-Trent, on November 13th, and was attended by 216 members and guests. The Chairman of the

Branch, Mr R. R. Gower, F.C.A., presided.

In his response to the toast of 'The Institute of Chartered Accountants in England and Wales,' Mr G. T. E. Chamberlain, F.C.A., a member of the Council of the Institute, said there was no doubt that the status of the profession and the chartered accountant had grown enormously in the last few years, and there was a tremendous call by industry generally for qualified accountants. Many men in the highest positions today, said Mr Chamberlain, had attained them because they had first qualified as accountants. But the recent intake from universities had been disappointing and in the last four years an average of only 250 to, 300 graduates a year - about 9 per cent of the articled clerks registered annually - had entered the profession. 'We do feel we should get a larger proportion. No profession or industry has anything better to offer', he said.

The profession, Mr Chamberlain continued, had to attract the best of the boys from grammar schools as well as graduates. The Institute had not yet convinced the careers officers at the universities that the profession was 'second to none' and if the graduate spent an extra three years' work in accountancy he would go a long way. Mr Chamberlain said there was also scope in the profession for more women members.

Mr Gower proposed the toast of "The Guests', and Mr J. C. H. Halsall, President of the British Pottery Manufacturing Federation, replied.

### MANCHESTER SOCIETY OF CHARTERED **ACCOUNTANTS**

### **Discussion Group**

The following officers were recently elected to the committee of the Manchester Society of Chartered Accountants' discussion group:

Chairman: Mr F. Broadie, F.C.A.

Secretary: Mr M. J. Croll, 46 Fountain Street, Manchester 2.

Committee: Mr D. H. Eglin, LL.B., A.C.A., and Mr F. A. Sherring, F.C.A.

### MANCHESTER CHARTERED ACCOUNTANTS STUDENTS' SOCIETY

At a recent committee meeting of the Manchester Chartered Accountants Students' Society, Mr J. Townsley, B.COM., A.C.A., was appointed honorary secretary of the Society in succession to Mr F. A. Watson, B.A.(COM.), who has resigned.

### SEVENTY-FIVE YEARS AGO

From The Accountant of November 26th, 1887

A Weekly Note

Music is an excellent thing, but if out of tune or out of season is calculated to do anything but soothe the "savage breast." The itinerant cornet players and organ grinders, who infest the vicinity of the Institute after nightfall, cause great irritation to members who either wish to speak or to listen at the meetings of the London Students' Society. Mr. VAN DE LINDE discourses on "A Merchant's Office," or Mr. Fletcher describes a system of fraudulent bookkeeping to the very audible tune of "She wore a wreath of roses," or "Do not forget me" (Maid of the Mill). The latter injunction is, however, scarcely necessary in regard to lecturers who have made their mark.

### THE CHARTERED ACCOUNTANT STUDENTS' SOCIETY OF LONDON

The following meetings of The Chartered Accountant Students' Society of London will be held during next

Wednesday, 5.30 p.m., Lecture, and demonstration of punched card accounting (limited number); 6 p.m., at the Institute: Impromptu 'Hat' debate.

Thursday, 5.15 p.m., at Winchester House, Old Broad Street, EC2: Introductory course lectures on – (1) "Taxable income", by Mr J. Kennedy Melling, F.C.A., F.T.I.I., F.R.ECON.S., and (2) "The law of sale of goods', by Mr R. Lowe.

Friday, '59 Club' dance at St Bartholomew's Hospital.

### DEFENCE BONDS: CONVERSION OFFER

The Treasury has announced that a conversion offer will be made to holders of 3½ per cent Defence Bonds, purchased between September 16th, 1952, and March 15th, 1953, and maturing on March 15th, 1963.

These holders will be invited to exchange their holdings into 5 per cent Defence Bonds (Second) Conversion Isuse) on March 15th, 1963. Holders who accept the offer of conversion will receive a final interest payment of six months' interest at 3½ per cent per annum on March 15th, 1963. A first interest payment on the Conversion Issue Bonds will be made on July 1st, 1963, in respect of the period from March 15th, 1963, to June 30th, 1963. The terms of the new Bonds will be the same as those of the 5 per cent Defence Bonds currently on sale except that interest will be payable on January 1st and July 1st. The lists of acceptances of the conversion offer will be closed on December 14th, 1962.

### Shape of Taxes to Come?

EPORTS appear on other pages in this issue of two conferences held concurrently in London and Brighton at the end of last week. Both were concerned with that vital, controversial, frustrating subject - taxation. While, however, in Brighton, the tax conference of the London and District Society of Chartered Accountants was devoted to present-day problems of taxes in Britain, in London a conference sponsored jointly by The Federal Trust for Education and Research and the United Kingdom Branch of the International Fiscal Association was concerned with the problems of taxation in relation to the Common Market and the effect of harmonization on the British tax system if this country joins the European Economic Community.

Of particular interest was the address on tax harmonization given at the London conference by Professor F. NEUMARK, Chairman of the Fiscal and Financial Committee of the E.E.C., which we have the privilege of reproducing exclusively in this issue.

The case for a measure of harmonization or unification of the national tax systems is based upon the fact that different taxes exert widely differing economic effects and which, in varying degrees, produce distortions in the pattern and direction of international trade which are inconsistent with the objects of the European Community. In this respect the British stamp duties are especially objectionable and in the opinion of Professor Neumark, should be 'abolished as fast as possible'. Because of its high rates, British estate duty, he said, exerts similar distorting effects on the movement of capital and should be replaced by a form of inheritance tax.

British readers will note with approval the Professor's forthright comments on the need 'to ensure that in every member country a similar efficiency in tax assessment, collection and control' should exist. No one will dispute his statement that 'there seems at present to be considerable differences in this respect among member countries', which makes a direct comparison of the effective tax rates impossible.

If the French 'value added tax' was generally adopted in the E.E.C., then the United Kingdom purchase tax would have to go, stated Professor NEUMARK. He added that it would not be immediately necessary to bring about uniform rates of indirect taxation on goods such as alcohol and tobacco, which are universally taxed. Duties on articles which are taxed in some countries, such as matches, playing cards in the United Kingdom and not in others, would probably have to be abolished. 'Any solution of the problems', concluded Professor NEUMARK, 'can at best be no more than a reasonable compromise between vested national interests'.

### Protecting the Depositor

OR many years the offer of shares or debentures to the investing public has been hedged about with restrictions and safeguards aimed at protecting the public and punishing the dishonest promoter. Until a few years ago the layman might well have been pardoned for believing that much the same protection applied in the case where the public were invited to deposit money. That there was in fact a gap in the law in this respect has become increasingly obvious, not least to persons minded to make a lot of money quickly at no risk to themselves. The immense growth of hire-purchase selling, in which there seems hardly any limit to the rate of interest which purchasers will pay, as long as it is wrapped up in 'hire-purchase charges', has given a tremendous fillip to the activities of persons desiring to obtain deposits of money from the public for hire-purchase finance.

Scandal arising from the activities of the less scrupulous operators in this field has driven the Government to close the gap in the law, and the result is the publication of the Protection of Depositors Bill, a very carefully thought out document aimed at punishing those who rely too much on the credulity of the investing public, and also at giving that public more information about the companies to which they lend money.

The power to punish a person who is not over careful about what he says when inviting deposits is strengthened by clause I of the Bill which imposes a term of imprisonment of as much as seven years for attempts to obtain money on deposit by any one of the three following methods:

- (i) a statement, promise or forecast which he knows to be misleading, false or deceptive;
- (ii) dishonest concealment of material facts;
- (iii) the *reckless* making of any statement, promise or forecast which is misleading, false or deceptive.

The same punishment applies if any of these things is done to induce a person to enter into an agreement to invest money on deposit; or even to induce a person to offer to enter into such an agreement. Needless to say, the clause also applies if there is not merely an attempt but an attempt which succeeds. All these things are probably

punishable already, but not with seven years' imprisonment.

Clause 20 substitutes a new paragraph (b) for the existing paragraph (b) in section 13 (1) of the Prevention of Fraud (Investments) Act, 1958, which imposes a like penalty for similar deception. The paragraph deals with schemes under which the investors' money is turned into some property other than securities (e.g. pigs) on the footing that the investors are to participate in profits coming from the management or disposal of such property.

Clauses 1 and 20 are somewhat outside of the main theme of the Bill, which is the control of advertising for deposits of money. The Bill adopts the now familiar method of imposing a completely general prohibition, and then providing for exceptions which are subject to strict supervision. Clause 2 (1) provides quite generally that:

'No person shall, after the commencement of this Act, issue any advertisement inviting the public to deposit money with him.'

This is not, as some newspapers have implied, a prohibition only on companies. It is on all persons, natural or juridical. The full implications of this prohibition emerge only when one studies the definition clauses. 'Advertisement' is not, strictly speaking, defined, but clause 25 (3) provides that the expression 'includes' every form of advertising, whether in a publication or by the display of notices or by means of circulars or other documents or by an exhibition of photographs or cinematograph films, or by sound broadcasting or television. References in the Bill to 'issue' in relation to an advertisement are to be construed in accordance with this wide meaning of 'advertisement'. If an advertisement is issued by way of display or exhibition in a public place, the person issuing it is to be treated as issuing it on every day on which he causes or permits it to be displayed or exhibited in that public place.

The invitation need not be couched in the form of an invitation to be within the prohibition. An advertisement which contains information calculated to lead directly or indirectly to the deposit of money by the public is to be treated as an advertisement inviting the public to deposit money (clause 25 (4)). 'The public' includes any

section of the public, however selected, including, in relation to a company, a section selected as members or debenture-holders, or depositors, of a company. Clause 2 (1) in form confines the prohibition to the case where the person issuing the advertisement is the same as the person who is to receive the deposits. However, an advertisement issued by A. on behalf of (or to the order of) B. is to be treated as issued by B. Moreover, where proceedings are being taken against B. under the Act, an advertisement inviting deposits with B. are to be deemed to be issued by B., unless he can prove the contrary (clause 25 (5)). The practical usefulness to the authorities of this provision hardly needs stressing. Two of the comparatively few words in clause 2 (1) which are not specially defined are the verb 'to deposit' and the noun 'money'.

The penalty for contravening clause 2 (1) is two years, with the possible addition or substitution of a fine. This is where proceedings are by indictment. Summary conviction can involve three months' imprisonment and a £200 fine (clause 2 (5)). A person issuing an advertisement on behalf of someone else can escape conviction if he proves that neither he nor anyone acting under his direction had a part in the wording of the advertisement. This will protect proprietors of newspapers and other advertising media.

Clause 2 (1) is subject to the exemptions in subclauses (2), (3) and (4). These apply to advertisements 'with respect to' the following matters:

- (i) investments within the Trustee Investments Act, 1961, First Schedule;
- (ii) deposits to be made with any banking or discount company within the meaning of the Companies Act, 1948, Eighth Schedule, paragraph 23 (i.e. one which satisfies the Board of Trade that it ought to be treated as a banking or discount company);
- (iii) deposits with a building society;
- (iv) deposits with an industrial and provident society;
- (v) deposits to be made with a company incorporated in (or having an established place of business in) Great Britain; if
  - (a) the advertisement complies with Board of Trade regulations; and
  - (b) the company duly delivers, before the issue of the advertisement, any accounts required by the Bill;

(vi) deposits of any such class as may be prescribed by Board of Trade regulations.

Finally, the Board of Trade can give permission in writing for a particular advertisement, subject to such conditions as the Board may think fit; but special permission cannot be given for an advertisement for deposits to be made with a company which falls within (v) above, i.e. a company incorporated or having an established place of business here. 'Company' is widely defined by clause 24 (1), but it does not include a banking or discount company within (ii). Thus it is possible for an individual, or a partnership of individuals, to obtain special permission, and this would be necessary in the case of a banking firm which was not a 'company'. On the other hand a company which called itself a banking company would not necessarily be within (ii), and if it was not it would have to comply with the requirements of (v). These requirements which appear in clauses 5 to 14 inclusive take up the major part of the space covered by the Bill.

Broadly speaking, these requirements concern the regular submission of audited accounts, both to the authorities and to individual depositors. Before a company issues an advertisement after the appointed day (i.e. three months after the Act is passed) it must deliver to the Registrar of Companies and to the Board of Trade audited accounts up to a date not more than fifteen months before the advertisement, covering a period not less than six months. Moreover, if those accounts are made up to a date more than nine months before the advertisement, the company must also deliver interim accounts, which need not be audited. The periodical accounts to be delivered after the advertisement are to consist of annual audited accounts and interim six-monthly accounts which need not be audited. The periodical accounts must be lodged within three months after the end of the accounts period. When, broadly speaking, the company ceases to invite deposits, there is provision for bringing to an end its liability for lodging accounts as required by the new Bill. There are special provisions for companies which have already issued advertisements, and for newly incorporated companies. For the purpose of accounts required by the Bill, the auditors must qualify as auditors to companies which are not exempt private companies.

### Tax Harmonization in the Common Market

by PROFESSOR F. NEUMARK Chairman of the Fiscal and Financial Committee of the E.E.C.

THE need for a harmonization of taxes within the Common Market was felt first in the field of the general sales, or turnover, tax; the controversies about the right, or rather the just and fair, solution of the problems involved date back to the early days of the Coal and Steel Community. In the Rome Treaty which created the foundations of the European Economic Community, Articles 95-99 deal with tax questions but they too are more or less restricted to so-called indirect taxes, that is, aside from the general sales tax, excises and probably such taxes as stamp duties. The aim of these articles is to avoid tax measures capable of bringing about distortions of fair competition among member countries, as might result from taxes of different structure and levels on goods and services which, to a more or less considerable extent, are exchanged by way of imports and exports.

### No Tax can be Judged in Isolation

When the committee asked by the Brussels authorities to investigate the problems of tax harmonization started their work, they very soon reached the conclusion that a reasonable solution of these problems could not be restricted to the general sales tax and excises. There is, in fact, no single tax, the economic, social and fiscal impact of which could be judged rightly in isolation. Rather one has to consider it as an integral part of the national tax system to which it belongs. One of the consequences of this is the following: assuming that the Treasury of a country has to provide tax revenue for a given amount of public expenditure, every measure aiming at a modification of the effective burden and consequently of the yield of a particular tax cannot but have repercussions on other elements of the said tax system, e.g. a rise of the general sales tax, other things being equal, will lower the relative

An address given at the two-day conference on Taxation and the Common Market, sponsored by The Federal Trust for Education and Research and the U.K. Branch of the International Fiscal Association in London last week.

importance of excises, income tax, etc., and vice versa. At the same time one must not overlook the fact that the actual structure of national tax systems is very much the product and result of national peculiarities which, in the course of a long historical process, have influenced the structure of those systems as well as the methods of collection, assessment, control, etc.

Now the effects of a tax on costs, prices or profit expectations vary to a greater or lesser extent from tax to tax. Further, even the effects of one and the same tax may differ from country to country according to the institutional and other conditions of the respective economies, such as the degree of competition or of monopolization. It is true that a number of modern economists tend to believe that the time-honoured distinction between direct and indirect taxes, as far as it is based upon the assumption that the latter are shifted to consumers whereas the former are not, is not justified. I think, however, that taxes such as a general sales tax or excises are by their very nature much more likely to be shifted than a general income or even a corporation tax.

But however that may be, it seems to be undeniable that as a result of different economic repercussions of different taxes, the sole fact that tax systems of various countries are composed in a rather dissimilar way can give rise to distortions of international competition. Therefore a certain assimilation of national tax system structures will probably be the necessary complement of every effort to harmonize this or that important single tax.

### **Tax Comparisons**

Just to give a rough idea of the present situation, I would like to mention that in 1959 the share of income taxation (income tax, corporation tax and the so-called business tax or Gewerbesteuer) in the total tax revenue on all levels was around 42 per cent in Germany and the Low Countries, as against 28 per cent in France and 23 per cent in Italy, the corresponding percentage in the U.K. being 44 per cent. On the other hand, and, of

course, as a reflection of the fact just mentioned, the general sales tax in France yielded nearly 35 per cent of the tax total, as against 20 per cent in Italy (a country which relies heavily on special excises), 25 per cent in Germany, and about 8 per cent only in Great Britain where, however, the purchase tax is rather far from being a really general sales tax.

### Effect of Differences in Tax Burdens

It would be completely erroneous to assume that the quite considerable national differences with respect to the absolute and relative burdens or yields of various taxes could be explained mainly by corresponding differences in tax rates. Rates, it is true, form an important determinating factor in this respect but aside from them, many other elements have to be taken into consideration. Among them one finds, e.g. in the field of turnover tax and excises, exemptions, or within the framework of so-called direct taxes, all kinds of legal rules and regulations relating to the basis of assessment (depreciation allowances, stock evaluation, etc.). Moreover, the absolute and relative efficiency of tax administration is of very great importance. If in a country A. interests and dividends are formally subject to a 30 per cent tax, but half of the amounts paid out are not taxed at all because the non-existence of a stoppage at source invites, and enables, taxpayers to avoid the tax, then the real tax burden in A. may, on the average, be well below that in a country B. where dividends have to pay only 25 per cent but tax evasion is nearly impossible. Similarly, the following example may show the importance of legal tax exemptions: if in two countries, A. and B., there exists the same kind of net value added tax, the sole difference being the fact that in A. the rate is 10 per cent, and in B. 12 per cent of the final consumer price of goods, then, other things being equal, goods in B. will have to bear an over-tax in comparison with A. which, in terms of tax rates, amounts to 20 per cent, in terms of prices to 2 per cent. On the other hand, if on principle, tax rates are the same in both countries, say 12 per cent, but in A. certain commodities are exempt, whereas in B. they are liable to tax, then the difference of tax burden in erms of prices will be 12 per cent. In this latter. ase the difference, therefore, is six times as high s in the former.

Let us now turn to another much discussed problem, namely, the question whether differences – at least considerable ones – in the overall 'tax burdens' of various countries are likely to cause

disturbances of foreign trade conditions. These so-called 'burdens' can be expressed *inter alia* in terms of absolute amounts per head, or as a percentage either of per head income or of gross national product, or of national income. Aside from other statistical difficulties, there arises the question of which duties should be included in the 'tax' total.

Most contemporary economists seem inclined to consider compulsory contributions to social security as duties which, from the point of view of their economic impact, are very much the same as taxes proper. To illustrate the case, I would like to mention that in 1959 the share in G.N.P. of taxes on all levels of government, social security contributions included, amounted to 24.4 per cent in Belgium, around 29 per cent in Italy, Luxemburg and the Netherlands, and about 34 per cent in France and Germany. Does that mean that the tax burden of the economy in comparison with that in Belgium was 20 per cent higher in Italy etc. and 40 per cent higher in Germany and France, and can one deduce from these differences that in order to bring about more or less equal conditions of international competition, one would have to even up the said differences?

The answer to this question is a definite 'No'. First one must not overlook the fact that neither from the micro-economic nor from the macroeconomic point of view can taxes simply be put on a par with 'burdens' since they are not levied for their own sake but in order to render possible the production of public goods and services. Under present-day conditions, one can assume that normally the utility of services financed out of taxes is more or less greater than the disutility resulting from the collection of those taxes. If, and to what extent, this is true depends, of course, on the nature of taxes used as well as on the character of the public expenditures they allow to finance. Further, I do not deny that for individual taxpayers, or groups of taxpayers, there will often subsist a real net tax burden even after consideration of the utilities they will derive from their participation in tax financed public services.

### No Need for Elimination of Differences

Nevertheless, it remains true that in general a higher share of over-all tax payments in G.N.P. does not necessarily mean a higher over-all burden on the economy as such – normally, it will be rather the other way round. In this respect one has also to be aware of the fact that rich countries can afford a higher relative tax level than poorer ones.

As a result we may say that there is no general need for an elimination of differences in national over-all tax burdens. However, a certain qualification of this general statement seems indicated: if there exist important differences in relative overall tax burdens and if these differences, which supposedly are not compensated by corresponding differences in the amount and/or the quality of tax financed public services, spring from the fact that the high tax country is a poor one and has to compete with rich economies which, precisely because they are richer, can content themselves with lower taxes, then there may arise a certain exodus of capital and/or manpower from the former country, which, under these conditions, will try to prevent such a course of events by either reducing the quantity and/or the quality of public services, or else raising tax rates. Obviously, in both cases, measures of this sort will cause an aggravation of the situation. The only remedy then will be a certain supra-national equalization of tax burdens; in other words: subsidies have to be granted by the richer countries to the poorer ones which in this way will be enabled to create, or maintain, conditions of reasonable com-

After the preceding remarks which concern facts and problems of a rather general character, I would like to turn to an investigation under integration aspects of some particular taxes. Here, again, it seems useful to distinguish between quantitative and qualitative problems. Since my time is very restricted I will have to confine myself to a few observations relating to those taxes which both from the economic and the fiscal point of view play today an important role.

### Stamp Duties should be Abolished

In passing, however, I should briefly mention that in some cases taxes which, though in terms of their relative share in the over-all tax revenue seem to be of minor importance only, may, because of their possible negative repercussions on economic transactions within a Common Market, need a close examination as to whether their harmonization is useful, or even necessary.

This is true, e.g. for most stamp duties, especially those on cheques and receipts, the transfer of stocks and shares on sale, and the companies' share capital duty. All, or nearly all, of these duties originated in times long past when, on the one hand, income and wealth, particularly the more mobile kinds of assets and the produces from them, were not yet taxed in an effective and adequate way by taxes on income and net value, and where, on the other hand, a general turnover tax was till unknown. Even apart from the necessities of a Common Market, the said duties should, in my opinion, be abolished as fast as possible. Their elimination from a modern and rational tax system is in fact overdue. Economic integration still emphasizes the urgency of such a reform. In many

countries stamp duties form a serious obstacle to a free exchange of capital, all the more as often they discriminate against foreign capital or foreign capitalists. The fact that the total yield resulting from these duties represents a small percentage only – say 1–2 per cent – of total tax revenue should, in theory, facilitate their repeal. In practice, however, such a seemingly revolutionary proposal will meet with strong opposition from all conservative-minded civil servants. For this reason it would be wise to consider a gradual reduction rather than an immediate and complete abolition of the said duties some of which might be given the character of moderate fees.

### Tax on Net Wealth Advocated

In several countries inheritance, estate, and gifts taxes are also thought of as belonging to the group of taxes on capital transactions. Inheritance taxes, and especially estate duties, cannot rightly be judged without considering the question whether or not they are part of a tax system which comprises taxes on net wealth, for to a large extent an estate duty fulfills the same fiscal functions as a tax on net wealth. With respect to this latter tax, I would like to mention that within the six member States of the present E.E.C., three - Germany, the Netherlands and Luxemburg collect such a tax whereas the others so far do not. Tax experts are inclined to believe that in a modern tax system personal and progressive income taxation should be complemented by an equally personal tax on net wealth. In this respect they are in favour of rather moderate tax rates and they propose to restrict the scope of the tax to individuals only as against the current practice which, by also taxing capital of corporations, results in what may be called virtual economic double taxation. If and when a harmonization of net wealth taxation is accomplished on these lines, a certain difference in national tax levels will not hinder capital movements and/or not cause such movements which are mainly motivated by fiscal considerations.

Generally, neither taxes on net wealth nor estate duties today form an important fraction of tax revenue, the sole exception being the U.K. The share of the British estate duty in over-all tax revenue averaged in the last few years around 3.5 per cent whereas in countries like Germany or France the respective percentage is much less than 1 per cent. Even if, in the German case, the current tax on net wealth is lumped together with the inheritance tax the combined shares of these two duties remain considerably below that of British estate duty only.

### Lower Estate Duty if Britain Joins E.E.C.

On the whole, tax experts of the member countrie of the E.E.C. hold that it is not necessary to do much about quantitative inheritance tax harmonization since differences of effective tax burdens among the

Six are in most cases not very important. They think, however, that in order to increase 'tax transparency'. t would be wise to apply in every member country nuch the same kind of inheritance taxation. But there is not the slightest doubt that in regard to the British estate duty, the absolute and comparative level of tax rates is such as to represent a very heavy obstacle to the good functioning of a Common Market. Since in all probability the other countries will not be willing to accept such extremely high rates as they exist in your country (although I for my part have for a long time proposed a marked rise in effective German inheritance tax burdens), Great Britain's entrance into the European Community cannot be imagined without being followed by a noticeable lowering of her present estate duty. The loss for the Budget resulting from such a measure could easily be made up by introducing a moderate tax on net wealth of, say, I per cent.

### Turnover Tax and Excise Duties

I now turn to a brief survey on some questions relating to the general sales or turnover tax on the one hand, excise duties on the other hand.

It should be clear that from the point of view of a ceal Common Market where economic conditions have to be much the same as within the national economy of one single State, not only customs frontiers but also tax or fiscal frontiers should cease to exist, at least for all intra-community movements of goods, services and capital. This, in turn, would require the general application of the so-called origin principle as against the principle of destination.

### Principle of Destination

As is well known, the latter principle implies that goods and services, wherever they may have been produced, are subject to the taxes of the country in which they are finally consumed or used. Consequently a commodity, no matter whether it has been produced totally in country A. or has been imported rom country B. or C. or whether it has been produced n A. by means of raw materials, machines, etc., mported from this or that other country, has to pay the same kind and amount of general and special excise duties. In as far as these duties are different from country to country, the application of the destination principle requires (a) the refund of previous tax payments in the case of exports and (b) the levying of compensatory import duties. In both cases, control measures and for this reason, the maintenance of so-called fiscal frontiers are indispensable.

### Origin Principle

On the other hand, if and when the origin principle is applied, goods and services, irrespective of the place of their final consumption or utilization, will have to pay the excise duties levied in the country where these goods have been produced. Consequently, a

commodity manufactured partly in country A., partly in country B. and whose raw materials have been produced in C., has to pay the sum of excise duties (with, eventually, the general turnover tax included) levied in C. on the raw materials and in A. and B. on the respective parts of values added by manufacturing. It follows that in a given country a commodity is always subject to the same tax total, no matter whether it is consumed in this country or elsewhere.

Provided the tax rates be different from country to country, the tax total to be borne by concrete specimens of a given category of goods, however, will differ according to whether they have been totally produced in the country of consumption or have been produced wholly or in part in other countries. There is no need for fiscal frontiers, nor for tax refunds in the case of exports, or for compensatory import duties. But obviously, the application of the origin principle causes artificial distortions of foreign trade conditions in so far as the excise duties concerned are different from country to country with respect to kind and level.

I have to add that the scope of the distinction between the two principles just mentioned is restricted to so-called indirect taxes. As a matter of fact, the principle of destination as such cannot be applied to taxes on income, net wealth, legacies, etc.; for these taxes, another distinction is relevant, namely, that between the country of residence of individuals and companies on the one hand, and the country of the source of income or, in the case of capital taxes and estate duties, that of the situs of assets and/or real property, on the other hand.

At any rate, if one wants to abolish tax frontiers between member countries of an Economic Community, it seems inevitable in the field of indirect taxation to abandon the present system of application of the destination principle in combination with certain compensatory fiscal measures, all the more so, as these measures do not exclude protectionist and discriminatory practices. However, since under the existing conditions the principle of origin leads to serious distortions of international competition, the only possible expedient seems to be a complete harmonization of indirect taxation. Now this is rather a tall order. We will examine the questions involved, first, with respect to the general turnover tax, and second, to excise duties proper.

### Net Value Added Tax

Most contemporary experts nowadays are agreed that the German type of a multiple stage turnover tax, particularly because of its cumulative character and its artificial stimulation of business concentration, is exposed to very strong objections. On the other hand, the French system – to employ the words used by E. B. Nortcliffe in his book on Common Market Fiscal Systems – 'is closer to the economist's ideal than that of any other country'. But even the French

turnover tax system in its actual form is still rather far from being perfect. Whatever it is, tax experts of the six member countries of the present E.E.C. recommend the abolition of the German type of turnover tax and the introduction in all countries of a theoretically 'pure' kind of net value added tax. In order to allow the removal of fiscal frontiers, the new taxes have to be not only similar, but rather uniform, including uniformity of tax rates, exemptions, etc.

Since today the absolute as well as the relative budgetary importance of turnover tax yields differ widely from country to country, these differences being to a large extent due to different levels of effective rates, it is evident that the introduction of a new uniform net value added tax in all member States, whatever the rates, the scope of exemptions, etc., will be, cannot but have far-reaching repercussions on the national budgets. In some countries, especially in France and in Belgium, the proposed reform is likely to cause a considerable loss of revenue, whereas, e.g. in the Netherlands, the result may be just the other way round. Besides, though the initial difficulties of applying such a new tax in an efficient way will be great everywhere, the magnitude of these difficulties will be different from country to country, particularly with regard to taxation of small retailers. That is why it is proposed to exclude retailing from the net value added tax. On the other hand, the value added tax, though considered as the main, or 'basis', turnover tax, will be complemented by a retail sales tax whose rates can be different from country to country without, by its very nature, causing distortions in international trade (aside from cases to which American 'use taxes' apply).

### End of Purchase Tax Envisaged

In this way the system of sales taxation could be given a form which is not only economically superior to that prevailing today but permits at the same time the abandonment of the principle of destination and, consequently, the abolishment of fiscal frontiers. The bi-partition into a uniform value added tax and a non-uniform retail sales tax implies a certain elasticity and allows for differences in national revenue needs. I must add, however, that the level of the retail sales tax is supposed to be rather moderate and that possible differences between tax rates should not be very large. From this it can be deduced that the present British purchase tax would not be compatible with the solution just explained. In any case, this tax can be considered a collection of special excise duties rather than a general turnover tax. Whatever it is, one can hardly imagine the possibility of maintaining this tax in the event that the U.K. joins the Common Market and that tax frontiers and, consequently, tax refunds and compensatory import duties are suppressed.

After dealing with harmonization problems in the field of general sales taxation, I turn now to a short examination of excise duties proper.

As already mentioned, the relative importance of such duties as revenue-raisers is rather different among the six member countries. This is due to several facts. First, quite a few commodities are subject to excises in some countries, whereas in others they are not. Second, rates of duties on certain goods which are taxed everywhere differ from country to country. Third, because of marked differences with respect to national consumption patterns, an excise duty, say on beer on the one hand, tea on the other hand, will provide rather different yields in various countries according to deeply rooted preferences of consumers for one or the other of these beverages.

### Dilemma

In view of this, one finds oneself faced by a serious dilemma: on principle, in a real Common Market, all kinds of goods should be able to be exchanged within the community under conditions of fair competition which evidently excludes large price differences due to different tax burdens; therefore it seems necessary that (a) a given kind of goods is either taxed, or not taxed at all, in all member countries and that (b) with respect to goods which as such are subject to an excise everywhere, the tax rate is the same. Concerning the first point, I would like to mention that today commodities such as coffee, tea, salt, wine, meat, matches, etc., are taxed only in some of the E.E.C. States. Consequently, tax harmonization requires that the member countries agree either to abolish such excise duties where they exist or to introduce them in countries where they do not exist. In most cases the complete repeal of the said duties would be the most reasonable expedient. In order to ease the anxiety of 'harpagons' possibly to be found in the Treasury, I would like to point out that the revenue total of excises on salt, matches, lamps, playing cards, and saccharin amounts in Germany to 0.2 per cent of the over-all tax revenue and even in Italy to 1.1 per cent only.

But there is no doubt that apart from duties of minor budgetary importance, there are others without which no country could, and would, do. Above all, taxes on beer and spirits on the one hand, on tobacco on the other hand, have to be mentioned in this' connection. Revenue from excise duties on beer and tobacco represents as much as 7.4 per cent and 13 per cent of total tax revenue in Germany and Italy respectively. According to the above-mentioned rule, harmonization in this field seems to require a more or less complete uniformity of tax rates. But for reasons mentioned, such a uniformity would have quite different repercussions on the various national budgets. That is why, for the time being, the Brussels committee did not yet think feasible a radical change of existing habits. In other words, though a certain approach with respect to systems and rates of excise duties is very desirable, the different taxes on consumption will be maintained, and consequently the destination principle will continue to be applied to these duties. This, of course, is a recommendation

which is in contradiction with one of the fundamental argets of the report, namely, the abolition of fiscal rontiers. To a certain extent, such an exception may be defended by stressing the fact that exports and mports of commodities subject to special taxes epresent a more or less small fraction only of export ind import totals. Further, it may be hoped that in lue time economic and social conditions of the various member countries will approach each other o such a degree that differences in tax system structures can progressively be diminished and, in he end, a more or less complete harmonization of excise duties will prove to be possible. However, ilready today, a harmonization is inevitable with respect to motor vehicle and fuel taxes, the details of the reforms involved being dependent on the principles which are to be established for transportation and energy policy in general.

### **Income Taxation**

The last remarks of this speech are concerned with noome taxation.

As to income tax proper, that is, the taxation of ndividual incomes, the committee think that in this respect a far pushed harmonization would be neither leasible from the political point of view, nor necessary or the good functioning of the Common Market. Nevertheless, they hold that a certain approach of the noome tax systems and of rules for taxable income computation seems indicated, if only in the interest of greater 'tax transparency', so important for international movements of men and capital.

After discussing the respective advantages and disadvantages of different income tax regimes, the committee arrived at the conclusion that the so-called synthetical system, as against the old French schedular system, should be adopted as such by all member countries. Further, the report points out that an effort should be made to assure in every member country a similar efficiency in tax assessment, colection, and control. In this respect, there seem at present to be considerable differences among the nember countries. In my opinion, it is largely due to a ack in the efficiency just mentioned that the absolute and relative importance of income tax yield in some countries is rather small. It follows that in these cases revenue derived from this tax could be increased considerably if measures of assessment etc. were mproved, whereas tax rates could be left unchanged, or even reduced. On the other hand, experiences in some federal States seem to show that local or national differences in effective income tax burdens do not necessarily cause artificial movements of men and apital, provided these differences are not too big.

### Income from Capital Sources

There is, however, one problem which requires special attention, namely, that of taxing income from capital, such as interest and dividends. The fiscal

treatment of so-called capital gains also has to be considered thoroughly in this connection.

Whereas in Britain the method of stoppage at source has for a long time applied to interest etc., this is still not the case everywhere. The members of the Brussels committee are agreed that the application of uniform rules for the said stoppage is indispensable for the free movement of capital within the Common Market. At the same time they admit that in view of different 'propensities to evade', the stoppage rates have to be varied according to probabilities and opportunities of evasion. Therefore they propose the following solution with respect to *individuals*: in the case of dividend payments to taxpayers whose names are known, or made known, to fiscal authorities, the withholding rate may, according to national tendencies and wants, fluctuate between 10 and 20 per cent, whereas in all other cases a higher and uniform rate will apply which should not be less than 25 per cent.

### **Dividend Payments to Companies**

As for dividend payments to *companies*, it is thought that on principle such payments should be tax-exempt in order to avoid economic double taxation. Considering possible evasion practices, however, the following proposals seem to present a reasonable compromise:

Provided the recipient of dividends is a company which is resident either in the same country as the dividend distributing company, or in another member country of the E.E.C., no tax will be deducted at source. In all other cases, namely, if on the one hand it is unknown to the paying company whether the dividend receiving person is an individual or a company, and on the other hand if – with reservation as to double taxation agreements – dividends are received by a company resident outside of the E.E.C., tax is deducted at the higher of the two rates mentioned, i.e. not less than 25 per cent. There are, however, three points which, in the interest of precision, I would like to explain:

(1) If dividends received by a company are not distributed to the shareholders of this company within, say, two to four years, the said company should pay an additional tax on these dividends.

(2) The non-deduction of tax from dividends received by a company resident in E.E.C. countries will be dependent on the condition that the company has held at least 15 or 20 per cent of the share capital of the paying company during at least one or possibly two years before payments are made.

(3) Since, with respect to individuals, dividend tax withheld at source is normally considered a payment in advance on account of the income tax of shareholders, it seems fair that revenue derived from this tax should, as a rule, be repaid to the Treasury of the country where the shareholder is resident, if this country does not happen to be the same as that which withholds the tax.

### **Profits Tax**

The foregoing remarks, though chiefly relating to income tax proper, could not but allude to some problems of corporation tax also. However, with regard to this tax some additional explanations seem to be indicated.

The Brussels committee recommend the introduction of a distinct corporation income tax in all member countries as in fact it exists today in most States. The rates should be the same in each of the Six and will apply to the absolute amount of company profits. By way of parenthesis, I would like to mention that, in my opinion, this is rather a bad method, especially if used as the only basis of assessment. Personally, I would prefer a corporation tax system consisting of two elements, namely, (1) a flat rate tax on absolute profits and (2) a complementary one, graduated according to the proportion of profits to the working capital of the company. This problem has been touched on in the report but has been left to further investigation. On the other hand, the experts are in favour of different tax rates according to whether profits are distributed to shareholders or ploughed back. In the second case the committee think that on principle, corporation tax should not be much below the marginal rate of income tax which means that at present it would have to be around 50 per cent, this rate being thought to be uniform within the whole Economic Community. With respect to corporation tax on profits distributed, the rate should amount to about half that applied to undistributed profits; however, in order to confer on national treasuries a certain elasticity of their tax policy, corporation tax on dividends will be allowed to vary between the rate just mentioned (in other terms, about 25 per cent) and a rate of 15 per cent, considered as a minimum. Of course, this part of the corporation tax must not be confused with the withholding mentioned a little earlier and relating to individual income tax to which, as a mere payment in advance, it is wholly imputable.

### Effect of National Discriminatory Measures

I would like to add the following remarks relating to both income tax and corporation tax:

Today, income and corporation tax laws in all countries contain regulations which in one way or another, and for this or that reason, grant special favours to, or discriminate against, certain groups of individuals, branches of industry and trade, etc. Fiscal measures of this kind are indeed part and parcel of present time's 'planless planning policies'. They cannot but distort conditions of competition within the national economy, and since they are different in kind and level from country to country, they imply at the same time distortions in the field of international trade also. That is why a certain harmonization of those regulations seems of paramount importance for the good functioning of a Common

Market, a harmonization which in turn requires an agreement among the member countries on the principles of their policies of growth, employment, monetary and financial stability, etc. One can, of course, imagine structural peculiarities of an economy which will induce the Government to take protectionist and/or discriminatory measures in the field of taxation as well as in that of economic policy proper. It is possible that in certain events, measures of this kind will not give rise to distortions of international competition. However, in these cases the European Economic Commission as such should have to decide whether or not the said measures are compatible with the spirit of a Common Market.

In passing, it may be mentioned that the report deals also with problems of international double taxation. In this respect, the experts hold that future agreements should be shaped along the lines provided in the model agreement by the O.E.C.D. In the end, member countries should arrive at a multilateral convention.

### Conclusion

To sum up: tax harmonization appears to be a much broader and more intricate issue than most economists thought until recently. It implies inter alia the resignation of many deeply rooted habits on the taxpayers' side as well as on that of the Revenue Department and even of tax consultants. Any solution of the problems involved can at the best be no more than a reasonable compromise between vested national interests. Further, tax harmonization is a process of long duration. It cannot be achieved at once, rather it requires a realization by stages. This, however, should not represent a pretext for hesitating politicians and civil servants to delay the necessary reforms. In fact the Brussels committee's report contains a kind of 'time-table' which indicates rather clearly what has to be done when.

Finally, I would like to stress the fact that tax harmonization in the Common Market has to be complemented by the harmonization and co-ordination of principles recognized by all member countries as guide-posts to rational economic, fiscal, and monetary policy. Without mutual understanding on such principles, all efforts are doomed to remain patchwork.

May I conclude by expressing my firm conviction that notwithstanding the manifold and numerous difficulties which the harmonization of taxes and, for that matter, the economic integration process as a whole will meet with, fact and institutions have already developed in such a way that a failure of the great work is not any more conceivable. The Europear Common Market — nay, the economically and politically 'United States of Europe'—only a decade ago seemingly a mere Utopia—are on the march, and it is my sincere hope that Great Britain will feel able to join the Six, if not immediately, at least in the near future.

### Problems of the Smaller Practice - I

by R. W. SMITH, O.B.E., T.D., F.C.A.

### Introduction

MUST start with a few words about the title of this paper. At the beginning it seemed right, but -as I went a little way with my preparations I began ) feel that I should have restricted the title by calling 'Some problems of the smaller practice', but now 1at the task is finished, and I have had the help and dvice of many members of the Institute in small ractices, I am convinced that even more correctly should be 'A few of the problems of the smaller ractice' - but I am sure that these few which can nly be dealt with somewhat broadly in a paper of is length will not only help to stimulate discussion n this summer course but may also reach a wider rcle and even help to produce means of solving or leviating some of these problems of the smaller ractice.

2. It is in the nature of summer courses that some of ie topics which form the subject-matter of this aper have been discussed before. For other aspects these problems that face the practitioner I should be to refer you to previous papers, especially those Mr H. T. Nicholson in 1949 on 'Some problems' general practice', Mr R. W. Foad in 1952 on 'The lice organization of an accountant in practice', Mr

Perfect's paper in 1960 with a similar title<sup>3</sup>, Ir W. L. Barrows on 'Some problems of the charred accountant in practice' in 1953<sup>4</sup>, and Mr D. V. ouse's 'Professional ethics' in 1956<sup>5</sup>. I have taken the liberty of quoting from these and other papers.

3. My task is to try and put before you in one per a consideration of those problems which have special emphasis for the members of our Institute ho are engaged in what I have called the smaller actice. There is no definition for this phrase but I eve in mind the practice that is carried on by no ore than two partners, and in many cases by a sole actitioner. It does not necessarily follow that the nall practice consists of small clients but I think at a small practice made up of a few large clients is ceptional. Another point I must make is that the naller practice is not by any means synonymous with e rural practice. I find that there are something like o sole practitioners in Central London as defined in le Institute List of Members, about eighty in Biringham and about the same number in Manchester. tatistics which have been prepared by the Institute indicate that of all members practising in the United Kingdom no less than 19 per cent are sole practitioners, and about 23 per cent are in two partner practices. This is the limit of my definition of the smaller practice, and it must be agreed that a total of 42 per cent of all practising members is a very significant proportion. There are those who would perhaps go further than I do and suggest that three or four partner practices can also be defined as small. These represent an additional 30 per cent of the total. It is therefore of the utmost importance to understand that any problems of the smaller practice affect a substantial majority of the practising members of the Institute.

- 4. My approach to the subject is by way of human relationships because I am convinced that at the root of all the problems we are likely to encounter in professional practice there is a very powerful human element, and if we can understand this human element we are going a long way towards understanding the problem and getting to grips with it and finding a solution. Speaking personally, I feel that without the problems offered to us by our profession, life would become a very dull affair. Therefore the first relationship to be considered by any practitioner large or small is his relationship with himself - and here I wish to make only one point, which is that he should regard every problem as a challenge to himself, a challenge to find his own solution. For though I shall attempt to indicate what I consider are the answers to the various problems I shall discuss, it is only by self-examination that the lesson will be learned.
- 5. The relationships in which the smaller practitioner finds himself can I think be classified as follows:
  - (a) Government departments and officials.
  - (b) Other professions.

Mr R. W. Smith, O.B.E., T.D., F.C.A., the author of this paper presented at the Oxford Summer Course of The Institute of Chartered Accountants in England and Wales, is senior partner in the firm of Day, Smith & Hunter, Chartered Accountants, of Maidstone. He was admitted to membership of the Institute in 1933.

The Accountant, September 10th, 1949.

The Accountant, October 4th, 1952.

The Accountant, December 10th, 17th, and 24th, 1960.

The Accountant, August 8th, 1953.

The Accountant, October 13th, 20th, 27th, and November d, 1956.

- (c) Other practitioners.
- (d) The Institute.(e) His clients.
- (f) His staff.(g) Himself.
- 6. It may be considered somewhat odd that I have placed the relationship with clients so far down the list, but this is not to say that it is the least important, rather the reverse. What I hope to demonstrate is that the relationship with the client is bound up with all the others. Before coming on to consider these relationships in detail and the problems which they create in so far as they are peculiar to the smaller practice, there is one fundamental point of distinction which I wish to make between the small and the large practice. That is in the nature of the work carried out regardless of the size of the individual jobs. It is simply this: that in the larger practice the accent is very much on the audit of limited companies - this I am certain forms the bulk of their work - in what proportion I am not prepared to say - it must vary from one practice to another - but it is clearly more than 50 per cent and in many cases more than 75 per cent of the total work.
- 7. In the small practice, on the other hand, auditing is certainly less than 50 per cent of the work and this proportion diminishes as the size of the practice reduces. The rest of the work of the smaller practice forms a very complicated pattern, a very large proportion of which is concerned with taxation in one form or another.
- 8. Perhaps I can put the cause and effect of this in another way. One can generalize and say that a small practice is concerned with small clients and a large one with large clients. The larger client will in the majority of cases have its own taxation department and will almost certainly be in a position to prepare its own accounts ready for production to the auditor. It will also have the necessary administrative staff to deal with problems of purchase tax, census of production and other statistics, rating and valuation, pension schemes and company registration matters, which in the case of the smaller business are passed over to the professional accountant for him to deal with. More often than not they are regarded by the client as something that should be done for the inclusive fee, whatever additional complications they may involve. Even in those cases where the taxation work is all dealt with by the professional accountant, he who is concerned with the smaller case will find that the amount of work in this connection is proportionately higher than with the larger case. It is very seldom that in two cases where the audit fee is, say, 500 guineas and 50 guineas respectively the tax work on the former involves ten times the amount of work that it does in the latter.
- 9. I have said this in order to demonstrate what must be an obvious thing to most of us; that the shape of the smaller practice is altogether different from that of the larger one. From this we come to

- another conclusion which provides an important point of distinction. Much of the work which is carried out by the smaller practice cannot be undertaken by the larger firm merely as a matter of practical policy. There is an entirely different scale of notation and tempo, if that is the appropriate metaphor, although I do not want it to be inferred from this that there should be any difference in the standard of professional performance, as I shall attempt to demonstrate later on in this paper.
- 10. It will therefore be readily appreciated that if what I have said in the preceding paragraphs is accepted it is quite wrong to suggest that in the changing world of today there is no room for the small practitioner and especially for the sole practitioner. If there were not still plenty of members of our Institute willing to accept the challenge and to carry on a one-man or a two-man practice in the face of all the problems and difficulties which they encounter, then the work which they perform would very soon pass into the hands of practitioners and others who are not qualified accountants. This would be to the undoubted detriment of the profession as a whole, and the business community in general. Whatever may be done by the giants of business we are stil likely to remain a nation of shopkeepers and a community of individualists for many generations to come. The present zest for amalgamations is regarded by many as a phase which will have its day, and although in some industries we are still seeing larger and larger groupings, there are signs that in some activities there is still a better service supplied to the public by the smaller unit. Even our nationalized industries are at last beginning to see that there is something in this, and are decentralizing some of their activities.
- 11. Perhaps this is a convenient point to express my views on what is happening in our own profession where this grouping and amalgamation tendency has been manifesting itself, doubtless prompted by the complementary process which is going on in commerce and industry. Are we right in building up thes gigantic professional empires with so many partner that multiple partnerships have to be formed in ord to circumvent the legal limits of partnership legis lation? Are we not as a profession facing a real dange that eventually this process will lead us away from the idea of individual personal service to our client on which the true professional relationship is base and which still has its being very much in the hand of the smaller and medium-sized practice? It is als pertinent to observe that empires today as in all age have a strong tendency to decline, disintegrate, and fall at the very moment when their size appears to their strength.
- 12. I am bound to refer to the questionnaire whi was sent out earlier this year for consideration by the district societies. My brief is not to discuss the questionnaire or its results. That is a matter for the Council of the Institute, but there must be some

ommon ground — many of you will have doubtless and a hand in replying to the questionnaire. What I m attempting to do is to look at the problems of the maller practice, or some of them, and to suggest ossible ways in which the practitioner himself can ackle them. But if, as a result of the Institute's indings through this questionnaire, it is possible to onvince the smaller practitioner that he is not alone a trying to solve his problems, then I have little loubt that this will lead to an improvement in his tatus, and as a natural consequence of this in the tatus of the Institute as a whole.

### Relationship with Government Departments and Officials

13. Under this heading most of us will immediately hink of Inspectors of Taxes, Special Commissioners nd possibly the Estate Duty Office, but a little effection will bring to mind other Government lepartments with which the practitioner is conerned; the Board of Trade in connection with comany registration, business names, bankruptcy, iquidations and the census of production and distrioution; Customs and Excise, the District Valuer, the Lourt of Protection, The Public Trustee, The legistrar of Friendly Societies, and the Tithe Comaissioners, to mention only some of the more bvious. There are few small practitioners who at ome time or another do not have to deal with all f these. I have already pointed out in my introducion that more of his time is occupied in work involvng these departments than in the case of the member f a larger practice, where the work often takes on a pecialist character and becomes allocated to a paricular partner or department of the firm. From this rises probably the greatest problem of all for our maller practitioner - that he must do his best to eep himself acquainted with all developments thich are likely to impinge on his practice and to eal, with a reasonable degree of competence, with Il matters which his clients may bring before him. he larger practice is or should be organized so that here is at least one partner who has a specialist knowedge of - for example - bankruptcy, friendly societies, r trusteeship, whereas so far as this kind of work is oncerned the smaller practitioner is bound to be a ack of all trades, without ever being able to obtain omplete mastery in any of them. At the very least, owever, since taxation work overshadows most of he other dealings which he has with Government epartments, he will feel compelled to make a big ffort to keep his working knowledge of taxation in ood trim, and to rely on works of reference in dealing with many of the other subjects I have included nder this heading.

14. What are the possible remedies for this probm? Quite clearly there is a point beyond which the maller practitioner cannot widen his knowledge or xperience without the risk of being completely overhelmed. On the other hand he is faced with the possibility that his standard of professional performance may begin to deteriorate. Various methods suggest themselves - amalgamation into larger units, the provision of an official advisory service operated by the Institute, and the introduction of specialist practitioners on the style of medicine and the Bar. In my view none of these provide individually either an ideal or an acceptable solution although there are considerable advantages to be gained from them all. For some reason which I find it very difficult to discover ours is a profession whose members seem to be very reluctant to seek consultation with and advice and help from their fellows. Is it because they fear to display their own lack of knowledge on a specialist matter, is it because they think they would lose status in the eyes of their clients by seeking another opinion, or do they fear that they will lose work to larger firms? I should have thought that there was very little substance in any of these fears but there seems to be no other way in which the matter can be explained.

15. Inquiries were started about the middle of last year through the district societies with a view to finding out whether it would be in the interest of members of the Institute to initiate a practitioners' advisory service and if the need were proved, how such a service should be operated. My view is that there is a need for such a service and that its main objects should be twofold, firstly to assist any practitioner in dealing with problems of an operational nature, problems arising out of his professional work, on which he either wants guidance or a second opinion, or even the services of a specialist, and secondly to provide advice and help about the administrative problems of a practice, which I shall refer to in another section of this paper.

16. We are all aware that there are ways and means of getting the kind of information and help that such an advisory service would provide but at the present time there is no form of co-ordination and standard procedure. Naturally there would have to be safeguards which would operate to prevent such a service merely becoming an idle practitioner's service, but this I think should present no difficulty. No one would expect it to be free, and it would be reasonable to assume that members could in some way make a practical contribution to the operation of such a service.

17. There is another and quite distinct problem here which falls more heavily on the smaller practitioner than on others, and that arises from what I am going to describe as the quite clearly discernible decline in the standard of performance of many Government departments. This may be due to a variety of causes arising from the same basic reason: the enormous increase in bureaucracy compared with a generation ago and the inevitable difficulty in the recruitment of suitable staff. Perhaps I may give an example or two from my own experience in order to deomstrate what I mean.

18. Within the last year or so there has been some

100.0

criticism from Inland Revenue quarters of delay in submission of accounts and computations, and it has been said that the lists of cases for appeal before the District Commissioners are increasing in length, largerly due to the greater number that are brought on for hearing because of delay in getting accounts in support of appeals against estimated assessments. I have discussed this criticism with a number of Inspectors of Taxes from various kinds of districts and I have so far found none who are prepared to say that such conditions are deteriorating. It is important to note that the statement is a generalization and makes no distinction between the various classes of appellants and the agents who represent them.

19. For my own part over this question of time spent on appeals procedure I have kept a careful log of assessment notices with which I have dealt personally during the months of November and December in the last few years. I have classified the results under the following headings, and the percentages of the total are more than an interesting commentary:

Per cent of total (a) Correct assessments following submission of accounts, computation and 40.6 (b) Provisional or estimated assessments by reason of no accounts or return or (c) Incorrect assessments following submission of accounts, computation and return .. 32.8 . . (d) Incorrect allowances or reliefs following submission of return 15.3 (e) Incorrect calculations on assessment notice ...

20. The above statistics only refer to assessments under Schedules D and E and surtax. They do not include Schedule A demands issued at the same time, in which the percentage of errors is even higher. Now the amount of time which is spent in the smaller practice in dealing with matters of this kind is very great indeed at particular seasons of the year, and I wish to be quite emphatic that the figures I have quoted are in no way exaggerated — in fact they rather understate the problem because they do not include errors arising on amended assessments issued in substitution.

21. Another matter giving rise to a similar cause of friction and frustration, comes from the apparent failure of the Inland Revenue to adopt an attitude of tolerance with regard to relatively insignificant points in examining accounts and computations. I could give scores of examples of questions asked in connection with the accounts of small clients which can only be described as absurd, but which cumulatively become very tedious – it may be that they figure somewhere in the instructions issued for the guidance

of junior inspectors of taxes. To be asked to give an analysis of repairs where the expenditure runs into thousands of pounds is reasonable enough – most of us would probably supply a schedule of this in any event, but to have the same question put in a case where such expenditure is £20 or so, can only bring the Revenue into disrespect. For the small practitioner who has to deal himself with every computation and the correspondence arising thereon in detail, any unnecessary query and its answer merely increase costs which he cannot pass on to the client and are a drain on his time which he can ill afford.

22. Time and space do not permit an exhaustive examination of all the problems that face the smaller practitioner in his relationship with Government departments, but there is just one other matter in connection with the Inland Revenue which I am sure is largely outside the experience of the larger practice. I refer to the kind of inquiry which very often follows the transfer of a case to a chartered accountant from elsewhere. This frequently seems to provide the inspector of taxes with the opportunity of asking a great many more questions on a set of accounts than he may have done previously and I am tempted to think that it is more than a coincidence that this happens just when the taxpayer has decided to transfer his affairs to a chartered accountant. I cannot ignore the possibility that the inspector considers that he may get such questions answered with greater care and veracity than before. The trouble is aggravated in those cases where the questions asked relate not only to the year under review - but to earlier years. The remedy seems obvious - that if the Revenue could be persuaded to put these same questions to the previous accountant - and press the matter to a conclusion - then life would be a little more tolerable for the small practitioner who is striving to maintain a standard.

23. I do not want to suggest that in dealing with bureaucracy the larger practice experiences any less virulent form of frustration but what I am trying to demonstrate is that its area of fall-out is very much wider and the effect is less concentrated. What is perhaps more important is that the difficulties of dealing with Government departments are taken of by the particular partner or department of the firm which is especially staffed and equipped for that purpose — and that many of the matters which in the smaller practice are dealt with by the firm on behalf of the client, are at the other end of the scale handled by the client who may be better equipped for doing so than the professional accountant.

24. In general terms the obvious remedy for the kind of problem seems to be a policy of simplification of law and procedure, especially with regard to taxation, since that is where the greatest volume of fruitless effort lies — but the same could be said for most if not all of the dealings with other Government departments. There is a tendency to regard our profession as having something of a vested interest in the

complexities of taxation. I have even heard it expressed by some of our own members that simplification and reduction of taxation would lead to a loss of work. If this is true then I for one would welcome it because it would provide the practitioner, whatever the size of his practice, with a splendid opportunity for replacing the negative pursuit of fleeting taxation advantages for his clients, by the positive policy of being able to devote more of his professional time to giving them constructive advice and help about the efficient management of the financial side of their businesses

25. In this connection it is sometimes forgotten how much work which might well be carried out by Government staff is in fact done by the accountant in practice, because it takes too long to wait for the other side to act, or it leads to an unsatisfactory result when this happens, or because the client feels he is getting a better deal if the accountant does it. I refer to the following examples: the preparation of Schedule D tax computations, capital allowance claims, the calculation of income tax repayment claims, the preparation of dividend schedules, and the settlement of P.A.Y.E. queries, to mention only a few examples. No one will deny that such affairs bear more heavily on the small practitioner.

26. So I will put this as a question which I hope will supply material for discussion. Are we as a professional body using our knowledge, experience and ability to the best advantage with a view to securing a greater administrative and legal simplicity not only in our system of taxation but in all other processes of central and local government with which we are concerned? I have little hesitation in saying that a successful campaign of this kind would do us as an Institute far more good than all the efforts of a publicity committee.

### Relationship with Other Professions

27. The next type of problem facing the small pracitioner is that which arises as a result of his relationship with other professions. Here he will find himself in a completely different world from that in which is larger brethren are operating. In referring to other professions I have in mind mainly solicitors, auctioneers, valuers, property agents and insurance prokers with whom the small practitioner and his clients ire frequently in contact. Perhaps we can include the rustee and tax departments of banks, and quasiprofessional and official organizations such as the National Agricultural Advisory Service, trade associaions, and chambers of commerce, many of which offer to give advice and service in connection with accounts, taxation and other related matters. All these o which I have just referred, to a greater or lesser legree, deal with some of the work which is perormed by practising accountants, and in many nstances it would be difficult to establish a frontier vhere the province of the one ended and that of the other began - this is surely one of the real problems acing the advocates of registration of our profession.

28. The small practitioner finds himself in almost daily contact with people in these groups and it is a constantly repeated plea on his part that because many of them perform work or services which he regards as his own field of activity, there should be some form of control so that this work could be reserved to him. I doubt whether the impact of this kind of problem on the larger practice means anything at all. Once again it is a question of size and the relative importance of the work concerned. I have actually heard it stated by a member of a large firm of chartered accountants that he did not reckon to dabble in farm and estate accountancy, such work was far better left to estate agents and agricultural valuers who had more experience in it. I am firmly of the opinion too that it is of little consequence to a large firm if a bank deals with personal tax repayment claims at two or three guineas a time, whereas to a small practitioner, the prospect of facing the loss of such work to a body corporate which is not precluded from advertising its willingness to carry it out, can be a very serious matter indeed.

29. The other side of the coin is that there are many small practitioners who themselves carry out work which could more strictly be described as falling within the sphere of other professions. I think it is possible that from time to time we have all met examples of accountants in practice doing work which involves giving legal advice, performing valuations which are more strictly the province of the valuer, and acting in the capacity of stockbrokers and insurance brokers. I am not necessarily suggesting that when they perform such work they do not give good advice or service, or indeed that there is anything legally or morally wrong in doing so. What I am suggesting, however, is that the chartered accountant in practice is on dangerous ground when he takes it upon himself to perform such services for he accepts the responsibility for the consequences of his actions. And he is surely placing himself at a serious disadvantage if he points a finger at others accusing them of invading a professional province which he regards as his own. This is a problem which the small practitioner would be advised to study with great care. I am greatly impressed here by the observations made on this subject in this Hall a year ago by. Mr A. B. Snow:

'I have never reconciled myself to the principle that a professional accountant may properly receive commissions from an insurance company with whom he has placed his client's business... the accountant's reward for his advice is the professional fee which he receives from his client, and the receipt of a sum of money from a third party (either in substitution for the fee or in addition to it) is surely something which is repugnant to a professional relationship.'

30. I, too, find it very difficult to reconcile myself to the principle of accepting or sharing commission on clients' business either with an insurance company or a stockbroker. There is no doubt of course that the small practitioner will on many occasions be requested by his clients to provide this kind of advice or service, and the temptation to act accordingly will be a very strong one, but I think that he would do well to reflect that on many such occasions he may be performing a greater service to his client if he persuades him to consult the appropriate professional expert. This too will have its obvious temptations but the Institute's fundamental rule on the sharing of remuneration is so clear as to need no comment from me.

31. I feel certain that if the small practitioner were to regard this problem as one where the maxim 'Do as you would be done by' provided the appropriate guidance he would soon find that his neighbours in other professions would begin to respect his attitude of independence and impartiality and would themselves reciprocate. It seems faily obvious that an insurance broker would be unlikely to recommend any of his clients to go to an accountant who openly carried on an insurance agency business, any more than a solicitor would send his client to consult an accountant who was known to dabble in legal business. Therefore may we once again regard this problem as one primarily of human relationships, and if we set a good example others may well follow and custom may take the place of regulation and leave our position stronger in consequence.

32. As a demonstration of what I have said I quote from a news letter published by a firm of insurance brokers:

'Many farmers make up their annual accounts to Michaelmas or the end of the calendar year, and the present is therefore an appropriate time to consider the objects for which the accounts are prepared. These are:

(a) To provide information as to the financial results of the year.

(b) To enable the farmer to compare his results with previous periods and with other information and to see whether or not he is operating his farm as efficiently as possible.

(c) As a basis for the assessment of income tax.

'A limited company carrying on a farm business or any other trade is required to keep proper books of account, but there is no such legal provision affecting the farmer who carries on business in his own name or in partnership. Obviously if proper books are not kept then it is very difficult to prepare adequate accounts. The books need only be quite simple so long as they give all the necessary information, and the cost of preparing farm accounts in an adequate and informative way is comparatively small, certainly the cost will be very much more than repaid by the extra information which will be available, and which should, if properly used, lead to better profits.

"The proprietor of a business is usually anxious to have his accounts prepared immediately after the closing of his financial year, and this is most important if the accounts are to be of any use to him. However, many farmers seem to be satisfied with accounts which are not completed for a year or more, and we recently came across a case where the accounts for

1958-59 had not yet been finalized. There is no excuse at all for this sort of delay and the farmer should insist on having his accounts prepared promptly and in a proper form. The agricultural industry is better supplied than any other with standards and costing information, and a comparison of actual results with some of the figures available can be very interesting and instructive.

'In farming today it is becoming more and more difficult to make a satisfactory profit and no farmer can afford to overlook any steps which would help him to improve his position. If the accounts are not kept right up to date then the farmer can be horribly misled as to his financial position, sometimes with disastrous consequences. Any chartered accountant would be pleased to advise as to satisfactory and simple methods of book-keeping and would see that the accounts were prepared in the best possible manner.'

(To be continued.)

### Weekly Notes

### ALTERNATIVES TO THE COMMON MARKET FOR BRITAIN

RECENT news from Brussels on the negotiations over terms for Britain's entry into the European Economic Community has undoubtedly hardened some British opinion against the Government's policy. A similar reaction seems to have been experienced by Professor Meade, whose Hobart Paper No. 17, of last April, has now reappeared in revised and expanded form. Recent developments are reviewed and the author is concerned at the E.E.C.'s trend towards discrimination in trade, which would keep out 'Australasian foodstuffs and Indian textiles in order to protect high-cost European producers'.

With these doubts in mind, Professor Meade examines the alternatives for Britain. The Government could seek American co-operation in the building of a North Atlantic free trade community if Britain joined the E.E.C., a policy which is practicable in view of the passage of recent United States trade legislation, although this legislation brings pressure to bear upon Britain to join the E.E.C.

A second alternative would be to reverse unilaterally Britain's present protectionist trade policy, but this would be fraught with the dangers of cheap imports straining the country's balance of payments and possible devaluation. Such a policy would be possible only within the context of world co-operation which Britain's initiative might encourage.

Finally, the United Kingdom could seek to bargain with the various world trade groupings to obtain the best possible terms for the Commonwealth and the

<sup>1</sup>United Kingdom, Commonwealth and Common Market: A Reappraisal. Price 6s. Section entitled 'The Common Market: Is there an alternative?', available separately, price 3s. The Institute of Economic Affairs, 66A Eaton Square, London SWI.

European Free Trade Area, subject to the overriding provisions of the General Agreement on Tariffs and Trade, with the object in the longer run of eliminating tariffs and other forms of discrimination.

The successful implementation of any of these policies is dependent, states Professor Meade, upon the formulation of an effective incomes policy which cannot be restricted to wages. This might be achieved, he suggests, by a reform of the tax system and a redistribution of wealth.

### LACK OF COST CONSCIOUSNESS

In a luncheon address at the recent London Cost Conference of The Institute of Cost and Works Accountants, noted in last week's issue, Lord Robens, Chairman of the National Coal Board, said that this year for the first time for a number of years the Board will make a profit. And this, he declared, was more attributable to their accountants than to their engineers, for accountability has been the keynote and in a vast industry like theirs with a turnover of nearly £1,000 million a year, 'a very slight improvement in efficiency in terms of cost makes a difference in our balance sheet of several million of pounds'.

Lord Robens said that, in his view, there was a lack of cost consciousness in Britain. This manifested itself everywhere. While he welcomed the idea of Britain's entry to the Common Market, it should be remembered that joining the Market was not a panacea for the problems of exporting. It would open a door for wider opportunity for British exports, but it would also enable the sharp probe of competition to come in. It was, however, in the field of cost that the greatest contribution could be made in the shortest time.

If Britain was going to increase her exports as she needed to, went on Lord Robens, not only production costs, but every cost between the point of production and the point of final delivery, where often great economies and savings could be made, required to be thoroughly examined. It was in this field, therefore, that the cost accountant had to play his part.

### NO MORE HALFPENNIES?

THE abolition of the halfpenny is forecast by Mr J. H. James, Deputy Master and Comptroller of the Royal Mint, in his annual report published last Tuesday. No halfpennies were minted last year—the first time since the present bronze coinage was introduced in 1860. Mr James says that he is fairly certain that the useful life of the halfpenny is nearing its end.

The report contains a brief outline of the history of the application of decimal reckoning to coinage and of the controversy on this subject in the United Kingdom, and also records that the Mint has complied with the request of the Austrian Government that the Vienna Mint should regain its monopoly in the minting of Maria Theresa thalers – large silver coins which are widely used for trade in the Middle East. Thalers had been struck by the Royal Mint since 1936 after Austria had given up her monopoly to Italy, and British traders had found difficulty in obtaining supplies.

In 1961, 836 million coins were produced – an increase of 127 million over the previous record of 709 million in 1959. United Kingdom coinage struck during the year totalled 298 million pieces and of the 217 million cupro-nickel coins struck, 111 million (more than half) were sixpences. Pennies were minted again, the first since 1953. Overseas work comprised over 64 per cent of the year's output, with coins of seventy-seven different denominations going to twenty-five Commonwealth and foreign countries, including Burma, Dominica, Greece, Iceland, Jordan, Kuwait, Libya, Muscat, New Zealand, Nigeria, Uruguay and Viet Nam.

### PROFITS TAX AND FRANKED INVESTMENT INCOME

THE High Court has rejected an argument by the Inland Revenue that the Finance Act, 1947, gave them the right to tax income twice over. The rules for computing profits for profits tax purposes are contained mainly in the Fourth Schedule to the Finance Act, 1937. Paragraph 7 (1), as amended in 1947, excludes from charge, inter alia:

'income received directly by way of dividend or distribution of profits from a body corporate carrying on a trade or business to which section 19 of this Act applies'.

Such income is called 'franked investment income'. The Revenue contended that this meant that the company paying the dividend must still be carrying on the trade or business at the time it paid the dividend; otherwise the dividend was not franked investment income.

The Revenue had assessed a company for the three months ended March 31st, 1956, on the footing that two dividends received by it on March 31st, 1956, from two wholly-owned subsidiaries should be included in the profit, notwithstanding that these dividends were received out of trading profits. The grounds for this double assessment were that the subsidiaries had already ceased trading; one in November 1954, and the other in October 1955. One subsidiary had never paid profits tax, its profit never exceeding £2,000; but the other had paid profits tax in respect of the profit used in paying the dividend to the parent. The Revenue argued that the subsidiaries were not 'carrying on a trade or business' within the meaning of paragraph 7 (1). They admitted that this meant double assessment, but said that they would normally give concessional relief in a bona fide case but not, for instance, in a dividend-stripping case.

Giving judgment in the case C.I.R. v. Clifforia Investments Ltd, Mr Justice Ungoed-Thomas said it would be intolerable that if the words did involve

double taxation the Revenue had a right to disregard and overrule the Legislature. A better interpretation was that put forward by the company, viz. that the exclusion applied where the paying company was carrying on a trade or business at the time the profit accrued to it, out of which the dividend was paid. He dismissed the Revenue appeal accordingly.

### EUROPEAN PATENT LAW

WHETHER or not the United Kingdom joins the Common Market there will be considerable interest in this country in the draft of a convention for a European Patent Law which has been prepared by a study group set up by the Six. Although the draft has not been finally cleared by the study group or by the Commission of the European Economic Community, the Board of Trade has prepared a

translation in English which is available from H.M. Stationery Office and the Patent Office, price 5s (by post 5s 5d).

A system of European Patent Law is envisaged, capable of existing alongside the national systems. Except, however, during a transitional period it would not be possible for any person in the territories of the member states to hold both a national and

European patent for the same invention.

It is proposed that patents should be granted for products including chemical products as well as processes, and the right is included to prohibit the importation of a product made by a patented process outside the Community. The draft proposes the establishment of a European Patent Office and describes in detail the method of application for European patents and the requirements which must be satisfied before such patents would be granted.

### This is My Life . . .

by An Industrious Accountant

CHAPTER 148

OUR new wing opens into the ladies' dress-goods section on the ground floor. When the old wall was finally demolished, there was quite a mess of dusty rubble, wooden planking and buttressing, and heavy scaffolding. We got it cleared up as quickly as possible, but the builders' men were coping with final odds and ends for quite a while.

The insurance man responsible for our public liability came along for a chat, so we went off to inspect the scene. If a piece of brick should fall and injure an industrial merchant prince, or even a humble member of our staff, said our professional harbinger of disaster-to-come with apparently considerable relish, we'd be in for trouble up to the hilt.

We wouldn't really, I thought. We had arranged early on to cover this contingency thoroughly; our contractors had been asked to extend the amount of their own public liability policy appropriately and to bracket our name with theirs in the policy wording. They'd agreed, reasonably enough. We were trying to reckon the maximum possible liability should the whole building collapse during a crowded Saturday shopping spree, when I felt a sharp tap on my shoulder. 'One moment, my man,' said a high-pitched peremptory voice.

'I beg your pardon, madam,' I replied with old-world courtesy, which never comes amiss with our store's elderly customers. Then I recognized her and my heart sank. It was our ancient bête noire, that overaffluent dowager ominously nicknamed Lady Macbeth who was lately returned from foreign travelling. 'Could I possibly obtain a little attention, IF you

please?' she continued with considerable acerbity. 'After all, I do give your establishment a fair share of money over the years. Perhaps you could show me some of these flecked worsteds.' It's typical of this irascible lady that she affects not to recognize any of us at first meeting, a gambit that has unnerved better men than I over the years.'

In my preoccupation with the hazardous scaffolding, I'd failed to notice that our assistants were swamped with the pre-Christmas shoppers. The aisles round the stands, draped with sweeping folds of colourful materials festooning down from the overhead racks, were packed. I looked round tentatively at our nearer girls; they saw Lady M. and all avoided my eye.

Lady M. attacked again and I explained that I was not permitted to help her. 'Nonsense, absolute nonsense,' she barked. 'Summon the managing director at once.'

"The counter-staff are clearly two-deep with customers," I observed blandly and the termagant glared fiercely under her leopard-skin cap. 'I insist on service,' she announced. She spied some chairs nearby and sat down majestically. After all, these skirmishes really make her day; she enjoys a fight and has all day to protract it.

'What name shall I say?' I inquired maliciously, but she jumped up with a shriek. 'My coat is ruined! Your chair was filthy, you'll have to replace it!' To my horror, her gorgeous mink was white with dusty flakes; they must have sifted down from the broken wall.

She was giving me both barrels at full blast when our efficient insurance man intervened. He sat deliberately on the adjoining chair, then rose with a snowy seat. Some smart smacks (a procedure scarcely feasible for me to have adopted with Lady M.) displaced the dust entirely, and the equally nebulous grounds for the customer's claim vanished simultaneously.

## Finance and Commerce

### No Audit

NO fee, no audit. That was the position presented recently to shareholders in The Bestwood Co Ltd which is generally described as an investment and industrial holding concern. The company did what it could under the circumstances by providing shareholders with a draft consolidated balance sheet and a report giving, among other things, trading results with the notice convening the annual general meeting. The company's situation was explained by the chairman, Col C. G. Lancaster, in the report.

He pointed out that the meeting was to comply with the requirements of the Companies Act and reminded shareholders that the Westminster Bank appointed a receiver and manager of the company on August 22nd, 1961, so that for the greater part of the period since the last annual meeting, the company had been managed by the receiver, Mr F. S. McWhirter, C.A.

It was not possible, he said, to arrange for an audit of the accounts of The Bestwood Company and its subsidiary, Plowright Brothers, for the year to December 31st, 1961, because the receiver was not in a position to release funds for this work to be carried out. Two other subsidiaries not affected by the receivership had their accounts audited. The statement setting out group net assets, said Col Lancaster, was based on unaudited internal accounts.

### Reconstruction

At the meeting, the chairman referred back to the credit squeeze and the bank's appointment of the receiver who, he said, found himself in the position of being unable to release money to pay for the audit. Mr McWhirter added that it was not just a question of getting the bank to agree to release the necessary money; there were other unsecured creditors to be considered. Actually, he saw no reason why the bank should not be repaid in full. He was anxious that shareholders should receive audited accounts as soon as possible and maybe after what had been said at the meeting, it was possible something could be done.

As might be imagined, lack of audited accounts provided a grievance for the shareholders who made it their chief discussion point. They wanted audited figures as soon as possible. In sum total, it is one of those extraordinary situations that has to be left to the goodwill of the parties concerned.

Col Lancaster thought the receiver's work should

be completed some time next year, after which reconstruction of Bestwood's activities would have to be considered. Broadly, preference shareholders' interests appeared to be intact and those of the ordinary shareholders to the extent of about two-thirds.

### **Hard Going**

The Bestwood Company's principal investment is its interest in Plowright Brothers Ltd, a company making and erecting heavy plant and machinery used by collieries. Most companies in that line of business have found the going difficult. The Coal Board has been driving hard bargains.

The receiver for Plowright has reported that it has not been possible to find a suitable purchaser for the business as a whole but arrangements have been made to sell about a third of the works premises and the goodwill of the business. It has been possible to complete very substantial contracts to which the company was committed, and thereby, the company has avoided claims against it which might have been extremely onerous if the contracts had not been fulfilled.

Substantial retention moneys will remain outstanding for the greater part of 1963 and not until some time towards the end of next year will the final position concerning the company emerge. Meanwhile, there is still a considerable proportion of Plowright's fixed assets to be realized.

### Long Ago

In days now long ago, this column confused its double-entry. It called a debit a credit – or vice versa. A reader sarcastically pinpointed the error, and this column, blushing with shame, wrote explanation at great length. Its effort, however, was stifled at birth. The master hand slipped paper into machine and laughingly dismissed the whole affair as of no great consequence. Even Homer was known to nod, he wrote. And that is how it appears in the bound volume of *The Accountant* of that time.

Despite all the checking, human frailty results in errors getting through – right through to the printed and published accounts – and, it is to be feared, someone somewhere is severely reprimanded.

But what can be done when accounts in share-holders' hands awaiting acceptance at the meeting are found to contain error? There is nothing laid down, but for those who have yet to face this awful position, a notice to shareholders drawing attention to the error and saying: 'for this, read that', is, in practice, deemed sufficient.

A classic example of the work of the gremlin appeared in the prospectus of the £3 million issue by Forte's (Holdings): 'The first payment of dividend on the (7 per cent) Preference shares will be made on January 31st, 1963, calculated from October 11th, 1962, and amounting to £1 6s 6d less income tax per share'.

### Changes in the Purchasing Power of Money

SIR, — In his letter in your issue of November 24th, Mr Broster gave the example of a machine bought for £1,000 but requiring £2,000 for its replacement, the funds for this purpose being accumulated by purchases of bonds maturing on the replacement date. In such a transaction he questioned the need for any accounting recognition of change in the purchasing power of the bonds.

In answer to his question let us assume (a) that the original machine was bought out of equity capital; (b) that the additional £1,000 required for its replacement was provided from revenue receipts; (c) that the doubled cost of replacement resulted from a halving in the value of money over the period (represented by a rise in the general price index from 100 to 200); and (d) that trading profit is arrived at after charging depreciation on historical cost.

Under traditional accounting the £2,000 of replacement funds would then be shown to have been derived from the following sources:

8				·£
Equity capital				1,000
Retained profit:				
Cash income	•: .		2,000	
Less Depreciation of	origina	al		
machine	•••	• •	1,000	
				1,000
			_	^
			-4	,2,000

This presentation leads the proprietor of the business to suppose that he has earned £1,000 of net income, despite the fact that none of this can be drawn out without harm to the business and that even with its retention the business will be no better equipped than it was when it started.

In contrast, recognition of the change in the value of money in the way which Mr Parker proposes would give the following picture:

Equity capital: Amount originally subscribed	£ 1,000	£
	===	
Current purchasing power thereof Retained profit:		2,000
Cash income		
Less Depreciation of machine	1,500	
Trading profit	500	
vested in bonds •	500	
	—	Nil
	-	

This alternative presentation (based on maintenance of the real capital of the undertaking) not only discloses the effect of the change in the value of money on the trading result but demonstrates the adverse consequences – to the extent of eliminating the whole of the trading profit – of investing equity capital in bonds of a fixed monetary amount.

Mr Broster will appreciate that it is not the bonds which need 'revaluing' but the capital which they represent; it is the restatement of the latter at its current purchasing power which throws up the loss (or gain) attributable to holding the bonds. He would be right in saying that no such loss or gain would accrue to the equity from holding bonds to the extent that they are matched by a corresponding monetary liability; for to that extent the bonds and the liability counterbalance and the net investment of equity capital in money is nil.

Yours faithfully,

REALIST.

### Decimalizing the Currency

SIR, - Nobody has yet mentioned the very important question of future comparisons against pre-decimalization figures.

If the £1 unit is retained, as I fervently hope, for the prestige of 'Sterling', then there would be no difficulty in comparing significant amounts, as at present, to the nearest £1.

Also, when retail price tickets have to be changed over, there would be much less confusion among shoppers if the £ unit remained unaltered.

I would, therefore, suggest a variation of the old saying, viz., 'Look after the £ and the decimals will take care of themselves'.

Yours faithfully,

Southwick, Sussex.

L. E. LESLIE.

### General Store: Gross Profit

SIR, – In reply to 'Edwin' (November 17th issue) I deal with a number of village general stores' accounts and the following details of two of them, which I have chosen because of the excellent records maintained, may be of interest to him:

(i) Turnover £12,000. Gross profit percentage on sales for the last two years: 14.9 per cent and 16.1 per cent.

(2) Turnover £17,000. Gross profit percentage on sales for the last two years: 13.2 per cent and 13.8 per cent.

In the first case, the business is extremely well-run, great accent being placed on buying on the best possible terms and avoiding as much waste as possible, particularly on the perishable items. I would consider, therefore, that the gross profit percentage earned on sales in this case is extremely good and would be rather above the average.

The second example quoted probably gives a more average picture of the expected gross profit percentage to be earned on sales by such a business.

Yours faithfully,

WINED.

### Taxation and the Common Market

### USEFUL TWO-DAY CONFERENCE IN LONDON

A two-day conference on Taxation and the Common Market was held in London on Thursday and Friday of last week. Sponsored jointly by the Federal Trust for Education and Research and the U.K. Branch of the International Fiscal Association, the conference was attended by over two hundred and thirty delegates representative of British industry and commerce. There were also representatives from the Inland Revenue; the German Federation of Industry; the Department of State, Washington; the Department of Finance and Revenue Commissioners' Office, Dublin; the States of Guernsey; the Swedish Institute of Foreign Law; and the École Supérieure des Sciences Fiscales, Brussels.

### Can Direct Taxes be Shifted?

Professor Alan Peacock, Professor of Economics, University of York, gave the opening talk on 'The Future of Taxation'. He referred to the present controversy on the correct balance to be adopted between the burdens of direct and indirect taxation, and he did not altogether accept the view that direct taxes were harmful to incentive. One of the arguments against direct taxation was that it was in any case shifted on to the price of products. He agreed that probably the profits tax could in certain circumstances be passed on by manufacturers in the price, but he wondered whether, if competition was to become the feature of the Common Market that it was alleged to be, this might not prevent direct taxes being shifted to consumers. After all, most economists would agree that in a state of complete competition, it would be difficult to shift any direct taxes.

It was commonly assumed, said Professor Peacock, that because the Common Market countries at present were biased more to indirect taxation than direct, this tendency would continue. However, he did not entirely agree. As to whether direct taxes were destructive of incentive, he did not think that it was necessarily so, but he conceded that the present top rates of income tax and death duties were excessive.

On the question of harmonization, Professor Peacock said purchase tax did not come out too badly in a comparison with indirect continental taxes, provided it was adjusted to one rate and had a wider spread.

Social security provisions were bound to be agreed on a more uniform basis in the Common Market. It was probable that though British social security costs levied on employers would increase in the Common Market, this increase might eventually lead to lower labour costs if more attention to the social security of employees led to greater peace in industry. Professor Peacock said that though British benefits on pensions and family allowances were less than in the Common Market, there was a greater emphasis in Britain on voluntary pension arrangements by employers. He also pointed out that a greater contribution to social security benefits would be matched by greater benefits, and therefore the higher social security charges would not necessarily lead to a lowering of other taxation, unless it was assumed that the contribution of the State from consolidated revenue would diminish.

Professor Peacock felt that there would be no external pressure on the United Kingdom for changes in direct taxation, in view of the vagueness of the Rome Treaty on this point. Nevertheless, there would be plenty of internal pressure, especially for the lowering or abolition of profits tax. This would certainly happen if the tax on added-value was imposed as an alternative to purchase tax, and if employers' social security contributions were substantially increased.

### Direct Taxation: Investigations by Working Parties

Mr G. Heerkens of the General Problems Division, Directorate-General for Competition, E.E.C. Commission, and a secretary of the Neumark Committee, gave a review of the existing systems of company taxation in 'the Six'. He said that apart from the three subcommittees which had recently reported to the Commission on the subject of indirect tax harmonization, a working party was looking into the possibilities of harmonizing the direct tax structures and the harmonization of depreciation methods as 'tools of growth'; another working party was examining the tax problems posed by investments by third countries in the countries of 'the Six', and also the problems of the use of 'tax havens' in this context. Yet other working parties were studying problems of harmonization of stamp duties, and the taxation of insurance contracts.

There followed an address by Mr H. V. Lewis of the secretary's office, Inland Revenue, who commented on the very wide divergence between the treatment of dividends in the Common Market countries compared with the United Kingdom.

### Indirect Taxation: Will Purchase Tax Continue?

Dr J. van Hoorn, Jun., managing director, International Bureau of Fiscal Documentation, Amsterdam, reviewed the indirect tax systems of the Common Market countries and explained the basic defects of the 'cascade' or 'avalanche' non-cumulative system which was at present in existence in five of 'the Six'. He explained that no correct calculation of 'cascade' taxes was possible in the case of exporters, with the result that the effect on exports was very arbitrary.

Mr R. J. S. Cory, Chief of Intelligence Branch, H.M. Customs and Excise, pointed out that the present range of purchase tax covered about one-third of consumer expenditure in Britain, and if it was extended, the only remaining items to cover were food, services, housing and fuel. He pointed out that the November 5th amendments in purchase tax had led to a significant compression in rates.

On the subject of the harmonization of tobacco duties, Mr Cory commented that in two of 'the Six' there were Government tobacco monopolies in being, which would complicate the issue. He also noted that tobacco was at present the biggest producer of indirect taxation in the United Kingdom. There were discussions in 'the Six' on the harmonization of the duties on heavy oil, with proposals for eventual reduction to

 $\frac{1}{2}d$  a gallon. The rates in 'the Six' were at present in the range of  $\frac{3}{4}d$  to  $2\frac{1}{2}d$  a gallon; this compared with the U.K. rate of 2d a gallon. The range of duties on petrol in the Common Market varied at present from 2s 6d to 5s; the U.K. rate was 2s 9d.

#### Tax Harmonization

Professor F. Neumark, Chairman of the Fiscal and Financial Committee of the E.E.C., spoke on the subject of harmonization on the second day of the conference. His address, which is reproduced in full elsewhere in this issue, was the first official and authoritative interpretation of the report which bears his name. The general impression had been that Professor Neumark and his colleagues had adopted rather dogmatic views on the way harmonization of the Common Market tax system should develop. He showed himself, however, to be exceedingly flexible in his approach to harmonization problems and entirely conscious that the differences in national tax systems reflected national character and idiosyncracies. Professor Neumark is a reasonably accurate (though agreeably diffident) observer of the English scene, and was apt to quote English poets and philosophers on the slightest provocation. He greatly appealed to his audience when dealing with the natural conservatism of Civil Servants in the E.E.C. (and elsewhere) and their strong opposition to change. He should, indeed, be an authority on this, having been the author of some features of Turkish fiscal reform during his tenure of the Chair of Public Finance at the University of Istanbul from 1933 to 1951. It was interesting to note that his strongest comment on the English tax system was on the estate duty; he suggested that the countries of 'the Six' would not be willing to accept such high rates and that there would have to be a noticeable lowering of estate duties; any budgetary

loss could, in the Professor's view, be adjusted by an annual tax on net wealth, of, say, I per cent.

#### Problems for the Panel

The conference concluded with a question and answer session, with a panel comprising Mr A. E. Aylmer, taxation manager, Unilever Ltd, Mr R. J. S. Cory, Customs and Excise, Mr Arthur Dale, taxation department, British American Tobacco Co Ltd, Mr Alun G. Davies, chairman, U.K. Branch of the International Fiscal Association and Mr H. V. Lewis, of the Inland Revenue, and presided over by Mr Douglas Houghton, M.P. Among the interesting points to emerge from the session, was the feeling that purchase tax was a better tax than the Common Market had up to now given it credit for: and that Britain could have a creative and stimulating influence on the future of European taxes, if only the country could be linked with the present discussions before too long. Some doubt was expressed about the loss of area of manoeuvre at least on national short-term economic regulations which would follow the unifying of fiscal techniques within the Common Market.

One of the fascinating and potentially most valuable features of the conference was the fact that the Boards of Inland Revenue and Customs and Excise were sufficiently seized of the present high tide in fiscal affairs vis-à-vis the Common Market, to send official spokesmen to the conference. While the conference was conscious that the present difficult position of the United Kingdom in regard to 'the Six' was hardly the time for Government departments to be at their best at a public showing, it was appreciative of the fact that the official departments had decided to join in the public debate which will undoubtedly continue on the fiscal relations between the United Kingdom and the Common Market.

# London Chartered Accountants' Taxation Conference

Nearly one hundred and fifty members of the London and District Society of Chartered Accountants attended a residential taxation conference held by the Society at the Hotel Metropole, Brighton, from Thursday to Saturday of last week. The course was under the chairmanship of Mr D. S. Morpeth, B.COM., A.C.A. and Mr P. F. Carpenter, F.C.A., President of The Institute of Chartered Accountants in England and Wales, gave the opening address on Thursday evening. Four papers were presented, which we refer to below, each being followed by meetings of the ten discussion groups into which the course was divided.

#### Taxation in a Modern Economy

Speaking on "Taxation in a modern economy, Mr J. F. Chown stated that the general rules of economics show that consumers get the greatest satisfaction from a given income if they have the maximum freedom to spend it as they wish and the maximum range of different opportunities. The pain of taxation, said Mr Chown, must be set against the benefits of Government

expenditure, but as a general rule, centralizing expenditure will lower economic efficiency by reducing consumers' choice and damping down the process of transferring assets to more efficient uses.

The economic case for progressive taxation, Mr Chown continued, was based on disputable philosophic foundations. Where the aim is to improve the lot of those with lower incomes it seems likely that this can be better achieved by economic efficiency and growth than by redistribution. Some people argue that equality is a desirable end in itself, but it cannot be imposed by taxation under a rule of law.

An efficient tax system must obviously not destroy personal incentives. Less obviously it must not discourage the rise of new businessmen and the accumulation of new fortunes, nor the transfer of assets from less to more profitable uses. It should encourage capital investment, but not fall into the contemporary error of judging quantity rather than quality of investment and facilitating investment in plant at the expense of investment in, say, financing overseas customers.

The business man, building up from the level of profits at which surtax bites to the level at which he can go public and be safe from a surtax direction, has to run an obstacle race administered by the Revenue. The untidy position relating to capital gains taxation was an uneasy compromise between the chains of redistribution efficiency and Revenue convenience. 'We have so far escaped the dangers of the German, Belgian and other systems which place a tax penalty on liquidations and reorganizations,' said Mr Chown. 'But I would like less discouragement to public companies on distributing their profits.'

#### Organization of Taxation Work in an **Accountant's Practice**

In an address on the organization of taxation work in an accountant's practice, Mr G. H. Vieler, F.C.A., stated that it was in the field of taxation that the small practitioner, in particular, should strive to be capable of giving good advice.

He believed that as far as possible the audit staff must be encouraged to take responsibility for tax work at the accounts stage, in which case there were three classes of

audits:

(a) Those where the audit staff compute the tax provisions unaided.

(b) Those where the audit staff prepare computations for accounts purposes but these are checked by the auditing firm's tax department before the accounts are finalized.

(c) The very large and/or complex cases where it is essential that the tax department work alongside the audit staff and prepare the computations ab initio.

Every endeavour must be made during the course of an audit to prepare tax schedules in their final form so that duplication and triplication of work was reduced to a minimum. With a little forethought and cooperation from all the people concerned, it was often possible to produce computations at the audit stage, which required little or no amendment before they were submitted to the Inland Revenue.

Once an audit was complete, it became the work of the tax department to submit computations to the Inland Revenue and carry on any correspondence arising thereon. The correct policy, said Mr Vieler, was to draw up computations in such a way that the Inspector, if he were so minded, could check them with the accounts and supporting schedules and satisfy himself as to their accuracy without need for further inquiry.

Personal tax work made as heavy demands on the accountant's time as any, but unfortunately it was often by no means remunerative. The aim must be, therefore, to cut out all unnecessary work; for example with dividend counterfoils it should be possible for these to be sorted into a predetermined order with the gross amount ticked in red and then for a typist to produce

the list in its final form.

How many cases can be handled by each individual in the firm's tax department? Probably something like one hundred upwards, believed Mr Vieler, but this must depend on the complexity of the cases. It was advisable that every member of the department should have a mixture of both company and personal tax work, the proportions being dependent on the capabilities of the individual concerned.

There must be a methodical approach to work and adequate records on which to progress it throughout the year. Record cards should be kept for each client, whether company or personal, showing details of income and assessments. A list should be made of repayment claims submitted to the Inland Revenue and regular reminders should be sent in unsettled cases. The tax department should have its own separate filing system.

Referring to relations with the Inland Revenue, Mr Vieler said that these had an important bearing on the accountant's work. The average Inspector was doing an extremely competent job, often in difficult circumstances, and accountants should endeavour to ensure that the computations submitted were correct and set out in a clear and logical sequence. He was sure that a great deal of skilled time was wasted through cases having to be heard by the General Commissioners which should have been settled with the Inspector.

For good client relations, said Mr Vieler, it was important that clients be kept informed at all times. Company clients should receive copies of the agreed computations and personal clients generally appreciated a schedule of taxed income and often a complete copy of their return. Fees should be dealt with at regular intervals, even if the work had not been completed, and in the case of special work, the bill sent immediately the task was completed.

With the ever increasing volume of legislation, most accountants, declared Mr Vieler, simply had not the time to stop and consider whether they were as efficient as they would like to be. 'I am, however, guite convinced', he stated, 'that equally with a good knowledge of the subject, method and the standardization of work are our greatest allies and you will sleep a good deal more soundly by making sure they both exist in your offices.'

#### Property Transactions and the Speculative Gains Tax

Speaking on recent legislation regarding property transactions and the 1962 speculative gains tax, Mr M. Nolan referred to sections 21, 22 and 25, Finance Act, 1960, and sections 14, 23 and 24, Finance Act, 1962. All these sections contain measures designed to extend and rationalize the charge of tax upon profits realized on the disposal of land and shares, and Mr Nolan considered how far that aim was likely to be achieved. In the course of his paper he said:

Some of the worst features in Britain's fiscal laws had resulted from the series of measures designed to 'pierce the corporate veil', to override the principle that a company is a separate person. This series, now extended by sections 21 and 22, Finance Act, 1960, and sections 14 and 24, Finance Act, 1962, began with the companies surtax provisions of the Finance Act, 1922. As early as 1928, when the first batch of amendments to the original section 21, Finance Act, 1922, came before the Courts, Rowlatt, J., protested that the section 'is made perfectly unintelligible to any layman or any lawyer who has not made a prolonged study with, all his law books at his elbow, and it is a crying scandal that legislation by which the subject is taxed should appear in the statute-book in that wholly unintelligible form'. The corresponding estate duty provisions of the 1940 Act, aimed at treating the assets of the deceased's companies as part of his estate, led Lord Simonds to remark in the St Aubyn case that the relevant provisions were 'couched in language so tortuous and

obscure that I am tempted to reject them as meaning-less'.

Take section 21, Finance Act, 1960. It must be one of the most extraordinary sections ever to find a place on the statute-book. In terms it imposes tax upon a certain proportion of the proceeds derived from certain sales of shares in certain types of trading companies — in particular, property dealing companies. Pausing there one wonders why it should be more fiscally wicked to sell shares in a property dealing company than in, say a manufacturing or a commodity dealing company. It is hard to see why the shareholders in one type of trading company should be taxed under different and harsher laws than those governing the shareholders in other types of trading companies.

Nevertheless, it may be said the tax is only payable on so much of the sale proceeds as is equal to the profit the company would make by selling its trading stock; and it is only right that this proportion of the sale proceeds should bear tax since it represents a revenue gain. But since this strikes at the root of the principle—or perhaps I should say it ignores the plain fact—that the company and the shareholder are different persons, it is hardly surprising to find, in consequence, a considerable degree of confusion as to whom and in what circumstances the tax is intended to hit.

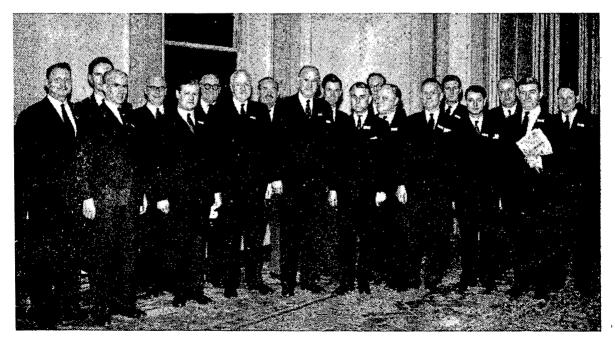

Once the tax is paid – whether by the former share-holder or by the company – the company is entitled to such relief from standard rate tax as may be just in respect of subsequent receipts from the sale or other dealing with the assets which comprised its trading stock at the time of sale. But what if the company discontinues its trade, so that it becomes taxable on a

notional profit under section 137 (1) (b), Income Tax Act, 1952? The answer, in short, is double taxation.

This is the second especially striking feature of section 21. If a man sells shares in a company which continues to carry on a property dealing trade, then either he will escape tax by satisfying the Commissioners in the terms of section 21 (2), or if he does not do so, the company will at least be relieved from a corresponding amount of standard rate tax when it sells the relevant trading stock. In this latter case the Revenue will get surtax (if appropriate) from the selling shareholder and profits tax from the company on what is effectively the same profit, but only one lot of standard rate tax. If a man sells shares in a company which ceases to trade, the Revenue gets surtax, profits tax and two lots of standard rate tax on (effectively) the same profit. Where is the justice, where is the sense in all this? What was the Legislature trying to achieve?

In section 14, Finance Act, 1962, one can see an intelligible aim. Granted that profits on the acquisition and disposal of land within three years are to be taxed (and losses relieved) it makes sense that a corresponding charge should be levied on profits from the disposal of the whole or part of substantial holdings of shares in property owning companies, in so far as those profits reflect the net aggregate appreciation in value of land acquired by the company within the last three years. There are, however, serious flaws in the section. One is that it gives no relief to the company if it subsequently sells the land within three years: here again, tax can be charged twice on what is effectively the same profit.

The trouble is, quite plainly, that the draftsmen are given insufficient time to formulate the original

ome personalities at the conference. Left to right: Mr J. A. Allen, F.C.A., Group Leader; Mr M. P. Nolan, Speaker; Mr L. Wannan, Speaker; Mr H. Gordon Smith, F.C.A., Group Leader; Mr J. F. Chown, Speaker; Mr G. R. Appleyard, c.A., Past Chairman of the Society; Mr C. V. Best, F.C.A., Chairman of the Society; Mr W. E. Lamaison, F.C.A., Mr P. F. arpenter, F.C.A., President of the Institute; Mr E. B. Palmer, B.COM., A.C.A., Group Leader; Mr D. S. Morpeth, B.COM., C.A., Conference Chairman; Mr E. C. Meade, F.C.A., Group Leader; Mr L. A. Hall, F.C.A., Group Leader; Mr G. H. Vieler, c.A., Speaker; Mr P. G. H. Evans, F.C.A., Group Leader; Mr K. H. Oates, F.C.A., Group Leader; Mr W. T. Wells, F.C.A., Froup Leader; Mr D. R. Huntingford, F.C.A., Group Leader; Mr J. W. G. Cocke, T.D., M.A., F.C.A., Secretary of the Society.

proposals; and that the Legislature is given insufficient time to consider the work of the draftsmen. If we are to have changes in our institutions, let us start by changing the present Finance Act procedure.

A fourth paper, entitled "The taxation of interest

and dividends', was presented by Mr J. L. Wannan, F.C.A., in which he surveyed procedure and referred to decided cases. The course concluded with a 'Brains Trust' under the chairmanship of Mr H. A. R. J. Wilson, F.C.A.

# KEEP EDUCATION IN STEP WITH NATIONAL TRENDS

### President's Views at Liverpool Society's Dinner

The need for the profession to keep its educational training in step with trends in national education was stressed by Mr Percy F. Carpenter, F.C.A., President of The Institute of Chartered Accountants in England and Wales, at Liverpool last Friday.

Mr Carpenter, who was responding to the toast of the Institute at the annual dinner of the Liverpool Society of Chartered Accountants at the Adelphi Hotel, said that in Liverpool the relationship between university and school of commerce was very close. Now that a number of new universities were about to be formed, he felt that such relationships throughout the country would become closer.

Mr Carpenter said it was good to see something solid being done which would improve and raise the standards of the profession. The syllabus for the new examinations had been settled and though the report of the Parker Committee had raised a number of points, he hoped that all these would soon be resolved.

Turning to local matters, Mr Carpenter said he believed that Liverpool was one of the birthplaces of accountancy as it was known today. It was on record that in 1790 there were five accountants practising in Liverpool; in 1870 the Liverpool Society was formed and, in 1880, there were twenty-nine members of the profession in the city.

He expressed his thanks to those members of the Liverpool Society who were serving on the Institute's Council. There were now four of them and they played their parts very fully.

Mr Stanley Morris, J.P., F.C.A., President of the Liverpool Society, who presided, said, in proposing the toast of 'The City and Trade of Liverpool', that such a toast was not relative to roads, office blocks, or blitzed sites but to a 'Timeless Lady'.

This 'Timeless Lady' had for generations conceived ideas, invested her fortunes wisely throughout the world and had given birth to countless thousands of men and women of Merseyside.

Mr Morris declared that Liverpool was a city of people first; trades and places second. How could the people make its future? It went deeper than asking

At the reception prior to the annual dinner of the Liverpool Society of Chartered Accountants at the Adelphi Hotel, Liverpool, last Friday. Left to right: Lord Kilmarnock, M.B.E., President of the London Chamber of Commerce; Mr Percy, F. Carpenter, F.C.A., President of the Institute; Alderman David J. Lewis, Lord Mayor of Liverpool; Mr Stanley Morris, J.P., F.C.A., President of the Liverpool Society; Mr J. Howard Bradley, F.C.A., Vice-President of the Liverpool Society; and Judge Robertson Crichton, Recorder of Manchester.

people to work harder or in asking them to put 'their backbones where they wanted their wishbones to be'.
'I believe the men and women of Merseyside require

encouragement and leadership,' he declared. 'I ask each of you to walk round your office, factory, department or shop floor once a day or once a week . . . If the men and women who work with you give you a sideways glance or don't look at you, there is something wrong which only you can put right. If they are rude to you, there is something very wrong. If they smile - say "good morning" - things are not too bad. . . .

Mr Morris said they should ask themselves what steps they were taking to train adequate and efficient staff to compete with the specialist age of the future.

He concluded: 'I am firmly of the opinion that if we will be interested in the men and women of Merseyside

today, the city will prosper tomorrow."

Responding, the Lord Mayor of Liverpool, Alderman David J. Lewis, said that a great responsibility rested on the profession, the proposer of the toast had made that clear. The city was indeed a "Timeless Lady' and it was at their peril that they underemphasized the importance of the 'huge empire' in which important structures in the fields of the arts. education, commerce and industry had been built.

'This great maritime port', he said, 'will be flourish-

ing, irrespective of the importance of the Rochdale

Report, long after that Report has been forgotten.'
Proposing the toast of "The Institute of Chartered Accountants in England and Wales', Lord Kilmarnock, M.B.E., President of the London Chamber of Commerce, said he considered that the notable increase in the number of members of the Institute was an indication of the increasing recognition of the services of that great body, for the increase was certainly not due to any relaxation in standards.

Looking to the future, Lord Kilmarnock said that if the European Economic Community was enlarged to include Britain, and possibly other members of the European Free Trade Association, all the professions would, he was sure, jealously guard their standards of

professional qualification and conduct.

'Provided the professional organizations in the other countries have a similar conception of professional integrity and of the need for basic professional training, the abolition of artificial barriers can only be in the interests both of the professions and of commerce and industry,' he added.

Mr J. Howard Bradley, F.C.A., Vice-President of the Liverpool Society, proposed the toast of 'Our Guests' and Judge Robertson Crichton, Recorder of Manchester, responded.

## COVENTRY CHARTERED ACCOUNTANTS' ANNUAL DINNER

Over two hundred members and guests attended the annual dinner of the Coventry Area Branch of the Birmingham and District Society of Chartered Accountants, held at the Hotel Leofric, Coventry, on November 22nd. The Chairman of the Branch, Mr

G. F. B. Peirson, F.C.A., presided.
Proposing the toast of 'The City of Coventry', Mr G. M. M. Tonge, J.P., chairman of J. & J. Cash Ltd, said that 1962 had been marked by one of the most outstanding achievements in the City's history - a history which was linked with many brilliant achieve-

ments in many fields.

"The Cathedral', he said, 'is not merely an architectural achievement, it symbolizes the rebirth of Coventry, a city which is not a new city, but an old city which has taken on new life."

#### Centre of the Nation's Industry

He said that there were very few cities which had such a long and varied industrial history as Coventry and spoke of the amazing adaptability that had ensured her present position in the industrial world.

Rayon, nylon, cars, aeroplanes, television and telephones had all played their part in making Coventry the centre of the nation's industry, but he pointed out that the city today faced similar challenges to the ones which had confronted Coventry's industry one hundred years ago. Mr Tonge referred to the Common Market and the recent Japanese Trade Treaty as two major challenges. On the Common Market issue, he felt that Coventry had nothing to fear from Britain's probable entry. The effects of the recent Japanese Trade Treaty on textiles alone, he felt, was something for concern as it presented formidable opposition.

Responding, Councillor G. S. N. Richards, C.B.E., LL.B., who deputized for the Lord Mayor who was indisposed, said that he thought that chartered accountants in the City had worked hard and made an honourable contribution to industry, the professions and commerce.

The Bishop of Coventry, Dr C. K. N. Bardsley, C.B.E., D.D., proposing the toast of 'The Institute of Chartered Accountants in England and Wales', said that thoughts of decimal coinage and the many spheres in which chartered accountants were playing a leading role, should dispel for ever the impression of 'rolled umbrellas and bowlers'. 'Adaptation is the secret of success, and as long as we remain content with one line we will shrivel and die - we have to be ready for all changes.

Mr W. L. Barrows, LL.D., F.C.A., a Past President of the Institute, responding to the toast, said that the consecration of Coventry Cathedral was a moving ceremony which had 'thrilled and humbled the whole world'.

He spoke of the history of the Institute and told of the threefold membership increase to the present level of 36,000 members. 'Size is not everything and one of the great problems we have is in organizing the work of the Institute, and as chairman of the General Purposes Committee I am extremely conscious of the importance of branches such as yours,' he said.

Mr Barrows said that there was a need for the administration to be decentralized and to keep the branches 'more in the picture'.

The toast of 'The Guests' was proposed by Mr Peirson, and Mr Evan Ag. Norton, C.B.E., M.A., responded.

A monthly feature designed to keep readers - whether in practice or in commerce - abreast of the latest developments in the field of office equipment.

#### **Push-button Invoicing**

COMPLETE, self-contained work station for doing jobs like invoicing and stock record-keeping is provided by *Synchrotypewriter 300*, latest model in this Remington series. This improved machine, which can be used in conjunction with an eighty-column card reader-punch or paper tape reader-punch, can incorporate automatic sterling multiplication, addition and subtraction facilities, and can use continuous stationery.

In the typical set-up shown in the illustration, the Synchrotypewriter is linked to an ICT Model 1000 card reader-punch, which is controlled from the typewriter

Synchrotypewriter with Card Reader-punch

keyboard. Data are read and typed automatically from eighty-column cards, extensions being calculated and printed out in the same way. The same functions could be performed with paper tape, the reader and perforator being concealed in the desk pedestal. Continuous stationery is fed from and back to compartments at the rear of the desk behind the typewriter.

Price, from £550.

Also new from this maker is a medium-priced portable typewriter. The *Monarch*, with a die-cast aluminium frame, includes a tabulator, individual touch adjustment, a device for aligning cards and envelopes, and a paper support. It can use a two-colour ribbon and will type stencils; has margin stop setters in front of the machine. It weighs 15 lb. and has a zipup travelling case.

Price: £,31.

Remington Rand Ltd, Remington House, Holborn Viaduct, London EC1.

#### Compact Credit Transfer System

REASONABLY priced and very compact, a new Twinlock system is designed specifically for completion of handwritten credit transfer documents. Using the well-established billing board principle, it allows the simultaneous completion of the credit

# New Offic

transfer slip, credit transfer list and duplicate, and a summary sheet. Columns on the summary sheet can be used for analysis.

Basis of the system is the *Mini-board*, a posting board which folds to half the size of its 12 by 17½ in. writing area and slides into a PVC wallet when not in use. With this the makers provide specially designed and punched forms equipped with one-time carbon. If desired, the credit transfer sheets can be overprinted at a small extra charge.

Cost of initial equipment including the *Mini-board*, a binder and compressor bar, 500 credit transfer slips, and fifty each of bank instruction sheets, duplicates and summary sheets, is just over £12, including purchase tax.

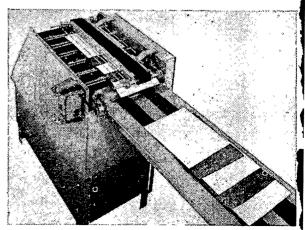

Percy Jones (Twinlock) Ltd, 37 Chancery Lane, London WC2.

#### **Automatic Collator**

OW price is a welcome feature of *Pacemaster Auto Collator Mark I*, a new machine by Kemp Applications, a British firm now well known for its paper-handling machines. This model accepts paper up to 12 by 13 in. in size and in weights from airmail to heavy art.

It has six feed stations, each of which holds 150 to 300 sheets. Feeding is by friction and rubber side grips or needle separators (both supplied with the machine) prevent double feeding. After being offset about 2 in. from the feed hoppers, the sheets are gripped by a horizontal conveyor belt and transported to the receiving hopper.

An inspection conveyor, fitted as an extension to the main machine, is an optional extra. This moves completed sets, slightly staggered in such a way that they can be removed manually one by one for stapling. Another optional extra is a foot control to stop the conveyor; but the makers say that an experienced

Pacemaster Auto Collator

# quipment

operator should be able to collect sets continuously without stopping the machine. Maximum output is 2,400 sets per hour.

The *Pacemaster* jogger by the same company may be attached to the end of the conveyor which then feeds completed sets of sheets straight to it.

Price: Basic collator, £150.

Kemp Applications Sales Ltd, 25 Coombe Road, New Malden, Surrey.

#### Scandinavian Furniture

CONSIDERATIONS of prestige and sound common sense are blended in a series of Danish furnishing units now available in this country. Designed for assembly in a bewildering number of permutations, they are made of teak, oak or mahogany and mounted on plinths or legs of wood or on today's ubiquitous thin metal legs.

Space limitations preclude even mention of all the impressive number of components available (there are twenty-one desk and table tops alone). These can be assembled into standard and L-shaped desks, occasional, coffee and working tables, filing cabinets, wardrobes, counters and bookcases. Several of these functions can be combined in one piece of furniture, owing to the wide choice of internal fitments. There is also a comprehensive range of clerical, executive and general purpose chairs.

Typical prices: five-drawer teak desk with  $27\frac{1}{2}$  by 59 in. top, £69 3s. Teak cabinet with sliding wooden doors (glass also available) and one adjustable shelf, 18 in. high by  $50\frac{1}{2}$  in. wide by 14 in. deep with 15 in. long steel legs: about £35. Fabric-upholstered adjustable office chair with teak arms, £17 11s.

Intercraft Designs, Berkeley Square House, Berkeley Square, London Wr.

#### Carbonized Correspondence Paper

OTHING, it seems, can teach the average typist that carbon paper is an expensive item. Few accountants, given the chance of going through ypists' waste-baskets, could repress a shudder when hey saw how much little-used carbon paper lay there.

A system known as *Clenlicopy* neatly avoids this prodigality by using one-time carbon. Designed for correspondence, it provides flimsy sheets, in a choice of five tints and white, each with its own attached piece of one-time carbon.

This should noticeably increase typing productivity. Vo time is wasted in collating or decollating; but at he same time, the system is completely flexible, ince the sheets are supplied singly, not ready-made nto sets.

The paper is packed in boxes with a fold-back end which makes a neat dispenser tray. The design of the heets themselves allows corrections to be made during work as easily as when using conventional separate carbon sheets. After completion of the work, a twitch on the paper-bound lower edge of the carbons removes them.

Price: according to sheet size and quantities, e.g. quarto 198 3d per 500 sheets.

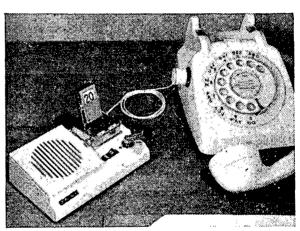

Dawley Brook Papers Ltd, Kingswinford, Staffs.

#### Telephone Amplifier

ANATTY little gadget, and most useful, is the new "Tel-Amp' transistor telephone amplifier. Attractive in appearance, cream finished and including a chromium rotary calendar and a pen or pencil socket, this exceptionally low priced piece of equipment allows one the use of both hands completely free for note taking or for handling papers during telephone conversations. One can also carry on working when asked to 'hold on' – often saving both time and temper – or several people in the room can join in a discussion with the telephone caller.

No elaborate installation is required; bijou-battery operated, the amplifier is instantaneously connected to the telephone by means of a rubber suction pad.

Price: to readers of *The Accountant*, £4 complete. Kay & Co, 126 Seymour Place, London W1.

'Tel-Amp' Transistor Telephone Amplifier

#### Paper Tape Punches

EW versions of two existing paper tape punches are described by Creed in recently issued leaflets. An additional model of the 25 Multipunch punches eight-channel codes in paper tape I in. wide. Its maximum speed for synchronous working is thirty-three and a third characters per second; for pulsed operation, up to twenty-eight characters per second. The tape duplicator set has been similarly extended.

Unipunch, a neat device for manual insertion of missing holes in paper tape, can now accept six-, sevenand eight-channel tape as well as five. To make amendments, the user locates the incorrect code, which is held in perfect register by pins, and depresses the one-hole hand punch. The hardened steel tip of this ensures a neat hole. The machine is pocket-sized.

Price: 25 Multipunch eight-channel £325; Unipunch £5.

Creed & Co Ltd, Telegraph House, Croydon, Surrey.

# Notes and Notices

## THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

#### **Presidential Luncheon Party**

The President of The Institute of Chartered Accountants in England and Wales, Mr Percy F. Carpenter, and the Vice-President, Mr Robert P. Winter, gave a luncheon party yesterday at the Dorchester Hotel. The guests were: Lord Bicester, Lord Nathan, Sir Harold Wernher, Sir William Penney, Sir Julian Pode, Mr P. W. Milligan, Mr W. Armstrong, Sir Thomas Robson, Mr P. F. Granger, Mr W. G. Densem, Mr L. C. Hawkins and Mr C. Evan-Jones.

#### PROFESSIONAL NOTICES

MESSRS & ALBAN LAMB, Chartered Accountants, of Cardiff and Newport, Mon, announce that they have taken into partnership the following members of their staff: Mr Harry Charrington, f.C.A., Mr Noel Cliffe, f.C.A., Mr C. Stanley Jones, f.C.A., and Mr Hugh M. Ireland, a.C.A. They also announce that Sir Frederick J. Alban, C.B.E., Ll.D., J.P., f.C.A., and Mr Norman E. Lamb, J.P., f.C.A., have retired from the partnership but will continue in association with the firm as consultants.

Messrs Coopers & Lybrand announce that they have formed the Jamaican firm of Coopers & Lybrand with an office at Bolam Chambers, 113 Harbour Street, Kingston, Jamaica. The resident partner is Mr G. Trevor Brown.

Messrs Henry R. Davis & Co, Certified Accountants, of I Hunter Street, Chester, and 44 Chester Road East, Shotton, near Chester, announce that Mr Harold Malcolm Shaw, A.C.A., who has been a member of the staff for several years was admitted as a partner on December 1st, 1962.

Messrs Deloitte, Plender, Griffiths & Co, Chartered Accountants, announce that they have admitted into their South Wales partnership Mr John Rowlandson, F.C.A., as from December 1st, 1962. Mr Rowlandson has been a member of the London office staff for many years.

Messrs Goodridge, Sklar & Co, Chartered Accountants, and Messrs Paul, Harris & Co, Chartered Accountants, announce that they have merged their practices as from December 1st, 1962. Councillor V. Sklar, F.C.A., and Mr P. A. Cohen, A.C.A., will practise under the style of Goodridge, Sklar & Co (incorporating Paul, Harris & Co) at 35 Bedford Row, London WC1.

Messrs P. & J. Kevan, Chartered Accountants, of 12 Acresfield, Bolton, and at Manchester, announce with regret the death, in his 85th year, of their senior partner, Mr W. L. WHITEHURST, F.C.A., on November 17th. He had been associated with the firm since 1895, and although he retired from the partnership on December 31st, 1959, he continued to attend the office until the day before his death.

Messrs Shah & Co, Chartered Accountants, announce a change of address to 28A Devonshire Street, London W1. Telephone: Welbeck 5764-5.

Messrs Thornton Baker & Co, Chartered Accountants, announce that with effect from December 1st, 1962, they are combining their present London offices at Bartlett House, 9/12 Basinghall Street, EC2, and Livingstone House, 11 Carteret Street, SW1, and are moving to new premises at Lee House, London Wall, London EC2. Their present office at Nuffield House, 41/46 Piccadilly, London W1, will coutinne as hitherto.

Messrs Whinney, Murray & Co announce that Mr B. E. McHugo, B.A., A.C.A., a member of their staff in Zürich, was, on October 1st, 1962, admitted a partner in their Zürich office, the address of which is now Schweizergasse 6, Zürich 1. They also announce that Mr H. J. McDowell, F.C.A., who was formerly resident in Copenhagen, is now the partner in charge of their office in The Hague.

## THE ASSOCIATION OF CERTIFIED AND CORPORATE ACCOUNTANTS

#### Annual Dinner and Dance

The President of The Association of Certified and Corporate Accountants, Mr Edgar Spencer, F.A.C.C.A., presided over a company of about six hundred members and guests at the annual dinner and dance of the Association held at Grosvenor House, Park Lane, London, on Monday evening.

The principal guests were the Rt Hon. The Viscount Mills, K.B.E., and Viscountess Mills; Alderman Sir Frederick Wells, Bt; Mr David Price, M.P., Parliamentary Secretary, Board of Trade, and Mrs Price; Sir Henry D'Avigdor-Goldsmid, Bt, D.S.O., M.C., M.P., and Lady D'Avigdor-Goldsmid; Mr J. C. Stewart, C.A., President, The Institute of Chartered Accountants of Scotland; Mr P. F. Carpenter, F.C.A., President, The Institute of Chartered Accountants in England and Wales, and Mrs Carpenter; Mr W. Bishop, C.A., F.C.W.A., President, The Institute of Cost and Works Accountants; Mr N. Doodson, F.S.A.A., F.I.M.T.A., President, The Institute of Municipal Treasurers and Accountants.

The toast of 'The Guests' was proposed by the President and Viscount Mills responded.

## JOHN FOORD & COMPANY

56 VICTORIA STREET, LONDON, SWI

Telephone: Victoria 2002 (3 lines)

#### REVALUATION OF ASSETS

WORKS, FACTORIES, PLANT & MACHINERY, Etc.

#### INSPECTOR-GENERAL OF COMPANIES

The Board of Trade have announced that Mr George Frederick Morris has been appointed to be Inspector-General of Companies, Companies Liquidation and Bankruptcy.

They have also appointed Mr George Frederick Morris to be the Registrar of Deeds of Arrangement for the purposes of the Deeds of Arrangement Act, 1914. Both appointments took effect on November 19th, 1962.

#### DOUBLE TAXATION: ISRAEL

The Double Taxation Convention with Israel, which was signed on September 26th, was published on November 22nd as a schedule to a draft Order in Council.

#### DOUBLE TAXATION: SOUTH WEST AFRICA

The provisions extending to South West Africa, the Double Taxation Convention between the United Lingdom and the Republic of South Africa, were sublished on November 22nd as a schedule to a draft order in Council.

#### THE DUBLIN SOCIETY OF CHARTERED ACCOUNTANTS Luncheon Meeting

L luncheon meeting of the Dublin Society of Chartered Accountants held at Jury's Hotel, Dublin, on Iovember 14th, was addressed by Mr J. Lynch, T.D., ne Minister for Industry and Commerce. The Chairman of the Society, Mr R. P. J. Smyth, F.C.A., was in ne chair, and the meeting was attended by a very urge number of practising and non-practising sembers.

After briefly adverting to the fact that this was not ie first occasion on which he had addressed the Jublin Society of Chartered Accountants, the Minister ent on to his main topic which was the new Companies ill. He stated that there were some business firms ho would have to be compelled by statutes, such as ie new Companies Bill, to prepare and present odern accounts to their firms and the public. He did ot think that these accounts would pose any great toblems for company accountants and auditors. The ill anticipated some of the changes which were commended by the Jenkins Committee, but some her refinements and elaborations proposed by that mmittee had not been included because of the reponderance of small private companies in the epublic. Mr Lynch said that he would be relying, to great extent, on the watchfulness of the professional odies to ensure that the standard of accountancy and iditing were kept at a high level.

The Bill imposes certain requirements in relation to allification for appointment as auditor, but it has not yet been decided what societies should be recognized. For this purpose the Minister said that 'organizations of substance will have little to fear in this respect'. If the proposals in the Bill became law, the position of auditor would become a more or less permanent one. The Bill proposes that, as regards voluntary winding-up of companies, there will, in future, be two types, creditors voluntary winding-up, and members voluntary winding-up. There are some substantial changes in respect of preferential payments in winding-up, and the liquidator will have an obligation to report to the Attorney-General any offences which come to light in the course of a winding-up.

The Minister will recommend that a special committee of the Dail be set up to consider the Bill, and this committee will welcome comments, especially from the profession.

#### **Industrial and Administrative Group**

Meetings of the Industrial and Administrative Group of the Society have been arranged as follows:

February 6th, 1963, 1 p.m., 'Public speaking for businessmen', by Mr Laurie Duffy (chairman, Toastmasters Club).

March 20th, 6 p.m., 'Modern accounting developments in U.S.A.', by Mr B. A. Maynard, F.C.A.

In addition, the Group holds monthly luncheon meetings and also study group meetings at which a small number of members attend by invitation.

#### LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

The final meeting on the Common Market will be held next Thursday at the Chartered Insurance Institute at 5.30 p.m. Mr J. Kraayenhof, Past President of the Netherlands Institute of Accountants, will speak on 'The practice and the profession of accountancy within the Common Market' and a period of discussion and questions will follow.

#### SW. LONDON DISCUSSION GROUP

The next meeting of the South West London Chartered Accountants' Discussion Group will be held at the Kingston Hotel, Wood Street, Kingston upon Thames, at 6.45 for 7 p.m., on Monday next, December 3rd. The subject will be the 1962 International Congress of Accountants, introduced by Mr R. O. A. Keel, F.C.A.

#### ACCOUNTANTS' CHRISTIAN FELLOWSHIP

The monthly meeting of the Accountants' Christian Fellowship for Bible reading and prayer will be held at 1 p.m. on Monday, December 3rd, in the vestry of St Mary Woolnoth Church, King William Street, London EC3. The scripture for reading and thought will be John, Chapter 15, verses 16 to 19.

#### CORRECTIONS

We regret the error in the style and title of the Rt Hon. Lord Robens of Woldingham, P.C., in the note, on page 695 of our last issue, on the London Cost Conference of The Institute of Cost and Works Accountants.

With reference to the note relating to the Yorkshire Electricity Board's E.D.P. system on page 660 of our issue of November 17th, we are now informed that the volume of work handled greatly exceeds that indicated. In fact, the installation each day will be processing data relating to one and a half million consumers and 25,000 bills a day will be sent out, apart from reminders. This is the first stage of development and work other than consumer billing will eventually be undertaken.

## LONDON STUDENTS' COLUMN

#### News from the London Chartered Accountant Students' Committee

#### by A Student Member

Perhaps the most important news of the month is that the London Committee of the District Society have agreed in principle a request for an increase of the students' annual subscription by  $f_{,2}$  2s. Given this encouragement, the search for new premises can now begin seriously. Wanted -3,400 square feet in the City!

#### Activities

Attendances at the introductory and 'practical aspect' courses have shown substantial increases while the general lectures have recovered from a poor start in this respect. The mechanized accounting course has made its usual satisfactory showing.

#### Subcommittees

It has been agreed to make greater use of the power to co-opt non-committee members on to subcommittees. The Committee may decide to ask for further powers to meet the difficulty of maintaining attendance at subcommittee meetings at the next annual general meeting.

#### **Drama Society**

It has been reported that a member is interested in starting a production side of a drama society. The Committee have welcomed the suggestion.

#### Magazine

Approval has been given to a request by the editorial board of *Contra* for permission to have their own note-paper, as the design of the Students' Society's official notepaper is unsuitable for their purposes.

#### **President's Meeting**

The President's meeting will be held in Guildhall on Monday, February 4th, 1963. Sir Frank Lee, Master of Corpus Christi College, Cambridge, and formerly Joint Permanent Secretary to the Treasury and Chairman of the Economic Planning Board, has accepted the President's invitation to speak.

#### The Students' Club

The Club has been forced to search for new premises after November 30th. No definite progress has been made, but there are hopes that a place will soon be found.

#### **Debates**

Attendance at debates has dropped alarmingly, and members of the Debates Subcommittee are at a loss for a reason. Suggestions from members which may help to retrieve the situation will be warmly welcomed.

#### Dates to Note

December 10th: Annual dinner at Grosvenor House, Park Lane, W1.

January 4th: Christmas dance at Dunster House, Mincing Lane, EC3.

#### Next Week's Meetings

The following meetings of The Chartered Accountant Students' Society of London will be held during next? week:

Tuesday, 5.30 p.m., at the Chartered Insurance Hall, 20 Aldermanbury, EC3: Mock company meeting Theorem Chairman: Sir Harold Gillett, Bt, M.C., F.C.A. (a Vice President of the Students' Society).

7.30 p.m., at Ewell: Lecture on 'Investigations', by Mr R. S. Waldron, F.C.A.

Wednesday, 5.30 p.m., Lecture and demonstration of punched-card accounting (limited number).

7.15 p.m., at Reading: Lecture on 'The stock exchange and the London money market', by Mr A. J Whiteside, Barrister-at-law.

Friday, 7.30 p.m., at Southend: Lecture on 'Interpretation and criticism of accounts', by Mr C. J. Russell, A.C.A.

# Anatomy of Business

HE Board of Trade's latest report on company structure<sup>1</sup> skilfully dissects the habits and behaviour of business undertakings in the United Kingdom during the years 1958–60. It follows along the lines set by earlier publications, but the present survey gives a much wider range of statistics relating to individual companies than any of the previous efforts.

The report is divided into two sections. The first section contains a list of 1,909 companies with net assets of £0.5 million or more at the end of 1960, arranged in descending order of their net assets. In addition, ranking by annual average income is shown, together with enough statistical data to gladden the heart of the most ambitious investment analyst—return on gross assets, introduction of new capital, provision for depreciation and percentage growth in net assets between 1958 and 1960.

Whether one takes net assets or average annual income as one's criterion of size, Imperial Chemical Industries heads the list, followed by Unilever. The position is reversed, however, if one chooses to adopt turnover as the determining factor — Unilever (£1,847 million), I.C.I. (£558 million).

The second section, which contains seven summary tables, epitomizes the structure and behaviour of 2,618 companies (the 1,909 companies listed in section I plus a further 709 small companies with net assets of less than £0.5 million whose accounts for 1960 were the subject of separate analyses earlier this year<sup>2</sup>).

The three years, 1958-60, witnessed a fall in the number of small companies. This was particularly noticeable among those with assets of less than £0.5 million. It is in this sector that many of the acquisitions by the larger companies have taken place. Indeed, the whole tenor of the analysis points unmistakably to the increasing concentration of business through the medium of mergers and acquisitions. For instance, the hundred largest companies, which at the end of 1957 already accounted for 51 per cent of total net assets, had, by the end of 1960, increased their share to 54 per cent. Then, during the same three years two hundred or so companies which were newly granted stock exchange quotations were added to the Board of Trade analysis. Allowing for the net fall from nearly 2,900 companies analysed in 1957 to just over 2,600 at the end of 1960, it would seem that about 450 companies lost their 'quoted' status for one reason or another.

Furthermore, a glance through the index reminds us that the

<sup>&</sup>lt;sup>1</sup> Company Awests, Income and Finance in 1960. H.M.S.O. Price 10s net. <sup>2</sup> Economic Trends, April 1962.

trend continues because a note is made where a company included in section I was liquidated, taken-over, merged with another company or renamed before December 31st, 1961.

Nor is that the only supplementary information to be gleaned from the notes in the index. For the first time, turnover is shown for those companies disclosing this information in their 1960 accounts. A select band of 120 companies passed this test – little more than 6 per cent of the sample – so there is still plenty of scope for improvement in this direction, particularly among the smaller companies.

Returning to the main summary tables, the value of the net assets of the quoted companies at the end of 1960 was £13,500 million, while additions to net assets between 1958 and 1960 amounted to £2,900 million. After eliminating

the effect of revaluations of fixed assets, amounts written off goodwill and similar items, net assets rose by about 28 per cent over the three years. Perhaps the most typical growth for a company over the period was between 10 and 19 per cent, with an annual rate of between 3 and 6 per cent.

A comparison of the figures shows quite clearly that there is a distinct relationship between the size of companies and their rate of growth. Among very large companies, two-thirds increased their assets by 20 per cent or more in the three years, and only one in seven shows a rise of less than 10 per cent.

If only the medium-sized and smaller companies could keep up with the pacemakers, N.E.D.C. might have been able to contemplate its appointed task with comparative equanimity.

# **Back Duty Progress**

COMPTROLLER AND AUDITOR-GENERAL announces the latest score in the perpetual game between the Inland Revenue and the tax evader. In his report on the Revenue Departments Appropriation Accounts for 1961–62 he releases the statistics supplied to him relating to investigations into under-assessment resulting from fraud and evasion of taxes on income and profits. The six-year comparative table is as follows:

Year	Number	Total	Penalties
ended	of .	charges	and interest
March 31st	cases	raised	included
1962	11,868	£18,770,906	. £5,200,427
1961	9,752	12,905,544	5,549,820
1960	13,734	19,642,073	8,491,884
1959	10,757	18,013,864	6,792,470
1958	14,593	21,529,264	9,495,437
1957	15,511	22,549,246	9,426,295

In the last year another £694,629 was collected by local inspectors in minor cases, relating to untaxed interest, allowances, etc.

The COMPTROLLER observes that the latest year was the first full year of operation of the revised penalty provisions of the Finance Act, 1960. He does not mention that the drafting of these new provisions was found by the Divisional Court to be wanting<sup>1</sup> and that the draftsman had to have a second shot in the Finance Act, 1962.

Notwithstanding that the 1960 Act gave power to charge interest and also contained provisions making it much easier to impose penalties, that Act drastically reduced the maximum penalties; hence the dramatic fall in the penalties recovered. It did so because of the public outcry aroused by the case of C.I.R. v. Hinchy (39 A.T.C. 13) where the Inland Revenue successfully sued a taxpayer for penalties amounting to £438 because he understated interest by some £33.

In a leading article on August 18th, we commented on the Committee of Public Accounts' recommendations that the Revenue's powers under section 20 of the Finance Act, 1956, be exercised with more urgency. A Treasury minute dated November 13th, 1962, takes up the story. It agrees that the inquiries now in hand to test the extent of tax evasion in the field of building and civil engineering subcontracting 'should proceed as speedily as possible'. It adds that the investigation whereby selected tax districts are making special inquiries of firms engaged in the building trade as to payments made by them to subcontractors is necessarily spread over a period 'as different firms render their accounts to the Inspector of Taxes at different times of the year and the results are therefore not yet available' It would seem from these words that the inquiry is confined to current accounts; presumably at the time when the tax computation on them is being agreed.

<sup>&</sup>lt;sup>1</sup> Ex parte Fysh (The Accountant, April 28th, 1962, page 523).

## Taxation of Excess Rents

by H. S. A. MACNAIR, F.C.A.

ANY years have elapsed since the 1936 general valuation of properties for Schedule A purposes. New properties ave come into being while others have lost their dentity or have been reassessed on the grounds hat structural alterations have been made. From a egal standpoint it would perhaps be more correct o say that in such cases the property as constiuted prior to the alterations has ceased to exist on the creation of the new unit, a point noted by Channel, J., in *Turner v. Carlton* (5 T.C., at page 1900) and Lawrence, J., in *Lyons v. Collins* (15 A.T.C., at page 264; 21 T.C., at page 22).

As appears from the case of Thornley v. Brown 8 A.T.C. 3; 15 T.C. 459) the distinction is naterial since section 84 (3) of the Income Tax Act, 1952, directs that the annual value of any property which has been adopted for the purpose of income tax under Schedule A for any year of ssessment shall be taken as being the annual alue of that property for the next year of assessnent, unless a year of revaluation. For the latter, he annual values of all properties in Great Britain are required to be determined afresh (section 84). As it happens, the Inland Revenue Valuation Offices in England and Scotland are at present ngaged in preparing for a general revaluation in 963 although its primary purpose concerns local uthority rating.

#### General Revaluation

The income tax law in force in 1936 contemplated he repetition of a general revaluation every five ears, an intention frustrated by the events of 940. This postponement emphasized the possible oss of tax in years subsequent to a general evaluation through the fact that the existing ssessment could be adjusted downwards (section 4) but not upwards. The opportunities for expayers afforded by this state of the law are lustrated by the case of Salisbury House Estate td v. Fry (9 A.T.C. 101; 15 T.C. 266) which stablished the principle that the taxable capacity therent in the ownership of land was exhausted y its assessment under Schedule.A. In conseuence, legislation was introduced in 1940 to nable the Revenue to assess under Schedule D ie excess of the actual taxable capacity of property over the measure of that capacity as determined for Schedule A purposes.

These observations serve to point the distinction between excess rents and other profits or gains assessable under Case VI. With regard to the latter, the method of computation required is expressed by section 135 in terms corresponding to those applicable to profits dealt with under Cases I and II (except as regards the question of basis periods), namely, the full amount of the profits or gains arising.

#### **Commercial Loss**

This commercial basis is applicable to excess rents only where losses are concerned, a curious anomaly resulting from the fact that relief for losses is accorded by section 346, relating to Case VI generally, which was originally enacted in 1927. The Revenue at one time argued that this section was not drawn widely enough to cover losses on the re-letting of property, but the contrary view was established by the House of Lords in *Littman v. Barron* (31 A.T.C. 387; 33 T.C. 373). Viscount Simon emphasized the distinctive nature of excess rents in these words:

"... the "excess" on which tax under Case VI of Schedule D is charged is the result of a formula. The formula might bring out a figure of excess when there was no commercial profit and there might be commercial profit though the formula would bring out no excess to be taxed.

Excess rents do not arise in the case of a 'long lease', defined as a lease granted for a term exceeding fifty years (not being a lease which is or takes effect as a lease for a term of years determinable after the death or marriage of any person). Moreover a lease terminable at the option of the lessor before the expiry of fifty years is to be deemed to be a short lease, while a lease granted for a term exceeding fifty years (if not so terminable) is to be deemed to be a long lease, notwithstanding that the lease is terminable at the option of the lessee before the fifty years are up.

Alternative methods of computing excess rents are prescribed according to whether the case falls within section 175 or 176 of the Income Tax Act, 1952. In applying the formula it is necessary to identify the 'immediate lessor' of any given premises. In its simplest form the definition of

this expression in section 172 envisages a lessor whose immediate tenant is occupying or entitled to occupy the entirety of the premises. If, however, different parts of the premises are the subject of separate tenancies or separate occupations, regard must be had to any lessors of the whole or any part of the premises whose estate or interest extends to the entirety of the premises and is not itself subject (immediately or mediately) to a lease of the entirety thereof. The identification of the 'immediate lessor' rests with that lessor (if more than one) whose estate or interest is not reversionary on the estate or interest of any of the others.

#### Single Unit of Assessment

The case where an immediate lessor gets rent from premises comprised in a single unit of assessment under Schedule A falls under section 175 provided that no part of the rent is derived from a letting of part of such premises let together with other premises not wholly comprised in that unit. All other cases fall under section 176.

The formula under section 175 requires a comparison of the net annual value or rent payable (whichever is the less) with the notional net annual value ascertained by reference to the facts of the year in question. Unlike the position where rack-rents are computed for Schedule A purposes, no regard may be had to such matters as premiums (Davies v. Abbott (6 A.T.C. 296; 11 T.C. 575)) or rising rents (C.I.R. v. Dickson's Executor (7 A.T.C. 485; 14 T.C. 69)) which may represent facts of some year other than that under review. The correct approach to be adopted was discussed by the House of Lords in Tollemache Settled Estates v. Coughtrie (30 A.T.C. 46; 39 T.C. 454) where a suggestion that royalties for a sand-pit should be averaged over the period of the lease was negatived and approval given to the following computation:

Royalties actually received: April 1st, 1953, to March 31st, 1954	£646
Surface rent actually received: Two acres: April 1st, 1953, to September 29th, 1953; seven acres: September	v
29th, 1953, to March 31st, 1954	22
Less: Repairs: one-eighth	668 84
Less: Net annual value (Schedule A)	58 <sub>4</sub>
Excess rent (under section 175)	£577

#### Rack-rent

On the other hand, approval was given in principle to the adjustments required to bring the actual rent to a rack-rent, such as a deduction for rates borne by the landlord or an addition for repairs borne by the tenant. An illustration of the latter in the context of Schedule A is available from Bishop and Marco v. Talbot (25 T.C. 398) where the case stated records a determination by General Commissioners as follows:

Rent	• •	• •	• •	• •		£130
otherwis	nake good se than by	damaş fair w	ge whi	ch occu	ırred	
operatio	ns (10 pe	r cent)		••	• •	13
Gross ann	ual value	• •		• •		143
Less: Repa	airs allow	ance	••	• •		27
Net annua	l value (S	Schedu	le A)		••	£116

A further illustration of the formula under section 175 is to be found in *Strick v. Longsden* (32 A.T.C. 371; 34 T.C. 528) relating to a farm where the rent was increased half-way through the year 1947-48 from £200 per annum to £675; the approved computation is shown on the next page.

A final point to be noted under section 175 concerns the case where the immediate lessor is himself occupying part of the premises. In this event the rent is deemed to be increased by an amount equal to the relevant proportion of the gross annual value as determined for Schedule A purposes.

#### Landlord's Services

Under section 176 the method of computation prescribed involves a series of deductions from the gross rent parallel to those required by the notional valuation called for under section 175. The first group of deductions involves conversion of the gross rent to a rack-rent by subtracting tenants' rates and the cost of any services rendered or goods provided by the landlord otherwise than by way of maintenance or repairs, being services' or goods which he is required to provide by the terms of the lease but in respect of which hel receives no separate consideration. A useful practical application of these rules in the context of Schedule A is to be found in Pearl Assurance Co Ltd v. O'Callaghan (21 A.T.C. 242; 25 T.C. 211). This case concerned an office building let to various tenants who used in common the entrance, staircase and landings, as well as a passenger lift,

	ŧ			,		April October	to				October 1947, to 5th,	Ap	pril
Rent receivable per annum						£200	0	0			£675	0	0
Deductions:													
Repairs – £30 $\times \frac{1}{4}$		•••		£7 10	0				£7 10	0			
- Balance $\times \frac{1}{8}$			. • •	21 5	0				80 12	6			
Tithe				15 10	0				15 10	О			
Land Tax		• •	*11	2 10	0	_			2 10	0	٠		_
						46	15	0			106	2	6, ——
						£153	5	0			£568	17	6
Proportion for the period	••	• •				79	7	0			274	4	0
									353 11	0			
Net annual value (Schedule	A)	• •	••		£				148 15	0			
Excess rents (section 175)	••		••	•					£204 16	0			
•	·		••		af ,				148 15	<u> </u>			

or the upkeep and cleaning of which the landord was liable. Details of the undermentioned andlord's services were set out in the case stated and, as noted in the Court of Appeal, their admissibility was agreed by the Revenue:

- (a) Lift insurance, inspection, oiling, servicing, electric light and power (lift repairs and replacements fall to be dealt with on the same footing as repairs to the building).
- (b) Caretaker and lift attendant wages and national insurance, cleaning materials, rates and gas.
- (c) Electric lamps and light.
- (d) Water rates and cleaning of stairs, passage, corridor and drains.

The second group of deductions is identical with hose applied under Schedule A. They include and tax, drainage rates, sea-wall expenditure on twenty-one-year average, five-sixths of tithe innuities, owner's rates in Scotland (if applicable) and certain ecclesiastical deductions.

#### **Maintenance Relief**

The deduction of the rent payable in respect of the premises or the net annual value, whichever is the reater, corresponds with the rule under section 75. By that section, however, a notional repairs llowance is also granted (with corresponding djustments in the deduction for repairs and the eiling of relief applicable to any maintenance

claim under section 101 for the same year). Section 176 applies a simplified procedure by providing for the deduction (on a five-year average basis) of any expenditure not relieved under section 101. Thus where section 176 applies no adjustment is required to the normal method of computing maintenance claims.

#### **Accrual of Rents**

In conclusion, it may be mentioned that the treatment of rents under long leases is assimilated to that of annual payments, deduction of income tax at the standard rate being made in accordance with the rules of sections 169 and 170, with adaptations whereby rents in Scotland for the period ending at May 15th in any year are treated as falling within the fiscal year ending at April 5th previous to that date. This treatment contrasts with that applied to short leases where rent is computed by reference to the period over which it accrues due (vide Strick v. Longsden, supra).

Strictly applied, this rule would preclude the grant of relief where bad debts occur. It is suggested, however, that the various extrastatutory concessions relating to Schedule A (published by the Commissioners of Inland Revenue in their hundredth annual report) may be regarded as applicable to excess rents. If so, appropriate relief would be given in respect of rent which is wholly and irrecoverably lost or waived owing to the bad financial circumstances or absconding of the tenant.

# Problems of the Smaller Practice - II

by R. W. SMITH, O.B.E., T.D., F.C.A.

#### Relationship with other Practitioners

NCE again in considering the problems that arise we should be governed by a desire to treat our professional brethren as we should like to be treated ourselves. This attitude should make no distinction between those who are chartered accountants and those who are not. This is another example of the very great rift that lies between the small and large practice. I imagine the impact of the unqualified practitioner on the large practice is almost non-existent. By this I do not mean that the large practitioner is unaware of their existence, but he seldom comes face to face with them in the course of his everyday business. There is no doubt that among small practitioners and particularly in rural areas the competition from unqualified practitioners and others is one of the most difficult problems.

34. The problem arises because as a profession we do not yet seem able to reconcile the elements of competition and co-operation, possibly because we have not been established long enough. It is wrong not to regard our profession as competitive but at the same time we must remember that competition is not a matter of doing a job for a smaller fee or in less time than the next man. True competition for us consists of acquiring an adequate professional competence which we are prepared to keep right up to date, giving the best possible service to our clients and charging a fee which is not only fair to the client, but also fair to ourselves and our staff. These elements of the problem are also very closely connected with relationships which I shall be referring to later on in this paper, but at this point I must state that many of the smaller practitioners approach this problem in what I regard as quite the wrong way. It may be that they feel they have little help or guidance - but so many of them unfortunately do allow themselves to be influenced too much by the financial element of competition. It is not confined to us, it is a feature of the world of commerce. From this arises the controversy which is an annual subject for discussion in the groups on the question of regulating fees. I intend to refer to this later on, but without a satisfactory system of controlling fees our maxim must surely be that to obtain work as a result of a reputation for charging a low fee can only end in bad work, dissatisfied clients, a poor reputation for the Institute, and the practitioner finding himself in a downward spiral from which it is impossible for him to recover.

35. Obviously the first step towards a remedy for this problem is to provide for a measure of co-

The second part of a paper presented at this year's Oxford Summer Course of The Institute of Chartered Accountants in England and Wales. operation among the small practitioners without stifling competition and this must in the end be good for the clients. It is admitted that there are unsatisfactory clients and I think it should be more difficult for such a client to obtain the services of another accountant.

36. I have been able to find no better way of expressing this sentiment than in the words of Sir William Carrington at the seventy-fifth annual general meeting of the Institute: 'Our function is to provide skilled professional services, not to provide a cloak of respectability as a cover for a client's deficiencies, whether due to carelessness or other causes.'

37. Is there perhaps in this a case for a kind of lower tribunal than the Council itself, which could operate through the medium of district societies, and endowed with the power to give members disciplinary advice amounting if necessary to reproof? It seems to me that such limited power could be defined without great difficulty, and might well lead to an improvement in professional behaviour – without involving members in the severe disciplinary remedies reserved by the Council for infringements of greater gravity.

38. Another aspect of this problem is that any member of our Institute, immediately on qualifying, may set up in public practice without any postgraduate experience. Among smaller practitioners the disadvantages are accentuated because this member may be in sole practice or in partnership with another whose experience is no wider than his own. In a larger practice he will almost certainly have more experienced partners to whom he can turn for advice. I think all this points to a number of possible improvements designed primarily to make the road less difficult for the smaller practitioner. In the first place I consider that his training should include a much greater emphasis on professional behaviour and etiquette - at the moment this is a feature much neglected by principals, examiners and student societies.

39. It has also been suggested that there should be some interval after qualification before a member may be permitted to engage in public practice. This is not a solution, and could only under present conditions bring criticism to bear on the Institute's examinations which allow a candidate to reach a standard of competence which satisfies the examiners but does not necessarily endow him with the qualities needed to practise his professional skill.

40. I would much rather see this problem tackled along the lines of a Practitioners' Advisory Service—which was suggested early in 1961 as a solution to some of the smaller practitioners' problems. As I

understand the position this matter has been the subject of some investigation through the district societies, and the objects of the proposal were as follows:

- (a) "To devote its whole attention to improving the profitability of accountancy practices.
- (b) To acknowledge that there are many practitioners dealing largely with work which it is not practicable to execute to the highest standards, and always to bear in mind that these are the types of practitioners in most need of assistance.
- (c) To initiate and supervise a "Practitioners' Advisory Service". It is contemplated that this would be under the immediate control of a full-time salaried director, with adequate staff, who would:
  - Gather data relating to all types of accountancy practices; their methods, costs, fees and results.
  - (ii) Accumulate experience regarding the best or most economical ways of dealing with the various types of work handled by accountants.
  - (iii) Regularly circularize to practitioners the results of (i) and (ii).
  - (iv) Answer specific queries submitted by individual practitioners.
  - (v) Consider whether it would be practicable, if not to recommend rates of fees, at any rate to recommend standard ways of computing these.
  - (vi) When requested, visit the offices of practitioners and submit to them detailed reports regarding their methods and results.'
- 41. The author of these proposals admits that such a scheme would cost money, but that bearing in mind the very large proportion of Institute income that comes from the subscriptions payable by small practitioners, the provision of such a service would be no more than a fair return and as I have said elsewhere anyone who made use of such facilities should have little objection to paying a reasonable fee.
- 42. Before I leave this part of my paper I would like to make reference to another difficulty which I think must be largely confined to smaller practices. This is the effect of having a partner who is not a qualified accountant. There are many such practices and I believe that the majority of them exist for the good reason of providing a chartered accountant as a successor to a practitioner wishing to retire frequently a son succeeding his father who aims to improve the status of his practice. There are some, however, where such conditions do not exist and any chartered accountant who is a partner in such a practice may not necessarily be reducing his problems.

#### Relationship with the Institute

43. It is thus a very short step that we need to make to bring us into considering the problems that arise for the small practitioner as a result of his relationship with his own Institute. They arise from a sense of remoteness and in consequence to some

extent out of ignorance – on both sides. This can lead very easily to a feeling on the part of the smaller practitioner that his problems are allowed to pass unrecognized. Until very recently I do not think that the Institute has made sufficient efforts to find out exactly what the difficulties of the smaller practitioner amount to. I have already referred to the questionnaire which has been the subject of inquiry during the last twelve months. There is no doubt that when the results of this inquiry have been fully examined much more information will be available to the Council and will indicate ways in which some of the difficulties which face the smaller practitioner can be resolved. As I have already stated it is not my intention to deal with the questionnaire but to give you my own views on the subject.

- 44. If there has been some ignorance in high places about the conditions and problems of the smaller practitioner there has also been considerable ignorance on his part of what goes on, not only at Moorgate Place, but also in the district societies. Probably one thing which has done much to remove this ignorance on both sides has been the informal atmosphere that prevails at summer courses, where it has always been possible for members of the Institute to meet successive presidents and members of the Council, under conditions where frank exchange of views has always been encouraged. Unfortunately limitation of numbers does not permit more than about 1 per cent per annum of members to attend these courses but I know only too well from my own experiences that there are very few indeed of our members who having once attended do not wish to come again. It is for obvious reasons less easy for the small practitioner to attend these courses but the number who do manage to come is a surprisingly high proportion of those attending.
- 45. A similar problem arises in connection with representation on the local and central government of the Institute. It is a frequently expressed criticism that the smaller firm is seldom represented on the Council of the Institute, although I do consider that they are probably adequately represented on district society committees. Representation in either way is not, however, in anything like the proportion which I referred to in the introduction to this paper, but I venture to suggest that there are relatively few members of small practices (as I have attempted to define them) who would be willing and able to give up sufficient of their professional time to render themselves suitable representatives, and at the same time not risk neglecting their own practices.
- 46. There is no doubt that one of the effects of this is that decisions made and statements issued by the Council may carry an implication that policy which is appropriate to a large firm dealing with large clients can be applied equally well to smaller firms with their smaller clients. I may perhaps be permitted to give one or two examples of what I mean by this.
  - 47. Those sections of the Members' Handbook

dealing with stock-in-trade provide a good example of what I am trying to demonstrate. They are N 22 dealing with the treatment of stock-in-trade and work in progress in financial accounts and U 2, the statement on auditing dealing with the same subject. No one will disagree with the counsel of perfection that is laid down but it is in the application that the problems arise for the small practitioner. I feel certain that considerable difficulty arises in the strict application of such maxims to the general run of audits carried out in the smaller practices.

- 48. In section N dealing with accounting principles there are twelve recommendations which are still of current application and I venture to suggest that only the following are of particular importance to the majority of practitioners:
  - No Depreciation of fixed assets.
  - N 14 The form and contents of accounts of estates of deceased persons and similar trusts.
  - N 18 Presentation of balance sheet and profit and loss account.
  - N 19 Treatment of income tax in accounts of companies.
  - N 20 Treatment of investments in the balance sheets of trading companies.
  - N 21 Retirement benefits.

I must hasten to add that when I make this statement I am far from saying that the remaining recommendations are not of interest to many members of the Institute. They are all excellent for the purpose for which they are intended and much thought has been put into their preparation. What I am saying is that the smaller practitioners are inclined to think – and I consider are justified in so thinking – that similar efforts might well be expended upon advice about many of the problems which are peculiar to their own existence such as I have tried to exemplify in this paper.

- 49. I wonder too if the effort which has been put into many of these Institute statements really means very much to the larger firms who are likely to be interested in their application. Take for example the two recommendations N 13 and N 16 dealing with reports for prospectuses. There can nowadays be very few firms concerned directly with such reports this has become an entirely specialized business and one is accustomed to see that even in a prospectus where the named auditors are a firm of considerable eminence, they are not of necessity the reporting accountants.
- 50. I think we should all prefer to see an extension of the sections of the *Members' Handbook* dealing with practical points and technical statements of the kind contained in sections P and S. These I am sure would have a considerable appeal to all members of the Institute, and would go a long way towards providing the basis of the advisory service that has been referred to elsewhere.

#### Relationship with Clients

- 51. Possibly the problems arising from the relationship with clients are the most important or perhaps because of their almost daily occurrence they seem to be the most important but I want to try not to over-emphasize them because they do fit into the general pattern of the other human relationships I have been attempting to describe. When I said just now that such problems are of almost daily occurrence I was underlining what is, in this connection, the most important difference between the small practitioner and those of greater size.
- 52. The chartered accountant in the smaller practice is by the very nature of it rather too close to his clients and one of his greatest problems is to find the opportunity of getting away from them and considering them in true perspective - an exercise which he is seldom able to carry out. Except in the very large towns the small practitioner is always meeting his clients both on and off duty - in the club, the pub, bus or train, at church, school prize-givings and so on - he rarely gets away from them. If they cannot see him at the office they will call on him or telephone him at home, and he has to don a very tough outer shell if he is going to make sure of leading a private life of his own. On the other hand he will have to temper his behaviour so that he is not to earn a reputation for being difficult to approach.
- 53. This brings with it other attendant problems which are seldom encountered in the larger practice. Many of his clients will be well known to each other some will be friends, others enemies, male and female many will have their own difficult and delicate business relationships with each other, and all these cross-currents will constantly be carrying the small practitioner from Scylla into Charybdis from which he will seldom emerge unscathed or unruffled. There is no remedy for this problem other than to be possessed of infinite patience and good temper, an inexhaustible sense of humour, tact and resource, a great understanding of human nature and a perfect secretary.
- 54. On the other hand, as we have seen earlier in this paper the very nature of this problem is a challenge and an opportunity. We have already noted that the small practitioner's competitors include not only the members of his own Institute but other kinds of practising accountants and the members of other professions, and with the very close personal contact which he is bound to have with all his clients he will find a ready field for expansion so long as he can demonstrate that he has something better to offer than the next man by way of personal skill, service and a high standard of performance. I am certain that this is one of the answers to those who advocate registration.
- 55. Inseparable from the problems arising from the relationship with clients is the question of fees. Let us try to look at this problem objectively. Without adequate remuneration we cannot equip ourselves

with suitable offices, competent staff, modern equipment and a decent standard of living. Without all these (of which the last is not the least) we shall never be in a position to provide the client with the skill, service and performance which I referred to in the previous paragraph. This brings me to the controversy which has been the subject of midnight discussions at every summer course – the question as to whether or not there is a case for the regulation of our fees.

56. Let us first of all see where we as a profession stand over the matter of fees. Perhaps the best guide we have is contained in the report of the Royal Commission on Doctors' Remuneration under the chairmanship of Sir Harry Pilkington which produced its findings early in 1960. These were based on the expectation of earnings for a man in each profession aged 30 in 1955 working full time until retirement at the age of 65. The definition of professions used was somewhat unusual since it included engineers and graduates in industry, but the results were interesting, and from the accountants' point of view somewhat disturbing. Of the nineteen groups into which professional earnings were divided accountants took sixth place from the bottom of the list, and with the one exception of graduates employed in industry all groups whose expectation of earnings exceeded that of accountants were those which either have registration, or some system of controlling fees or

57. I am sure that the evidence of this report will be confirmed by any practising accountant who will agree that newly-qualified doctors, dentists, solicitors and auctioneers, within a year or so of setting up in practice, frequently attain a level of net income which a chartered accountant in a small or even a mediumsized practice can never hope to attain in a life-long career. This is not due to any excess of natural ability but simply as a result of the fact that these professions are protected one way or another. I am bound to give some importance to this question of ees because there is no doubt that opinion is very livided on the main issue of whether or not there hould be some form of regulation. I have made ome researches first of all into what has been said on earlier summer courses and elsewhere.

58. In 1949 Mr H. T. Nicholson expressed himself is being in favour of regulating fees by laying down minimum standard, on the other hand in 1953 Mr N. L. Barrows stated that the fixing of a standard cale would be a disservice to the profession and in particular the smaller practitioner in the provinces. Mr D. V. House in 1956 seemed somewhat undecided; while agreeing that it would be impossible for the louncil to lay down any fair and reasonable scale propriate for all practitioners and all classes of work, he suggests that guidance can be obtained from the Treasury scale and goes on to deprecate underutting of fees. We all do, but if there is no minimum tandard – what is undercutting? Mr J. Perfect in

1960 indicated another somewhat indefinite line by saying merely that the appropriate fee depends on the type of work involved and special skills that have been required, without adhering too rigidly to the basis of time occupied.

.59. You will of course all be familiar with section P 3 of the Members' Handbook dealing with remuneration. I personally find it very bewildering that this section only consists of three pages of which only a few lines are devoted to suggestions as to the way in which members should base their charges, whereas twenty-two pages are devoted to accounting by electronic methods, twenty pages to the treatment of stock-in-trade and work in progress, and no less than forty-five pages are devoted to the contribution which the accountant can make to business efficiency. Surely if we can manage to produce so much erudition on such subjects as these we can afford a little more effort in the attempt at defining our own costs, charges and efficiency in these respects. Those in favour of regulating fees are not necessarily small practitioners who think that they need this measure of protection. In addition to quoting from published and public statements I have also carried out my own researches by means of data supplied freely by many practitioners that I have asked to help me - all of whom belonged to the class which I defined earlier as those in smaller practices. The result of these researches can be summarized in this way.

60. My questions were addressed to practitioners who formed a fair sample scattered over all the district societies, including the Metropolitan area, and I asked for the following information:

(a) Basis of calculating and charging fees over the range of:

Partners (doing partners' work);
Partner (doing work of qualified senior);
Qualified senior;
Unqualified senior;
Semi-Senior;
Articled clerk;
Others.

- (b) Details of any other methods used for charging fees.
- (c) Opinion on regulation of fees by the Institute and any other comments.

61. So far as the basis of calculating and charging fees was concerned I received replies that showed a remarkable consistency, and the most interesting thing was that the average coincided almost exactly with the Treasury scale. In a few cases the charging rate for principals was very much lower and at a rate which I would regard as most unrewarding. These were nearly all sole practitioners of not very long standing who usually accompanied their replies with the comment that if they were to charge any more they would be unlikely to get new clients and might lose

some they already had. Where I asked for the charging rate for a partner doing the work of a qualified senior I received some replies giving charging rates for principals doing the work of unqualified seniors and juniors. This is a vital comment which I trust will make a deep impression on the leaders of our profession. Another cogent remark which was made by more than one of my correspondents referred to the fact that mechanics' time charged for the repair of office equipment was generally at a rate which was equal to or more than that charged for a qualified senior — with nothing like the professional responsibility or skill carried by our own work.

62. On the matter of regulation of fees by the Institute opinion was divided. About a third of my correspondents stated that they were opposed to any form of regulation. Of the remaining two-thirds who stated that they would like to have some method of regulating fees almost all of them qualified their statement in one way or another.

63. The 'noes' generally felt that variations in quality and standard of performance made regulation almost impossible and several stated that if there were regulation they would probably have to cut the rate or lose work to unqualified competitors — including banks and solicitors.

64. In many cases the replies I had from the 'ayes' to some extent expressed the same sentiment - that although they would like to have fees regulated they feared the difficulties that would arise in meeting competition from practitioners who would not be bound by such regulations. Many of them felt that this would not be an insuperable problem if the regulation of fees were accompanied by the appropriate publicity, quoting in some cases the action taken in this direction by other professions - but here I think I am likely to find myself getting on to the same ground as the small practitioners questionnaire which it is my expressed intention to avoid. Some of my correspondents stated that the Treasury scale was better than nothing, that they found it a very satisfactory guide and tried as far as possible to charge this scale of fees - making, where appropriate, substantial increases over this scale for work of a special character. I was interested too that more than one reply I received put a case for a fee based, in appropriate circumstances, on turnover, pointing out that this was no different from the basis of calculating fees for much of the work done by solicitors, architects, auctioneers and others. Above all what was most heartening was that everyone who replied to my inquiry was most anxious to make a contribution to improving the status of the profession in general and of the small practitioners in particular and most of them were in favour of Institute publicity to this end. One of my correspondents produced a printed brochure of charging rates which had been agreed among the chartered, incorporated and certified accountants practising in his area.

65. In view of these opinions it seems wrong to

state so categorically, as has been done by some members of the Institute, that it would be a mistake to lay down a scale of fees. Inquiries which have been made over the last year or so in some district societies seem to indicate that by accident or design there is a reasonable degree of consistency in charges when classified by areas and size of practices. If this is so are we not entitled to assume that this is a good reason for saying that fees could be regulated, at any rate by laying down a minimum scale which would at least give the small practitioner an opportunity of knowing what his basic income ought to be? If he chooses to set his sights higher than this it is obviously up to him to justify the extra by ensuring that his clients receive the best possible service he is capable of providing, and of retaining in the profession the staff he wants instead of watching helplessly while they are enticed away by the higher financial rewards which they think they can get in industry. This is a complex relationship, and one on which from the professional point of view we are very far indeed from a practical solution.

66. I know that I am repeating what has been said many times before, but I cannot allow myself to forget that almost every other profession seems to have been able to regulate its fees – solicitors, auctioneers, valuers, architects, surveyors, stockbrokers and insurance brokers – and it is not without some significance that almost all the charges made by the foregoing are based on ad valorem rates so that they are covered against inflation and variations in standards of living. It is all very well for solicitors (and others) to state so blandly that some of their rates of charging have remained constant for many decades but this important factor is not so readily referred to.

67. The fundamental difference is, of course, that we have no convenient yardstick to which we can apply an ad valorem scale - so that if we are to have regulated fees they must be based on time rather than turnover - and this is where the difference is bound to appear between the large and the small, practice. If time rates are adequate for the small they are insufficient for the large practice, and if a rate based on some kind of ad valorem formula were satisfactory for the large practice it would produce only a microscopic fee for work at the smaller end of the scale. But I do not of necessity consider that this should end the matter. There is no doubt that the Treasury scale, criticized though it has been in many quarters, has been of very great assistance - on the other hand, the Friendly Societies' scale is a povertystricken affair, though many small practitioners are forced to accept it.

68. Other problems in the relationship with clients and the impact of fees beset the small practitioner in ways which are quite outside the experience of the large practitioner. One arises from his struggles to start a practice of his own, for in these days there are few young men with enough capital either to buy themselves into a practice or who can afford the more

arduous path of opening an office and waiting for the clients to arrive. Some of them will be fortunate enough to join an established firm in which they will be given a partnership but others who wish to become practitioners will have to take the hard road of building up a nucleus while otherwise employed. In doing so they will often be taking on work at fees which are unremunerative to established practices but nevertheless as much as the client can afford to pay. One hopes that in such cases the employer of the part-time practitioner is aware of what goes on but how else does a small practice grow sufficiently to reach the point where it can become full time and support its owner? If it were not for these adventurers many of the clients who come to them would relapse into having their work done by quacks. But on the other hand is it desirable that they should be giving their services in exchange for fees which are so much less than they could possibly charge if obliged to incur the expense of a regular office - and are they not forced to continue working for a low scale of fees even after they have expanded sufficiently to operate full time?

69. Not altogether unconnected with this problem are those arising from honorary and 'semi-honorary' work. I agree with the opinion expressed by Mr W. L. Barrows in his paper in 1953 that it is better that this work should be paid for at the proper rate and then if it is a charity the practitioner can demonstrate his sympathies by making a donation. The small practitioner is faced with far too many requests to give his services free to this or that local charity, sports and other clubs and local societies, and all too often these demands will be accompanied by glowing accounts of the wide field of prosperous professional activity that such associations will open up for him. In my experience and in that of many others with whom I have discussed the problem no statement could be further from the truth. Although it would obviously be unwise to undertake charitable work merely for the distant hope of reward, nevertheless it can be a matter of acute disappointment for the young practitioner that when as a result of a reputation for diligence which he has built up in this way he feels he is about to obtain a useful introduction, he discovers that after all, the more lucrative work has gone elsewhere. It may be even worse than this to have insult added to injury by the oblique remark that 'so and so can't have much of a practice if he can find time for all this work as treasurer of the club' - so I would say that it is far better that some charge is made for this work - it is human nature that the service which is paid for is more esteemed than that which is had for nothing. And when it comes to a question of service the small practitioner will do well to remember hat whether he does such work for nothing, for a dominal fee, or for a fair charge, he is none the less liable for professional negligence and he is acting very dangerously if he allows his quality of performance to be governed by the size of the fee or its absence. Even if no action for negligence ensues the effect on the practitioner can still be very damaging – and we all know that irregularities in this type of work, though generally small in degree, are far more numerous than in commercial audits.

70. Having said that the small practitioner receives these frequent demands to give his time and services for little or no reward. I must add that this is not a problem confined to his end of the practising scale. The members of larger practices are also called upon to give a considerable amount of their time, not only to honorary work, but also to membership of committees, the Council of the Institute, district societies, Government boards, official inquiries and so forth more often than not without any financial reward, and indeed frequently at some personal expense. What it is important to remember is that the larger practice is much more easily able to support this kind of activity. In a practice of a dozen or so partners the equivalent of one partner's whole time is less in proportion to that which may have to be given up in this way by a sole practitioner.

71. I would therefore like to sum up my own views on the question of fees somewhat in this way.

72. I do not accept that it is either undesirable or impossible to devise a scale of charges for professional accountants in practice. The existence of the Treasury scale and the fact that many practitioners use this as a guide for their everyday work is surely an adequate proof of this – and indeed this scale makes a distinction between charging rates for London and the Provinces. I believe too that the Institute had a large part in negotiating this scale so that presumably the knowledge and experience so gained could be usefully employed in devising an Institute scale.

73. The Treasury scale is based on time, but the much criticized Approved Auditors scale is based on turnover. It is at the lower end of this scale that real hardship is encountered. In its upper reaches fees are by no means inadequate. We also have fees based on turnover or what can almost be described as 'payment by results' in bankruptcies and liquidations. There is also evidence that local groups of accountants have been successful in standardizing charges—and there is plenty of evidence too that even without rigid control fees do tend to find a common level.

74. I do no understand therefore why there cannot be an official directive indicating scales of charges — even if this is only described as an Institute recommendation. Such a recommendation could with little difficulty indicate what loading should be added for specialized types of work or for particular districts which involve higher costs. Would it also create any real problem for a committee of the Institute to adjudicate in cases of alleged overcharging in the same way as I believe is done by the Law Society?

75. We claim to be the technical masters in the field of accountancy. We claim to advise other businesses and professions on the thorny and difficult problems

of how they should regulate their profits, remuneration, and the charges and costs which provide the raw material for such calculations – and yet when it comes to dealing with the same problem for ourselves we have practically nothing to say.

76. Regulation of fees is not of much use unless it is backed up by virile and effective publicity – or public relations. If we are to overcome the problem that so many smaller practitioners face – that of losing work because someone else will charge less – then those who employ our services must be convinced that in

the end they get what they pay for – and a low fee will merely mean low quality work. The Law Society and the London Stock Exchange both indulge in suitable publicity. They already both have the advantages of controlled membership and controlled charges – if they can find a use and justification for publicity how much more so can The Institute of Chartered Accountants – and is there really any valid argument against our joining the ranks of such eminently respectable company?

(To be concluded.)

# Weekly Notes

#### EXPORTS FROM THE COMMON MARKET

A REPORT published in Brussels this week by the Common Market Commission says that businessmen in the European Common Market are relatively pessimistic about the state of export orders. The only

exception is transport equipment.

This survey was carried out in a questionnaire on a monthly basis asking for the state of order books, export orders, stock, production and prices. The replies were asked for on the same basis as in the questionnaire sent out in this country by the Federation of British Industries which requests a simple statement of 'better' or 'worse' than the previous period. This monthly investigation by the Commission has so far obtained the co-operation of about thirteen thousand businesses.

Taking individual countries, 60 per cent of the replies from Luxemburg said export order books were weak, the corresponding total for Italy being 40 per cent. In Germany there is more satisfaction with the export order position although there has been some falling off in foreign business in recent months.

There is much more optimism about the overall order position when it takes into account both domestic and export business. Demand is high in industries connected with construction work although there has been a decline in demand from capital equipment sections. Among consumer goods the general upward trend is offset by poor returns from the textile industry. Particularly in France and Belgium, more business men expect a rise in output in the next few months than expect a decline. There is less optimism on this score in Italy than earlier in the year.

Prices are expected to rise in a number of industries but more business men expect a fall than a rise in rubber and paper. The most confident forecast of increased prices comes from Italy. German business men expect stable business prices on the whole.

One of the gaps in the survey is any reaction from the Netherlands where the survey is regarded as likely to give valuable information to competitors.

#### LAST SPECIAL DEPOSITS RELEASED

LAST week the Bank of England announced that it was going to release the last £81 million of special deposits belonging to the clearing banks and the Scottish banks.

On the one hand the authorities have made it clear that the special deposits frozen at the Bank of England are not to be retained just as long as some form of credit control is necessary as a brake on the economy. On the other hand they have certainly not given any suggestion that they will not be used again. The ratios have been dismantled within a six months' period. They started at a level of 3 per cent for the clearing banks and 12 per cent for Scottish banks and they have been dismantled in three stages while Bank rate has remained unchanged at 4½ per cent. It is well known that the Bank of England has had; serious reservations about the use of special deposits at all and has doubtless been anxious to take the earliest opportunity of showing that they are a device for limited and discriminating use.

The control of the monetary system is now left to more orthodox means, notably Bank rate. The banks are now in a stronger liquid position and there is certainly no need of additional restrictive weapons at present. To those who might say that it is anomalous to increase the banks' lending capacity at a time when the sluggishness in advances is due mainly to a lack of credit-worthy customers, it can be said that at a time when reflation is the policy it is more than anomalous to retain on the banking system restrictive controls which can only operate in one direction.

#### A NUMBER OF CAVEATS

IN a racy speech at a lunch given by the London and District Society of Chartered Accountants on Wednesday of last week, Baroness Burton strongly advocated the need for a greater degree of consumer

protection so that a powerful parallel phrase to caveat emptor might become caveat vendor. She illustrated her remarks with personal reminiscences of experiences in Parliament and in the market place and outlined a number of matters in which scrupulous standards by sellers should be observed. One of these was that titles and trade-marks should be realistic in relation to the nature of the goods being sold and that weights, descriptions and instructions printed on containers, wrappers and labels should be fully explicit. Another was that the advertising industry should do all in its power to ensure that advertisements which might be described as anything from misleading to downright dishonest were banished from the local newspapers which carried them.

The remedy, Baroness Burton thought, was largely in the hands of the shopping public – both by way of a firm insistence in getting the kind of goods it wanted and by being critical of all forms of fictitious price reductions and gift schemes organized ostensibly for the benefit of customers but actually for sales promotion purposes. She also thought that this was a good time for everyone with a vote to follow up the report of the Molony Committee on Consumer Protection by saying what they want because with the possibility of an election not far round the corner –

"... every political party loves them; every political party wants to take note of our needs, and what we do not get before a General Election we are unlikely to get after. That is sound common sense."

This bland statement may well be sound common sense but ethically, of course, it does not bear examination. To catch votes by making promises which are either specious or implemented only to suit the occasion is no more elevating than many of the doubtful practices employed commercially in selling goods and services so roundly condemned by the Baroness. It might therefore be appropriate for the ordinary consumer to add another warning to his shopping list and that is caveat suffragator.

## SUBSCRIPTIONS TO ECONOMIC LEAGUE DISALLOWED

In a test case decided on November 27th, Mr Justice Ungoed-Thomas held that a subscription made by a shipbuilding company to the Economic League, to be used for the general purposes of the League, is not made 'wholly and exclusively for the purposes of' the subscriber's trade (Joseph L. Thompson & Sons Ltd v. Chamberlain). The company did not subscribe to the League direct but it did subscribe to the Shipbuilding Conference which contributed annually to the Economic League and the Revenue objected to the deduction of that part of the company's subscription to the conference which was in effect passed on to the Economic League.

The League's primary object was

to promote and improve the knowledge and study of

economics and of other industrial and social subjects affecting the interests of the community, and of members thereof, from the standpoint that

- the preservation of personal freedom and free enterprise is essential to national well-being;
- 2. while maintaining its complete independence of any particular party the League must actively oppose all subversive forces, whatever their origin and inspiration, that seek to undermine the security of Britain in general and of British industry in particular'.

The League provided pamphlets connected with shipbuilding and exposing the communist way of life, for the Communists were especially active in the engineering and shipbuilding trades. There was however no real or imminent threat of nationalization in the building industry. The learned judge rejected the company's argument that its statement that it made the subscription to the conference wholly and exclusively for trade purposes should be accepted, regardless of the stated objects of the League to which the conference had then contributed. The case was distinguishable from Morgan v. Tate & Lyle Ltd (33 A.T.C. 184) where there had been an imminent threat to deprive the company of its undertaking. He dismissed the company's appeal with costs.

#### IMPACT OF TAXES AND SOCIAL BENEFITS

IT is a cliché that in the Welfare State the State takes money from us in various ways with one hand and gives it back (more or less) with the other. An article published in the November issue of Economic Trends presents estimates for the first time of the impact of taxes, direct and indirect, and of a wide range of State benefits, whether received in cash or in kind, on groups of households of different sizes, in various ranges of income, in 1957 and 1959. The Central Statistical Office has prepared the estimates, mainly from data collected in the continuing family expenditure survey which is used primarily to revise the weights of the Retail Price Index.

The article contains two graphs, one for 1957 and one for 1959, which bring out the 'break-even' point for various types of households in various ranges of income between £195 and £1,950 per annum. The break-even point is the point at which income before taxes and before benefits equals the income after deducting taxes and adding the benefits. In 1957, for a household consisting of one adult (excluding adults whose main income is a State pension), the break-even point was only £210; and for two adults, it was £390. The corresponding 1959 figures were £280 and £450. For households with two adults and three children, the break-even point is not easily calculated for 1959; for 1957 it was well above £1,000; no doubt largely because of free schooling, family allowances, and National Health Service. Incidentally, the compilers have assumed that the children would take advantage

of the free schooling, which for the purposes of a small sample in this comparatively low income range is probably fully justified.

Original income is defined as including income in kind but before receipt of any direct or indirect State benefit (such as family allowances, pensions, unemployment pay, etc.) and before deduction of any direct or indirect taxes. Direct taxes are confined to income tax and surtax and all contributions to National Insurance and National Health services. (Incidentally, one wonders how the households in the sample came to be paying surtax). Indirect taxes are confined to rates, customs and excise duties, motor vehicle licences and (wonderful to relate) stamp duties. Taxes on raw materials are ignored; as are such 'benefits' as the cost of national defence and National administration.

To anyone familiar with direct taxes, the article

seems to devote a fair amount of space to pointing out the obvious, for example the more children one has, the less tax one pays. The presence of children in the household, it is found, does not very materially increase the household consumption of tobacco and alcoholic drinks. What is particularly interesting is the statement by these experienced statisticians that a characteristic feature of all family expenditure surveys is the failure, even of people who are cooperating, to record their full expenditure on drink and tobacco. Comparison of the total yield of the taxes on these commodities, with the amount of them which people admit having consumed, shows that on the whole, people fail to record about half their expenditure on drink and about a quarter of their expenditure on tobacco. Can it be that the missing proportion is consumed 'wholly and exclusively for the purposes of' trades, profession and vocations?

# This is My Life . . .

by An Industrious Accountant

CHAPTER 149

BEN is the nice elderly chap in our payroll section who always seems to be deeply immersed in other people's troubles. They come in to see him about amendments to their P.A.Y.E. allowances, or to have their insurance premiums settled by monthly deductions from their salary cheques, or to wangle small loans to be repaid by instalments. This latter procedure is actually *ultra vires*, but I follow Nelson's example and turn a blind eye, provided the grubby little I.O.U.s in the cash box don't get too numerous.

I was somewhat worried that our auditors might object to these advances actually – bearing in mind the tough representative of theirs who used to be very pernickety in the old days – but times have changed. I asked our present man his views on the subject, but he only laughed. 'Have a heart, old chap,' he expostulated. 'You can't leave an employee in a jam for a temporary couple of quid, and Ben is absolutely reliable and scrupulous.'

Our roles seem to have changed around, I reflected; he was cribbing my lines. However, Ben's judgement has never yet been in question. So I leave it to him.

Recently though, Ben hasn't been looking so well. He seems worried over his future. He told me once that he hadn't saved much, and his pension would hardly bridge the gap. Moreover his wife's been ailing for years and he keeps his sister, too. The worried eyes in his gaunt sallow face spoke for themselves.

Last week he wandered rather aimlessly into my room and sat down limply. 'It's this inflation, sir,' he said. 'My bit of money, you know, it isn't what it used to be.' I encouraged him in bluff, hearty style, but his stare was curiously blank. 'They take it while I'm not looking,' he whispered, looking behind him nervously. 'They keep on peeping at me round my desk, lots of them; I can see their eyes. It's terrible to be followed all the time.'

I suggested a nice hot cup of tea and pressed my bellpush surreptitiously, but my secretary wasn't at her desk. Ben's mouth twitched spasmodically; he leaned forward across my desk. 'They'll take my money, you know; some of it's missing already.' He picked up my long paper-knife and fingered it intently.

I spoke slowly and sympathetically, trying to stare him into submission, my thumb hard on the bellpush. It pealed unheard in the outer office. 'They watch us all with their horrid little red eyes; they'll take all our money,' Ben said tonelessly. 'There's one of them now!' He stabbed erratically at my 'In' tray, scattering its papers.

To say that I was disconcerted is putting it mildly. It was rather difficult to move quickly in my heavy swivel chair – and on impulse, I suddenly pushed over my laden three-tier 'Out' tray. It fell with a crash and Ben started violently. 'Beg pardon, sir,' he said blinking. 'Did I knock it over?' He looked vaguely at the paper-knife and putting it down, bent helpfully to retrieve the contents of the trays.

We chatted for some minutes about contributing to the Christmas charitable appeals as early as possible; he was the familiar old Ben again, kindly and thoughtful.

But is he likely to have another of these sudden attacks? Both the personnel director and our doctor feel that I exaggerate; Ben's essentially harmless they argue; just keep an eye on him – after all, two helpless women depend on his earnings. But what if he goes berserk and assaults someone; I'll feel merally responsible. Should I insist on his going on protracted sick leave to protect our other employees?

# Finance and Commerce

#### **Equalization Reserve**

THIS week's reprint is of the accounts of Kardomah Ltd, for the year to July 7th, 1962. The company operates a chain of coffee houses and cafés in London and many of the principal cities; Liverpool and Manchester being well represented as befits a business based in Liverpool. It is also concerned in the blending and distribution of teas and coffees. The company is old-established; this year's annual meeting in Liverpool is the ninety-fifth and there is now a fourth generation on the board. The accountancy profession is represented in the person of Mr F. O. Harcourt Williams, F.C.A., one of the two managing directors.

What first caught the eye as the pages were turned was the dividend equalization reserve investments at the foot of the assets side of the balance sheet. It is not often these days that an opportunity presents itself of giving accounts which include dividend equalization. The whole idea of equalizing dividends with the aid of a special reserve, once quite common, has faded with the years; balance sheets used to contain a string of reserves for this or that specific purpose, but the accounting practice has evolved of concentrating under two reserve headings: capital and revenue.

What may have brought about dividend equalization in the past was the use in a business of money specifically set aside, its specific purpose thus being negatived. It has been known for a dividend equalization reserve to be swallowed up in a capital reconstruction. The special point in the Kardomah case is that the reserve investments are there to back the reserve.

#### Higher Dividend

Mr J. E. Hadfield, Kardomah's chairman, draws attention to the fact that the profit available for dividends and appropriation, after deduction of income and profits taxes, this year is £82,009, as against the previous £68,858. He notes that the interim dividend was 12 per cent compared with 11 per cent and that 'taking into account our restraint last year', 18 per cent against 15 per cent is recommended for the final dividend, giving a total distribution of 30 per cent against 26 per cent last year.

The increase, he says, may also provide some interim return on the extra capital now known to be

employed in the business as a result of the revaluation of the freehold and leasehold properties in 1961. The board, says the chairman, had hoped 'in one way or another' to bring shareholdings more into line with these new figures but consider that such action at present was not likely to be of immediate advantage to shareholders. The objective, however, will not be lost sight of.

Meanwhile, in addition to the higher dividend, there is I per cent from profits which are not liable for taxation. This comes from the contingencies reserve and its effect will be seen in Note 2 in the notes on the accounts included in the reprint.

#### **Not Evident**

What the 'extra capital now known to be employed in the business' amounts to does not seem to be evident from these accounts. One of the points we continually stress is that the balance sheet view should invariably be as up to date as possible. It may not always be feasible or even advisable to write in the latest asset values, but it should be possible to include the information in a note preferably below the balance sheet item.

In this connection, it is interesting to read in a review of these accounts given in *The Investors' Chronicle* that the net equity assets amount to £1,468,692, equal to 478 3d per Ordinary share — with a note explaining that the figure is 'allowing for the 1961 revaluation of properties'.

Mr Hadfield also notes that 'although the total amount provided for the depreciation of fixed assets is the same as last year, we have dealt with it differently'. The fifteen-year period over which the café installations are written off, he explains, has been lengthened to twenty years, thus reducing the annual amount required for the purpose.

The saving is charged against profits separately and has been allocated to the development reserve. By following this practice, Mr Hadfield says, it is hoped to build up the credit on that account to a sum sufficient to meet expenditure on future obsolescence in the cafés. Eventually, the appropriations to the development reserve that have hitherto been necessary will not be needed. But that, he adds, will not deal with the backlog of expenditure on which they are now working and appropriations for this must continue for the present.

#### Take-over Bid

Any argument about the true asset worth of the Kardomah equity, however, has now been settled. The Forte's (Holding) group is making a cash and share bid for Kardomah, worth 65s a share. The Kardomah directors and their families, controlling about 60 per cent of the ordinary shares and 29 per cent of the 'A' have agreed to accept the Forte's bid, the terms of which were announced on Tuesday of this week.

#### CITY NOTES

RACTS of the present have temporarily overcome hopes and estimates for the future in the equity section of the stock-market. Rising unemployment—and forecasts of a further rise—signs of slackness in retail trading and the plain fact that share prices, in their rally, had got a little ahead of events, have combined to bring, if not dullness, then a certain staleness to the equity sections.

There is, however, a disposition amongst London brokers to look optimistically at 1963 equity prospects on the assumption that, by the middle of next year, Government re-expansion moves will have begun to bite. Investors, on the other hand, seem content to wait for signs of the biting rather than to anticipate them.

Another stock-market factor is a sizeable new issue rush which is tending to absorb investment funds normally available for market investment purposes. A considerable proportion of current new offers are of fixed interest investment stocks and in this end of the market there are still hopes of an eventual further reduction in long-term interest rates.

#### Changes in the Purchasing Power of Money

SIR, — I have read 'Realist's' reply in your issue of December 1st to my letter in the previous issue; but I am not sure that his formulation of my example carries Mr Parker's argument forward. 'Realist' makes four assumptions, two of which—those lettered (b) and (d) are scarcely consistent with the assumptions which I made. My assumptions (implicit, if not explicit) were that the replacement provision was made over the life of the machine and not all in the year of renewal, and that depreciation was charged on the estimated net replacement cost, not the historical cost.

Perhaps I ought to enlarge on the use of the replacement cost. Many United Kingdom companies - some hundreds, I believe, including many of the largest, vide, for example, I.C.I.'s annual report for 1958 - now revalue their fixed assets from time to time to take account of increasing replacement costs. This necessitates an increase in the depreciation charge to a level consistent with the current replacement cost. If under 'traditional accounting', a firm can spend the whole of its cash income in a year on replacement of plant, and yet come to the conclusion that it has made a net profit, as 'Realist' argues, then clearly there is something wrong with traditional accounting. But the assumption that the firm finds the whole of the replacement cost in the year of replacement is 'Realist's', not mine.

'Realist's' alternative scheme to take into account changes in the purchasing power of money is not convincing. It may well be that I do not understand it; but what he seems to be doing is to inflate items shown in traditional books at original value to their value in terms of current £s, and to deflate items shown in traditional books at current value to the £ of the year of acquisition. If this is so, then I suggest there is rather more than double counting in his scheme

I have another point on this proposed scheme. If equity capital is to be inflated by reference to the fall in the purchasing power of the £, then, to be consistent, the book value of fixed assets should be similarly treated. As I have said, this would necessitate charging depreciation on current replacement cost, and such revaluation would therefore invalidate his historical cost assumption.

'Realist's' alternative scheme suggests that a word of warning is necessary. Any firm contemplating any such scheme would be wise to adopt a standard year – preferably the current year – for all valuations and revaluations. There is a lot to be said for historical or original values, but where revaluation is thought

to be necessary, the value of the  $\pounds$  in a particular year should be adopted for all such revaluations. If equity capital is to be inflated to its current value, then investments should be entered at their current value and not deflated; and it should also be kept in mind that consistency and good accounting may demand the revaluation of other items as well as those first picked on for such treatment.

I am not sure what is meant by the first sentence of 'Realist's' last paragraph. The second sentence seems to indicate that he accepts my view that where bonds are acquired for the ultimate repayment of a loan, a revaluation of the bonds would be superfluous.

Yours faithfully,

Bushey Heath, Herts

E. J. BROSTER.

#### **Training of Articled Pupils**

SIR, – We have for a long time felt the serious need of some full-time course at an early period of articles to expedite pupils' academic training so that practical work can, as soon as possible, have more purpose and

meaning. Something shorter than we had envisaged has recently been introduced by the City of London College, and after having the experience of sending two pupils to the first course we should like to congratulate those responsible both on initiating the course and on its content. It seems to us to be valuable for any three- or five-year pupil who is well on with a preliminary correspondence course.

Yours truly,
WHITEHILL MARSH JACKSON & CO,
London WCI Chartered Accountants.

#### Sale of Audits

SIR, – We have a block of audits for sale, including some requiring an auditor approved for the purposes of friendly societies, etc., and we should be grateful if any of your readers could give us a reasonable idea of the amount we should obtain, based on a number of years' purchase price of the gross fee. It is a provincial practice.

Yours faithfully,

CHARTERED.

# THE INSTITUTE OF CHARTERED ACCOUNTANTS OF SCOTLAND

#### SPECIAL GENERAL MEETING

A special general meeting of members of The Institute of Chartered Accountants of Scotland was held on November 23rd, at Chartered Accountants' Hall, 218 St Vincent Street, Glasgow. Mr James C. Stewart, c.A., the President, was in the chair.

#### PRESIDENT'S ADDRESS

Addressing the meeting, the President said:

On the occasion of the half-yearly meeting, when no printed report is circulated to members, it has been the custom for the President to present to members

Mr James C. Stewart

some report on the activities of the Council since the date of the annual meeting. This year there has been a great deal of activity and cannot in the time available cover the whole of it. On the domestic side members are alof the ready advised of the main features, because we had a special general general meeting in June at which various changes in the Institute's rules were made and at which certain other matters were reported. Members

will recall that at the same time circulars were issued dealing with other matters on which the Council had reached conclusions affecting the whole membership. Most of these proposals arose from the Report of the Policy Committee, which covered such things as apprentices' remuneration, admission and registration fees, examination fees, the issue of *The Accountants' Magazine* to members, and professional charges. The necessary changes in the rules to give effect to certain of the proposals have been approved by the Privy Council and they are now in force. Arrangements are in train for the issue, as from January next, of the *Magazine* to all members of the Institute as part of its general services. There has been an appreciative response to the circular which was issued dealing with professional charges and some useful meetings have been held in various districts. Others, which I hope will be equally useful, have been arranged.

A new Treasury scale of fees for accountants has come into force, effective as from April 1st, and that should also be of help to members who undertake work for Government departments.

#### **Invisible Exports**

In addition to these matters the ordinary day-to-day services to members and the administrative work which is necessary for running an Institute of this size has gone on. These constitute what one might call the invisible exports from headquarters to the members and, just as in our country's trade the invisible exports play a very considerable part, although only those connected with them may see what is going on, so in the Institute these services do account for a great deal of hard work by a great many people, and they do have a great deal of advantage for the members in general, although they may not appear definitely to affect them as individuals. The visible exports in the way of paper have increased also. We hope that with the issue of the Magazine to all members the multifarious circulars

which have to be issued will perhaps be reduced in number and that there will be more effective contact between the Council and the membership generally through the medium of the *Magazine*. A reduction in this paper work would be welcomed by the Council, and also by the secretariat and, I am sure, by the members, but it seems to be a flood which it is impossible to escape from or even to build any kind of ark on which to float away.

It may interest you to know that *The Accountants' Magazine* is very highly regarded in professional circles and that frequent extracts from it and references to articles in it appear in the professional Press both in Britain and overseas. Together with other activities of the Institute here it helps to maintain our good name and standing abroad.

#### **Courses for Institute Members**

The Council provides many other services for members by way of courses, discussion meetings and other activities. The Summer Schools, of which the tenth was held in the summer at St Andrews, are now a very well-established feature of the Institute's activities. I hope that many of you new members will take advantage of that opportunity to meet some of the older members, to come there and give the older members some new ideas and to acquire what a great many of those who have attended previous schools have acquired – the feeling of belonging, the feeling that this Institute is really something that has got a personality and that there is companionship to be had among the members.

There have been this year two E.D.P. courses, one a fourth version of the elementary introductory course which now seems to be established as a regularly recurrent feature, a course which I think most people would benefit from attending even if it by no means serves to make them experts in this field. I myself was compelled by reason of my office to attend the last one – that was my feeling when I went there – but when I came away I was extremely glad that I had gone, and I think I understand just a little of what goes on inside the little black boxes. At the advanced course I merely attended the opening dinner, but I gather that the course was very much appreciated by those who attended and it is hoped that it may also become a recurrent feature.

In addition to these courses we have had in Glasgow the usual course in mechanized accounting and there has just been started a course in rapid reading, which is a very necessary thing if we are to keep up with the flood of paper to which I have already referred.

#### Other Domestic Activities

We have set up a research committee which is presently considering the best method of operating and what type of project is likely to be most helpful to members. Research projects take some little time before the results become available to members, but you can take it that the Institute is now actively engaged in this field.

Tutorial classes must also be regarded as services to members, because under present-day conditions they form a necessary part in the training of the apprentices which, in the more leisurely days of half a century ago, could all be done in the offices, but which cannot now be given in that way. Therefore the provision of these classes by the Institute is not only a service to the

apprentices who attend them but is definitely a service to the members whose apprentices are able to get part of their training there.

In various centres also there are discussion groups and other types of meetings which help to get the membership together.

Another branch of Institute activities is what one might call relations with Government departments and public relations. There have been discussions with the Inland Revenue department on the Finance Bill and other tax matters, and consultations with other Government committees and departments on various subjects.

In quite a different type of venture the Institute collaborated with a number of bodies in producing a booklet on services available for management in Scotland. This was widely distributed to the members of the Institute and to the members of the other participating bodies, and was very well received by industrialists and commercial people generally. The part played in editing the booklet by the Institute's staff and particularly by Miss Dunlop was very much appreciated. This type of co-operation is something which I think should be encouraged.

We are also participating directly and indirectly in the National Productivity Year, which was inaugurated earlier this month, and we hope that people will realize that chartered accountants have a part to play in promoting productivity and the efficiency of the business enterprises which they serve.

#### **Overseas Relations**

Leaving this country, there has been a great deal of activity during these last six months in the field of foreign relations. Now this is a field in which many members may think they have little or no interest, but it is not so. It is a field which concerns energone. It concerns people in two ways: those who have a direct interest just now in practice on the Continent or elsewhere throughout the world - and a great many of our members are engaged in practice outwith the United Kingdom - and those who practise in this country in that, if and when the United Kingdom joins the Common Market, there will be a great many problems arising over the exchange of accounting services between British accountants and continental accountants. Then it concerns us all in a different way in that, if we are to maintain our position as leaders of accountancy thought in the world, we must keep abreast of what other people are thinking and of what other people's methods and practices are. It is only by meeting not only European accountants but also accountants from all over the world that we can hope to do that. While, therefore, it may seem to some people that attending conferences and committee meetings in various very pleasant spots in Europe is something of a fringe benefit for the Secretary and the President, it is not really so. It is a very practical and essential part of the Institute's work.

The main event in this international field was the Eighth International Congress, which was held in New York in September. The number of members of our Institute who have attended these international congresses seems by some curious process to increase the farther away the congress is held. At the 1952 Congress, which was held in London, there was a very small number of Scottish members present—it is not

terribly exciting or interesting to go to London. In 1957 the Congress was held in Amsterdam and there was a somewhat larger attendance - Amsterdam is a very pleasant city and it is rather more exciting to go there perhaps than to London. The 1962 Congress was held in New York and there was yet again a very great increase in the numbers. There were altogether, including the ladies who accompanied them, some two hundred representatives of the Scottish Institute present in New York. Whether these members came back any better informed technically about the profession I would not like to say, but they came back, I am quite certain, better able to exercise their judgment in accounting matters as a result of the discussions, formal and informal, in which they had taken part during that week, and they came back with much widened horizons of thought, something of very great importance in our profession.

#### The European Congress of Accountants, Edinburgh, 1963

The next of such congresses will be held in Edinburgh next year, the European Congress of Accountants. I hope that what I have said about the members who attend being in inverse ratio to the distance will not be taken as justifying a refusal by the Glasgow members to travel to that exciting place, Edinburgh. The interest which is being taken in this Congress all over the Continent is quite amazing. Wherever one meets Danish, Dutch, French, German, Norwegian, Swedish accountants, or indeed accountants from any of the Western nations of Europe, one hears, 'Now we hope to be in Edinburgh next year', 'We hope to meet you again in Edinburgh next year', and so on. I do not know whether we shall have to hold overflow meetings in Glasgow to accommodate all the people who seem to want to come, but it is very encouraging to those concerned with the organization of the Congress to snow that there is such enthusiasm for it, and I hope that the members of the Scottish Institute, which is acting as the host body, will support it in great numbers and that they will take every opportunity to get into personal contact with the accountants from overseas who will be there, and I am sure that they will find his personal contact stimulating and that they will gain a great deal in knowledge of the conditions in which the profession is carried on in different places ind much background knowledge which will be useful n their day-to-day work thereafter. It should also be sorne in mind that this European Congress will provide n opportunity for us to show these visitors, who are seople with the same kind of influence in their own countries as our members have in ours, and that is not nconsiderable, what Scotland has to offer in the way of ttraction both to the tourist and to the business man.

#### Conclusion

will close with one reflection on the New York Longress. As one might almost have expected in America, there was great stress laid on size and one ould very easily become obsessed and oppressed by ize—the size of the Congress itself, the size of some f the accounting firms which were represented there, he size of the business enterprises whose leaders ame and spoke to the Congress—and one might ome away saying, 'Well, the Scottish Institute is retty small beer compared with this kind of practice

of accountancy and this kind of scale of industry'. But this is, I think, quite the wrong attitude. The Scottish Institute has a great deal to contribute to the profession. It may not be among the giants in size, but each of our members is quite as competent an accountant as his counterpart in any of the other professional accountancy bodies and we have a great deal to contribute provided we retain our national pride, and our pride in being a member of our Institute; we must retain our independence of thought, and we must have the courage to form our own judgments.

#### PRESIDENT'S ADDRESS TO NEW MEMBERS

At the meeting, 224 candidates were admitted to membership and 113 of the new members were present.

The names of the winners of awards and prizes in respect of the 1962 examinations held by the Institute were read out, and the prizewinners received their awards from the President.

In the course of his address to the new members the President said:

You are entering your professional careers, as I have said, in a period of change - a period of political change. In Europe, Africa, Asia, America and all over the world political changes are causing feelings of uncertainty which affect not only the political life of the countries concerned but the industrial and commercial life of the whole world, and these are some of the things which you have to learn to live with. It is also a period of scientific change: the introduction of atomic power; new conceptions of astronomy; the nature and the size of the universe and how one should be able to get about it. There is social change: a loosening of religious and family ties which creates unrest in most countries and in the midst of which I think that Institutes such as ours, although that is by no means their primary purpose, can serve as stabilizing influences; and, of course, bearing most directly on the object of your attendance here today, there is professional change.

There are new techniques being introduced and new conceptions of the conditions under which we should work, of the extent of Government control or the extent of institutional control over the activities of our members; changes in the conception of the auditor's role and of the functions of accountants generally. In the midst of all these changes you must neither stand bewildered nor cling despairingly but anquestioningly to what you think you have been taught during the course of your studies. You must be prepared to think and judge for yourselves, to seek advice, which will be willingly given you by your elders, but to reserve the right to question or reject that advice. The training you have received has been designed as much to fit you to do this as to acquaint you with merely technical skills and with the statutory requirements under which you will carry out your duties. If it has not given you that ability then, in so far as it has not, it has been a failure even if you have passed the requisite examinations.

Blown upon by these winds of change, which sometimes to your elders seem to be positive gales, you will, I hope, find in your membership of the Institute a haven of shelter from the merely destructive blasts and a port from which you may sail to prosperity before the fresh breezes of changing opportunity.

# Netherlands Accountants' Year-Day

#### MERGERS AND INDUSTRIAL CHANGE IN EUROPE

#### Dutch Experience in the Common Market

RGANIC change in European industry and business problems arising in mergers were the subjects discussed at this year's Accountants' Day Conference of the Nederlands Instituut van Accountants held in Amsterdam.

The President of the Netherlands Institute, Mr H. C. Treffers, was in the chair at the conference sessions in the Concertgebouw, a building which evokes pleasant recollections for the many overseas accountants who attended the Seventh International

Congress there in 1957.

In addition to some six hundred members of the Netherlands Institute, there were present accountants from Austria, Belgium, Denmark, France, Germany, Great Britain, Ireland, Luxemburg, Sweden, Switzerland and the United States of America. The Institute of Chartered Accountants of Scotland was represented by its President, Mr J. C. Stewart, c.a., with Mr E. H. V. McDougall, Secretary; the English Institute by Sir Thomas Robson, F.C.A., and Mr F. M. Wilkinson, F.C.A., Joint Secretary; the Irish Institute by Mr R. E. McClure, F.C.A., President, and Mr W. S. Orr, F.C.A., Secretary; The Association of Certified and Corporate Accountants by Mr E. Spencer, F.A.C.C.A., President; the American Institute of Certified Public Accountants by Mr J. Harold Stewart, C.P.A., Past President; and the Union Européenne des Experts Comptables Economiques et Financiers by Dr W. Elmendorff, President, with Mr R. Holveck, Secretary-General. Mr Douglas A. Clarke, LL.B., F.C.A., Mr A. E. Dawson, F.C.A., Mr Alexander McKellar, C.A., Mr W. L. Milligan, c.a., and Mr G. A. Usher, c.a., attended as guests of the Netherlands Institute.

#### **Dutch Registered Accountants Act**

In his opening address, Mr H. C. Treffers referred to the passing of the Registered Accountants Act for the regulation of accountancy in Holland. In the course of his address he said:

'Dutch accountants may feel satisfied that this Act largely corresponds with the principles underlying the recommendations of the Council of my Institute that were submitted to the Government in 1953 and 1954, and to the Van der Grinten Committee. Investigation is still in progress as to whether separate rules should be made for a 'second group of accountants'. Without, for the present, going further into the matter, I wish to say that in the opinion of the Institute, it would certainly cause confusion and also be against public interest, if a group of 'second-class auditors' were created. For proper auditing one cannot set a lower standard for the smaller businesses.

'It is, of course, of paramount importance that the law should explicitly guarantee that, for professional practice under the title of "registered accountant", the qualifications of professional knowledge shall not be lower than those of our present university and Institute examinations. This ensures that the standard of professional knowledge will

not be lower than what has so far been achieved through persistent effort in a free organization. This is not put forward as primarily in the interests of the registered accountant himself, but is of the utmost consequence for the proper performance of our professional duties.

'It is obvious, and not only to our colleagues, that besides the requirements for the necessary professional knowledge, the rules of conduct will have to guarantee the utmost functional independence, especially when the accountant is

acting in public practice.

'Next I would like to mention that our committee of advice on professional matters has, either itself or through a subcommittee, reported on three problems of outstanding importance for the profession, namely:

(i) the responsibility of the auditor with reference to

fraud;

(ii) the influence of latent tax obligations on the annual accounts of the limited liability company, and

(iii) the consequences of hidden and secret reserves for the approval of the annual accounts by the auditor.

#### **Hidden and Secret Reserves**

'In spite of all division of opinion on this point [hidden and secret reserves], I am convinced that all of us will agree that here we have a problem on our hands that must be faced and solved. I do not think it is incumbent upon me to put forward a suggestion on this subject, but I do wish to observe that those who are convinced that the system of industrial production and distribution is a very important asset in our Western community will, in my opinion, have to do whatever they can to find a solution for this problem. In this respect also the accountancy profession will have to be alive to its task, although I should add that it would be incorrect to consider this a problem, in the very first place or even exclusively, for the public accountant. On the contrary, I may say that primarily it is more a problem for the boards of management of companies, for the financial world and the financial press, but it should be noted, as well, that some consider this point to be a task for the Government.

'I will not say that this question is not of importance for the public accountant; on the contrary; for after all the public accountant can only give his approval if he thinks that the accounts submitted to him for audit are acceptable. For the acceptability and especially for the extent of the information and explanations required, there has for the past few years been a tendency to apply standards that are growing more rigorous. It would not be logical to make such standards primarily dependent upon the judgement of the public accountant. That would impose a responsibility where it does not belong in the first place. Nevertheless the members of our profession are, in fact, quite prepared to co-operate towards finding a solution. In actual practice this is being done to a far greater extent that is manifest to the public at large, by giving advice in places where the accountant is in charge of the audit of the annual accounts.

"The growing feeling that it will be imperative to come to a greater uniformity in the principles of valuation applied in drawing up the annual accounts, fits in with what has been said before. This is not only a problem of national importance; as a consequence of the ever-increasing internationalization of trade and industry, also strongly stimulated by evolutions such as the European Economic Community, it

has at the same time developed into a problem of international importance. In the course of the Eighth International Congress of Accountants held in New York, this problem was repeatedly under discussion.'

#### Changes in European Industry

Professor Dr H. J. Kuhlmeijer, of the Economic University of Rotterdam, then addressed the conference on 'Organic changes for and in European industry as a consequence of the European Economic Community'.

Recent events, he said, showed that the violent economic expansion of recent years in a number of Western European countries had diminished in strength. A period of quieter development was dawning. The slowing-down of the growth produced its own problems. Increased vigilance was required when the economic traffic lights were blinking amber warning signals.

Without wishing to neglect these current and extremely important aspects, Professor Kuhlmeijer said that he was concentrating on structural development and on long-term trends, and particularly on a number of changes for industry as a result of the European Economic Community. Some of these developments were, more or less clearly, taking shape.

Examination of these developments is at present hampered by the continuing uncertainty as to whether Great Britain, whether or not accompanied by some countries of the Commonwealth and by members of the European Free Trade Association, would join the European Economic Community and on what terms. Their entrance and especially the conditions of entry may make all the difference between night and day for some branches of industry.

In American eyes, the European Economic Community was viewed as one market with a purchasing power of less than half of their own American market. Yet the annual economic growth in the Common Market countries was appreciably higher than in the United States, so that while these conditions continue, the difference per head in purchasing power between these two great markets may gradually become smaller.

In recent years the consumers and workers in Holland had experienced an important rise in income. In the period from 1958 to 1961 wages had risen about 15 per cent, as against a rise of 5 per cent in the cost of living. A comparison between 1958 and 1962 would be still more favourable.

Increased spending was accompanied by an increase in what was called the free-income component. Owing to this, the power of the consumers as a group increases and the distributing sector gained more importance.

#### Towards a Marketing Economy

Professor Kuhlmeijer then discussed a number of general economic trends which were strengthened by the combination of the national markets.

The union of a number of national markets in Western Europe would not by itself, he suggested, create a common market that was greater than the sum of its parts. Accordingly, important questions of adaptation and adjustment were brought forward, not only for business life, but for the Governments of the member countries, involving the harmonizing of economic, social and trade policies.

The progress of technical development and the

continuous shortage of labour resulted in increasing investment in more expensive machines and equipment. Owing to this the proportion of fixed costs may rise. The greater the capital investment, the more was the undertaking sensitive to the trade cycle, and the more was the need to avoid excessive disturbances in production and to have a stable demand.

#### Costs and Prices

Undertakings have, for a number of years, been confronted with a continually rising level of costs in wages and salaries, social security burdens and a shorter working week. The Common Market, said Professor Kuhlmeijer, was well on the way to becoming an area with high costs of production and distribution. On the other hand, numerous sectors had already been confronted with a downward pressure on prices, which, apart from cyclical and other factors, may also result from the periodical reductions in the internal tariffs.

Businesses and branches of industry which did not succeed in time in making the adjustment between prices and costs would see their market position affected and might have to give place to others. While the changeover process would be eased by a widening of profit margins, the consequence of the Common Market was likely to be a shrinking of profit margins, accentuated by labour scarcity. Businesses with the lowest profit margin would be the first to feel the profit pinch and profitless prosperity offered little future. The phase of transition to the Common Market would be distinguished by an elimination process in which a number of European businesses would disappear or be taken over. As against this there would be the establishment of new businesses by enterprises from inside or outside the Common Market (e.g. English and American concerns).

#### **Concentration of Enterprises**

The growing intensity of capital in industry, susceptible to cyclical influences, the increase in the free income component of the consumers and the greater size of the market, all pointed to the increased significance of marketing for many industrial frms. In the industrial sector, the commercial departments were often the least developed and much needed to be done in training of their managers and staff.

Manufacturers with limited capacity would have less success in competing if they made a long range of products: they would need to specialize and to decide which products should be eliminated and on which qualities, price ranges and customers they should concentrate. The success of the large-scale distributing enterprises would stimulate consumption at lower prices and further promote mass production in large series.

In order to realize lower costs, under the economic laws of scale and growth, the assortment of manufacture in each factory would have to be narrowed. In retail trade, however, costs might be saved through increase of turnover at the place of sale, widening of choice and self-service. Owing to these contrary tendencies, new forms of combination and collaboration would have to grow, involving new relations between the making and selling departments of big businesses. The marketing sectors would grow in importance and the proportion of distribution costs to total cost would increase.

#### Widening of Distribution

Industrial enterprises in a number of sectors were faced with the choice as to what extent and in what way they should attune their output to the large distributing concerns and to the traditional middlemen. As a consequence, the optimum volume of turnover, in relation to marketing costs, and the optimum volume of manufacture, in relation to manufacturing costs, would be disturbed. Balance could be restored by closer co-operation or merger of undertakings, so as to combine the advantages of specialization in production with differentiation of sales. Success in exports outside the Common Market was partly determined by the preservation of the market position in the Common Market.

The question as to the optimal place of establishment of industries needed to be further considered as a result of the integration of the Common Market. Great international concerns might be willing to incur changeover losses in making a geographical shift of production. Industries with intensive need of labour could move to associated countries inside or outside Europe where the labour costs were relatively low.

Trade and industry, said Professor Kuhlmeijer, while striving for profitability and growth, must champion the essential cause of raising the level of prosperity; this was so, not only within national boundaries, but also in the whole of the Common Market, which would increasingly take on the character of a marketing economy.

#### **Europe the Home Market**

Dr Weisglas, head of the Economic Department of Unilever, thought that with the slackening of economic growth, too much attention had been paid to short-term problems and too little to the long-term benefits offered by the Common Market. After a time, one reached the limit of available capacity of equipment and of labour. All available economic prognosis pointed, apart from world-wide calamities, to growth though this did not rule out recessions of limited duration and geographical area. Even in economics, trees cannot grow in the sky and, especially in the Netherlands, there was a continuing shortage of labour, or, more exactly, a shortage of available manhours which was the cause of the slower growth.

The Common Market, he said, was a catalysator of many economic tendencies which had manifested themselves more clearly in recent years. The lowering of tariffs and the cessation of quotas had helped European trade independently of the Common Market, but the acceleration of this in the Common Market had encouraged the American Trade Expansion Act, through which further world-wide reductions of tariffs were to be expected. The process of mergers and co-operation to obtain technical benefits in production, selling and research had also been speeded by the Common Market.

It was less than five years, said Dr Weisglas, since the Treaty of Rome came into effect on January 1st, 1958, with its measures for raising quotas, lowering tariffs, co-ordinating agriculture and harmonizing of social policy. Further harmonization measures would be established by 1970 or earlier. Within a few years the European Economic Community would be one home market.

#### Confidence in Dutch Industry

The industry of the Netherlands, said Dr Weisglas, had grown up with similar problems and without a specific policy of protection and had learned to develop with only limited protective tariff walls. In 1960, about half the industrial production of Netherlands industry found its way to the foreign market, and of this more than half to the European Common Market. The proposition that the Netherlands market could be a remainder-market or dumping-ground for foreign manufacturers was unthinkable: nor that Dutch products could be of lower quality than those of foreign industry. Rather might one claim that the Common Market offered to Dutch and Belgian industry relatively more scope for expansion than to the larger countries of the Common Market. Beyond the home market of the European Economic Community, were the development areas, which were of special importance for the Dutch capital goods industry. Despite the transitional problems, Dutch industry would record more profit than loss from the Common Market and would satisfy the needs of the time for larger-scale production, better quality, specialization, product development, co-operation and effective market strategy.

Dr E. W. Meier, secretary and adviser to the Netherlands Catholic Employers' Association and permanent delegate to the European Economic Community, said that in the past industrialization had been stimulated in Holland by lower costs and wages. He claimed that through rising wages the industrial position of the Netherlands had worsened in comparison with its competitors in Europe and that the automatic warning lights were showing a red light. He feared that in the future costs would rise further through the outside tariff wall of the Common Market and the harmonizing of social costs.

At the end of the morning, Mr Treffers thanked Professor Kuhlmeijer for his critical analysis, for not shrinking from bringing out any weakness in the present position, and for his stimulating challenge. Dr Weisglas had been a more optimistic observer and Dr Meier had set the Professor's sketch in a golden frame. Mr H. C. Treffers concluded:

'We are witnesses, we are living through a great and fascinating development in Western Europe and we can be astonished that this old part of the world shows so much resilience. Though our future depends on the success of the Common Market, we have in the Netherlands the hope that this development will not shut us off from the rest of the world and that it will above all bring to an end the division of Western Europe.'

#### Concentration of Enterprises

For the afternoon session of the conference, Professor G. Diephuis, a member of the Netherlands Institute, had prepared an address on business problems in establishing concentration of enterprises, but owing to illness was not able to be present. His paper was discussed by a panel consisting of Mr J. Kraayenhof, Drs P. F. R. Stol, Professor Dr A. Th. de Lange and Dr H. Veringa. Professor A. Goudeket was in the chair as leader of the discussion and first gave a summary of the address of Professor Diephuis:

In the years eafter the Second World War the formation of larger units had again come to the fore. In Holland, through lack of sufficient raw materials, industry originally developed refining processes forming an extension of international trading activities.

Consequently the three distinctive features were variety, a horizontal organization and relatively smaller production units. In other countries, the presence of raw materials and a larger national market made possible a more integrated organization of industry with a more specialized production in greater series.

With these origins, Dutch industry had been confronted with a realization of the political and economic idea of the European Common Market, which aimed at an expansion of the market as a basis for large-scale production. The conditions of harmonization, said Professor Diephuis, deprived Holland of the advantage hitherto enjoyed of a low level of cost. The high rate of growth in 1959 and 1960 had now fallen back, while labour costs had increased and the working week was shorter. In theory prices should rise, but with the influence of the Common Market and the price regulation policy of the Government, prices had risen less than costs.

Since a favourable balance between prices and costs was a necessary condition for the continuance of a business, it was imperative for the management to consider whether the structure of the concern would promote efficiency over future years or whether some change was needed. The present very fast development in Western Europe raised the double task of changing over to a much greater selling market and to a reduction in costs. Professor Diephuis expressed the view that the natural growth of an enterprise may proceed too slowly and there may be danger of over-capacity in a particular line of business. Co-operation may bring out existing latent reserves of capacity. In this way one could 'buy time' and induce growth by leaps and bounds.

#### Mergers

Any form of co-operation, said Professor Diephuis, demanded from each of the partners the sacrifice of some independence. The rules for a lasting and successful co-operation were:

- (a) the purpose of the co-operation should be clear to each participant;
- (b) the advantages should, as far as possible, benefit them proportionally to their contributions;
- (c) the carrying-out of the co-operation should, as far as possible, take place in stages. For psychological reasons, time must be given for the management at different levels to realize the importance of the co-operation.

Although co-operation in relation to certain functions of a business might take the form of a cartel or might arise through a take-over bid, Professor Goudeket led the main discussion at the conference to the subject of amalgamations by merger. The individual enterprises lost their economic independence and a combined economic entity is created with a central management. The merger was, in part, a transfer of the existing enterprises, and in part an intention to create an improved economic position.

#### **Net Worth and Maintainable Profits**

The value of each of the existing enterprises would depend, according to Professor Diephuis, on its invested net worth at present-day values and on its maintainable profits using comparable standards but without taking into account the effect of the merger.

The panel spent some time discussing the basis of valuation and other matters in which accountants had special interest and could give advice. The high importance of ascertaining maintainable profits and the difficulties in doing so for businesses of a different character; the weight to be given to cash and other surplus assets not actually being used in a business but useful to the combined undertaking; the quantifying of other advantages and benefits; all these seemed very close to the accountant's sphere. There was also discussion as to the form of mergers, by holding company or otherwise, and on the treatment of additional profit arising out of the merger itself. It was agreed that the accountants to the fused undertakings should be given authority to discuss matters together so as to be able to avoid situations of conflict between the companies.

In summing up, Professor Goudeket, with his long industrial experience at Philips, said that in his opinion the professional accountant was the person to make the plans for the new entity being created by the merger.

#### Conference Dinner

At the conference dinner, the President, Mr H. C. Treffers, welcomed the visitors from abroad and the members of the Netherlands Institute and their ladies. He spoke with appreciation of the speakers and debaters at the conference and the work of the Ladies' Committee under Mevrouw van der Bosch.

Mr F. van Amerongen, Vice-President of the Netherlands Institute, addressed the representatives of other countries, speaking in French, German and English, on the prospects of agreement between the accountants of Europe. He said that accountants of Europe were looking forward to making a pilgrimage next September to Edinburgh, the cradle of the

Returning thanks for all the foreign guests, Monsieur Alexandre, Honorary President of l'Ordre National des Experts Comptables et des Comptables Agréés and President of l'Institut Français des Experts Comptables, speaking in French, said that the new economy of Europe confronted the profession with the need for constitutional change, for upsetting all traditions and for revision of ideas. While acting as guides to businesses, accountants must maintain a continuous research into intellectual matters, and put moral improvement, with the elevation of the conscience and principles, over materialism.

### PARKER REPORT LACKS BOLDNESS

#### Educationist's Views at Birmingham Students' Dinner

A theme which recurred throughout the annual dinner of the Birmingham Chartered Accountant Students' Society, at the Grand Hotel, Birmingham, on November 30th, was, perhaps not unnaturally, that of education and training.

It was introduced by the city's Chief Education Officer, Sir Lionel Russell, C.B.E., M.A., who criticized what he described as a lack of boldness in the recommendations of the Parker Committee in these matters.

Sir Lionel, who was proposing the toast of "The Institute', said that since the passing of the Education Act of 1944 there had been a silent revolution in the field of education. So far as the statutory leaving age was concerned, the Act had done no more than increase it by a single year to 15.

Actually a most exciting voluntary extension of school life was taking place. Children were remaining at school after the age of 15, and over recent years the sizes of sixth forms had been increasing at the rate of 5 per cent each year.

There was a much greater demand for higher education and a much greater pressure on university places, which had increased from 50,000 just after the war to 115,000.

#### Post-war Development in Education

Sir Lionel said that the accountancy profession was to be congratulated on its present concern with education and training, but he suggested that the Parker Committee, although it had made a bold start, had not carried that boldness into its recommendations.

Since the war there had been a great development in education, particularly in higher education. Taking the engineering profession as an example, he recalled that before the war progress was largely by way of the night school, leading to National and Higher National certificates. He continued:

'May I say at once that I have a tremendous admiration for the man in any profession who has come up the hard way. But you can't do that without making certain sacrifices.

'It is very difficult to come up the hard way and not be just a little narrow in your outlook on life. Because you have had to make large sacrifices of your leisure time, you have been unable to follow all sorts of interests.'

Sir Lionel described how the engineering profession had solved this problem by means of 'that most exciting feature, the sandwich course' – four years of alternating practical experience and instruction in college. 'I cannot accept as an educationist,' he said, 'that correspondence courses are the best method of education'.

He was glad to see that the Council of the Institute seemed prepared to go further than the Parker report to investigate what arrangements could be made with the technical colleges and commercial colleges. With the experience gained from sandwich courses, he was sure that it was 'terribly worth while' to see whether they could not achieve this co-operation between the Institute and the colleges.

In any profession, professional competence was not enough. There must be training in leadership, and the leaders must be men who were as broadly educated as they were highly trained, who would ensure that their profession was used in the service of the whole community.

Replying to the toast, Mr John E. Talbot, F.C.A., a member of the Council of the Institute, said that the problems of training and education would be very much in the minds of the members of the Council for many years to come.

It was clear that reform would come, even though it might not go as far as Sir Lionel would wish. No doubt conservatives would regret many of the changes that were coming, while the radicals would feel that they did not go far enough.

The work of an accountant, he went on, was based on certain techniques, and many of these could not be learnt within the classroom or the lecture hall. That was one of the justifications for articles, and the retention of the system whereby articled clerks did office work concurrently with their study of textbooks and attending lectures.

Mr Talbot emphasized the importance of the allocation of adequate time for earnest and sustained study. This, he suggested, would get rid of two opposite misconceptions – the pessimism which said that the examinations were so difficult that nobody could pass them, and the optimism which said that all the work could be done in the last few weeks before the examination.

Proposing the toast of the 'Birmingham Chartered Accountant Students' Society', Mr John Shufflebotham said he had no basic criticism to make of students or of young people today. 'I think the only fault to be found with youth is that many of us don't belong to it any more' he remarked amid laughter.

#### Higher Aim

So far as education was concerned, he went on, it was only part of a much higher aim which was not always so apparent. This was the creation and maintenance of standards of mutual confidence and trust in professional outlook and behaviour.

So often attempts to settle industrial problems broke down because of a lack of trust in some way or another. By meeting together, students could acquire the qualities of getting to know the other man and of living with him. Those were the qualities needed to bring economic stability and peace to a distrustful world.

In his reply, Mr B. R. I. Scorer, honorary secretary of the Society, said that during the past year Birmingham students had shown a slight but encouraging increase in interest in the activities of their society. He hoped it was because the Society was trying to go a little further and a little deeper. It was aiming at widening the students' interests.

The toast of 'The Guests' was proposed by Mr R. L. J. Easton, a committee member, and Mr J. A. D. Owen, M.A., barrister-at-law, replied.

The health of the President was drunk on the call of Mr A. J. T. Crabbe, B.A., also a committee member, and the President, Mr Stanley Kitchen, F.C.A., replied.

# Notes and Notices

#### PROFESSIONAL NOTICES

Messrs Futcher, Head, Smith & Co, Chartered Accountants, announce that they have opened an office at 1 Imperial Buildings, Muster Green, Haywards Heath, Sussex.

Mr L. Gordon Gee, f.c.a., announces that he has closed his office at 1 Broad Street Place, London EC2. The practice of W. H. ROBERTS, GEE & Co, formerly carried on there, has now been incorporated into the practice of Eric Nabarro & Co, Chartered Accountants, 5 Bloomsbury Street, London WC1.

Messrs Price Waterhouse & Co and Messrs WOOD, COSTA & HARTY announce that on January 1st, 1963, their practices in Jamaica will be merged under the firm name of PRICE WATERHOUSE & Co. The partners of PRICE WATERHOUSE & Co from that date will be Messrs H. CLINTON NUNES, R. C. HARTY, G. W. N. DOWNER, R. C. HUMPHRIES, J. D. ASHENHELM, PETER LIDDLE, J. F. L. LORD and JOHN WHYTE.

Messrs Stead, Taylor & Stead, Chartered Accountants, of 10 James Street, Liverpool, announce that Mr WILLIAM WHINNERAH, F.C.A., who has been with the firm for over sixty-eight years is retiring from the firm on December 31st. Mr WHINNERAH became a partner in 1907 and from 1925 onwards has been the senior partner. The practice will be continued by the remaining partners.

Messrs C. N. Wood & Co, Chartered Accountants, of St James's House, 44 Brazennose Street, Manchester 2, announce that as from December 1st, Mr ARTHUR EDGE, F.C.A., has been taken into partnership, and the name of the firm is now changed to C. N. Wood, EDGE & Co.

#### Appointments

Mr Norman J. C. Barton, A.C.A., secretary of John Dickinson & Co Ltd, has been appointed to the board of the company as financial director. He relinquishes the post of secretary.

Mr R. P. Chappell, F.C.A., has been appointed circulation director of George Newnes Ltd.

Mr P. E. Kanas, A.C.A., has been appointed secretary of British Rainwear Manufacturers' Federation.

Mr N. O. Lance, A.C.A., has been appointed assistant secretary of British Uralite Ltd.

Mr P. W. Lewis, F.C.A., chief accountant of Dennis Bros Ltd, has been appointed a director of the company.

Mr George Ireland, F.C.A., has joined the board of Bowden (Engineers) Ltd.

Mr Ian T. Morrow, c.a., f.c.w.a., has been elected chairman of the Kenwood Manufacturing Co Ltd.

Mr M. A. Muzaffar Hasan Hydrie, B.COM., A.C.A., A.C.I.S., has been appointed as an auditor in the Public Service of Northern Nigeria.

#### **OBITUARY**

#### Jack Farrance Chadwick, F.C.A.

We have learned with regret of the death on November 14th last, at the age of 64, of Mr Jack Farrance Chadwick, F.C.A., financial director of George Wimpey & Co Ltd.

Mr Chadwick qualified as a member of the former Society of Incorporated Accountants in 1924 and was admitted an Associate of The Institute of Chartered Accountants in England and Wales in 1932. He gained special distinction in the examinations of both the Society and the Institute. He spent many years with Mellors, Basden & Co, and although a director of Wimpeys since 1934, was persuaded to become the full-time financial director only in 1956. He was outstandingly successful in dealing with the world-wide problems of the company.

Although quiet and unassuming in manner, Mr Chadwick held tenaciously to his views, always based on a penetrating analysis of the situation and informed judgement. He endeared himself to his colleagues by

his friendliness and quiet humour.

#### SIXTY-THREE YEARS IN THE PROFESSION

A member of The Institute of Chartered Accountants in England and Wales for sixty-three years, Mr William Whinnerah, F.C.A., senior partner in the firm of Stead, Taylor & Stead, Chartered Accountants, of Liverpool, is retiring from practice at the end of this month, as announced under Professional Notices.

Mr Whinnerah was articled to his father in 1894, who was also a partner in the firm, and was admitted an associate of the Institute in 1899. A partner in his firm since 1907 and senior partner since 1925, Mr Whinnerah must be one of the oldest practising accountants in the country.

In 1957, the Liverpool Society of Chartered Accountants held a luncheon in his honour to celebrate his long association with the profession.

#### NEW BRITISH RAILWAYS BOARD

The membership of the new British Railways Board, announced by the Minister of Transport, Mr Marples, last week, includes two chartered accountants. They are Mr P. H. Shirley, F.C.A.(AUST.), who becomes a

MOTOR — FIRE — CONSEQUENTIAL LOSS

#### **INSURANCE** MOTOR'

COMPANY

full-time member and Colonel D. H. Cameron of Lochiel, T.D., B.A., F.C.A., who will serve in a parttime capacity. Both were members of the British Railways Committee, formed earlier this year, to prepare the way for the new Board.

#### IN PARLIAMENT

#### **Decimal Coinage System**

Mr Gower asked the Chancellor of the Exchequer if, in view of the present Common Market negotiations, he will make an early decision about the proposed change to a decimal system of currency.

Mr BARBER: I think we should await the report of

the Halsbury Committee.

Mr Gower: Is not it regrettable that this decision has been delayed for so long? Is it impossible for the Committee to give some interim advice to enable my right hon. friend to come to an earlier decision?

Mr BARBER: We hope that the Committee will be in a position to report early next year.

Hansard, Nov. 20th, 1962. Oral Answers. Col. 991.

#### Wages: Payment by Cheque

Mr Graham Page asked the Minister of Labour whether he will now name the day authorizing the

payment of wages by cheque.

Mr HARE: Yes. After consultation with interested organizations, I now propose to appoint March 1st, 1963, as the day from which the payment of wages by cheque will be authorized under the Payment of Wages Act, 1960.

Hansard, Nov. 30th, 1962. Written Answers. Col. 115.

#### THE INSTITUTE OF COST AND WORKS **ACCOUNTANTS**

#### President's Luncheon

The President of The Institute of Cost and Works Accountants, Mr W. Bishop, c.A., F.C.W.A., gave a luncheon party last Tuesday at the Grand Hotel, Bristol. Those present were:

Prof. L. R. Amey, B.EC., B.A., PH.D., Professor of Accounting, University of Bristol; Mr A. G. Bush, F.c.w.A.; Mr Donald A. Bussell, M.B.E., F.C.A., Chairman, Yatton Furniture Ltd; Mr R. E. Caines, A.C.W.A.; Mr M. J. Condon, A.C.W.A.; Mr J. F. Harper, C.A., Managing Director, Bristol Aircraft Ltd; Mr Richard Hill, J.P., Director, Charles Hill & Sons Ltd; Dr H. S. Hirst, M.A., B.SC., PH.D., General Manager, Severnside Works, Imperial Chemical Industries Ltd; Mr G. J. Pierce, F.C.W.A.; Mr J. F. Robinson, Chairman, E. S. & A. Robinson (Holdings) Ltd; Mr A. B. Wiggins, A.C.W.A.; Councillor Charles O. Worth, Chairman, Port of Bristol Authority; Mr Derek du Pré, Secretary of the Institute.

#### THE INSTITUTE OF CHARTERED ACCOUNTANTS IN IRELAND List of Members

The List of Members of The Institute of Chartered Accountants in Ireland, now published, shows that membership at August 31st, 1962, numbered 1,761, an increase of fifty-one over the previous year's figure. An analysis of the membership is given below:

		Members in Ireland	Members no in Ireland
Fellows in practice		267	15
Fellows not in practice		18	13
Associates in practice	٠.	202	22
Associates not in practice		928	296
Matal arranghamahim		<del></del> .	-6-
Total membership	• •	1	<b>,</b> 761

The new book contains the usual alphabetical and topographical lists of members, together with names of members of the Council of the Institute.

#### THE CHARTERED ACCOUNTANT STUDENTS' SOCIETY OF LONDON

The following meetings of The Chartered Accountant Students' Society of London will be held during next week:

Monday, 6.30 p.m. for 7 p.m.: at Grosvenor House, Park Lane, W1: Annual dinner.

Tuesday, Visit to Fords Motor Works (limited number).

5.30 p.m., at Luton: Lecture on 'Consolidated accounts', by Mr R. S. Waldron, F.C.A., F.T.I.I., F.I.A.F.B., F.INST.D.

Wednesday, Lecture and demonstration of punched-card

accounting (limited number).

Thursday, at St Bartholomew's Hospital: '59 Club' mock

trial. At Caversham: Reading Branch dance.

Friday, 6.30 p.m. At Ilford: Lecture on 'Financing industry', by Mr D. H. Millard, A.C.A.

7 p.m., at Dorking: Mid-Surrey Branch annual

general meeting.

The London Articled Clerk's Diary for 1963 is now on sale at the Students' Society Library, Spencer House, South Place, EC2 (price 4s, by post 4s 6d).

#### ANNOTATED TAX CASES

Part 4 of Volume XLI of the Annotated Tax Cases, edited by Mr Peter Rees, of the Inner Temple, Barrister-at-law, is now published and contains reports with notes on the judgments of the following cases: Musker v. English Electric Co Ltd (Ch.D.); Brooke Bond & Co Ltd v. C.I.R., Brooke Bond & Co Ltd v. Butter (Ch.D.); Doyle v. Davison, (Q.B.D.); Jennings v. Barfield and Barfield (Ch.D.); Fitch Lovell Ltd v. C.I.R. (Ch.D.).

The annual subscription to the Annotated Tax Cases is 50s post free; the publishers are Gee & Co (Publishers)

### £10,000 a Year

AGOOD many years ago Mr Samuel Warren wrote a book which he called £10,000 a Year and which rapidly became a best seller. Its success was perhaps not unconnected with the intriguing nature of its title. If one were to add after the title the potent words 'tax free' it would conjure up visions of a truly astronomical gross income. This highly desirable situation was nearly attained recently when the Special Commissioners decided that a tailoring company need not pay tax in respect of some £10,000 a year from customers. However, the story does not stop at this happy ending, and last week in Elson v. Prices Tailors Ltd, Mr Justice Ungoed-Thomas reversed the decision.

In his judgment, the learned judge said that the respondent, Prices Tailors Ltd, carried on the business of bespoke and ready-to-wear tailors at some three hundred and fifty to four hundred branch retail shops. Customers who placed orders for bespoke garments were asked to leave a sum of cash with the company which was referred to as a 'deposit'. In some instances customers who had paid 'deposits' failed to collect the garments, and the company was left with the garments and the unclaimed deposits. The company issued reminders for about three months and if these were without results the unclaimed garments were then sold as ready-to-wear garments in the company's own shops.

The company provided a manual of instruction for its branch managers and this stated that where a customer turned up to collect his 'deposit', the manager should persuade him to buy something with it. However, where the customer was not persuaded, the manager was to return the 'deposit' to him in order to protect the goodwill of the company. Something like £10,000 a year came in from unclaimed deposits and the company claimed that these were not trading receipts and therefore not taxable.

His lordship said, according to *The Times* of December 8th, that he had come to the conclusion that the Special Commissioners' decision was not right. The word 'deposit' in this context carried its usual meaning of 'security for purchase'. It became forfeitable at the time of the customer's default, and that made it a trading receipt of the year in which it was actually received. The decision thus answered two separate questions, both of which are a frequent source of dispute in income tax practice. Is it income? and if so, At what date did it accrue? There is authority both ways on both of these points, and although no doubt subtle distinctions will continue to be drawn, the decision introduces clarity in one particular field. It is subject to appeal.

# Port Accounting à la Rochdale

AT the time that Lord ROCHDALE was appointed to head the committee of inquiry into the major docks and harbours of Great Britain *The Times* saw fit to remark that 'His findings, some think, are more likely to be reliable than brilliantly original'. Whether this general view is warranted now that the report is published it is not for us to express an opinion, but most certainly its financial and accounting findings, if not quite 'brilliantly original', would, if implemented, mark a very important step forward in the application in the public sector of the most modern, and indeed, most realistic accounting theory. Accountants should not allow the report to pass unnoticed.

The accounting recommendations must be viewed in the light of the committee's general criteria for judging the financial standing of a port. The committee entirely rejected the concept of 'public service' as a limit to a port authority's responsibility for conducting their financial affairs on the basis of sound economic and accounting principles, and they saw no reason why ports should not be regarded as commercial undertakings. In this respect, therefore, their report consolidated the approach of the Herbert Committee Report on the Electricity Supply Industry, January 1956 (Cmd. 9672), and the Government's White Paper on the Financial and Economic Obligations of the Nationalised Industries, April 1961 (Cmnd. 1337).

The Rochdale Committee's views and recommendations on the treatment of depreciation are of much interest. The form and basis of the accounts of the various port corporations is at present laid down in the Parliamentary Acts under which they were established. Most ports use some form of double account system. In the case of the public port corporations there has been no specific requirement to provide for depreciation as such, but only to make provision for maintenance and renewal in the revenue account. The committee suggest that this should be changed, and they recommend instead that, 'after covering working expenses, ports should aim at providing out of revenue for interest on loans, depreciation on a replacement cost basis, taxation, and some margin for reserves to meet contingencies and to help finance minor improvements'. A Charging depreciation of assets at original cost, in their view, does not go far enough since under it ports would only accumulate funds sufficient to replace assets with plant and equipment of a value not exceeding their original cost, or alternatively to pay off the loans borrowed to buy those assets in the first place. In inflationary conditions — and history suggests that some degree of inflation is normal — this would entail that ports would have continually to increase their borrowings, and consequently their interest charges, in order merely to hold their position, and, indeed, this is what has happened in the past.

Like the Government White Paper on the nationalized industries referred to above, the committee recommend charging depreciation on an uplifted basis but there is one important difference. The Rochdale Committee's implication is that the full amount of depreciation should be provided as one item in port accounts; in contrast the White Paper clearly states that depreciation on the historic cost basis should be charged and 'provision should also be made from revenue . . . to cover the excess of depreciation calculated on replacement cost basis over depreciation calculated on historic cost, (i.e. it should involve two items in the accounts). The final decision on how depreciation should be charged 4 in the port industry is going to be an interesting and is it too much to hope - an enlightening one. This is especially so since the Herbert Committee saw 'no practical or theoretical reason why the clearer course of making the whole (depreciation) charge before arriving at "surplus" should not be taken'. In spite of this the electricity supply industry still provides a supplementary reserve for depreciation (to cover additional replacement cost depreciation) after striking its consolidated surplus.

The committee do not discuss the mechanics of replacement cost depreciation. Ports will have to decide whether it is the original cost of the assets revalued by a *general* price index or by price indices of *particular* assets, or alternatively whether it is the current cost of maintaining a given capacity in terms of throughput (i.e. taking technical change and improved organiza-

tion into account). Again, does the system require, in effect, the revaluation at the start and a further revaluation each year thereafter? Does it involve depreciating life-expired assets and how are those prematurely scrapped to be dealt with? The valuation of land involves its own peculiar problems. All these and other matters will have to be decided before ports can depreciate at replacement cost. It will be a pioneering task and they may well have to learn from experience on the Continent.

The step from the ideas of the late nineteenth century to those of the second half of the twentieth is not confined to depreciation alone: t is apparent in the underlying philosophy of the control of charges. As with the railways and other public utilities, Parliament sought to curb my potential monopolistic power conferred in the Parliamentary Acts on port authorities, by providing that the principal charges must not exceed the maximum rates prescribed in those Acts.

The committee found that charges were kept to a reasonable level by competition between the ports and by users' representation on the boards and concluded that the existing system of charges control was 'inconsistent, incomplete and to a arge degree no longer serves any useful purpose'. Accordingly they proposed that it should be bandoned. In the case of port charges there is a listinction between dues which are levied on hips, goods and passengers, and other charges or specific services. The committee considered hat payers of dues should have the right of ppeal to the National Ports Authority, whose ecision should be based solely on the cost of the ervices concerned. All other charges, on the ther hand, should be reasonable and subject to ecourse to the Courts by dissatisfied port users.

This recommendation is curious in two ways. Dues are, by their nature, the most difficult of harges to relate to costs and are largely in the ature of tolls for the use of the port and to meet the fixed expenses of locks, quays, basins, etc. – xpenses that have to be met irrespective of the olume of use. On the other hand, the Courts' riteria in assessing the reasonableness of charges ould be inconsistent with the financial objectives at by the committee and with the decisions on uses by the National Ports Authority.

In addition to the proposed safeguards for ort users the National Ports Authority would

have *permissive* powers to regulate port charges, but these would only be exercised if the Authority was not satisfied on examination of the accounts that charges were not being made on an economic and reasonable basis. Ports would be instructed to establish a charges system which would provide adequate earnings on capital employed on each and every activity.

The general aim in fixing the level of all charges should be to ensure sufficient revenue to achieve the financial objective suggested by the committee. This objective is interesting. Ports would aim at earning enough revenue to cover depreciation on assets at replacement cost and to pay interest on loans, but not in addition to provide for loan redemption. The aim of covering both depreciation at replacement cost and providing for loan redemption was rejected, as it was thought to place an unreasonable burden on port revenues. Commercial concerns, asserted the committee, are not normally expected to maintain themselves and also to pay back their original share capital, and ports which rely for finance on redeemable loans would be placed at a disadvantage by comparison.

In pure theory, depreciation and provision for loan redemption are alternatives, and no doubt this accounts for the committee's recommendation. The problem for the ports is that, as a matter of practical finance, it is not feasible for port authorities financed by fixed interest loans to issue such loans without associating with them sinking funds that will provide for the redemption of these loans after a reasonable period of time. These funds must be kept entirely for the redemption of their related stocks. To issue fixed interest stocks not associated with sinking funds would be tantamount to issuing irredeemable stocks - for even though the issues had redemption dates, such redemption could in practice only be met by conversion. Once this position was appreciated in the stock-market it seems certain that the rate of interest required would rise to a high level to take account of the risk. The rate of interest on fixed interest stock issues, plus the cost of loan redemption, might be said to approximate to a commercial company's dividends. Hence ports could reasonably be expected to provide for loan redemption in addition to replacement cost depreciation.

One solution to this problem is to provide for

loan redemption in the profit and loss account, and to reduce the replacement cost depreciation charged to that account by a similar amount.

The committee thought that ports should also provide out of revenue a reserve for unforeseen contingencies, such as premature obsolescence, and to help finance minor improvements; but the size of such allocations was not indicated. In the electricity industry, the Herbert Committee suggested that an average annual allocation to reserve of 1 per cent of the capital employed would be 'no more than a modest provision against contingencies'.

The Rochdale Committee also criticized the ports' accounting systems and the presentation of accounts, and the low level of capital expenditure in the industry since the war. On management accounting they had a number of suggestions: budgetary control would be improved by having the budgets prepared by the operating departments themselves; regular financial reports to management should be prepared comparing actual with budgeted expenditure; port operations should be costed more frequently and in greater detail; all accounting functions should be done by the accounts department; a common code for analysis of income and expenditure should be

developed by the National Ports Authority. Doubtless many of these improvements are in train. Wide use is made of punched-card equipment, at least two computers are in use and the extension of the use of computers is being examined. Perhaps the report will hasten these developments.

All in all then, the Rochdale Committee have produced a worth-while report. How the Government will act upon it we must, like Mr Asquith, 'wait and see'. However, THE MINISTER OF Transport, Mr Marples - himself no mean accountant - has cited port accounting as one instance where action by the ports on the Rochdale recommendations need not wait for Government pronouncements: 'There are few ports in this country, for example, which would not benefit by a thorough review of accounting procedures. Until each and every port in this country runs its accounts on a thoroughly up-to-date basis it will not be possible for the Government – or anyone else – to be sure that true efficiency, in the sense of really earning one's keep, is being achieved.' Whatever happens the nation must surely be grateful for the constructive criticism of this vital section of the economy afforded by these Rochdale pioneers.

# What Kind of Growth Rates?

by A BUSINESS ANALYST

LL decisions involve planning, whether it be explicit or implicit. Forecasting is an outstanding subject in the minds of business men and is considered indispensable in planning. Forecasts are statements of future expectations. As exact statements of what will happen in the future are virtually impossible the predictions, to a very great extent, depend on the assumptions made. If the assumptions are reasonable, the prediction has a better chance of being reliable. When facts underlying the assumptions are set out in detail, the reliability of forecasts can be more readily judged.

The essence of a sound approach to forecasting is common-sense analysis of the important forces making for economic change. These forces must be expressed quantitatively on a co-ordinated basis of timing in order to appraise their relative importance and to put them in proper relationship with each other. In order to minimize the probability of error, the estimates of their individual values must be corrected or modified in the light of their interrelationships and integrated in a consistent pattern of economic development.

#### **Growth Potentiality**

Forecasting methods and techniques vary with the kind of planning needed. The rapid advancement made in planning in the last decade is largely due to the ever-increasing importance given to sound business forecasting. As decisionmaking is becoming more and more difficult, diverse methods and techniques of forecasting are required. Two broad types of business forecasting are usually applied: short-term and long-term? forecasting.

Increasing interest is being given to long-

range forecasting because it provides a reliable basis for planning commitments for durable goods. Future demand for durable goods must be estimated from anticipated future requirement for their services. Long-range forecasts develop a kind of average anticipation or expectation under determined assumptions. This expectation may be called growth potentiality. In using modern forecasting methods, the assumptions made are based on full or near-full employment.

Long-term forecasts are needed to make decisions regarding public utilities, water works, roads, etc. These decisions are reflected in the budget estimates. Make-shift adjustments from year to year produce unsatisfactory results. Knowledge of long-term requirements for growth and an enlightened understanding of the growth of demand will lend substantial reassurance and encourage private industry to set reasonable targets and provide leadership instead of following blindly certain indications of current markets in the private economy. Private industry needs, and should have, all the encouragement and reassurance it can get to be able to put the future in true perspective. Among the many functions of the Government, one is to provide some degree of responsibility as regards industrial leadership.

For the private industry, it is a costly mistake to provide too little or too much capacity. If capacity is too high, operation is too costly; if capacity is limited, some orders cannot be filled. Low and very high rate of operation are allied to high per-unit cost. No one would expect a business man to have the order books at all times commensurate with his capacity of production, but one would expect a capacity which will satisfy most of the demand in prosperous periods. To meet the demand, the business man must know the long-term demand for his products. Knowledge of future market conditions will help him to have enough capacity so as not to fall far short of peak demands, and not to be out of relation to current demand. Specialized capacity is not readily convertible to other types of products, and even if it is converted the appropriate level of aggregate capacity may become unprofitable dueto concentration of the wrong type of products.

#### **Improving Competitive Position**

An understanding of the growth potentialities of different kinds of products will help to keep the distribution of capacity adjusted to the distribution of demand. When one company attains a better understanding than its competitors of the growth potentiality of aggregate demand and of

the distribution of the demand, the competitive position of the company will be substantially improved.

Comprehension of growth potentialities will help hold down cost of capacity, because it makes it possible to allocate increased expenditures to expansion when costs are the lowest. Capital building is usually carried out in periods of high current demand and costs. Knowledge of growth potentialities will help to stabilize the economy by allocating adequate expenditure on capital building in periods of depression. It also helps creating sound labour relations.

Labour will respect the management much more if they are convinced that the management has a thorough and enlightened understanding of growth potentialities. Company and industrial objectives can be explained more convincingly, capital buildings can expand employment in depressed periods, and if the competitive position of the company improves, higher labour costs can be more easily met without price increases. So much for the advantages and importance of accurate growth forecasting and enlightened understanding of the growth of demand.

#### **Determining Growth Rates**

To be able to make accurate growth forecasting, the rates of growth must be computed accurately too. It has become very fashionable to talk in terms of growth rates, but is the term understood by all of us who talk about it or use it? Some forecasters are convinced that the economy does not change rapidly, therefore the immediate future is likely to be a continuation of the trends of the present. If the rate and direction of change can be determined, it is necessary only to project these movements to predict the future. The following variations of approach can be used:

- (i) projection of consecutive period to period change in either adjusted or unadjusted data;
- (ii) projection of non-consecutive period to period change in either adjusted or unadjusted data;
- (iii) projection of trends in the rates of change (here the calculation of trend line or other mathematical treatment is necessary);
- (iv) projection of trends in the original data, adjusted or unadjusted;
- (v) projection of one half of the cycle from the rates of change of the other half;
- (vi) projection of rates of change patterns etc.

The determination of growth rates depends on

the methods of computation used. Some business analysts use the compound table method, others prefer the method of least squares. There are many other business analysts who use different methods such as:

simple average method; semi-average method; average annual increases/decreases method; moving average method; logarithmic method etc.

It is difficult to say which one is the best method because it depends rather on the series of figures on which the average rate of change is calculated. The examples below give some indication of the importance of the various methods:

#### (i) Compound Table Method

Year -	Sales	
	(£000)	
1948	80	
1949	88	To obtain the average annual growth
1950	96	rate, 140 must be divided by 80
1951	90	which gives 1.75. Looking this up in
1952	87	the compound table, we get 5.2 per
1953	100	cent per annum. The shortcomings
1954	118	of this method is that it measures only
1955	122	the growth between 1948 and 1959,
1956	110	and does not take into consideration
1957	108	the movements between these two
1958	119	years.
1959	140	

#### (ii) Logarithmic Method

This method (based on the figures in Example (i)) gives the same result as that above. The only advantage it has is that no compound table is necessary to arrive at the average annual growth rate.

Antilog of 0.022 0944=5.2 per cent per annum Here again the growth is measured only between 1948 and 1959.

#### (iii) Logarithmic Method Based on Index

Numbers (based on figures in Example (i))
Year Index

0.243 0380 4 11 = 0.22 0944

Antilog of 0.022 0944=5.2 per cent per annum

#### (iv) Semi-average Method

Here the first six years' sales figures are added together and divided by the number of years, and the result plotted on a chart exactly in the middle of the period. The same operation is carried out for the second period.

1st period	2nd period
80	118
88	122
96 90 90·17	110
90 90 17	108 1193
87	119
100	140
541:6=90·17	717:6=119·5

If these two figures are plotted, the two points joined and extended up to 1959 and back to 1948, then the values for 1948 and 1959 can be read off the chart. The value for 1959 (137) must be divided by the value of 1948 (76) which gives 1.803. Looking this up in the compound table, we get 5.5 per cent rate of growth per annum for the period 1948–1959. The second and third methods may be used, but it would not change the result.

#### (v) Simple average Method

(based on figures in Example (i))

One hundred and forty is divided by 80 which gives 1.75 which in turn is divided by the number of years minus one, i.e. by 11, and we get 6.8 per cent per annum. This method is very widely used, and, needless to say, is the worst possible method one can apply.

#### (vi) Three-year Moving Average Method

Year	Sales (£000)	Three-year Moving Total	<b>Three-</b> year Moving Average
1948	80		_
1949	88	264	88
1950	96	274	91
1951	90	273	91
1952	87	277	92
1953	100	305	102
1954	118	340	113
1955	122	350	117
1956	110	340	113
1957	108	337	112
1958	119	367	122
1959	•140	- '	<u>-</u>

The purpose of this exercise is to eliminate or flatten out the fluctuations. After dividing 122 by

88 the factor becomes 1.386 which gives 3.7 per cent average annual growth rate by using either of the first three methods.

#### (vii) Average Annual Increases/Decreases Method

Year	Sales (£000)	Per cent annual change	
1948	. 80		
1949	88	10.0	•
1950	96	9.1	
1951	90	- 6.3	
1952	87	- 3.3	
1953	100	14.9	
1954	118	18.0	
1955	122	3.4	
1956	110	9.8	•
1957	108	r·8	
1958	119	10.3	
1959	140	17.7	
		62.1:	11=5.6 per cent per annum

The curve is fitted so as to minimize the sum of squares of the sales value differences between the trend and the actual sales values. Advantage can be derived, in some cases, by using the squared percentage method.

#### Conclusion

The eight different methods give six different results as can be seen from the following table:

	Per cent
	per annum
(i) Compound table method	5.2
(ii) Logarithmic method	5.2
(iii) Logarithmic method based on	
index numbers	5.2
(iv) Semi-average method	5.2
(v) Simple average method	6.8
(vi) Three-year moving average	
method	3.7
(vii) Average annual increases/De-	
creases method	5.6
(viii) Method of least squares	4.5

It emerges clearly from this table how important it is to use the right method for the computation of the average annual growth rates. The more a company is planning-minded, the more it is necessary to compute the growth rates by using the most appropriate methods. Perhaps some readers may care to comment and suggest other methods or relate their own experiences after having filled in the first N.E.D.C. questionnaire.

#### (viii) Method of Least Squares

# The Coal Board Story – I

INTEGRATED E.D.P.
IN A NATIONALIZED INDUSTRY

by DUDLEY W. HOOPER, M.A., F.C.A. Chief Organizing Accountant, National Coal Board

N reviewing the use of computers and the development of the computing art in a nationalized industry, it is necessary to take into account a number of considerations which together pose some special problems. Each of the nationalized industries has, of course, particular problems of its own, but they all have certain common features which affect the application and development of computing and electronic data-processing techniques:

- (a) they are large in size;
- (b) they are complex in administration;
- (c) there are usually traditional methods of management; and
- (d) they have to provide a public service which must not be disorganized or interrupted while any changes in their internal management methods or administrative structures are being implemented.

#### Possible Fields of Application

Computer applications in the coal industry may be considered as falling, broadly, into three groups. Firstly, there is the view of a computer as an arithmetical calculator. For example, we have used service bureau machines for statistical calculations, problems in medical research, and actuarial calculations in connection with pension schemes and superannuation funds. All these could be done by other methods, but on a computer they can be done faster and with fewer errors – and, if needed, more comprehensively and more frequently. Two particular examples of this sort of work are:

- (a) Calculation of stock control tables to give reorder quantities and levels of stockholding for different items, with stock forecasting; there are 1,000 entries in each table. The computer relieved human boredom and overcame human error.
- (b) Investigation of the time taken to get a message from the pit head to all men dispersed underground, the message having to be passed through various telephone exchanges or terminals, not always manned. This is a good example of critical path scheduling.

Secondly, there is the use of a computer as a mathematical tool, developing techniques which would not be practical on conventional calculators, for example, in model simulation, production forecasting and control, and other problems of projecting many alternatives to find the optimum solution. Examples of this sort of work carried out by service computers are:

- (a) Linear programming exercises on the various by-products of a coke oven, to determine the optimum allocation of each by-product to be produced in the next production period.
- (b) Simulating the flow of work through a projected workshop to establish the best layout and distribution of machines.

Thirdly, there is the use of a computer at the heart of a data-processing system designed to handle current transactions and to prepare information for management. This information will often be, initially at any rate, in similar form to that produced by conventional methods, but should be:

- (a) better (more comprehensive, and partly predigested);
- (b) quicker (and therefore more useful, with earlier action possible); and
- (c) cheaper (using fewer staff in conditions of rising costs).

It is the third field of application which usually offers immediate tangible returns and justifies the

This paper, based on the author's presidential address to the British Computer Society last May and reproduced by permission of the Society, has been brought up to date by the author. The original address, containing some additional technical detail, is to be published in due course in The Computer Journal. Any opinions expressed are those of the author and not necessarily those of the National Coal Board (to whom acknowledgement is due for permission to use the information now disclosed) or of The British Computer Society.

#### THE ACCOUNTANT

computer installation which can then be developed over the other fields. In practice, of course, these three fields of possible computer application are not completely distinct. While distinction was perhaps necessary in the early days of computer development, these fields are becoming more fused together. But it is not easy in a large industry to develop mathematical simulation over the vast range of activity and the many variations in everyday operation. Further, management must not be confused by substituting mathematical non-understanding in place of the traditional flow of information to which they are accustomed.

#### Information for Management

Therefore, the first move has been to design systems which will, as first objectives, provide management information better, quicker and cheaper. This justifies the installations, which will then hold the detailed information related to actual events to be used for developing production control and other techniques based on the simulations and model problem solutions.

The basic form of information for management is a

#### **OPERATING STATEMENT**

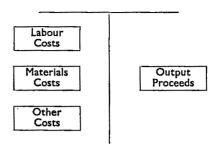

Figure 1. Simble operating statement.

simple operating statement, based on a comparison of cost against realization, outlined in Figure 1. This is the fundamental information required at every level of management, for each activity, and for any purpose (e.g. profit or loss, income and expenditure, actual against budget, etc.). To produce such a statement, it is clearly necessary to record and process all relative transactions to be included in each of the four blocks.

A schematic representation of the flow of data to provide operating statements is shown in Figure 2.

#### INTEGRATED DATA PROCESSING FOR MANAGEMENT

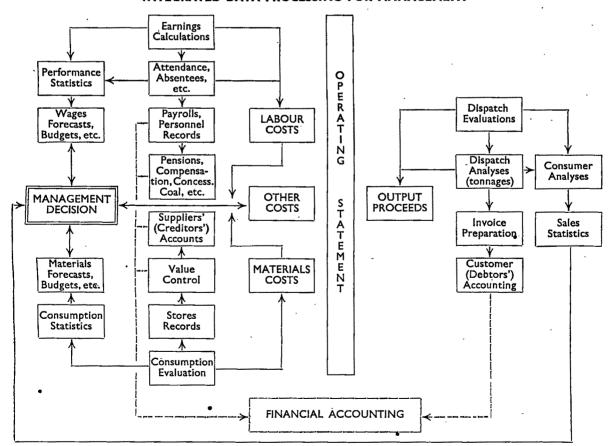

Figure 2. Schematic representation of integrated data processing for management.

Here we have the essence of integrated information processing, a transaction, once recorded, serving all subsequent purposes for which that transaction may be used or incorporated with others.

In a large industry such as the National Coal Board, such a project is particularly challenging in two aspects:

(a) The sheer volume of transactions, or events, occurring every hour, every day, week, accounting period, month and year, with the many variations from expectation in an industry so conditioned by changing geological and economic circumstances;

(b) The implications in potential organization and administrative changes, without destroying the basic administrative pattern or spheres of responsibility within the industry.

The National Coal Board is a large organization by any standards as can be seen from the volumes given in Figure 3. The Board is the sole statutory body for the working of coal in Great Britain, and comprises eight full-time with, at present, three part-time members, appointed by the Minister of Power, with headquarters in London.

**Coal Board Organization** 

For administrative purposes, operations are organized in nine geographical divisions, on the coal fields, each led by a divisional board, with a chairman, deputy chairman, and five or six functional directors. The divisions are subdivided into areas, each led by an area general manager. There are forty-three areas at present. Each area comprises five to twenty collieries, with a variety of other activities, such as central workshops, central stores, road transport services, houses, estates, land, farms, etc. There are also coke and by-product plants, and brickworks.

Collieries	(Approx.) 650
Weekly Paid Industrial Workers	580,000
Annual Turnover	£800,000,000
Annual Output	200,000,000 tons
Net Assets	£800,000,000
Divisions	9
Areas	.40

Figure 3. Some statistics of the National Coal Board.

The administrative organization of the industry follows the 'line and staff' pattern, with a direct executive channel from the Board, through the divisional board, to area general managers and the individual collieries. Each level of management is supported by a functional staff, with line responsibility for technical support.

#### E.D.P. Development in the Coal Board

An outline E.D.P. system for integrated information processing for management, on the basis of Figure 2, was conceived in about 1948, but the original overall concept was too vast to tackle as a whole, particularly on the limited equipment then available. It was therefore decided initially to isolate each component of the main picture, and to deal with each separately, but in relation to the eventual whole.

On the theory that if the most complex problem could be solved (both within the data-processing system and in the surrounding organization) then the remaining components would give rise to fewer problems, wages accounting was selected, and in 1949 an outline wages system was devised for E.D.P.

The scientific minds occupied with computers at first dismissed the problem as being too simple. After being re-written, with the many processes in the computation of earnings in the coal industry expressed as algebraic formulae (with more than a hundred parameters), it was then admitted to be too difficult for any machine then available to solve. Planning went ahead, however, to design a system which could be operated on a small to medium-sized 'commercial' computer, when such a machine was marketed.

Detailed investigations then started to uncover anomalies; in 1950, only two years after nationalization, there were still many local agreements. The problem was whether to wait for rationalization of the whole complex system of calculating earnings, or to accept conditions as they were and devise systems to meet them. It was decided to concentrate on the main aim of making E.D.P. work, whatever the circumstances and however they might change. A specimen colliery in the south-western division was therefore taken for detailed study in conjunction with one of the punched-card companies.

It soon became clear that the problems of preparing the vast amount of input data would outweigh any problems within a computer system. Three years were occupied with these studies and experiments were made with several methods, with the following conclusion:

(a) The only two practicable methods were by using either punched cards or paper tapes.

(b) A large number of identification codes had to be incorporated in the input, with consequent liability to error in any form of manual punching. The error factor could be significantly reduced by using pre-punched cards, a technique not possible with paper tape.

(c) Using mark-sensing, variable information could then be added at the point of origin on to a card already coded in respect of identification data.

(d) Time and work details would therefore be recorded at each colliery by mark-sensing prepunched cards.

In 1954 only the three punched-card companies (British Tabulating Machine Co Ltd, I.B.M. (United Kingdom) Ltd, and Powers-Samas Accounting Machines Ltd) had any experience of preparing input by these means and of organizing cards preparatory to input to a data-processing system. They were therefore allotted one sample area each in which to put forward proposals for a selected colliery, in conjunction with our own E.D.P. team, within the laid down outline system already devised. This system basically contained the following main features, which still remain and are operated today:

- (a) For piece-workers, mostly working in groups (or 'contracts'), pre-punched cards would be marked with each man's time, additional cards for each contract being marked with the work items which, in aggregate, are shared by the men in the group in proportion to the time worked by each man (complications arise owing to transfers of men from one contract to another in changing conditions underground).
- (b) Daywagemen's time worked would be marked
- (c) Accounting controls would be established on the total shifts worked in each contract or cost centre.
- (d) The first computer operation would then be to ascertain the total earnings for each contract, and hence for each cost centre, producing costs and statistics.
- (e) Next, contract earnings would be allocated to each individual according to the time worked in each place of work.
- (f) A sorting operation would then bring all one man's earnings together, with any other allowances particular to the individual.
- (g) The final operation would be the normal tax and deductions calculations, and other operations of payroll, with the added complexity of the large number of possible deductions.

#### **Feasibility Study**

Detailed planning proceeded on these lines for the three sample collieries, one each in the Northern (Northumberland and Cumberland), Durham and West Midlands Divisions, and by 1956 were sufficiently promising for a feasibility study on the full integrated accounting concept to be started in a selected area in the East Midlands Division. Clearly, wages accounting alone, on a weekly cycle, would be an unbalanced load.

The first task in this overall study was to establish what information for management was essential within the existing framework of the flow of management information. Many returns and reports had been evolved during the evolution of the industry since nationalization, for local, divisional and central use, and a complete analysis was necessary. This indicated

the information field in which maximum use could be made of data, input once only but used for many different purposes, and also showed where the variety of output could be reduced to serve more than one purpose. These investigations and the overall systems design continued over the next two years.

Meanwhile, the punched-card companies had produced small computers and programmed calculators with drum storage, and as these became available they were installed in the pilot areas. In 1958 the first colliery, in the West Midlands Division, became operational on the complete wages accounting system, followed by the other two divisions the next year. In 1959 also in the West Midlands Division a full-area was processed successfully and all three installations have steadily developed. These pilot installations are still operating, on the same outline systems, in basically the same manner and are now (October 1962) processing earnings and payroll for about ninety-three thousand men, with all costs and statistics, each week.

These experimental installations have achieved their objectives in proving that:

- (a) The initial theories for E.D.P. operation of our complex wages requirements do in fact work in practice; and
- (b) E.D.P., in the right circumstances, and with the right balance of load of work to size of computer, is economical, the staff savings more than outweighing the machine cost.

It also became evident that a larger scale rationalization and standardization of processing methods and management information requirements might be achieved than had at one time been thought possible. Further, the results of these experiments enabled firm operating assessments to be made of the feasibility studies on integrated accounting in the East Midlands Division, and of the problems outside and around the computer, which experience had shown to be more difficult to solve than those within the E.D.P. system itself.

During 1958 and 1959, therefore, all companies then supplying computers joined in the East Midlands investigation, each devising his own methods of applying his particular equipment (available at that time) to operate the systems devised by the Board. This also gave us the opportunity of comparing the relative merits of different types of computer, besides different makes, and confirmed our view that medium-sized machines were best for this particular type of operation at this stage of the Board's development.

The other important conclusion was that an E.D.P. system for integrated information processing would only really be economic for areas of more than fifteen thousand manpower, wages accounting causing a peak load and thus determining the size of the installation. This is a marginal figure, most areas employing between ten thousand and twenty thousand men. A larger unit of operation would therefore be necessary for the optimum result, and the possibilities were investigated of serving more than one area

from a central E.D.P. system. There would be some organizational difficulties, but with increasing machine capacity and flexibility these were not considered to be insuperable; further, the outline system now envisaged full magnetic tape operation, with punched cards used solely as a mechanism for input.

#### **Divisional Computer Centres**

On January 2nd, 1960, the Board therefore took the policy decision to 'introduce E.D.P. techniques throughout the industry as quickly as possible' and to develop these, on the basis of a computer centre in each major division for the main data-processing tasks leading to fully integrated accounting and statistics. Divisional E.D.P. teams were set up, computer manufacturers were called into consultation, and these were allocated projects in divisions to give the necessary element of competition, with the proviso that installations were to be planned with equipment that could be demonstrated to be operationally available at a fixed point in time; a line had to be drawn (and inevitably some companies were on the wrong side of it) if installations were to be developed rapidly.

Since then specific projects have been devised and costed, schemes approved, orders placed for the equipment, buildings planned (and some nearly completed), and the staffing, administrative and organizational details evolved. The computers them-

selves will start being delivered this year (phased over the next three years) and the computer centres will begin to become operational early in 1963. The plan for the industry is shown in Figure 4.

The prime objective has been to evolve divisional computer centres which, while operating independently, conform broadly to an overall plan for the industry. The outline systems are common; we are adopting standard codes wherever possible so that information can, as required in later stages of development, be interchanged between one installation and the other. The concept is rather of one E.D.P. installation for the industry, developing for some years as seven separate but related entities.

It is not at present considered that there is a need for a separate computer centre to service headquarters. The great bulk of accounting and statistical work (i.e. information for management at the level of operational management) is carried out at areas and divisions, the main work at headquarters comprising consolidation, interpretation, and consequent policy determination. The other types of computer application referred to at the beginning of this paper, however, are mainly sponsored and operated from headquarters, at present using hired time at commercial service centres over a wide range of available computers; as these techniques are developed to routines, the divisional centres should become available for such processing.

(To be concluded.)

## Problems of the Smaller Practice - III

by R. W. SMITH, O.B.E., T.D., F.C.A.

THERE are so many of the problems of the smaller practice which arise out of the relationship with clients that I am bound to select for the purpose of this paper only one or two more which I consider of the greatest importance. — doubtless the others will emerge in the discussions that follow.

78. One of the most difficult of all is that of coping with seasonal work. In an examination of various smaller practices I find that more than three-quarters of all the clients terminate their accounts at December 31st or March 31st, and I believe this is by no means uncommon. This problem is aggravated by the fact that the office is flooded by tax demands in December and January, and tax returns and repayment claims from April onwards. From this year things are even worse as a result of the new style PIID, which will occupy a disproportionate amount of the smaller practitioners' time. In the smaller practice too there is less scope for continuous auditing because only in exceptional cases are the jobs large enough to permit this kind of working. Even the fact that Institute examinations take place at the end of May can be an embarrassment because out of a staff of a dozen or less the absence of one or two articled clerks on extended study leave at this time can involve a serious disruption of work. The seasonal problem is also there in the larger practice, but to nothing like the same extent. The reasons for this are that much more of the audit work can be carried on continuously, or at intervals through the year, tax work does not form such a high proportion of the routine and in many cases is dealt with by the clients' own tax specialists, and the effect of absences for holidays and other reasons can be spread more easily through a larger staff.

79. Unless he is able to take exceptional measures to cope with this problem, the smaller practitioner falls into the danger (consciously or unconsciously) of grading his work into that which should be dealt with in priority and that which does not require this treatment, merely because the client does not press for this – indeed in some cases the client is the deliberate procrastinator because he is cunning enough to know that delay in preparing his accounts can lead to delay in agreeing and paying his tax. But all this is not good for the profession. If we are to get a greater respect, reputation, complete ascendency over unqualified accountants, and a better reward for our services, then all work must be dealt with promptly regardless of seasonal peaks and the attend-

The concluding part of a paper presented at this year's Oxford Summer Course of The Institute of Chartered Accountants in England and Wales.

ant staff problems. The remedies here fall into two classes: those which we can achieve and what can be done outside our own field of activity.

80. In the latter sphere I consider that an enormous amount can be done by the Inland Revenue not only to assist us but also to reduce the volume of their own work. No one has yet produced a satisfactory explanation why all assessments have to be signed by a Commissioners meeting before the demands can be agreed and sent to the taxpayer, why all assessments have to be made at the same time of the year, why all tax has to be paid on January 1st or July 1st, why all tax returns have to be issued in April and sent back (if possible) in May, how if this miracle did happen the tax offices themselves would be able to examine them. And why when a mistake occurs in an assessment or demand is it almost invariably necessary to write not only to the Inspector but also the Collector, and to the client and very often to repeat the whole process over again when the second and even the final demands are issued with the same mistake still uncorrected? I am absolutely certain that in the vast majority of small cases the accounts, computation and tax return could all be submitted in one operation and the tax arising (or repayment) agreed and settled almost by return of post, and I am equally certain that a reform of this nature would receive the overwhelming support of tax officials, taxpayers and practitioners alike. It will also be obvious from what I have said elsewhere that a greater attention to accuracy on the part of the Revenue, particularly in small cases, could do much to relieve the pressure on accountants at these busy periods of the year.

81. So much too has been said on the subject of the abolition of Schedule A tax - at any rate in the case of owner-occupiers – that it continues to be a source of amazement that the Treasury still cling to this utterly outmoded method of collecting so-called revenue. We are now promised that this will be dealt with in the next Budget, but this remains to be seen. Most practitioners will agree when I say that they have very few cases of owner-occupied dwelling-houses which are not exempted from Schedule A by maintenance claims, and they will also agree that the fee they charge in connection with such work is on its own unprofitable. As for premises occupied for business purposes the charging of Schedule A is no more than a farce. Abolition of the Schedule A and the corresponding deduction from the Schedule D profits would leave everyone exactly as they were financially plus the benefit of time saved.

82. But are there not many ways in which we can help ourselves in this problem of seasonal work? In

the first place I do not think that we spend enough time, particularly in the smaller firms, examining our own management problems. If we did we should pay far more attention to the full productive use of our staffs and ourselves. We should find if we did this that among the smaller clients there is an almost fanatical adherence to December 31st or March 31st (and even April 5th) as a suitable accounting date. Why there should be in the minds of business men - and accountants in particular - any virtue in following the example of such an archaic and cumbersome precedent as that set by the United Kingdom Treasury I cannot understand. There can be little reason but mere custom that prompts many to adopt these dates for closing their books. I feel sure that most of us could carry out a review of our clients that do so and we should discover many for whom some other time of the year would not only be just as convenient, but to their advantage, the least of which might be that we could produce their accounts more quickly - for let us remember that most of the smaller business men do not produce their own accounts, but expect us to do so, though they may have a general idea of their trading results. This is another aspect of the same problem, that in the smaller practice the work carried out by the accountant for his client is greater in comparison with that done in the larger practice - and the smaller the size of the client the larger the proportion becomes. This process starts with the very small business where the accountant prepares the accounts by writing up the books from the original records, next comes the case where the client writes up some books but leaves the rest to the accountant, and so on through varying degrees until at the other end of the scale the client organization not only produces its own parent, subsidiary and consolidated accounts, but deals with most of its own tax problems, runs its own internal audit department, to say nothing of departments dealing with control of costs, stock, management and administration.

83. Therefore in addition to educating our clients about relatively simple matters such as changing accounting dates, can we not help them and help ourselves too by introducing them to methods of simplified book-keeping which in the smaller practice we can keep continually under supervision throughout the year, leading to a much shorter interval after the end of the year before the accounts are produced. The client would be deriving a definite benefit as a result of better advice and would not only be too pleased to recognize it, but would be quite certain to advise his friends about the improvement in his own affairs as a result of the progressive tactics of his accountant. It is all very well for us to complain about the exploits of some of the management consultants but at the smaller end of the business scale there is a crying need for sound advice on business methods the need for which can easily be diagnosed by the accountant who is in close touch with the business. Not only can he provide the diagnosis, but usually the remedy as well.

#### Relationship with Staff

84. From clients to staff, a close and natural sequence, and again possibly one of the major differences between the larger and the smaller practice is the much closer contact between principal and staff in the latter. He will see them daily, will be more aware of their moods and personal problems, and will inevitably be looked to for advice, help and criticism in such matters. There are of course advantages in this as well as difficulties.

85. Apart from the obvious problems that must arise as a result of such proximity the main difficulty facing the small practitioner in connection with staff is that of obtaining and keeping personnel of the best quality - and this naturally is inevitably bound up with the problem of what he can afford to pay - not merely in terms of cash, but in competition with all \* the other attractions that the large firm, and more especially big business, can offer. He is also in serious difficulty in providing progressive promotion for the best of his staff. On the other hand it is clear that there are still plenty of people today who prefer to be employed in a small unit where they are regarded as persons rather than numbers on a payroll. It is evident too that among some of the more recent entrants into the profession there is a noticeable disillusionment about the attraction of joining the large professional firm or going into commerce. We must remember that only within the last generation has there been a tendency for large numbers of qualified men to take this road - the earlier ones have now mostly reached senior positions - but what of their numerous followers? Only a small number are likely to achieve partnership status in the large professional firms, and only a small proportion of those entering industry can expect to reach the board of directors, or become departmental chiefs, whereas those who remain in the smaller practices have a very much likelier prospect of becoming their own masters. Although there is an immediate problem in attracting and retaining the right material, this problem is one which will begin to produce its own solution in this way. There is no certainty that this will happen, until a number of the other difficulties to which I have referred have been satisfactorily resolved - and I think it will be agreed that basically the essence of the problem is financial. Once again I am bound to say that the small practitioner must turn a critical eye on the way he runs his practice and ask the question whether he is getting the best value out of his staff whatever he is paying them. He would do well to give a close study to the quantity and quality of the output of each member of his staff - and indeed of himself, before complaining that the low fees he gets prevent him from paying better salaries. Poorly paid staff in these days are bound to be poor performers, and in an accountancy practice a serious source of risk. Shoddy work that has to be done again is dear at any price, and as we should be the first to recognize, carries a double volume of overheads. It may there-

fore be a more profitable proposition for the small practitioner to employ two good clerks for the price of three that are not so good, though I wonder how many of us look at the problem in this way.

86. Where the practice as well as being small is away from a large centre of population there are the special problems that arise because staff, clients and principals are thrown together in their normal everyday existence outside the office. I have already made some reference to this in the section of the paper dealing with the relationship with clients. Where staff are concerned as well it can lead to difficulties which can only be resolved by the exercise of infinite tact. I can only offer the smaller practitioner one piece of advice, and that is to set the standard himself that he would expect the others to copy. This applies as much to staff as everyone else. Let his own standard of performance, time-keeping, turnout, behaviour and discretion be such as he will hope his staff will copy, and he will have little to fear. This may seem obvious but it is remarkable how often these truisms can be overlooked, and when they are it takes a very long time to restore the shortcomings of an hour or so. Among the many ways in which we as a profession can advertise ourselves legitimately is that of letting the outside world know that we have a contented, well-found staff who take a pride in their work and the firm they work for.

87. Under this heading of staff I can perhaps refer to another subject which presents a completely different problem in a small practice. It is that of accommodation. In the smaller practice a much greater proportion of the work is carried out in offices occupied by the firm. At the other end of the scale much more of the work is done in clients' own offices. This of course produces different problems arising from travelling and time spent away from the office and the necessity for making use of hotels. It means that in the smaller firms accommodation, furniture and equipment have to be provided on the assumption that for considerable periods of the year all the staff may be working in their own office. Although we are well aware of the fantastically high rents which have to be paid for office accommodation in the best professional districts in the larger cities, these costs nevertheless constitute a smaller proportion of the gross income of such practices than that which applies in small practices. I do not think that this is necessarily compensated by the travelling and other expenses which are incurred by the larger firms such costs are normally recovered in the fees. This can easily lead to an acceptance of a lower standard of accommodation and working conditions in the smaller practice, which has a bad effect not only on staff but principals as well, and in its turn can lead to a lowering of standards of work. I am not suggesting that we should all start looking for accommodation in expensive blocks of offices wherever we are, but a tremendous amount can be done to improve the accommodation we already have by a careful study of

decorations and lighting, provision of chairs and desks of the right sizes sited to make the best use of available space, organizing the layout of rooms and location of staff so that they have as little wasted motion as possible — once again is not all this a matter of organization and management on which most of us feel we can give advice to our clients, and yet we completely fail in this duty which we owe to our own businesses? I have been in many practitioners' offices which have appalled me by the lack of attention paid to such affairs — when for a very modest expenditure the type of improvement I have suggested can easily be carried out — and this criticism is by no means confined to the smaller practices.

#### Relationship with Himself

88. The previous observation brings me very naturally to the small practitioner's relationship with, himself – and his partner. You will recall that I prefaced my remarks with an attempt at a definition by saying that for the purpose of this paper I was considering that the smaller practice is generally confined to not more than two partners.

89. It was in Mr Foad's paper that suggestions were offered that we should organize for peace of mind and that the test of a good organization is peace of mind. You will have realized in coming with me this far in a study of some of the problems of the smaller practice that there is very much to disturb the peace of mind of our small practitioner, and that anything he can do to acquire peace of mind is going to help him to give a better service to his clients. Foad's recommendations are that we have specialists looking after every branch of our client's work, that we have proof that the work we have delegated is being properly done, and that our work is designed so that we receive warning of plans going wrong, and that we control performance. I wonder how many small practitioners could justly claim that their organization provides for all these safeguards, for I do consider that this counsel of perfection is in a large measure beyond their reach. Nevertheless, I suggest that there is much that they can do, which for want of the inclination or opportunity of turning a critical eye upon their own affairs, is just not done.

90. It is my opinion first and foremost that the sole practitioner can, if he closely examines his own relationship with himself, have very little peace of mind at all if only for the reason that he has absolutely no one with whom he can discuss his doubts, difficulties and problems on equal terms. The two partner practice is to this extent better off. My advice, having seen quite a lot of the sole practitioner's life both from within and without, is to suggest that by becoming a partner with another he immediately divides the magnitude of his problems by two. I do not suggest that by continuing this process he will bring about a progressive reduction – I have already stated my opinion that there is a proper place in the

scheme of things for small practices. But what else can be done to make life easier?

91. Above all is the question of health. Too often do we hear from an overworked and worried professional man the observation that he cannot afford to be ill, or that he can only get away from his practice for a long week-end in the slack season, or that he hasn't had a proper holiday for years. Often this is said almost as a boast. Anyone in our profession and especially in small practices who is obliged to say this is doing the greatest possible disservice to himself, his clients and his partners. If staff need adequate holidays how much more do principals, with their greater responsibility, longer hours and week-end work. Therefore I give this advice, that firstly the smaller practitioner should make it an absolutely fixed rule that his name goes on the holiday roster for a proper holiday taken in one stretch, and not as a succession of long week-ends. Secondly, if it is a question of illness, however trivial, he takes proper medical advice. It is more difficult to persuade him to avoid evening and week-end work - possibly every one of us is guilty of this from time to time - but if it does have to be done it should be balanced by adequate relaxation in other directions - and for this I can commend nothing better than a visit to a summer course where all the ingredients for a cure for office staleness are perfectly blended.

92. In looking after himself the small practitioner is so often inclined to forget the advice which he gives to his own clients, who in this respect face the same problem as he himself. They are usually the smaller business men who have no one to deputize for them. He will advise them to insure against personal sickness and accident, so that at least they have an 'income' while out of action from these causes. But does he always review his own insurance position to see if he too is adequately covered against this kind of risk, or indeed covered at all?

93. What of insurance against professional negligence? I have heard it said more than once by a small practitioner that he cannot afford the premium, and in any case why should he need this kind of insurance since he supervises every job personally and most of his work is accountancy and not auditing. All I can say is that if he cannot afford the premium, how much less can he afford the claim - and I can assure him that a claim for professional negligence can arise in the most extraordinary and unexpected ways that he can least imagine. I also commend to the smaller practitioner that he should examine very closely his own mote when it comes to a question of insurance for loss of profits and other forms of consequential loss such as the cost of reproducing his own and clients' books and papers which have been destroyed by fire or other causes.

94. I think it is in this field that much more can be done by district societies to help the smaller practitioners, but first I suggest that they can help themselves, by joining the district societies and taking full

advantage of meetings and other activities of local members groups. A small practitioner should be able to feel that he can take his problems to an advisory committee of his district society and obtain help -- as things are at present I have a feeling that many are reluctant to ask for help and advice for fear of disclosing their own lack of experience to their fellow practitioners. Nothing could be worse for the profession.

95. It has been demonstrated by statistics that our profession – on the practising side at any rate – is one of the most poorly remunerated, surely if this be true it can perhaps mean that the service which we have to offer is poor by comparison. Anything we can do to improve the quality of the service must improve the rewards, financial and otherwise. And let us not forget those other rewards – which come from that most fascinating study of all – the study of human relationships – which I have tried to exemplify in this paper. (Concluded.)

# Weekly Notes

#### AMERICAN COMPANY REPORTS

NO American accountant designing a company report and accounts need ever be at a loss for precedents. The survey of accounting trends and techniques as disclosed by published financial statements, produced annually by The American Institute of Certified Public Accountants, reflects the practices followed by 600 of the leading commercial companies in the United States.

The sixteenth edition of this remarkable work of reference analyses reports for financial years ending within the calendar year 1961 and has, as before, five sections. The first and shortest deals with accounts in general and the second and longest with the balance sheet. This is followed by sections covering the profit and loss account and the profit and loss appropriation account. The fifth and last section, as is logical, considers the auditor's report. There are in all 101 tables showing the methods used in presenting the various items and the words employed to define or describe them. This feature is of especial interest because, in each instance, comparative figures for selected years back to 1950 are given, thus making trends and changes in techniques easily discernible.

The general impression to be gathered from a glance at these tabulations is that financial accounts in America appear to be approaching a standard form but that there are always a few individualists among the companies represented who prevent any one practice or fashion from becoming unanimous. This is a healthy state of affairs because the quest for truth is never-ending and the day when the American Institute has no further call to continue making this survey because all financial accounts (apart from the

figures) are exactly alike, would be an indication of frustration rather than of fulfilment.

#### DEVELOPING NEW PRODUCTS

AST week the Institute of Directors organized a conference on 'New products'. The President of the Board of Trade addressing the conference said that the Chancellor of the Exchequer had granted the recent tax concessions for capital investment in building and plant to encourage scientific research by companies of all sizes. He went on to say that the Government was involved in research in many ways. These included its responsibility for technical education, its role (now to be increased by the proposed establishment of boards responsible for training in different industries) in encouraging improved apprenticeship schemes and more advanced training and the work of the Department of Scientific and Industrial Research. The Government was also actively concerned with development where new ideas are translated into commercial terms. The Government helped here by placing development contracts.

The main responsibility for research and development must, however, according to the Minister, lie with industry so far as new products were concerned. He said there was enormous scope throughout industry for improving present methods and establishing new ones and very often a new product could be the basis of a new method. He quoted the example of the saving which can be made by the use of electronic control systems with machine tools. The value of a new product lies not only in itself but in the progress which may be achieved in related fields.

#### ABORTIVE CLAIM FOR ESTATE DUTY ON OVERSEAS PROPERTY

THE Inland Revenue have failed to sustain a claim for estate duty on settled United States dollar securities valued at £18,737 which passed on the death of a life-tenant domiciled in England. Mr

VER seven hundred entries have so far been received for *The Accountant* Annual Awards to be made in 1963 – the tenth year of the Awards.

The task of selecting the two winning reports and accounts (one from large companies and the other from 'smaller' companies) has been started by the Panel of Judges, under the chairmanship of Mr K. W. Mackinnon, M.B.E., T.D., O.C.

Companies are reminded, however, that they still have until January 31st, 1963, to submit their reports and accounts presented at annual meetings held in 1962. Entries should be addressed to The Secretary, The Accountant Annual Awards, 151 Strand, London WC2 - the only condition of entry being that the companies' shares are quoted on a recognized stock exchange in the United Kingdom.

#### Members of the Panel

Mr Donald V. House, F.C.A., a member of the Panel for the past six years, has retired following his appointment as a member of the Restrictive Practices Court.

Two new members of the Panel this year are Mr W. G. Campbell, B.A., F.C.A., a member of the

Restrictive Practices Court until his retirement earlier this year, and a former member of the Council of The Institute of Chartered Accountants in England and Wales; and Mr Hilary Scott, a partner in a leading firm of London solicitors, and a member of the Jenkins Committee on Company Law. The other members are:

Mr A. S. H. Dicker, M.B.E., F.C.A., a Past President of The Institute of Chartered Accountants in England and Wales.

Mr C. D. Gairdner, c.A., a member of The Institute of Chartered Accountants of Scotland and a partner in a London firm of chartered accountants.

Mr A. W. Giles, M.B.E., M.A., C.A., a member of The Institute of Chartered Accountants of Scotland and a managing director of Baring Brothers & Co Ltd.

Mr J. E. Harris, B.COM., F.A.C.C.A., a Past President and a member of the Council of The Association of Certified and Corporate Accountants, and managing director of Sogenique (Service) Ltd.

Mr J. A. Hunter, M.B.E., T.D., a member of the Council of The Stock Exchange, London, and a partner in a London firm of stockbrokers.

Mr Ian T. Morrow, C.A., F.C.W.A., a Past President and a member of the Council of The Institute of Cost and Works Accountants, and managing director of U.K. Optical Holdings Ltd.

Sir Richard Yeabsley, C.B.E., F.C.A., a member of the Council of The Institute of Chartered Accountants in England and Wales.

Mr Arthur E. Webb, Editor of The Accountant.

#### Lord Mayor to Present Awards

The Lord Mayor of London, Alderman Sir Ralph Perring, has kindly consented to present the Awards at the Mansion House on May 21st. Justice Plowman held in the High Court on December 5th, that the proper law regulating the disposition under or by reason of which the property passed on the death was not the law of England or of Scotland, within the meaning of section 28 (2) of the Finance Act, 1949. It followed that as the property was situate outside Great Britain it did not attract estate duty (Re Levick's Will Trusts; Ffennell v. C.I.R.).

The trusts on which the securities were held were created by the will of Sir Hugh Gwynne Levick who died in 1937 domiciled in South Africa. While on a visit to England in 1933 he made his will in English form and by it hesettled his residuary estate on trust for his wife for life, and after her death as to one-half for his son, Hugh Gwynne Levick, for life on protective trusts, with remainder over. The son died on January 7th, 1961, and the Inland Revenue claimed estate duty on the securities as being part of the fund whose income was being enjoyed by the son during his life. The trustees claimed exemption under section 28 (2).

It was conceded that the securities were movable property situate abroad, and the only question was whether English or South African law governed the will. The Revenue conceded that if South African law had forbidden the disposition in the will, it could not have taken effect. His lordship said (according to The Times, December 6th) that it was implicit in the majority opinions in the House of Lords in Philipson-Stow v. C.I.R. (39 A.T.C. 394) that the proper law regulating a disposition was the law from which the validity of that disposition stemmed. In the case of immovables it was the law of the place where the immovables were situate. But in the case of movables it was the law of the place where the disponer was domiciled. In this case the testator was domiciled in South Africa. Accordingly South African law applied and the securities were exempted from duty.

#### EX-BUILDERS NOT TRADING IN HOUSES

"HE Court of Appeal has affirmed the decision of Mr ■ Justice Wilberforce in Seaward Brothers v. Varty¹, dismissing the Inland Revenue appeal from it. Messrs Seaward were two brothers who had carried on business as building contractors. When contracting work was slack they had used the firm's resources to build houses. By August 1949, when the building business was sold to a company, 123 houses had been built in this way, but none of them was included in the sale of the business to the company. Thereafter the brothers sold houses from time to time and the Revenue made assessments on the surplus proceeds, on the ground that the sales were trading sales. The Special Commissioners confirmed the assessments, holding that the brothers had carried on a composite business, only part of which had been transferred to the company, so that the houses remained trading stock in the brothers' hands. The learned judge held that the concept of a 'composite business' was wrong and that there was no evidence to support a finding that the brothers had carried on two separate trades. The brothers' trade ceased when they made the transfer to the company, the retained houses then becoming investments. The Court of Appeal held (reported *The Financial Times* of December 6th) that the learned judge was right. They refused to give leave to the Inland Revenue to appeal to the House of Lords.

#### SEVEN-YEAR COVENANT UPHELD

N Monday the Court of Appeal upheld the decision of Pennycuick, J., in C.I.R. v. Verdon-Roe, in which he held that a deed of covenant was not caught by section 392 of the Income Tax Act, 1952. Mr Geoffrey Verdon-Roe executed a deed on March 14th, 1958, under which he covenanted with trustees to pay during the period of seven years from the date of the deed (or joint lives if shorter) a yearly sum of £2,000, the first of such payments to be made on the date of execution and subsequent payments on March 1st annually. The Revenue refused to allow deduction of the £2,000 for surtax for 1958-59, on the ground that it was for a period which could not exceed six years, and therefore was caught by section 392. They argued that on a proper construction of the deed the taxpayer had covenanted to make seven payments and no more, so that the last one would be due on March 1st, 1964. As the first one was on March 14th, 1958, it followed that the period could not exceed six years.

The Special Commissioners rejected this concontention of the Revenue and they allowed the tax-payer's appeal against his surtax assessment. Pennycuick, J., confirmed that decision and the Court of Appeal (records *The Guardian* of December 14th) has affirmed his decision. Moreover it refused to give the Revenue leave to appeal to the House of Lords on any terms. Thus a covenant in such a case has to be read as requiring the taxpayer to go on paying the annual sum on each March 1st, in the seven years beginning on March 14th, 1958; i.e. the last payment is to be made on March 1st, 1965, making eight payments in all. This decision must apply to very many cases.

#### PARTITIONS ARE STILL 'PLANT'

LAST week the Inland Revenue failed to induce the Court of Appeal to reverse the decision of Mr Justice Pennycuick in Jarrold v. John Good Sons Ltd (41 A.T.C. 170), which was briefly reported in our issue of June 16th. The company carried on business as a shipping agent at Hull, which included several departments, the number of employees in each department varying from time to time. It was a commercial necessity for the company's office accommodation to be flexible, so that separate departments could be expanded and contracted. The company had a steel-framed building, used partly as a warehouse and partly as offices. The office part was built on the company's instructions as a large open floor space in which removable partitions could be

<sup>1</sup> The Accountant, May 5th, 1962.

erected. The partitioning consisted of metal ribs with insets of hardboard sheeting and with doors and windows. Attachment was to the floor and ceiling, not laterally. The positioning could be done by the company's own maintenance staff.

The Revenue rejected the company's claim to capital allowances on the partitioning on the ground that it was neither plant nor machinery. The General Commissioners allowed the claim and their decision has now been affirmed both in the High Court and, according to *The Times* of December 8th, the Court of Appeal.

#### FIRE LOSSES

FIRE in industry and in the home so far this year have cost the country more than in the whole of any previous year, states the British Insurance

Association. During the first ten months, material damage estimated at £46,544,000 had been caused by fire -£2,364,000 more than the losses recorded during the whole of 1959, which until now was the country's worst year for fire damage.

Estimated fire wastage in October was £5,312,000. Two fires each caused damage estimated at more than half a million pounds and four others resulted in

damage estimated at over £100,000 each.

The director of the Fire Protection Association, Mr N. C. Strother Smith, states that quite clearly many industries were still failing to apply the elementary lessons of fire protection. A clear-cut plan of action to be followed by management and staff if fires broke out and foresight in factory design and layout would restrict the spread of fire and avoid really serious damage.

# This is My Life . . .

by An Industrious Accountant

#### CHAPTER 150

THEORIES of management have changed a lot since my early days. Like many of my colleagues, I find it difficult to try to change myself correspondingly. Like Alice with the Red Queen, I have to run ever faster to keep in the same place.

Last week the cost accountant came along with a revised make-up of the standing charges in our consequential loss insurance policy. He's young and keen, and had some sound suggestions. I'm rather rusty on these figures now, but I had to deal with a biggish claim once, so I brought experience to bear on the calculation. We had a most enjoyable discussion.

In mid-argument, Prinny, our personnel director, entered. He'd a relatively unimportant query, he explained graciously; don't let him interrupt our discussion; he'd gladly sit by and listen. Maybe, he said with the cheerful air of a man who doesn't believe it, he could learn something. I didn't believe he could, either, but I refrained from saying so.

When Costs had departed, Prinny proceeded to upbraid me, more in sorrow than in anger. 'You spend too much time on details,' he accused me. 'Why don't you delegate all that routine stuff? Let him learn to handle it himself.' My explanations that Costs had missed out a significant factor, that I had enjoyed the talk, were futile. 'Let him make his own mistakes,' rumbled Prinny. 'You should study what's-his-name's book on management principles – about top men getting too immersed in trivialities. You must Think Big.'

Later I visited our managing director. 'About this Common Market,' I opened up. 'Perhaps we could have a talk sometime. I've taken out figures for our

recent continental imports; the profit on these Italian

brocades, for example. . . . '

The M.D. didn't seem to be listening. 'It's really rather a problem for the sales manager,' he pointed out. 'He's doing a special study on it.' I replied that surely Scotty would need figures for his study, the director answered that doubtless he'd ask for them when he wanted them. I came back smartly that he certainly hadn't asked for them yet; 'In that case', the M.D. said smoothly, 'presumably he doesn't require them yet'.

Our managing director started his career as an engineer. We don't hold it against him, not usually anyhow, but you know how it is with engineers; they think they're born knowing everything about

figures. Just as if they were accountants.

However, I went along to Scotty, but he was buried in a study about motivational consumer research and market predictability evaluations, and only said 'Losh, mon, dinna fash me the noo.' In a way, salesmen are like engineers, only more so. You can't tell them anything. I told him to remember we'd gladly help him out whenever he got stuck, as usual, and left before he thought of an answer.

The door of the chairman's room was open, and he hailed me as I passed. He'd just finished writing his memoirs and was in great form. He wanted to know what our shirt factory annual sales were in 1937–1939, and how the plant repair charges compared with today's figures. Not exactly, of course, but approximately. I assured him I'd ring him back with the figures in just a few minutes, but he looked disappointed.

Do you have to look them up?' he queried. 'But then, I suppose you've not much time for costs nowadays. You're probably too immersed in Common Market problems and all that futuristic stuff.'

Well, you see what I mean. I seem to go backwards when I try to go forward. "Faster, faster," cried the Red Queen...". No wonder I become bad-tempered sometimes.

# Reviews

#### Registration of Commercial and Licence Agreements in the Common Market

by A. K. Lewis, B.Sc., Ll.B., and J. A. Kemp, B.Sc., F.C.S., F.C.I.P.A. (Butterworth & Co (Publishers) Ltd, London. 30s net; postage 1s 3d extra.)

As is at present the case in the United Kingdom, so under the Treaty of Rome which regulates the affairs of the European Economic Community, all restrictive agreements must be registered. Failure to do so renders them null and void, it also means heavy fines. There is inevitably considerable uncertainty as to how these provisions of the Treaty will operate, but the intentions of the legislators is quite clear. Messrs Lewis and Kemp will have performed a useful service for all firms which are signatories to such agreements, in the event of British entry into the E.E.C.

The meaning of the term 'agreement' is wide, covering as it does agreements with but two signatories to those prepared and enforced by trades associations. The new laws apply not only to agreements signed by nationals of the member countries of E.E.C.; it will also affect Anglo-American or English agreements if they come within the ambit of the Treaty provisions through trade between the nationals of these countries.

#### **International Monetary Policy**

Second edition by Dr W. M. SCAMMELL. (Macmillan & Co Ltd, London. 40s net.)

This is a well-written, carefully documented and cogently argued contribution to the subject of international monetary affairs. It covers both the problems of maintaining exchange equilibrium and the difficulties of the world's present system of international exchange with the dominating problem of liquidity.

Although the book is intended primarily for economists, it would be a great mistake to believe that its subject-matter can be comprehended only by such readers, or that the lessons therein for the world are the sole concern of economists. The accountant seeking information about the world's financial problems will find here a wealth of information in comprehensible form.

#### Investment and Growth Policies in British Industrial Firms

by Tibor Barna. (Cambridge University Press, London. 12s 6d net.)

This study, sponsored by the National Institute of Economic and Social Research, and written by a leading economic statistician, deals in the main with

rates of growth and investment in a sample of firms in two industries, food and electrical engineering, more especially domestic appliances and electronics.

The statistical foundation of the study is based on data culled from the annual reports of some hundred companies and further information derived from interviews with about half of the firms whose accounts were analysed. This is a challenging piece of writing; the author is highly critical of British industry and urges more intensive competition as the solution to the all too widespread malaise of inefficiency.

#### The Investor's Vade Mecum

by Charlotte Square. (William Blackwood & Sons Ltd, Edinburgh. 10s 6d net.)

There are very many guides to the intricacies of investment and this newcomer from Edinburgh is as sensible and readable as any of comparable scope. The author, who hails from the Georgian hinterlands of Princes Street, knows the markets expertly and holds out no prospects of sudden riches for the reader. The risks and rewards are fairly presented and the distinction between investment and speculation and the need for patience are properly stressed. Further, the propriety of taking advice only from authoritative sources is insisted upon. If the reader is unwell, the author points out, he does not consult a garage hand, nor does he go to his tailor if his drains smell. Even so, it is up to every would-be investor to be familiar with the basic principles of buying and selling stocks and shares. To know why prices fluctuate is a step towards being able to anticipate such fluctuations. This is always much more satisfactory and sometimes much more profitable - than reading all about it in the newspapers the morning after.

#### Piecework Abandoned

by Wilfred Brown. (Heinemann Publishers Ltd, London. 21s net.)

This is a short book describing the events in the Glacier Metal Co Ltd which led up to the abandonment of piecework and other incentive schemes and the adoption of hourly rates in their place. Mr Brown also does all he can to show the results of the change, while admitting that it is as impossible to measure these exactly as it is to measure the results of changing to piecework (pace the time studiers, who will be well advised to read Mr Brown's book before rushing into print in support of their yardsticks, since Mr Brown has some pertinent information on just this subject).

It is generally known in this country that American industry has ceased to feel any great enthusiasm for incentive schemes, while our own industries are still converting rapidly to personal incentive schemes. Because accountants must often be asked for advice on whether to go on to piecework or incentives or not, this book is highly relevant to them. Mr Brown is almost certainly right when he says that he is not

aware of any other detailed account of the effect of changing from piecework to hourly rates: presumably his evidence should at the least be considered.

In fact this is a book which is extremely worth reading for its own sake. It is short, well written (avoiding completely all the criticism of Mr Brown's earlier book *Exploration in Management*<sup>1</sup> of being difficult to read) and provocative not only on piecework, but also on 'consultation', management responsibilities, consultants, business mammoths, the Welfare State, and clocking on. This last might even be of direct interest to those practising firms which still make their staff 'sign the book': does this serve any useful purpose?

Mr Brown is talking once again about the Glacier Project. He has been concerned with this as managing director and now chairman since 1948. It has certainly produced a lot of ideas, and, having established the groundwork, is now ready to talk common sense of an uncomfortable kind on localized subjects. This is the first manifestation but there is more to come, including something on 'Pricing and expense control'.

Those who have not met the Glacier Project before might like to start with this book and then work backwards if they find themselves stimulated to do so: those who know of the project will wish to keep in touch with it. Apart from some poor punctuation the book is guaranteed only to raise blood pressure and never just to niggle.

#### SHORTER NOTICES

Taxation Key to Income Tax and Surtax, 1962–63, (Finance Act, 1962, edition). Edited by Percy F. Hughes. (Taxation Publishing Co Ltd. 12s 6d net; 13s by post.) Practitioners will be familiar with the format, utility and coverage of this perennial handbook. The fifty-fourth edition is fully up to the standard of its predecessors and students approaching their Final examination, who may be inclined to regard this booklet as no more than a reference handbook, will on closer examination find that it will make an agreeable companion to relieve the tedium of travelling and prove remarkably informative.

Banking, second edition, by W. J. Thorne. Home University Library 206. (Oxford University Press, London. 10s 6d net.) The attraction of this excellent brief outline of the development and structure of British banking, its readability apart, is that it has not been written primarily for a student audience by an academic, but by one who has spent his working life in banking. It is essentially descriptive and historical in character, but it provides a most readable exposition of the functions of the banking system in the modern economy and the manner in which they are performed. As such it merits a high place in the most useful Home University Library series.

FIRST STEPS IN BUSINESS TRAINING, second edition, by John Harrison. (Sir Isaac Pitman & Sons Ltd. 7s 6d.) This brief guide to office procedures, now completely revised by a new author, is intended for the new office boy or junior and, if experience with some offices is any guide, some of their seniors would also benefit from a reading of its clear exposition how to take phone messages, deal with the incoming and outgoing mail, checking invoices and statements, etc. This is the sort of book which any office should place in the hands of all its new juniors.

Notes on Economic Theory, by W. Reay Tolfree, A.C.I.S., A.I.B. (Sir Isaac Pitman & Sons Ltd, London. 7s net.) This little booklet is intended for the student wanting a concise pre-examination cram book. It will fit into the pocket and unlike many such books which are the pet hates of most teachers, is really quite well done. For one thing, intelligibility is not sacrificed upon the altar of brevity. The student who has read his basic texts could use this little work with profit.

# Finance and Commerce

#### New Day

THIS week's reprint is provided by the accounts of New Day Holdings Ltd. Principal business is the New Day Furnishing Stores operating ninety-one shops. Other interests include food (Blower Brothers of Bolton), radio and television (Tates of Sunderland and Stockport), hardware (Edmund R. Goodrich of London with sixty-eight branches).

Through its transport section, the company has now gone into petrol and the motor business. As an initial experiment, the group has acquired ten petrol filling stations, the emphasis being on obtaining units selling mainly petrol and oil, but with sales and repairs of motor-cars involved in some cases. A separate management team for this new side of the business has been built up from the transport section in which approximately £85,000 has so far been invested.

The identity of these various New Day interests, their registered offices, number of branches and the towns where they operate is given in the last two pages of the annual report – a fact worth placing on record when, as happened recently, shareholders in a big public company failed at an annual meeting to obtain such information.

#### Clarification

With this year's accounts, a new formula has been adopted in the hire-purchase section of the business. Mr O. H. Frost, M.B.E., M.C., the chairman, notes that last year's 'streamlining' of the furnishing stores put that company on a more stable earning basis which should enable it better 'to weather the vagaries of future hire-purchase legislation'.

As a further step in this direction, the board, in full agreement with the auditors, has adopted a new and what is considered to be a more equitable method of calculating the provision for carry-forward of profit on uncompleted hire-purchase transactions. This new formula has the effect of retaining a part of the realizable gross margin on hire-purchase agreements entered into in the course of a year's trading, as an offset against some of the expenses incurred in obtaining that business. The amount carried forward under the new method, the chairman says, is more than adequate to meet all possible expenses incurred in the collection of outstanding instalments, and he

includes the net profit which will eventually accrue. He hopes the changes will 'simplify as well as clarify this complicated item'.

#### Changes

The new system entails several changes in the accounts. The first is the showing of trading profit in the consolidated profit and loss account after making the provision for carry-forward of profits on uncompleted hire-purchase transactions. The provision for this carry-forward is shown on the liabilities side of the balance sheet and the gross figure of 'Instalments outstanding on hire-purchase accounts less provision for doubtful accounts' is shown on the assets side. Last year's comparative figures have been adjusted accordingly.

Mr Frost points out that about 92 per cent of the group's hire-purchase business is done by New Day Furnishing Stores Ltd, and included in the consolidated profit and loss account is £238,686 which, under previous practice, would have been

carried forward.

A further adjustment in the accounts concerns £51,639 from 'Taxation estimated on profits of year' in respect of over-provision in prior years. A substantial part of this sum, Mr Frost explains, is due to concessions made by the Inland Revenue in regard to investment allowances on goods out on rental. The final result in group profit after tax is a figure of £250,276 against last year's £215,180.

#### **Bishop's Stores**

IN accordance with modern practice', said Mr G. E. Bradfield, chairman of Bishop's Stores Ltd, at the recent annual meeting, the board had decided to publish turnover figures. The company is expanding in self-service and also has a wholesale trade which includes a wholesale cash-and-carry department at Ruislip, Middlesex.

Mr Bradfield announced that retail turnover for the year to June 30th, 1962, was £3,184,000 and on the wholesale side, £5,830,000; the figures do not, of course, include inter-company sales. Current year retail turnover he expected to be about £3.7 million and wholesale about £7 million. We would suggest that next year the turnover figures might well appear in the accounts with the comparisons.

There is a new entry in the Bishop's Stores balance sheet this time: Share premium account £2,121. Notes explain the grant of options over 104,500 58 Ordinary shares to certain directors and senior employees at a price of 138 9d a share, exercisable before November 17th, 1971. Options covering 4,250 shares have been so exercised leaving 100,250 shares outstanding.

Another note explains that the balance on share premium account represents the consideration paid for the options and the premium on the shares

allotted thereunder.

#### CITY NOTES

THE stock-market struggle between hopes and facts is currently running the way of facts. Sir Ivan Stedeford, chairman of Tube Investments, turned it that way in a statement pointing to a loss of business confidence, indicating that it would be next spring at the earliest before Government action began to tell in industry, and forecasting another fall in Tube Investments earnings.

Sir Ivan's statement reminded the stock-market that, even by this time next year, a number of leading companies will still be reporting lower earnings compared with 1961-62. When doubts about the Government's loss of political popularity and about the Common Market negotiations are added to earnings doubts, then it is hardly surprising that the equity sections of the stock-market find the going hard.

Pauses for readjustment, however, are part and parcel of recovery after a prolonged 'bear' market. At the same time it is difficult to see the basis on which a rampant 'bull' market can be as confidently predicted as it is in some quarters.

#### The Balance Sheet

SIR, – May one congratulate you on having published not only the full text of Mr W. E. Parker's address at the International Congress of Accounting (November 3rd and 10th issues) but also the stimulating article by Mr T. E. Gambling on 'Variation on the balance sheet theme' (November 10th issue). It seems that the balance sheet is receiving more attention at the moment, and I have read Mr Gambling's article with particular interest because of my own suggestions in a previous issue (The Accountant, August 25th, 1962) as to ways of dividing balance sheets. I trust therefore, that Mr Gambling will not think me presumptuous if I offer one or two suggestions arising from his article.

To begin with, his form of balance sheet in fact concentrates one's thoughts upon the fixed assets (though not described as such) and relegates working capital to a separate self-balancing schedule which, in the tabular form adopted, elongates the balance sheet in a manner which I personally would have thought undesirable in a published set of accounts. Secondly, it has the effect of attempting to relate current working capital to the historical investment of original capital moneys. This, in my opinion, is unnecessary, and I should have thought that the preservation of real capital was likely to be safeguarded more simply by the adoption of a series of indices related to the purchasing power of money, as suggested by Mr Parker. This, incidentally, provides for increased replacement costs whereas Mr Gambling's method does not. Further, a cash flow statement showing source and disposal of funds, over the whole history of the company, should, one would have thought, give the 'bridge' needed to understand the balance sheet.

Such a cash statement is seldom seen, but is of great assistance to the investigating accountant and it is somewhat surprising that it is not met with more often.

However, if Mr Gambling's basic contribution on this subject could be reduced to a single statement, I feel it could well become a most helpful one, as well as the stimulus it has undoubtedly already been to many readers; I have therefore dared to redraft it on those lines, together with my suggested cash statement, and include some specimen reserves for the increased values of assets on the basis of assumed

indices	(using I	Мr	Gamblin	g's	original	figures	as	a
basis for	my ow	n ex	rample),	as f	ollows:	J

#### Decimalizing the Currency

Sir, - Will Mr L. E. Leslie (December 1st issue) kindly tell us what proportion of retail price tickets are expressed in pounds?

> Yours truly, A. H. PROUD, Director and Secretary,

London W1. BOURNE & HOLLINGSWORTH LTD.

[Mr L. E. Leslie writes: Obviously those items priced at less than  $f_{i}$  each cannot be so expressed, but there are very many things that are. I refer, of course, to that part of any price consisting of a whole pound or pounds including, for the sake of argument, guineas, which unit would presumably disappear anyway. Typical examples of prices in pounds are – new and second-hand motor vehicles, motor cycles, carpets,

Even when prices over £1 are quoted in shillings, the shopper knows how many £1 notes are required.]

#### Training of Articled Pupils

SIR, - I was naturally pleased to see in your issue of December 8th, the unsolicited tribute paid in the letter from Messrs Whitehill Marsh Jackson & Co, to the introductory course for articled clerks started this autumn at the City of London College.

The letter refers to the course as being something shorter than the writers had envisaged. Your readers may like to know that we should not only welcome additional support for this six-week course but should be very ready to put on a longer one if a sufficient number of chartered accountants wish for it.

> Yours faithfully, A. J. McINTOSH, Director,

London EC2.

CITY OF LONDON COLLEGE.

#### Church Accounting in Nigeria

SIR, - I wonder whether there is among your readers anyone who would be in a position to consider spending two to four years doing a constructive job helping an African Church. We are an Anglican diocese, staffed, apart from myself, almost entirely by Nigerians. We have inherited from our mother diocese, from which we were divided four years ago, a highly centralized system of accounts which still has to be run from its offices.

With so much competition from Government and business we are unlikely to get and keep a Nigerian accountant of the calibre to run such a system. If we could get the right man from the United Kingdom (or, indeed, from elsewhere in the Commonwealth), for a few years, he could get clergy into operating their own bank accounts (a parish here is ten to twenty churches with State-aided schools attached), and train an assistant who could take over from him when the financial secretary's job had become that of an auditor rather than banker as it is at present. There is also constructive work to be done in the field of propaganda for planned giving.

It should be added that salary and allowances would be at mission, rather than commercial, rates.

Yours faithfully,

P.O. Box 31 Owerri, Nigeria. G. E. I. COCKIN, Bishop of Owerri.

[Arrangements have been made for anyone in the U.K. who may be interested to be seen in London, and we shall be glad to forward any letters to the proper quarter. Interested readers abroad should write to the Bishop at the address indicated. – Editor.]

# **Taxation Cases**

Full reports of the cases summarized in this column will be published, with Notes on the Judgments, in the 'Annotated Tax Cases'.

#### Humbles v. Brooks

In the High Court of Justice (Chancery Division)
November 8th, 1962

(Before Mr Justice Ungoed-Thomas)

Income tax – Schedule E – Headmaster of school – Course at college for adult education – To improve background knowledge of subject taught – Whether fee paid deductible – Income Tax Act, 1952, Schedule 9, paragraph 7.

The respondent, the headmaster of a school, attended a course in history at a college for adult education during week-ends. His purpose in doing so was to improve his background knowledge of history, a subject which he had studied to G.C.E. 'O' level only. It was easier and time-saving to obtain this knowledge in that way than by reading textbooks. The fee was £9.

It was contended on behalf of the respondent that the fee was deductible in computing the amount of his Schedule E assessment. It was contended on behalf of the appellant that the deduction of the fee was barred by paragraph 7 of Schedule 9 to the Income Tax Act, 1952. The General Commissioners decided in favour of the respondent.

Held: as the attending the course was for the purpose of obtaining background information, and not for the purpose of preparing the respondent's own lectures, its deduction was inadmissible pursuant to paragraph 7 of Schedule 9 to the 1952 Act.

#### Leach v. Pogson

In the High Court of Justice (Chancery Division)
November 6th, 1962

(Before Mr Justice Ungoed-Thomas)

Income tax – Trade – Establishing and selling schools of motoring – Whether establishment and sale of first of thirty schools was a trading transaction – Registration of Business Names Act, 1916, section I – Income Tax Act, 1952, section 526.

The appellant organized a school of motoring in Hull in 1954, under the name of 'East Yorkshire School of Motoring'. Later in the same year he formed a company called East Yorkshire School of Motoring Ltd, but the company went into voluntary liquidation in the following year. The appellant bought the tangible assets, and continued the business himself under the name 'East Yorkshire School of Motoring'. On December 1st, 1955, a new company, East Yorkshire United School of Motoring Ltd, was incorporated. Its issued capital consisted of 15,000 fully-paid shares of £1, and 7,450 shares were alloted for cash and 7,550 for a consideration other than cash. Of the latter shares 7,536 were allotted to the appellant and the remaining fourteen to the seven driving instructors of the school. The 7,450 shares, which were paid for in cash, were allotted to fourteen individuals, some of whom were members of the staff of the company and others purely investors. Thereafter the appellant established other schools at other places, each under the name 'East Yorkshire School of Motoring', and there were thirty transactions of the kind.

It was contended by the appellant that his activities did not constitute the carrying on of any trade. It was contended for the respondent that the appellant had carried on a trade of turning motoring schools to advantage by way of selling driving licences and by way of selling schools. The Special

Commissioners decided in favour of the latter view. In the appeal to the High Court the appellant did not dispute that the Special Commissioners' decision was correct except in the case of the first school; and it was contended on behalf of the respondent that having regard to the number of transactions and to

784

other elements of the case the Special Commissioners were entitled to decide that the initial transaction was also a trading transaction.

December 15th, 1962

è

Held: the establishment and sale of the first school, as with the subsequent schools, was a trading transaction for tax purposes.

#### C. A. E. S. S.

#### The Chartered Accountants Employees Superannuation Scheme

#### FIFTH REPORT OF THE COMMITTEE TO THE MEMBERS

The fifth annual general meeting of members of C.A.E.S.S will be held at the Hall of the Institute, Moorgate Place, London EC2, on Monday next, December 17th, at 2.30 p.m.

The contributions receivable in the year ended May 31st, 1962, amounted to £103,451 compared with £75,702 for the previous year. Members contributing to the scheme as at May 31st, 1962, totalled 1,067 and the number of firms participating was 229. In addition to contributing members, 112 members who have left the service of participating employers have retained paid-up pension rights in the scheme. The detailed figures are as follows:

gares are as ionows.	Males	Females
Total contributing membership as at May 31st, 1961	868	140
1962	154	20
	1,022	160
Less		
Withdrawals during the year	102	13
Total existing contributing membership as at May 31st, 1962 Total number of members retaining rights in the scheme but whose con-	920	147
tributions have ceased	107	5
Total number of members as at May		
31st, 1962	1,027	152

No deaths of members occurred during the year. The withdrawals arose through members leaving the service of participating firms. Refunds of contributions amounting in total to £2,944 were made to those members whose contributions were less than £100 thus entitling them to exercise their option to take a refund. The contribution suspense accounts of the participating firms were credited with the appropriate amounts under the provisions of Rule 15.

The liabilities of the fund were submitted to actuarial valuation as at May 31st, 1962. The committee has noted that the actuary in reporting a surplus of £2,910 has recommended that the surplus should be carried forward unappropriated. The committee has decided not to propose any alteration either of benefits or of

contributions.

The scheme is now firmly established. It offers a number of advantages over the private scheme and the committee commends it to the attention of those employers who for various reasons have not yet seriously considered participation in it. The scheme secretaries will be very pleased to discuss the matter with those interested.

Mr G. L. Yates Mercer retires from the committee under Clause 25 (11) of the Trust Deed and is eligible for re-election.

> R. W. L. EKE, Chairman.

#### THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

#### SPECIAL AND ORDINARY MEETINGS OF THE COUNCIL

At special and ordinary meetings of the Council held on Wednesday, December 5th, 1962, at the Hall of the Institute, Moorgate Place, London EC2, there were

present:

Mr Percy F. Carpenter, President, in the Chair; Mr Robert P. Winter, C.B.E., M.C., Vice-President; Messrs J. F. Allan, C. Percy Barrowcliff, W. L. Barrows, T. A. Hamilton Baynes, J. H. Bell, H. A. Benson, C.R.E., Sir William Carrington, Messrs G. T. E. Chamberlain, D. A. Clarke, Carrington, Messrs G. T. E. Chamberlain, D. A. Clarke, J. Clayton, C. Croxton-Smith, W. G. Densem, S. Dixon, W. W. Fea, Sir Harold Gillett, Bt, M.C., Messrs G. G. G. Goult, P. F. Granger, J. A. Jackson, H. O. Johnson, H. L. Layton, R. B. Leech, M.B.E., E. N. Macdonald, D.F.C., R. McNeil, J. H. Mann, M.B.E., R. P. Matthews, W. Bertram Nelson, C.B.E., W. E. Parker, C.B.E., S. J. Pears, F. E. Price, L. W. Robson, Sir Thomas Robson, M.B.E., Messrs J. D. Russell, R. G. Slack, J. E. Talbot, A. G. Thomas, A. H. Walton, V. Walton, F. J. Weeks, M. Wheatley Jones, E. F. G. Whinney, J. C. Montgomery Williams, E. K. Wright.

#### The Small Practitioner Inquiry

The Council has already announced that a questionnaire on such matters as fees, charging rates and remuneration is to be issued as soon as possible to all practising members. The draft of this questionnaire has been agreed and is to be used in a brief pilot survey. This pilot survey will be undertaken immediately and will be addressed to a small number of practising members in a variety of practices in different parts of the country. Members will be invited both to complete the questionnaire and to offer comments on its contents and on difficulties which may be experienced in its completion.

The experience of the pilot survey will be used to amend the questionnaire, if necessary, and to indicate any special features of the arrangements for the main survey. It is hoped that the final questionnaire will be sent to all practising members at about the end of February 1963.

#### **National Productivity Year**

Notes for talks given during National Productivity Year on 'The part the chartered accountant can play in productivity matters' are available, on application, at the offices of the Institute, for the use of any member who may be invited to speak at functions in connection with the National Productivity Year.

#### Attendances of Representatives at Meetings of **European Bodies**

The Council received reports on attendances by representatives of the Institute at the following meetings: (a) Nederlands Instituut van Accountants

Attendance by the Chairman of the Overseas Relations Committee (Sir Thomas Robson) and the Joint Secretary (Mr F. M. Wilkinson) at the Accountants' Yearday in Amsterdam from November 1st to 4th, 1962;

(b) Institut der Wirtschaftsprüfer

Attendance by the Chairman of the Overseas Relations Committee (Sir Thomas Robson) and the foint

Secretary (Mr F. M. Wilkinson) at the Arbeitstagung in Baden-Baden from November 13th to 16th, 1962;

(c) Föreningen Auktoriserade Revisorer

Attendance by the President (Mr P. F. Carpenter) and the Joint Secretary (Mr C. Evan-Jones) at the fiftieth anniversary celebrations in Stockholm on November 16th and 17th, 1962, of the establishment of authorized public accountants in Sweden.

At that meeting the President presented a resolution

in the following terms:

'At a meeting held on November 7th, 1962, in the Council Chamber at Moorgate Place, London, the Council of The Institute of Chartered Accountants in England and Wales resolved to convey to the Föreningen Auktoriserade Revisorer, on the occasion of the fiftieth anniversary of the establishment of Authorized Public Accountants in Sweden, the congratulations of the Council and best wishes for the future progress and prosperity of the Föreningen Auktoriserade Revisorer.'

#### Appointment to Committee

Mr J. F. Allan was appointed to serve on the Investigation Committee.

#### Registration of Articles

The Secretary reported the registration of 566 articles of clerkship during the last month, the total number since January 1st, 1962, being 2,825.

#### Members Commencing to Practise

The Council received notice that the following members had commenced to practise:

Abdulla, Mohamed Hassanali, A.C.A., a1962; M. H. Abdulla & Co and \*Zavahir Z. Alibhai & Co, Jubilee Insurance Building, P.O. Box 1555, Mombasa; also at Zanzibar, M. H. Abdulla & Co.

Barrell, (Miss) Marlene Lilian, A.C.A., a1961; 'Red Roofs',

Usk Road, Pontypool, Mon.
Brown, James Edmund, A.C.A., a1955; Thornton Baker &
Co, 24B High Street, Aylesbury, Bucks.

Burns, Colin Ernest Brodie, A.C.A., aS1957; 8 Penshurst Avenue, Sidcup, Kent.

a indicates the year of admission to the Institute.

aS indicates the year of admission to The Society of Incorporated Accountants.

Firms not marked † or \* are composed wholly of members of the Institute.

†Against the name of a firm indicates that the firm, though not wholly composed of members of the Institute, is composed wholly of chartered accountants who are members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.

\*against the name of a firm indicates that the firm is not wholly composed of members of one or another of the three Institutes of chartered accountants in Great Britain and

††against the name of a firm indicates that the firm includes an incorporated accountant member of the Institute and is composed wholly of members of one or another of the three Institutes of chartered accountants in Great Britain and

Cann, Christopher Richard, A.C.A., a1959; Thorne, Lancaster & Co, Hillgate House, 26 Old Bailey, London EC4.

Chandler, John Arthur, A.C.A., aS1953; \*Elias, Chandler & Co, Wellington Square, London, Ontario, Canada.

Collett, Christopher, M.A., A.C.A., a1958; Cassleton Elliott & Co, 4 & 6 Throgmorton Avenue, London EC2.

Davis, David Thomas, B.Sc. (ECON.), A.C.A., a1956; 73 Ethelburga House, 91 & 93 Bishopsgate, London EC2.

Dobson, Peter, F.C.A., aS1951; Fawley Judge & Easton,

van der Merwe, David Barend, A.S.A.A., a1961; \*Deloitte, Plender, Griffiths, Annan & Co, 501 City Centre, Kaiser Street, (P.O. Box 47), Windhoek, South West Africa, for other towns see \*Deloitte, Plender, Griffiths, Annan & Co. Waller, Colin Leslie, A.C.A., a1962; 38 Valley Road, Streatham, London SW16.

Walton, William Alan, A.C.A., a1960; 14 Trafford Close,

Great Missenden, Bucks.

Whyatt, Lyndon Buchan, A.C.A., a1958; \*Edward Thomas Collins & Son and Kinnersley & Shipton, 28 Baldwin Street, Bristol 1.

Worsley, Michael David, B.Sc., A.C.A., a1962; 4 Longford

Avenue, Southall, Middx.

#### Re-admission to Membership

Subject to payment of the amount required by the Council one former member of the Institute was re-admitted to membership under clause 23 of the supplemental Royal Charter. One application under clause 23 was refused.

It was reported to the Council that the following readmissions, made at the Council meeting on November 7th, 1962, subject to payment of the amounts required,

had become effective:

Bowler, Gordon Roger, A.C.A., with Moore, Scott & Williams, 49 Widemarsh Street, Hereford.

Davis, Harold Edwin Coate, F.C.A., Harold Davis & Co, 178 High Street, Somerset.

Griffiths, Norman, F.C.A., 9 Harrod Drive, Birkdale, Southport.

Palmer, Robert Percival, F.C.A., Chesterton Priory, near Peterborough.

It was also reported to the Council that one readmission made at the Council meeting on November 7th, 1962, had failed to become effective by reason of non-payment of the prescribed sum by the given date.

#### Change of Name

The Secretary reported that the following changes of name have been made in the Institute's records:

Barnett, Robert Maurice to Breckman, Robert Michael. Browne, Bernard James Dennis to Dennis-Browne, Bernard James

Weissberger, Edgar Cecil James to Whitby, Edgar Cecil James.

#### Resignations

The Council accepted the resignations from membership of the Institute of:

McBurnie, Douglas, F.C.A., a1920; Abbey House, Westminster, London SW1.

and of the following members with effect from December 31st, 1962:

Atkins, Wilfred John, F.C.A., a1925; Maurice J. Bushell & Co, 16 Museum Street, Ipswich.

Barrow, Francis George, B.Sc., F.C.A., a1922; 164 Belgrave Road, Leicester.

Cook, Harry Laurence, F.C.A., a1924; 6 Oak Tree Close, Burpham, Guildford.

Godkin, Jack Noel, F.C.A., aS1911; 'Forest Edge', Beacon Road, Loughborough, Leics.

Jolliffe, George Graham, F.C.A., a1910; 'Wyecroft', St John.

Jersey, C.I.
Mott, Tom, B.A., F.C.A., a1932; 3 The Wardrobe, Old
Palace Yard, Richmond, Surrey.

Palmer, George Henry, M.B.B., F.C.A., a1923; 25 Lawrence Grove, Henleaze, Bristol.

Walmesley, John, F.C.A., a1911; Bowden, Bass, Cox & Co, 328 Lambton Quay, Wellington, C.I., New Zealand.

#### **Deaths of Members**

The Council received with regret the Secretary's report of the deaths of the following members:

Mr Percy Toothill, F.C.A., Sheffield, a member of The Society of Incorporated Accountants from 1924 and President of the Society, 1939-42.

Thomas Francis Alston, F.C.A., Manchester. Percy Septimus Cowell, F.C.A., Lyme Regis. Herbert Eccles, F.C.A., Blackburn.

John Angus Lancaster Gunn, C.B.E., F.S.A.A., Sydney. Charles James Harvey, F.C.A., Plymouth. Frederick Norton Hiles, F.C.A., Grasmere, South

Australia.

John Henry Humphries, F.S.A.A., London. David George Jackson, B.A., F.C.A., London. Frederic Maurice Jones, F.C.A., Manchester.

Raymond Wallace May, F.C.A., Solihull. William Ewart Mountford, F.C.A., Stafford.

Harry Daking Sheldrake, F.C.A., Frinton-on-Sea. Clarence Percival Stanley, F.C.A., Birmingham.

Charles Watts, F.C.A., Torquay.

William James Robert Watts, F.C.A., Heswall. William Westall, F.C.A., Morcambe and Heysham.

John Wild, F.C.A., Lytham St Annes. John Gilbert Wright, F.C.A., Hove.

#### FINDINGS AND DECISIONS OF THE DISCIPLINARY COMMITTEE

Findings and Decisions of the Disciplinary Committee of the Council of the Institute appointed pursuant to bye-law 103 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at hearings held on October 25th and November 7th, 1962.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that a clerk under articles to a Fellow of the Institute was at a Magistrates' Court convicted for that he did feloniously steal the sum of £6, so as to render himself liable to be declared unfit to become a member of the Institute. The Committee found that the formal complaint against the articled clerk had been proved and ordered that he be reprimanded but that there existed special circumstances justifying the omission of his name from the publication of the finding and decision.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that John Desmond Marsden Ellis, F.C.A., had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of sub-clause (3) of clause 21 of the supplemental Royal Charter in that (a) he failed to perform his duties under the Bankruptcy Acts, 1914 and 1926, as a trustee in the bankruptcies of three persons by omitting to render accounts and by needlessly protracting his trusteeships without any probable advantage to the creditors and was removed from office by the Board of Trade by reason of such failure, and (b) he failed to reply to or take any action in respect of three letters addressed to him by the Secretary and an Under-Secretary of the Institute, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against John Desmond Marsden Ellis had been proved and the Committee ordered that John Desmond Marsden Ellis of The High Street, Bourton-on-the-Water, Gloucestershire, be excluded from membership of the Institute. •

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Trevor Richard Hatton, A.C.A., was at the General Session held in the Old Bailey on January 30th, 1962, convicted on indictment for that he conspired together with other persons to incite divers persons to commit a breach of section 1 of the Official Secrets Act, 1911, and for that he conspired together with other persons to commit a breach of section 1 of the Official Secrets Act, 1911, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against Trevor Richard Hatton, A.C.A., had been proved and the Committee ordered that Trevor Richard Hatton, A.C.A., now in one of H.M. Prisons, be admonished.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that John Gordon Hurst, F.C.A., had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of sub-clause (3) of clause 21 of the supplemental Royal Charter in that he failed (a) within a reasonable time or at all to deal with or answer repeated requests made to him by a firm of chartered accountants to hand over the books and papers and to give information relating to the affairs of Mr and Mrs X. for whom he previously acted as accountant; (b) to answer or take any action in response to two letters addressed to him by the Secretary and by an Under-Secretary of the Institute, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against John Gordon Hurst, F.C.A., had been proved and the Committee ordered that John Gordon Hurst, F.C.A., of 89 London Road, Leicester, be reprimanded.

## The 'Institution of Institutions'

#### City of London Toasted at Women Chartered Accountants' Dinner

It was but a cheap display of intellectual snobbery to engage in the arid practice of turning the cold light of logic on the institutions of the City of London; far better to turn on the warm light of history and see what that disclosed, said Mr Desmond Heap, LL.M., Solicitor and Comptroller of the City of London, as principal guest at the annual dinner in London last week of the Women Chartered Accountants' Dining Society.

Mr Heap, who was replying to the toast of 'The City of London', had just completed a light-hearted review of its history. He said that it was entirely pertinent to mention that the recently-published report of the Royal Commission on Local Government in Greater London had declared that a sense of history and tradition was needed to support the sense of community necessary to successful local government. The City of London was unlike any other municipality. Its wealth, its antiquity, the enormous part it had played in the history of the nation, its dignity and its traditions and historical ceremonial made it an institution of national importance.

#### City's Origins are pre-Christian

It was right to think, said Mr Heap, that in the City there was gathered together the living and burning soul of England. 'When a man is tired of London then he is tired of life.' So said Dr Johnson, and he was certainly right, he added.

The Corporation of the City was the institution of institutions, Mr Heap went on. The Bank, the Stock Exchange, the Baltic, the Royal Exchange were all wonderful stories, but the most ancient of all was the City Corporation – 'we just don't know when it began, but there is a fundamental argument that its origins were pre-Christian'.

The toast was proposed by Miss H. E. Hartley, M.A., A.C.A., a member of the Committee of the Society. She said that the City meant finance and banking, and women would seem to play a minor part in running the famous institutions centred round the Bank. Those who were members of the Institute, however, had to learn about this abstruse work of dealing with bits of paper because 'the City' was the acme of general commercial and financial knowledge.

She said that since Roman times it had been Britain's main trading centre and now 'the square mile' contained the greatest concentration of wealth in the world. One-sixth of Great Britain's assessable profits were made there, and it was fitting that the present Lord Mayor, the 635th, was leading a new export drive.

The casual visitor, however, was hardly impressed by the City's physical layout. The buildings were either a mixture of Victorian red brick and Georgian concrete, or twenty-storey glass and steel slabs rising from bomb sites. To provide modern working conditions for the hive of half a million commuters who streamed daily into 'the square mile', the only solution was to build high.

But in the process, all physical traces of the City's history would be obliterated – turned up by bulldozers, perhaps photographed, and a few relics transferred to the Guildhall Museum. Whatever the problems of

preserving physical relics, however, the City had one intangible reminder of its history; that was its indestructible Corporation, which had been described as 'an obstinate relic of medieval structure sticking out like a rock in the sea' – the sea possibly being the L.C.C. (laughter.)

Miss J. Parry, Chairman of the Society, who proposed the toast of "The Institute of Chartered Accountants in England and Wales", said that the Society had extended its activities since last year. They had succeeded in forming a small group in the North East to attempt to combat the difficulty of members having to travel to London.

Miss Parry said there had been no let-up this year ingthe work of the Institute on behalf of the profession. They had three very important matters in hand – the report of the Jenkins Committee on company law, the Parker Report on the training of entrants to the profession, and the investigation into the affairs of the small practitioners.

She knew very well the meticulous care which the Council was giving to the Jenkins Report in an effort to see that no provisions became law that would be detrimental to the country, the public, or in any way to the work that accountants had to do. The training of entrants and the small practitioners' review were matters which were closely linked, because it had been established that by far greater number of articled clerks were trained in the offices of small practitioners.

#### **Tribute to Women Members**

Mr R. P. Winter, C.B.E., M.C., T.D., D.L., F.C.A., Vice-President of the Institute, deputizing at short notice for the President, who was unable to attend, paid tribute to the women members of the Institute. He said that of the 388 on the register, eighty were in practice, sixty-four were in practising accountants' offices, and forty were in industry. 'The rest', he added, laughingly, 'we do not know what they are doing, but presumably they are well employed.'

Referring to the recent retirement of Mr Alan MacIver from the secretaryship of the Institute, Mr Winter said that when Mr MacIver joined the staff in 1935, there were only seventeen people at Moorgate Place; now there were 120. Membership then totalled 10,000, now it was 36,000. There had been a whole change in the outlook of the Institute since the war.

But they had now reached the stage where they had to take stock of where they were going. They had expanded enormously since the war but had had little opportunity to review their problems and make sure their ship was well founded. Their activities had extended far beyond mere auditing and taxation, and embraced more and more the giving of financial guidance, and advice on management problems, costing and all other modern industrial requirements. They had got to keep up to date with these requirements.

The toast of 'The Guests' was proposed by Miss S. J. Clark, A.C.A., a member of the Committee of the Society. Miss E. C. Bather, O.B.E., ex-Chief Superintendent of the Metropolitan (Women) Police, responded.

#### LONDON CHARTERED ACCOUNTANT STUDENTS' DINNER

A total of 1,480 members and guests attended the fortyninth annual dinner of The Chartered Accountant Students' Society of London held at Grosvenor House, London, last Monday. Mr W. E. Parker, C.B.E., F.C.A., President of the Society, was in the chair.

Among those present were Mr Percy F. Carpenter, F.C.A., President of The Institute of Chartered Accountants in England and Wales; Mrs Olive G. Deer, J.P., the Rt Hon. the Chairman, London County Council; the Rt Hon. Baron Godber of Mayfield, Chairman, Commonwealth Development Finance Co Ltd; Sir Milner Holland, Q.C., Chairman, General Council of the Bar; Sir Alexander Johnston, K.B.E., C.B., Chairman, Board of Inland Revenue; Mr H. B. Lawson, M.C., M.A., LL.B., President, The Law Society; Mr A. D. Marris, c.m.g., Chairman, Issuing Houses Association; Mr P. W. Milligan, Chairman of Lloyds; Lord Ritchie of Dundee, Chairman of the Council of the Stock Exchange; and Mr E. K. Stewart-Smith, M.B.E., Chamberlain of London.

#### Development of the Profession

The toast of 'The Students' Society' was proposed by Baron Godber of Mayfield, who said in the course of his remarks:

'Looking back to the days when I first entered the City, something short of sixty years ago, I could not avoid comparing the public's appreciation of accountancy then with the public's appreciation today. My chief, then, had no use for accountants. He called them "book-keepers" – and as far as he was concerned book-keepers they were going to remain. And he was not the only one in those days that had that same feeling as regards accountants. They wanted to do things which were a bit of a nuisance, and to do things more correctly than did the great tycoons of the early nineteenhundreds. But changes have come, and they have undoubtedly been all to the good.

'As a result of the slackness of those early days there were many crises and many serious losses resulting from a neglect to give the accountants far wider scope. And other countries - for our's was not the only country - were just as backward in recognizing their value. Few of them provided by law for the auditing of accounts, and our own company law was

altogether different from what it is today.

'But company law has been tightened, and over the years the need and demand for accountants has increased at an amazing pace. Who can say, nowadays, that there is any avenue which is not open to the qualified accountant? Higher management, administration, public accounts and the public service, all of these the accountant has access to.

'Why is the profession of accountancy sought after these days and why are there such wide possibilities of advancement in the profession? It is because of the integrity of the accountant, his wide experience, not only in accountancy but in secretarial affairs, law, administration and so on, and, above all, because the accountant is needed. But what will be the future requirements of the accountant? Added to his qualifications he already has, will be a need for further qualifications. Automation has arrived, and with it nuclear development, and computers of one kind and another which are becoming more and more advanced. One cannot even guess at the problems which can arise from these developments alone. The layman can pass the expenditure -I have, myself, passed a great deal of expenditure - while knowing very little about the mechanics. The accountant

of the future will need to know the broad mechanics of these new discoveries and, what is more, their value in practice.

'Just a brief word to the articled clerks direct, if I may. No prize has ever been worth while without hard work, study and concentration on the job in hand. There is no short cut to progress. That is a thing which I, with my career behind me, strongly urge you to bear in mind as you study and prepare for examinations. What is abundantly clear is that your profession, for upwards of the last sixty years, has created for itself an honourable and trusted place in the structure of the nation. It has, however, also accepted great responsibilities, and in rightly taking pride in its achievements it has also to remember this other aspect.' (Applause.)

#### Tribute to Sir Harold Barton

Mr Clarence L. Llewellyn-Smith, Chairman of the Committee of the Students' Society, responding, paid tribute to the memory of Sir Harold Barton who died a few months ago. He was a member of the Institute for a considerable number of years and a Vice-President of the Students' Society who spent much time and energy in joining in its activities.

'Some of you are probably aware', he went on, 'of the new Weights and Measures Bill before Parliament. One of the things I believe is to revert to the metric system. The new definitions in that Bill, I think you will have found out, provide for a slight change in the weights and measures whereby the yard is to be a fraction longer and the pound a fraction lighter. But rumour - and it is no more than rumour - has it that this Bill has had an impact on the Examinations Committee. They have been thinking about this and we may get a pronouncement from the Institute regarding examinations, whereby in the future the time limit may be a fraction longer and the questions a fraction shorter. (Laughter.)

'An event which you must have read about, was the gathering of the International Congress of Accounting in the United States. We in London are particularly proud of the fact that our President attended this meeting, not merely as an observer, but he took an active part and delivered a paper at a technical session. We are proud of this, and I mention it to give you some idea of the work of our President. With all his commitments - now international commitments - he still finds time to attend our functions and our meetings. This, I think, we all appreciate very

much indeed.' (Applause.)

The toast to the visitors was proposed by the President of the Society, Mr W. E. Parker, who said:

'The Secretary has given me an account of our parade state this evening, and I am pleased to tell you – although I imagine that it will be no surprise to you - that there are no less than 1,480 of us here tonight. When a multitude of that size drinks your health it is quite some tonic (laughter), and I am grateful to Mr Llewellyn-Smith for prescribing it, and to all of you for administering it. I am also grateful for the privilege of presiding for my fifth successive year over our annual dinner, and for the opportunity which this gives me once again, on your behalf, as well as on my own, to express before this large gathering our thanks to your Committee, this year under Mr Lewellyn-Smith's chairmanship, for the tremendous amount of hard work which it does for us. Members of the Society, be sure of this - membership of your Committee is no sinecure, nor are the posts of the permanent officials, and I would like to pay your tribute, and

mine, to the devoted work of Mr Carter and his staff, not least in the organization of this considerable dinner party in which Miss Bacon has borne the great brunt of the hard work.' (Applause.)

#### Things not Always What They Seem

"This year, the text of my "sermon" to student members is "Things are not always what they seem". I cannot think of a better text for those of us who earn a living, or try to earn a living, or hope to earn a living (laughter), by examining other people's accounts and prospectuses. I think I can best get my message home by reminding you of a member of the Society who, while driving a racy car, was followed by the police. They were very surprised because he drove with the greatest skill and with every consideration. He took no risks, kept his correct position on the road, and gave the right signals, and so on and so forth. It was not far short of an immaculate performance - so much so that the police had to stop him and congratulate him. The young man who had, of course, looked in the driving mirror and given the correct signal before pulling into the kerb, thereupon told them "I will give you a word of advice. You cannot drive too carefully when you are as tight as I am". (Laughter.)

'To all our guests, I would like to express our pride in their attendance and our real and humble gratitude to them for gracing this function. Lest, from this, there should be any risk of any of them getting a swollen head, I must add that we lure our guests here with a double motive. We want our own members to have the opportunity of seeing the leaders of a wide cross-section of the great institutions, undertakings, professions which touch the life of the City of London. We also may hope that it will be good for the future business of our members that they should see us.' (Applause.)

#### City Chamberlain's Response

Responding to the toast, Mr Stewart-Smith said:
'In the course of my work I frequently have occasion to consider reports and accounts and I have found from experience that far and away the best policy is to sit quiet and let

accountants do all the talking. You may well wonder, then, why tonight I have abandoned this counsel of wisdom. The reason is that your President has rendered such great and signal service to a number of enterprises with which I am connected, that the very least I could do was to accept with great pleasure the honour he did me in inviting me to speak to you.

to you.

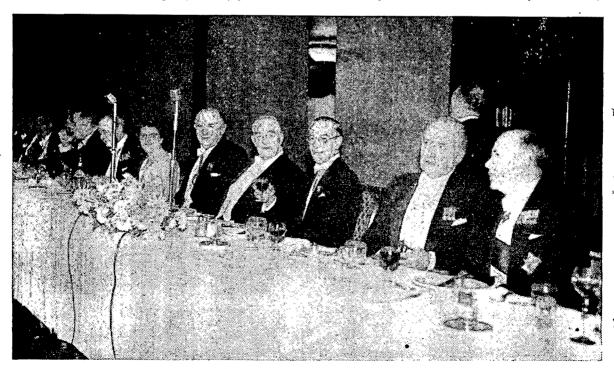

'I would like to congratulate you most warmly on choosing the profession of accountancy and thereby ensuring that you will be overworked for the rest of your lives. (Laughter.)

'I have spent some thirty years of my life in the service of one of the "Big Five" clearing banks and frequently, on discussing advances, I used to request or even demand—according to the state of the balance and state of the emergency—the most recent financial statement of my customers, and my customers, like a well-trained chorus, always replied "The books are with the auditors" and, in my imagination, they sort of added, sotto voce, "That's fixed it".

But very frequently that did not work because I knew the firm of accountants who were the auditors, and the customers could hardly refuse permission to let me make contact with them direct. It would then transpire that the auditors had, in fact, some time ago, put some vital and important questions which had remained unanswered by the customers, sometimes for weeks and sometimes for months. This was a well-known and popular method of thwarting, for a limited time and for a limited degree – and I emphasize these qualifications – both the banker and tax gatherer; but it did mean a great deal of work and, in my opinion, unnecessary work, for the accountant. That is one of the main reasons why I said to you at the beginning that you were likely to suffer all your lives from a chronic overdose of work.' (Laughter and applause.)

Proposing the toast of 'The Institute of Chartered Accountants in England and Wales', Mr H. B. Lawson said:

'Tonight I feel that I am amongst friends, not merely because of my brother's connections with your Institute,

THE PRINCIPAL GUESTS, from right to left: Sir Alexander Johnston, K.B.E., C.B.; Lord Ritchie of Dundee; Mr W. E. Parker, C.B.E., F.C.A. (in the chair); Baron Godber of Mayfield; Mr Percy F. Carpenter, F.C.A.; Mrs Olive G. Deer, J.P.; Sir Harold Gillett, Bt, M.C., F.C.A..; Sir Milner Holland, Q.C.

but because throughout my working life I have received the most generous help from so many members of your Institute. Its services are required by, amongst others, banks, and I, too, have spent a large portion of my working life in the service of a bank; and I would suggest that bankers, chartered accountants and solicitors have at least one thing in common. The customers of bankers and the clients of accountants and solicitors might possibly be said to comprise an odd assortment of bodies and individuals. For instance, I remember, years ago, a society whose overdraft regularly outran its deposits, but it was not until the liquidation and demise of that society that the bank was shattered to discover that the society's motto was "God helps those who help themselves". (Laughter.)

'Î don't think anyone would deny the greatness of gifts of common law, certain aspects of our legal system and standards of justice and integrity that our country has brought to the nations of the Commonwealth and to others. In similar fashion I believe that your Institute enjoys a reputation and status that is the envy of all accountancy bodies the world over. In one of the brochures of the Institute it states that your members have acquired a unique reputation throughout the world. None of us, I think, would be disposed to disagree with that assertion and

proud claim.

#### The Society's Early Days

Mr P. F. Carpenter, the President of the Institute, responding, said:

'It was exactly thirty-eight years ago tonight, on December 10th, 1924, that your Society held its twentieth annual dinner. There were some four hundred and forty present, and those members and their guests heard a very witty and erudite speech by a tall, slim, fair-haired young man who was then chairman of your committee. In the course of that speech he said the important position which is occupied by

chartered accountants as a body in the commercial world makes it imperative that only those who have undergone a thorough course of training and are properly qualified, should be admitted to membership of the Institute. I might add that when I spoke those words I had just passed my Final examination. (Laughter.)

#### First President Elected in 1883

'I must say I was a little puzzled to find that in 1924 the Society was only celebrating its twentieth annual dinner, and so I made some researches into the history of the Society, knowing as I did that it had been founded fairly soon after the grant of the Royal Charter to the Institute. It was, in fact, in 1883 that the Society was founded, and I found that on March 2nd, 1883, an informal meeting was held, at which it was decided that it would be a good thing to form a students' society. The forty-eight members present signified their intention of joining and on March 21st – just nineteen days afterwards – another meeting was held at which rules were approved, a president and committee elected, and auditors appointed.

'I then found that following this inaugural meeting there

a name well known in our profession. Mr F. W. Pixley spoke to them but not, as one might have thought, on bankruptcy and liquidation which, we are all told, was the only thing accountants did in the 1880s, but gave them a

lecture on auditing.

'Our students should always remember that they have chosen to take up a profession. I am not proposing to give you the definition of a profession, but one thing is quite certain – a member of a profession assumes an additional loyalty to those which we all have – those we have to our family, our school, our church, our town, and our country. And it is only with the whole-hearted support of members that a profession can flourish.' (Applause.)

### UNION OF CHARTERED ACCOUNTANT STUDENTS' SOCIETIES

#### ANNUAL CONFERENCE AT SEABURN

Fifty-five delegates from twenty-seven of the twentynine students' societies of The Institute of Chartered Accountants in England and Wales met last Friday and Saturday at Seaburn, near Newcastle upon Tyne, for their annual conference under the chairmanship of Mr Sidney H. Reilly, A.C.A., of Newcastle.

The first business was to welcome the Exeter Students' Society on joining the Union. The total number of articled clerks represented by the conference

exceeded fifteen thousand.

The conference opened with prayers by Canon Lathaen, Vicar of Seaburn, and a welcome by Mr A. Whittaker, F.C.A., the President of the Northern Students' Society, and then began the first of two sessions of discussion on a very full agenda.

#### Liaison Committee with the Council

The Statement issued by the Council of the Institute after the meeting with the Liaison Committee appointed by the last conference, had been circulated to all committee members of students' societies and was received by the conference. It stated the Council's position on the advisability of transfer of articles and on the rights of redress available to articled clerks who felt

that they were not receiving the experience required under their articles. The Council also gave their views on the refusal or opposition of some principals to allowing leave to attend students' society meetings. They promised to issue a students' handbook to articled clerks and stated unequivocally that there would be no relaxation of the standard of the examinations through any introduction of choice of questions.

#### Full-time Education and Technical Schools

After some confusion between arguments for using technical schools for introductory courses only and those for extended full-time scholastic teaching of theory, and in face of several warnings against the inevitable depreciation of the essential practical element of training for the Institute if merely academic interests were allowed to dominate the training, the conference passed motions calling for more full-time education and the representation of articled clerks on a committee to assist the Council of the Institute to extend the use of technical schools. Speakers in favour of the motions hoped that they would lead to easier study conditions, greater attraction to school leavers, six-month sandwich

Ħ

#### ACCOUNTANT

courses, wider general education, and 'adequate theoretical training' which could be gained cheaply because local rates would meet the cost.

#### **Short Residential Courses**

The conference passed a motion affirming the importance of short residential courses as a means not only of providing better lectures but also of encouraging contact between articled clerks and the consequent stimulation of the feeling of professional responsibility. The need to bring the professional benefits of such courses home to principals was emphasized.

#### **Articled Clerks' Conditions**

The conference refused to endorse proposals to circulate a questionnaire to articled clerks and to press for a specified minimum scale of remuneration. It also

rejected a suggestion that the Council be urged to give more general approval to the transfer of articles to secure better experience.

#### Students' Societies

A number of problems facing students' societies were discussed and suggestions exchanged. They included such matters as liaison between societies; contact between articled clerks; lecturers' fees and expenses; methods of wider professional education and the difficulties of securing secretarial services; and support for dinner-dances in some societies. A motion that political subjects be excluded from students' societies' reports and newsletters did not receive approval, though it showed strong views on the point at which freedom of opinion merged into abuse of circulations for the purposes of propaganda.

#### Notes and Notices

#### PROFESSIONAL NOTICES

MESSRS HARMOOD-BANNER, CASH, STONE & MOUNSEY, Chartered Accountants, announce that as from December 17th, 1962, their London practice, except for the Registration Department, will be carried on from 24 Ludgate Hill, London EC4, telephone City 9141. The Registration Department will continue at Dashwood House, 69 Old Broad Street, London EC2. The office at 48 Copthall Avenue, London EC2, will be closed.

Messrs Kingsford, Garlant & Co, Chartered Accountants, announce a change of address from 35 Earl Street to 69 Bank Street, Maidstone.

Messrs James Milne & Co, Chartered Accountants, of 5 Bon Accord Square, Aberdeen, announce the retirement on November 30th, 1962, of Mr Harry C. Reid, Ll.B., C.A.

MESSRS SAKER & DAVIS, Chartered Accountants, announce that on December 17th they are moving from Dashwood House, 69 Old Broad Street, London EC2, to 24 Ludgate Hill, London EC4, telephone City 9141.

Messrs T. G. "Shuttleworth & Son, Hadfield, Riddell & Co, Chartered Accountants, of 32 Wilkinson Street, Sheffield 10, announce that Mr J. W. Merryweather, M.C., T.D., F.C.A., senior partner, retired on October 31st, 1962. The remaining partners will continue the practice under the same names.

Messrs Stanley Marsh & Co, Chartered Accountants, of Masonic Buildings, Hall Street, St Helens, announce that Mr F. J. Farrell, F.C.A., and Mr E. J.

SHEW, A.C.A., became partners of the firm on November 10th, last. The firm's name will remain unchanged.

Mr W. G. WALLWORK, F.C.A., announces that he has taken into partnership as from December 1st, 1962, Mr D. E. Nelson, Ll.B., A.C.A., and in future the practice will be carried on under the name of WALLWORK & NELSON, 9 Lune Street, Preston.

#### Appointments

Mr W. B. Henderson, F.C.A., has been appointed a director of Jaeger Holdings Ltd.

Mr Sam Mann, F.C.A., is to become vice-president of Bowater Corporation of North America.

Mr T. E. Mulcaster, F.A.C.C.A., F.C.W.A., has been appointed joint managing director of J. W. Singer & Sons Ltd.

#### **OBITUARY**

#### Harry Daking Sheldrake, F.C.A.

We have learned with regret of the death on November 25th, at the age of 92, of Mr H. D. Sheldrake, F.C.A., former senior partner in the firm of Luckin & Sheldrake, Chartered Accountants, of Chelmsford.

He joined the firm in 1885 serving his articles with them, and was admitted to membership of The Institute of Chartered Accountants in England and Wales in 1899. Mr Sheldrake became a partner in his firm in 1894 and retired from active practice in 1945. He was a keen sportsman and mountaineer, playing hockey for Essex and cricket and golf for Chelmsford.

REVALUATION OF ASSETS

WORKS, FACTORIES, PLANT & MACHINERY, Etc.

#### THE CHARTERED ACCOUNTANTS' BENEVOLENT ASSOCIATION

At a recent meeting of the Excutive Committee there were ten members present.

#### **Applications for Assistance**

Eight new applications for assistance were considered. In two cases a grant was made; in three cases a donation was given; in one case a loan was made as a temporary measure and in two cases no grants were awarded.

Twenty-eight applications (including ten from persons previously assisted by the Society's fund) for further assistance were considered. In twenty-one cases the grant was renewed; in three cases the grant was increased; in one case the grant was reduced owing to improved circumstances and in two cases a donation was made as a temporary measure; one case was deferred until further information had been received.

#### **Matters Reported**

Sixteen cases were reported where changes in circumstances had occurred and grants were adjusted or donations made in appropriate cases. The Hon. Secretary was pleased to report that two beneficiaries had obtained employment and no longer needed assistance. The deaths of three beneficiaries were reported one of whom was a resident in one of Crossways Trust homes.

#### **Christmas Gifts**

It was decided to send small Christmas donations to certain beneficiaries who are resident in Homes and food hampers to others.

#### Other Matters

The Hon. Secretary reported the receipt from Mr W. L. Barrows, Ll.D., F.C.A., of £41 138 3d, collected by him from members of the Institute on their return journey from the International Congress recently held in New York.

Mr C. H. S. Loveday, F.C.A., was appointed Hon. Secretary of the Association following the retirement of Mr Alan S. MacIver, C.B.E., M.C., B.A.

#### IN PARLIAMENT

#### Mortgages: Tax Relief

Mr Millan asked the Chancellor of the Exchequer by how much the yield of income tax and surtax would be increased if no relief were given to owneroccupiers for mortgage interest paid.

Mr Barber: It is estimated that if owner-occupiers paying mortgage interest during the year 1961-62 had not been able to obtain any form of tax relief for that interest the extra tax payable would have been of the order of £80 million.

Hansard, Nov. 27th, 1962. Written Answers. Col. 37.

#### **Employment Income**

Mr Millan asked the Chancellor of the Exchequer how much of the total figure of £16,245 million, shown as income from employment in 1961 in Table 16 of National Income and Expenditure 1962, is represented by wages and salaries paid, but not employer's contributions, in industry assessable to taxation on profits.

Mr BARBER: £,12,850 million.

Hansard, Nov. 27th, 1962. Written Answers. Col. 37.

#### Farm Buildings and Improvements: Allowances

Mr Prior asked the Chancellor of the Exchequer if he will state the annual cost to the Exchequer of relief granted by capital expenditure claims for farm buildings or farm improvements for the last three convenient years.

Mr DU CANN: The cost of investment and other allowances in respect of expenditure covered by section 314 of the Income Tax Act, 1952, was in 1959-60, 1960-61 and 1961-62 £3 million, £4 million and £4 million respectively.

Hansard, Nov. 30th, 1962. Written Answers. Col. 103.

#### **Annuities: Assessment of Value**

Mr Hale asked the Economic Secretary to the Treasury whether he is aware that in the case of re Longbourne's Marriage Settlement 1952, reported in All-England Law Reports, at page 933, the duty was laid on trustees to assess the value of annuities on actuarial principles based on the cost of National Debt Annuities according to the ruling price of  $2\frac{1}{2}$  per cent Consols; when the appropriate tables were last published; and where they can be obtained.

Mr DU CANN: The present tables are contained in the Savings Bank Annuities (Tables) Order, 1954 (S.I. 1954 No. 1578) and the Savings Bank Annuities (Tables) Order, 1955 (S.I. 1955 No. 419). Copies of these Orders are still available from H.M. Stationery Office. They are also included in the bound volumes of Statutory Instruments which are available in many reference libraries.

Hansard, Dec. 5th, 1962. Written Answers. Col. 207.

#### LOCAL LOANS FUND

The Treasury have announced that as from December 8th the rates of interest charged on loans advanced by the Public Works Loan Board to local authorities are as follows:

Loans for not more than five years	Per 54	cent (5%)
Loans for more than five years but not	28	(58)
more than fifteen years	5₹	(5 <del>1</del> 8)
more than thirty years Loans for more than thirty years	5 7 5 8 5 8	$\binom{6\frac{1}{8}}{\binom{6\frac{1}{8}}{1}}$

The former rates of interest are shown in brackets; they have been in force since October 20th, 1962. The rates of interest on existing loans are unaffected.

#### LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

#### **Common Market Meeting**

Last week's fog prevented Mr J. Kraayenhof, Past President of the Nederlands Instituut van Accountants from travelling to London, and the meeting he was to have addressed on December 6th on 'The practice and profession of accountancy within the Common Market' has been postponed until Monday, February 11th, 1063.

The meeting will be held at 5.30 p.m. in the Hall of the Chartered Insurance Institute, 20 Aldermanbury, EC2, as previously arranged, and tickets issued for December 6th, should be retained and used for the February meeting.

Members who had not intended being present at last week's meeting may apply to the Secretary of the Society, Mr J. W. G. Cocke, at 2 Norfolk Street, London WC2, for tickets for the new date, enclosing 10s if requiring refreshments after the meeting.

#### DUBLIN SOCIETY OF CHARTERED ACCOUNTANTS

#### Industrial and Administrative Group

'The accountant's contribution to marketing' was the theme of an evening meeting of the Industrial and Administrative Group of The Dublin Society of Chartered Accountants held on November 28th, at Jury's Hotel, Dublin. The three speakers were Mr N. McMahon, A.C.A., Mr T. J. Woods, A.C.A., marketing manager of Sunbeam Wolsey Ltd, and Mr A. J. F. O'Reilly, general manager of Bord Bainne (Eire Milk Board).

Mr J. D. Hollwey, A.C.A., chairman of the Group, presided, and the meeting was attended by about one hundred members. Among those present were Mr R. P. J. Smyth, F.C.A., chairman of the Dublin Society, and Mr J. Mansfield, director and secretary of the Irish Management Institute.

#### BELFAST SOCIETY OF CHARTERED ACCOUNTANTS

At a recent meeting of the Belfast Society of Chartered Accountants Mr R. E. McClure, M.B.E., F.C.A., President of The Institute of Chartered Accountants in Ireland, spoke on his experiences at the Eighth International Congress of Accountants. He referred to the views of several prominent world industrialists who addressed the Congress and who expressed the opinion that accountancy was the international language of business, and the greatest possible uniformity in the content and presentation of accounts, and financial information was therefore necessary.

Mr McClure went on to say that the view was also expressed by many speakers that, while in the future a merger of smaller auditing firms would be necessary to allow for specialized departments, there would always remain a place for the competent single practitioner provided he had access to specialized services.

#### THE CERTIFIED ACCOUNTANTS' LODGE

At the installation meeting held at the Banqueting Suite, Colonial House, Mincing Lane, London EC3, on Monday, December 3rd, W. Bro. C. R. M. Davidson was installed as Master for the ensuing year by W. Bro. J. H. Hills, L.G.R.

W. Bro. Hills was invested as I.P.M. and the following officers were appointed:

W. Bro. J. E. Harris, S.W.; Bro. R. G. L. Jobson, J.W.; W. Bro. J. P. Shaw, P.P.G.ST.B. (Herts), Chaplain; W. Bro. S. C. Jones, P.P.G.D. (Middx), Treasurer; W. Bro. C. S. Setchell, Secretary; W. Bro. A. C. S. Meynell, D.C.; Bro. D. W. Page, S.D.; Bro. H. A. P. Miller, J.D.; W. Bro. E. Spencer, A.D.C.; Bro. F. A. Gommer, Organist; Bro. R. A. Bishop, I.G.; Bro. K. H. Bickmore, Steward; Bro. W. Rapson, Steward; Bro. T. H. I Johnson, Steward; Bro. A. W. Nelson, Steward; Bro. N. K. Lea, Steward; W. Bro. A. J. Courtney, L.G.R., Tyler. The address of the Secretary of the Lodge is 'Ziarat', Harthall Lane, Hemel Hempstead, Herts.

#### SEVENTY-FIVE YEARS AGO

From The Accountant of December 10th, 1887

A Weekly Note

A Blue Book, issued a few days ago, gives a summary of the annual returns and valuations of the Friendly Societies in 18 English Counties. The societies in the other divisions will no doubt be included in future issues. Of 798 societies comprised in the return before us 176 show surpluses, and 622 deficiencies; the net aggregate deficiency being nearly £400,000. These particulars indicate a serious but by no means new state of affairs. No doubt it is in the power of the societies to increase the subscriptions or make levies, but this does not take away the impression that it is impossible for them to give the full benefits which the members suppose they are secure of. The affairs of Friendly Societies are likely to occupy at no distant date the attention of Parliament, as many important matters in relation to such bodies are ripe for consideration. The periodical and independent audit of their accounts is not the least important of the questions which in all probability will be raised. As frequently mentioned in these columns it is a matter of deep importance to chartered accountants, and it seems desirable that the subject should without much delay have special attention at their hands.

#### Financing Hire-purchase

THE modest recession in the United Kingdom economy of the past two years has perceptibly slowed down the demand for consumer durable goods. Nowhere is this more evident than in the failure in the last year or two of hire-purchase finance to expand at the pace of 1959-60. Once the economic revival, which Mr Maudling is tentatively endeavouring to initiate, gets under way, there can be little doubt that hire-purchase in all its forms will once again encourage the consumer to acquire the status symbols of the mid-twentieth century.

In view of the importance of hire-purchase in the economy, it is hardly surprising that the Board of Trade should now be assembling improved statistics of hire-purchase activity and, of equal interest, the Bank of England Quarterly Bulletin for December examines the sources of the funds upon which the finance houses based their activities during 1958–62. Their central role in this field is evidenced by the statement in the Quarterly Bulletin that, although the last Census of Distribution showed that there were about one thousand five hundred concerns specializing in hire-purchase finance, the business is heavily concentrated among a few large companies. In 1962, for example, only thirteen such companies had assets of £10 million or more, and between them they accounted for two-thirds of the estimated total of assets.

The larger finance houses belong to the Finance Houses Association and about thirty medium- and smaller-sized concerns have formed the Industrial Bankers Association. The most interesting feature of these larger concerns is their capacity for financing about two-thirds of their total business on the basis of deposits; the proportion of business so financed by these larger companies increased from about 40 to 65 per cent between 1958–62. The deposits are of two kinds, fixed and 'at notice'. The smaller companies in this field are unable to attract the same volume of funds from this source, although as a result of advertising they undoubtedly attract a large number of smaller deposits, probably from private individuals.

The Quarterly Bulletin observes that the rates paid by the finance houses for deposits offer a return that 'is often attractive' to overseas residents and to United Kingdom banks holding deposits of overseas residents. Most of these funds probably go to the larger companies who, according to the available figures, hold a substantially smaller proportion of their assets in cash and balances with banks than do the smaller companies. For example, the overall cash to deposits ratio in June 1962 averaged only 4 per cent; the members of the Industrial Bankers Association are required, as a

a condition of membership, to maintain the prudent and conservative ratio of 10 per cent. Since the profitability of hire-purchase activity is directly related to the proportion of total deposits which may be tied up in loans, it is clear why in some cases Parliament considers it desirable to protect depositors. The Government's Bill should become law before the next phase in the expansion of hire-purchase business is well under way.

Total hire-purchase credit outstanding in June 1962 was nearly £900 million, which may be compared with a total of only £500 million in mid-1958 and a peak of £950 million in mid-1961. These figures clearly underline both the scope for growth and the pace at which expansion is possible. Much of this debt is owed directly to the hire-purchase companies, but about one-tenth of their assets are made up of 'block discounted' agreements bought for cash from retailers. The extent to which the fortunes of the hire-purchase companies and the motor industry are linked is underlined by the fact that about two-thirds of all debt is in connection with the purchase of private cars and commercial vehicles.

About one-sixth is in respect of household durables, e.g. washing machines, refrigerators, etc., and about the same amount is devoted to the purchase of industrial and agricultural equipment.

The total of issued capital and reserves has been estimated at £148 million in June 1962, i.e. about one-sixth of the total liabilities of the hire-purchase finance concerns. This average is a shade misleading since the ratio of total borrowing to issued capital and reserves varies quite widely and, in the case of the larger companies, it may be as high as ten to one. Here again the Industrial Bankers Association imposes a scale upon its members according to size; for larger members with over £200,000 of capital, the maximum? allowed is seven to one. Bank borrowing provides about the same volume of resources, i.e. f.152 million in June 1962. Here, again, there are wide disparities between the companies since the larger concerns - which rely more on deposits are less dependent than are their smaller counterparts on this source of working capital. By virtue of its flexibility, however, bank finance could become very important in any future expansion.

## Timekeeping and Costing in an Accountant's Office

by C. R. PRATT, A.C.A.

THE old adage 'a shoemaker's children are the worst shod' is often particularly applicable to the manner in which accountants in public practice keep their own time records. It is true that the textbooks describe systems admirably based on double entry, but they usually require a good deal of transcription from one time record to another.

#### Shortcomings of Old Systems

In the majority of systems a weekly or monthly time-sheet prepared by each clerk is used as the medium for posting to clients' time accounts (Dr), and to an account under the clerk's name (Cr). This involves the same information being written out three times and it is understandable, therefore, that the details of the work done are often described in the client's time account in only the briefest terms.

With patience, the total time spent on each job may eventually be obtained, but by then it is probably necessary in order to refresh one's memory in preparing the details of the fees bill to refer to staff diaries. Moreover, in times of pressure the work of keeping the time-books may fall sadly into arrear, and then the sheer necessity of getting in the fees reduces one to estimation, even to 'guesstimation', of the time spent on audits or other work.

The information and features required of a timekeeping system are as follows:

- (1) Client's time record. The time spent on each client, with adequate details of what was done, when it was done, and the clerk's grade; •
- (2) Work costings. Costing information of the profitability of each job, progressive totals indicating the profitability of the practice, and

the value of work in progress at any date;

- (3) Charge-out rates. Costing figures to ascertain the minimum charge-out rate for each class of clerk;
- (4) Simplicity and speed. The information to be obtained quickly and cheaply, using relatively unskilled labour.

The system now to be described has been found in practice to meet all of these requirements, and it also enables certain other useful information to be extracted.

#### **Improved System**

The principle of the system is based on double entry. Time, in quarter-hour units, is credited in total to the clerk's name, and debited in detail to clients' time accounts or 'lost time' accounts (office, holidays, or sickness). The clerk prepares a monthly (or weekly) time-sheet which is cut into strips so that the 'time used' strips are pasted on to each time account (Dr), the 'totals' strip being pasted to the clerk's name account (Cr).

It is unnecessary for time to be recorded in units of less than one quarter of an hour, as even a short letter, involving as it does typing time, should be worth one unit.

A system that uses hours and minutes is more difficult to operate than if based on a time unit, and the chance of clerical errors is increased. Any attempt to convert time into money values on the monthly (or weekly) time-sheet will inhibit the analysis of time to each grade of labour (see Figs. 1 and 2), increase the work involved, and will tend to induce inefficiency.

It is now assumed that the timekeeping system is to be installed in a practice of medium or large size. The variations suggested for small practices, having perhaps no more than five accounting members engaged principally on small fee work, are described later in the article. The changes suggested have as their purpose economy of time in maintaining the records, and, of course, the information obtainable from them is not so comprehensive as the full system. The term 'clerk' throughout also includes partners.

#### **Clerical Procedures**

(1) Clerks' Timekeeping. Each clerk is required to prepare a monthly time-sheet, which will be a summary of the information contained in his diary (see Fig. 1). The diary should be roughly summarized weekly, then monthly to give the time figures for the monthly time-sheet.

Typists should only prepare time-sheets when they are engaged on work of a special nature, as the value of their time spent on normal typing and clerical duties is best treated as an overhead to be incorporated in the charge-out rate of the accounting staff.

(2) Stripping. The monthly time-sheet goes to the time clerk for 'stripping', each strip subsequently being affixed into the time ledger under the relevant client, clerk and 'lost time' accounts (see Fig. 2).

The time ledger should be of a loose-leaf variety and, in the interests of economy, rough or used paper may be used as backing sheets.

(3) Billing. When it is noted on a time strip that the job is to be billed (see example on Fig. 1), the time spent is totalled, costed out, and the information transcribed on to the extracted copy fees bill of the previous year (see Fig. 2).

The senior clerk in charge of the job examines the copy fees bill, making such amendments to the description and fee as may be appropriate, and stating if any of the time is to be carried forward as being chargeable to the next period.

The fees bill is then typed and listed in the fees journal for debiting to the client's ledger account in the usual way.

When the copy fees bill is returned to the time-keeper, he will rule off the client's time account, note the date, and transfer the time charged to a 'time charged' account. The time charged account, besides the classified time columns, has two money columns – (i) cost (the costed value of the time transferred) and (ii) fee charged (see Fig. 3). Any 'carried forward' time will be treated as shown in Fig. 2.

- (4) Balancing the time ledger. At the end of each month or other suitable period, the accuracy of the time ledger is proven by listing the total times shown under the clerks' names (credits) and agreeing this total with that of the time shown in the clients' accounts, 'lost time' accounts, and time-charged account (debits). In the event of any difference, the entries may be checked by reference to the rough monthly summaries in the clerks' diaries.
- (5) Annual accounts. At the end of each year (or half-year, if half-yearly accounts are prepared) the total time shown for each clerk is transferred to the credit of an 'annual summary' account, and the office, holiday, sickness, and time-charged accounts will be transferred and debited. The balance on the annual summary account should then agree with the total time shown in the clients' accounts being work in progress. The value of work in progress may, of course, be computed by using the appropriate charge-out rates.

(6) Accounting control. The total of fees shown found from practical experience to include the in the time-charged account should be agreed at least half-yearly with the fees journal, so that any errors, double billing or failure to bill, will not go undetected.

#### Benefits of the System

The benefits of the system described have been

following:

(i) The total time spent, analysed as to the various clerical grades, forms an accurate basis on which to calculate the fee.

(ii) The profit or loss on each job is brought to the attention of a senior at the time the fee is assessed. Future reference to this is available by examining the time-charged account.

₹,

(iii) The cumulative effect of over- or under-billing can be found by taking the difference between the totals of the 'cost' and 'fees' columns of the time-charged account.

It will be realized that references to 'profit' or 'loss' are only on the difference between the costed value of the time spent on a client, and the fee charged. The actual profit and loss would have to take into account the margin of profit included in the charge-out rate, which profit will itself fluctuate according to the efficiency, health, etc., of each clerk.

- (iv) The cost rate in units, for a representative clerk of each class, can be calculated as follows:
  - (a) Deduct the units of lost time for the clerk from the total of his working time, as shown by his time account. The time in units thus arrived at will be the effective working time of the clerk for (say) the half-year.
  - (b) By dividing the effective working time into his wage cost, the wage value per unit is ascertained.
  - (c) Compute the value of overheads, including the wage cost of typists, and allocate a suitable proportion to the clerk. Divide the effective working time into the value of overheads to arrive at the overhead value per unit.
  - (d) By adding (b) and (c) together, the cost rate per unit is found. This should not be confused with the charge-out rate to clients. By calculating the cost rate and comparing it with the charge-out rate, the partners can ensure that each class of staff member is contributing to the profitable working of the practice. The charge-out rate will, of course, be of some convenient value and contain a suitable margin for profit.
- (v) The cost of sickness, holiday and unchargeable time (office) can be readily seen.
- (vi) A quick examination of the office account will readily show where time paid for is being lost. (If any clerk is charging an excessive amount of time to 'office', the partner may, with tact, point out that even though the time spent on a job may be getting well above the fee, it is of no help to the practice to have his time written off to 'office'.)
- (vii) The effective working time of each clerk can be extracted from the time books and by converting this into a fees value, his profitability can be roughly assessed, bearing in mind the factors of overheads and whether the jobs on which he has been employed were generally under- or over-billed.

These sorts of figures can be used as guides only, especially if there are charities and clubs which are charged at reduced fees. In any event, such figures will be of help in locating the cause of disappointing results, which is one of the major functions of any costing system.

(viii) The necessary forms can be duplicated in the office. There is no costly 'patent' system to be bought.

#### Amendments to System for the Small Practice

The following modifications are suggested to render the system outlined more practicable for the small practice. It is reiterated, however, that the simplified procedure will not produce the same amount of information.

- (1) Clerks' timekeeping. The time-sheet should be prepared weekly. As the jobs are usually small and numerous, this will not cause an undue number of strips to be stuck in under a client's name. The times are obtained more quickly, which will facilitate the speed with which fees are collected, thus assisting in the difficult matter of financing work in progress.
- (2) Stripping. The procedure already described should be followed.
- (3) Billing. It will often be convenient to have the clerk responsible for the job, himself calculate the fee and dictate a suitable fees bill at the same time, obviating the additional duty of extracting and refiling the copy fees bill of the previous year. The costed value of the time can conveniently be entered alongside the times written off in the client's time account, together with a note of the fee charged and the date. However, as there is no transfer of time etc. to a time-charged account, it will be seen that the time ledger cannot be made to balance.
- (4) Balancing. No balancing is effected, but the clerks' and 'lost time' accounts should be totalled (say) each half-year for reference purposes.
- (5) Annual accounts. There will be no annual summary account. If it is required to know the value of work in progress at any date, a simple extract can be made of the times shown in the clients' time accounts.
- (6) Accounting control. The fees journal should be ticked up to the time ledger at least quarterly, to make certain that there has been no failure to bill a client, or that the time on a client's time account was not written off at the time the fees bill was prepared.

#### The Coal Board Story — II

INTEGRATED E.D.P.
IN A NATIONALIZED INDUSTRY

by DUDLEY W. HOOPER, M.A., F.C.A. Chief Organizing Accountant, National Coal Board

#### **Main Applications**

HE outline of the work of wages accounting has already been described; additionally, weekly and monthly salaries, superannuation, pension and compensation payments will be processed.

The sales accounting field covers the following main requirements:

- (a) recording dispatches of coal and coke (e.g. by marking tonnages on cards pre-punched for known regular combinations of customer/ consignee/destination/dispatching point and quantity, or by manual punching occasional combinations);
- (b) using these records of dispatches, suitably coded, to retrieve from the computer the full details of each relative contract with a customer, pricing each dispatch, analysing the value into component parts (e.g. transport, service charges), and establishing the pit-head price, so that full statistics can be prepared, both by tonnage and by value, covering the various types and qualities of coal dispatched to various classes of consumer, special industries, sales region and zone, etc.;
- (c) during these operations, the computer will have built up a series of invoice lines which can be printed out at the month end or intermediately.

The concept is thus of building up a dispatch item file with necessary analytical information applied to each item so that, independently of the calendar, weekly and accounting period information can be produced for management, from the same source within the computer system as the invoice for the customer.

Materials and suppliers' accounting procedures are based on an assumption that a good storekeeper will always retain some form of stores record in his storehouse, even if unofficial or memorandum. This record is recognized as the cheapest and quickest method of answering an *ad hoc* inquiry from the storehouse on a particular item, and is also used by the storekeeper for noting earmarks and allocations, special purchases (e.g. for capital projects), undelivered orders, etc.

The E.D.P. system is not, therefore, designed to offer random access to the details of any item in any storehouse, but it will operate initially as follows:

This is the second and concluding part of a paper based on the author's presidential address to the British Computer Society last May and since brought up to date. The opinions expressed are the author's and not necessarily those of the National Coal Board or The British Computer Society.

- (a) all movements are recorded as input, storing within the computer standard prices, cumulative consumption and current balances of each item;
- (b) the storekeeper, after issue or receipt of an item, records the new balance on the issue or receipt note so that the computer, by comparison with the computer balance, can eliminate arithmetic? errors by the storekeeper, so that stock checking within the storehouse should reveal only factual errors and not arithmetic ones;
- (c) the computer system evaluates the stock balances as required for accounting records of stock control by value, in total of main and subclassification groups;
- (d) consumption details, with current balances, provide such provisioning information as may be required by the purchasing department;
- (e) certified invoices are recorded as input, and marked off against goods received notes, the supplier's account being built up, with automatic preparation of the statement and cheque at month end (suppliers in this context including services).

In the general accounting field, the outputs of the three previous main systems will include what are conventionally posting summaries to the main accounts. By adding such items as provisions and depreciation, the whole of the Board's financial and cost ledgers can be prepared automatically, with later development to capital expenditure records, comparison of actual against budgeted non-operational expenditure, and other financial and statistical work.

Throughout these applications there will be much information being made available which currently can only be obtained by ad hoc surveys. The aim is to provide within a computer centre such information as will enable management (not necessarily in retrospect) to obtain a new presentation of information from the existing data being processed without radical alteration to the system.

The total volume of transactions to be processed is very large. Some indication of the main work loads is given in Figure 5.

#### Some Important Principles

From the work which has been done over the past twelve years a number of principles have been established and conclusions drawn. The following notes cover some of the more important:

	NATIONAL COAL BOARD Work Loads (approximate) Main Loads to be processed by 7 Divisional Centres	Computer
٧	WAGES ACCOUNTING Number of Piece-workers' Contracts (weekly)	82,000
	Industrial)	612,000
	pensation Number of Wages Paying Points Number of Input 'Transaction/Lines'	188,000 950
	(per month)	9,600,000 15,000,000
Ť	MATERIALS and SUPPLIERS' ACCOUNTING Number of Storeholding Points Number of Vocabulary Items Weekly Stores Movements Number of Suppliers' Accounts Monthly Invoices Received	1,000 300,000 430,000 65,000 250,000
	Monthly Remittances Dispatched Number of Input 'Transaction/Lines' (per month)	40,000 2,200,000 100,000
	SALES ACCOUNTING Number of Dispatch Points Range of Qualities of Coal Daily Dispatches Range of Destinations (Consignees) Number of Wholesale Customers Number of Direct ('Retail') Customers Monthly Wholesale Invoices Number of Input 'Transaction/Lines' (per month) Number of Output Lines (per month)	1,250 1,500 25,000 200,000 30,000 350,000 33;000 1,000,000 900,000
	Total Input 'Transaction/Lines' (per month) (say)	13,000,000

Figure 5. Major Work Loads.

- (a) In designing these systems, the first need is to establish the output requirements. Then, the input required to produce that output can be defined, and a decision made as to the form in which it should be prepared most rapidly, most economically and, above all, accurately. The system must start not later than the initial record of a transaction under existing methods (e.g. time-sheet, advice note, or issue note), and this inevitably involves, at present, some manual operation; other means of data capture are needed, and some are under investigation.
- (b) Input must be available in sufficient time to meet the needs of output, having regard to transmission and processing times. This necessitates proper matching of the computer itself to the supporting ancillary off-line equipment, data preparation equipment and organization, control systems, and so on. The computer centre as a whole must operate as one production line.
- (c) We therefore look on the computer itself as one item only of the equipment required in a complete data-processing system; no one item• not

- excepting the computer, can operate independently of another in relation to the system as a whole.
- (d) The problem of allocating work to machines within a predetermined work flow and time cycle can only be solved by proper factory production line techniques. Further, since the management and administrative cycle of an industry such as ours must not be affected by the introduction of machines, the system (or its planned emergency alternative) must never fail to operate, and must retain some flexibility.
- (e) A divisional computer centre is not, therefore, a computer 'centre' in the accepted commercial sense, since it does not operate on an ad hoc or 'open shop' basis; it is organized as a factory; it is designed functionally, in a building planned for the purpose. It is not an 'electronic office'.
- (f) Within this concept, it is as important to regulate and control the flow of data into a computer centre as it is to control and inspect raw material arriving at a factory. The standard of inspection, and of the organization of the input data, must be very high, so that no computer time is wasted processing incorrect or imperfect input.
- (g) Unfortunately, however perfect the input, however good the control and the inspection of data, the computer system is nullified if humans interfere with the rules. It is extremely difficult to translate into computer terms the human mind, particularly of a wages clerk who has been a mental computer for the past thirty years or so, acquainted with every possible circumstance that might arise exceptionally, and always ready with some long stored knowledge of similar examples in the past. The system of input control and subsequent processing, once established, must be maintained precisely, and we therefore insist on a very high standard of independent control from the point at which the initial record is made; these original controls on input are themselves built up into subsequent controls against which each subsequent machine operation or computer run can be checked.
- (h) The first computer run in any major field of work, therefore, should consist primarily of translating the input from cards into magnetic tape form, at the same time editing this data and controlling it against the independent controls built up from the source input. Similar principles apply to amendments of standing data; a file tape should be controlled and proved independently of the use of that amended tape in processing runs. Unless clean data is used in actual processing there is not only the waste of computer time but also far too high a cost in error tracing.
- (i) This raises the cost of accuracy. In a wide area of engineering, mathematical and scientific computation, a measure of inaccuracy is permissible within defined tolerances. In the commercial data-processing field, output for third parties (the eventual purpose of every major application) can only be right or wrong; one cannot approximate, for example, a pay slip or an invoice.

The right balance has therefore to be sought

between, firstly, rigid adherence to a complex system, with a maximum number of both independent and in-built controls to obtain perfect accuracy; secondly, the production time limits imposed by the needs of output and availability of input; thirdly, the extent to which error can be accepted, if at all; and fourthly, the costs involved in varying combinations of these considerations.

Every system in the field of commercial data processing is therefore a compromise, and there will be a number of alternative solutions which will achieve the same result. Investigating the possible combinations of operations within an overall system to obtain the best compromise is, in practice, the most time-consuming part of detailed installation planning. It is essential not to take too long over this, but to make decisions in the light of circumstances pertaining at the time, and then to abide by these so as not to delay implementation of the system as a whole.

#### Functional Organization of a Divisional Computer Centre

The organization of the Board's divisional computer centres is essentially functional, with clear distinction between operation and control. The staffing organization is shown in Figure 6. All computer centre staff is being, and has been, obtained from within the industry. Selection is by a combination of aptitude test, interview, and past experience. As an example,

from, say, three hundred applications for systems analysts and programmers, one might expect to get twenty or thirty potential people, of whom about ten to twelve turn out to be acceptable, some often surprisingly good at developing new skills.

Buildings similarly are functional. Where possible they are being adapted; elsewhere they are being specially built. Equipment is normally on rental, with maintenance contracts with the suppliers, the computer manufacturer being considered the prime contractor responsible for the system as a whole; we cannot afford disputes between makers of different machines within the same overall E.D.P. system. Discussions are being held with the manufacturers to evolve some measure of standardization in maintenance and operating conditions. Reliability statistics are maintained on a standard basis, and are exchanged with other nationalized industries.

#### **Expected Savings**

It is never possible to forecast the ultimate financial benefits to an organization of an integrated E.D.P. system of this nature. It is, however, essential that the system, within the limited basis on which it has been planned for the first phase, should be economic and that each installation should stand on its own feet. Experience of the three pilot installations has enabled us to make precise estimates of the staffs which would be required under the best available conventional

#### FUNCTIONAL ORGANIZATION OF A DIVISIONAL E.D.P. CENTRE

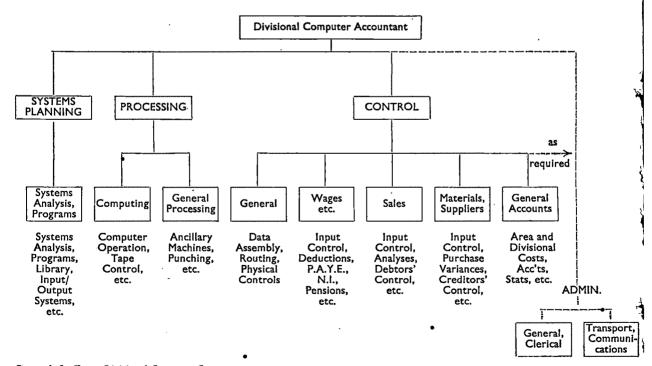

Figure 6. Staffing a Divisional Computer Centre.

systems, and to compare these with those which will be needed both to operate our computer centres and for work outside them (e.g. in preparing and creating

input).

The Board has placed the responsibility for implementing E.D.P. on Finance Department, as for these initial procedures it is this department which will be the main customer, and which has gained the experience on the pilot installations. On nationalization of the industry in 1947 the Finance Department staff numbered about eleven thousand five hundred. During the next five years there was a steady increase in the demands for information; uniform returns for costing and statistical requirements were required for the industry as a whole; the records and procedures of some six hundred colliery companies, some large but most small, some with good systems but many with Tlittle more than manual book-keeping methods, were taken over; the Mineworkers Pension Scheme was introduced; standard cost techniques began to be developed. By 1957 the Finance Department staff had risen to nearly thirteen thousand five hundred.

In the early 1950s the Board had started to apply, on a wide scale, what we would now term conventional accounting machines and punched-card techniques to the normal data-processing routines such as payrolls, sales invoicing and stores accounting. Systems were rationalized, processing centralized as far as practicable (e.g. payrolls for collieries were handled in group or area offices; sales invoicing became a divisional function). These steps had resulted in a reduction of staff to less than eleven thousand at the end of 1961, and any further reductions which could be obtained by conventional methods would be very marginal. By the development of computer centres, however, we propose to reduce the Finance Department's staff from this current figure to about seven thousand, seven hundred by about 1968, a saving of about three thousand. This saving should be covered by normal wastage, and no significant redundancy is expected.

Without taking into account the trend in increasing costs of staff, not only in salaries but in overheads, this saving significantly outweighs the additional costs of the machines, on a rental basis, and of the amortization of the costs of the new buildings. One major objective will then be achieved, that of producing information more economically, and in better form that it has previously been possible to do.

Staff savings are not, of course, the sole objective in introducing E.D.P., but these will enable computer centres to be established economically, so as to be ready to move forward to the next phase. The basic data which we will have compiled for integrated information processing will then be available to us for use in operational applications of computing, management and operational control, forecasting, and so on.

In which precise direction this further application of E.D.P. will develop cannot at this moment in time be stated. There are still many problems to be over-

come. The traditional ways of management, departmental boundaries, audit techniques, communications, and development of equipment standards, are only a few of the items on which a great deal of preliminary work has been done, but final conclusions have not been, and will not be, reached until the systems are operational in their planned areas of first phase work.

#### Conclusion

The whole task of implementing the Board's policy is an enormous one, with very heavy responsibilities on those charged with this duty. This work over the past twelve years has been, and continues to be, essentially a team effort; started initially at head-quarters, then supported by small teams in divisions, there are now (October 1962) some three hundred people in the industry employed solely on various aspects of development of computer application.

In round figures, the work involved up to the point at which programming for the complete integrated operation for the industry started may be estimated as having taken about 140 man-years. Of this, about ten man-years were occupied in devising basic concepts, fifty on wages planning, twenty on the feasibility study of the integrated concept, and a further sixty on evolving the detailed proposals for each division. Computer manufacturers have played a large part in the planning, and have in effect been sitting down in partnership with the Board's teams, evolving together, system specifications which matched our requirements to their particular machines. Throughout the industry, and particularly among those associated with this E.D.P. development, there is tremendous enthusiasm.

Acknowledgement must be made of the Board's act of faith in making their policy decision in 1960, on the evidence presented to them, affecting the whole industry, of the encouragement by successive Directors-General of Finance for continuous development of what had started some ten years before as apparently rather nebulous ideas, and of the work of the E.D.P. teams at headquarters and in divisions in pursuing these ideas, proving them practicable and, above all, making them work. This great effort is looked on as an essential part of the task of making the industry efficient, in every sense.

As our chairman has said: 'Just as we have to introduce the maximum degree of mechanization into coal production, so we continually seek to improve administration, to give management better information, more quickly and more cheaply. The two aspects of mechanization, in the pits and in the offices, must go together. Basically, the concept of digging for information, bringing the vital facts to the surface, processing them and serving them to management, has much in common with the process of extracting coal and delivering it to the customer. In either case the finished product must be obtained as economically as possible and must be in the form in which the customer can use it efficiently.'

7

#### A City Romance

#### by J. E. HINDER

(Broadcast in 'Monday Night at Home' in the B.B.C. Light Programme on May 21st last)

Professor C. Northcote Parkinson has declared that business firms have sexual characteristics. Feminine firms indulge in excessive cleanliness; are over-conscientious in their financial methods. Male and female firms frequently marry – some, indeed, indulge in pre-marital relationships, says the Professor. . . .

#### Dear Associated Scrap Conversion,

You may be surprised to receive this communication from an organization unconnected with your section of industry but, after all, we have been close neighbours since you took over from the old Nash Terrace, and it occurs to me that though our commercial interests may be poles apart, we could still be friends.

If in agreement, please flash your neon-sign twice around 6 p.m. tomorrow.

Yours sincerely,

Mountararat Property Trust.

#### Dear Mountararat Property Trust,

Pleased to receive yours of the 10th inst., contents of which have been duly noted and your suggestion re neon-sign duly carried out. Though, as you say, our business interests in no way coincide, I have personally always admired your façade and the good taste of the floral decorations round the Epstein.

Perhaps I might make so bold as to suggest that we see more of each other. Would you consider leaving windows open and all lights on after 8 p.m., on the 15th?

Yours,

Associated Scrap Conversion.

#### Dear Associated,

So pleased to hear you liked my décor. I do try to achieve a certain amount of chic – a natural feminine weakness that in no way detracts from commercial efficiency, as my balance sheet shows.

Don't think, by the way, that I am unaffected by your particular brand of masculine charm. Neo-Georgian has always attracted me. Just a point: those greenish stains on your Portland stone do look a little bit untidy. I'm not trying to change you – please don't think that – it's just a thought.

Yours,

Mountararat.

#### My Dear Associated,

You really shouldn't have gone to all that trouble. I was amazed to see such a snowy-white façade. And the clock gilded, too! Surely you didn't do it all for little me? Confess now – you were expecting important clients, weren't you?

Yours ever,

Mountararat.

#### Mountararat dear,

Only two days to go before the special meeting which will decide whether we continue to plough lonely furrows, or tread hand-in-hand the rose-fringed path of high profits, increased dividends and bonus issues – together at last!

I am too nervous to write more but, believe me, you are never absent from my thoughts.

Your own,

Scrappy.

Dearest Scrappy,

So we are to be one next month! No wonder my quotation rose on the Stock Exchange when the news arrived! How could I help it! Just imagine – one balance sheet, one board of directors – it seems too good to be true.

And as for the future, who knows, perhaps in the years to come we may have . . . a . . . little subsidiary?

With all my love,
Your own,
Mountararat

#### Caesar at Christmas?

#### by a member of the Accountants' Christian Fellowship

THERE was once a perverse genius who ordained that the demands of the Inland Revenue should issue forth in two main streams – the greater at Christmas and the lesser at Easter. Such, at least, is the folklore of the accountancy profession; there is probably no truth in the embellishment which makes that genius the son of a high church dignitary.

Be that as it may, the accountant is pointedly reminded at this time of the year of the demands both of his own kith and kin and of Caesar. If Caesar's demands are sometimes aggravating, they are at least plain; and on the whole are recognizable as just and necessary. The conflict between our personal desires and those of the community may not yet be solved, but modern civilization renders it at least tolerable, by a compromise in which our own profession plays no small part.

The interesting point is that Christ stated the conflict in quite different terms. The conflict was not between what is Caesar's and what is our own; in fact, the 'our own' was not even mentioned. The conflict to which He drew attention was between the things which are Caesar's and the things which are God's. In this point lies the whole debate between Christianity and materialism. The debate does not lie in the contrast between Caesar's and God's for we, as accountants, should appreciate the lesson that both of these have their proper place. The debate centres rather on the missing words: on the meaning of 'our own'.

Behind Christmas lies the fact that God gave – for us. Does this provide the clue to the solution?

#### The Inspector's Dilemma

by R. J. PICKERILL, F.C.A.

AT half past five H.M. Inspector of Taxes, New Town 3 District, closed the office door – thankful to be going home at a reasonable time. It was Christmas Eve and as he walked to the bus stop he studied the people hurrying by, laden with parcels, and his mind wandered to those financial accounts to be examined in the New Year in which 'General Expenses' would include 'Christmas gifts  $f_i x$ '.

'Rather nice,' he thought, 'to arrive in the office and find a bottle of whisky or a box of cigars on the desk as a present from A. & Co Ltd, even if your own firm had sent similar presents to all its customers.' Waiting in the chill wind for the bus he mused on the Christmas spirit of the Inland Revenue which allows the cost of the presents to customers as a deduction for tax purposes, but does not assess the recipients. Hard luck on the Schedule E chaps though, they don't get away with anything – but perhaps they take the presents sent to their companies!

On the bus he glanced through his evening paper, and contemplated a warm room and the cheerful greeting from his wife. She was obviously excited as he walked in – 'Look what's just arrived, John!' In the hall was a large parcel addressed to him. He opened it with some surprise – a Christmas hamper complete with turkey! A small typewritten card said: 'From taxpayers in New Town 3 District.'

Immediately his Civil Service mind began to work at full speed. 'Is this a bribe? What will the inspecting officer say? Can I keep it quiet?' Then he realized that if head office knew he received hampers from taxpayers he would be transferred—'Just as we have Tom settled in school.' Training had taught him that when in doubt consult the *Inspector's Manual*, but there would hardly be anything in there to cover this particular situation.

Mary obviously hoped he would accept the hamper. It was tempting but what should he do? The phone rang. It gave him an excuse for not telling Mary that Inspectors cannot accept gifts from taxpayers – not Christmas hampers with turkey and bottles of wine, anyway! He picked up the phone.

'New Town 3572'-'Hullo Roper-Burton here.'
(The Inspector No. 2 District) - 'Believe you've got a parcel - don't eat it all, old boy. I'll be round on Boxing Day - Cheerio!'

So he knew – but why? No chance of hiding this from the powers-that-be now.

The Inspector was still puzzled. There was no problem with gifts to customers because the donors were usually charged under Schedule D. Gifts from employers to employees were usually in kind and too small to worry about. (My Christmas bonus won't cause public departments any trouble, he thought – it's non-existent!) A Schedule E taxpayer could hardly claim successfully that a gift of this kind was allowable, but it would be hard to establish as allowable a gift to the Inspector of Taxes, even under Schedule D. If it were allowed he would surely have to accept that it accrued to him by virtue of his office!

'See if I can find something out about this,' he told his wife. He rang Bloggs & Snood, Chartered Accountants. Snood answered the phone – No, he wasn't working late – it was the office party. Yes – he knew about the parcel – a client had sent it but it would be a breach of confidence to say who it was!

What a blow! Somebody had sent it hoping for a tax benefit and it would have to be returned or given to the local hospital — and a full report sent to head office. Fancy spending Christmas with a turkey and two bottles of wine in the house, yet be unable to touch them and have to write a report to head office afterwards! These thoughts were interrupted by a knock at the door — a telegraph boy.

#### 'CABLE FROM S.S. CANADIA

HAPPY CHRISTMAS STOP ENJOY THE HAMPER STOP WE COULD NOT CARRY IT

(REV.) J. DOBSON'

ł

So that was it – from the vicar and his wife. But why send it to the Inspector of Taxes? He unpacked all the contents – at the bottom was a newspaper cutting showing the presentation of a Christmas hamper to the vicar prior to his departure for Canada. The vicar had underlined part of a reported speech: 'Bare ye one another's burdens' and had written 'and I can't carry this – so please help.'

'After all', thought the Inspector, 'taxation is a sharing of burdens. . . . Mary, bring the corkscrew.'

#### A Christmas Recollection

Regular readers of 'The Accountant' for the past fourteen years should have no difficulty in answering the following general knowledge questions selected from those which have appeared in previous Christmas issues over that period.

The first letter of each answer combines to form, without rearrangement, an appropriate quotation from Robert Burns. Where the answer is a person's name, the surname is given first. The solution appears elsewhere in this issue.

- 1. What is the name given to the science of studying and mapping the moon?
- 2. Who was imprisoned for referring to George IV as 'a corpulent Adonis of fifty'?
- 3. What Shakespearean character bade farewell to the 'pride, pomp and circumstance of war'?
- 4. Who translated Rabelais with panache, fought the Covenanters and is said to have died from the effects of a fit of joyful laughter on hearing the news of the Restoration?
- 5. What Shakespearean king was a man 'more sinned against than sinning'?
- 6. In which Dutch city did the painter Vermeer spend his entire life?
- 7. What is the opposite of homoeopathy?
- 8. What planet has for satellites Ariel, Umbriel, Titania and Oberon?
- 9. What is the piece of land between two pieces of ploughed land called?
- 10. Where in Britain did Julius Caesar first land?
- 11. What musical tempo is faster than adagio and slower than andante?
- 12. What single word describes bellicose patriotism?
- 13. What is the term for the fifth power of a million, i.e. 1 plus 30 ciphers?
- 14. What is the legal term describing the right of temporary possession, use or enjoyment of someone else's property as far as may be had without causing damage or prejudice to it?
- 15. What is the name of the sculptured leaf which is the distinguishing characteristic of a Corinthian capital?
- 16. What metal is regarded as a talisman against the baleful influence of fairies?
- 17. Who is the patron saint of Russia, of Aberdeen, of parish clerks, of scholars, of pawn-brokers and of little boys?
- 18. What famous Italian painter is reputed to have lived to the age of 99?
- 19. What is the heraldic name for the colour white?

- 20. What eminent British natural philosopher was born on Christmas Day, 1642?
- 21. To what gastronomic dish has a French master of epigram given his name?
- 22. Where is the temple of Diana, one of the reputed seven wonders of the ancient world?
- 23. What Victorian woman wrote a bulky classic, still a best-seller, married her publisher, produced four little boys and died in her late twenties?
- 24. What is the term applied to the custom of marrying only within the limits of a tribe or clan?
- 25. Who said that 'in this world, nothing can be said to be certain, except death and taxes'?
- 26. What is the 'wine month' of the year?
- 27. What street in Paris runs from the Place de la Madeleine to the Place de la Concorde?
- 28. What British king was unable to speak English?
- 29. What card game is played by three persons and with forty cards?
- 30. Who ruled over vast territories in central Asia and India, had his capital at Samarkand and lived from 1333 to 1405?
- 31. What Victorian critic referred to the poet Shelly as 'a beautiful and ineffectual angel'?
- 32. Who said 'If I have seen a little further than others it is because I have stood on the shoulders of giants'?
- 33. In a pack of cards, which king shows only his profile?
- 34. What is the term applied to flowers that open at night?
- 35. What modern poet suggested that the world would end 'not with a bang but a whimper'?
- 36. What artist, noted for his predilection for gigantic canvases, rich colouring and subjects depicting pomp and splendour, painted 'The Marriage of Cana'?
- 37. What is the annual Commemoration of founders and benefactors of Oxford Univer-
- sity, held in June?

- 38. What French city is the headquarters of the champagne industry in that country?
- 39. From what country does limburger cheese come?
- 40. In what opera does the character Sparafucile appear?
- 41. What is the Italian form of Roland, the hero of many medieval romances?
- 42. What doctrine was first expounded by Jeremy Bentham?
- 43. What mythological creature, with the head and legs of an eagle and the body of a lion, guarded the hidden treasures of the sun?
- 44. What is the red substance in blood which is responsible for conveying oxygen from the lungs to the rest of the body?
- 45. What is the county town of Somerset?
- 46. What was the Act of 1800 designated to prevent testators leaving their property to accumulate for more than twenty-one years?
- 47. What constellation contains the star Betelgeuse?
- 48. Who sang 'How happy could I be with either, were t'other dear charmer away'?
- 49. Who was the goddess of the rainbow?
- 50. Who in Greek mythology was the daughter of night and goddess of vengeance and chastisement?
- 51. With what country is the seguidilla associated?
- 52. What was the classical name for the Dardanelles?
- 53. To what group of British islands does Pomona belong?
- 54. What artist, noted for his treatment of perspective, painted 'The Rout of San Romano', now in the National Gallery, London?
- 55. Who designed the Cenotaph in Whitehall?
- 56. What animal was described by G. K. Chesterton as 'the devil's walking parody on all four-footed things'?
- 57. What Scottish town has an unsurpassed reputation for 'honest men and bonny lasses'?
- 58. Of which South American republic is Montevideo the capital city?
- 59. Who wrote the waltz 'Gold and Silver'?
- 60. Of what Biblical king was Nathan the trusted adviser?
- 61. What is the capital city of New York State?
- 62. What distinguished philosopher is supposed to have divorced his wife because her cooking fell short of his fastidious standard?
- 63. What in area is the largest province of Canada?

- 64. Who, headmaster in succession of Eton and Westminster, wrote the first English classical comedy *Ralph Roister Doister?*
- 65. What English novelist lived at Chawton, near Winchester?
- 66. What was the island home of Ulysses?
- 67. Who said 'Candy's dandy but liquor's quicker'?
- 68. What London district has the postal reference SW17?
- 69. Who was prime minister when George V came to the throne?
- 70. Into what slang word, current in the First World War, was the French il n'y en a plus corrupted?
- 71. Who, according to Byron in *Don Juan*, 'smiled Spain's chivalry away'?
- 72. What Greek, born circa 342 B.C., founded a philosophy on the belief that 'pleasure is the beginning and end of the blessed life'?
- 73. In which city, according to the rhyme, do 'the Lowells talk to the Cabots and the Cabots talk only to God'?
- 74. Who was the lifelong literary partner and friend of Karl Marx?
- 75. What Italian city did the Medici family dominate for more than two centuries?
- 76. What was the operational name for the Allied invasion of north-west Europe in 1944?
- 77. What Gilbertian character, in spite of all temptations to belong to other nations, remained an Englishman?
- 78. What is the dubious art of arranging election results statistics so as to make them appear other than they actually are?
- 79. Where had John Masefield's 'quinquireme of Nineveh . . . sailing home to haven in sunny Palestine' come from?
- 80. What river is common to Toledo in Spain and Lisbon in Portugal?
- 81. On what river was the fabulous city of El Dorado said to be located?
- 82. Who wrote the popular song 'Keep the Home Fires Burning'?
- 83. What is a plane figure of twelve sides, each solid angle being formed by three regular pentagons?
- 84. Who was the last of the twelve Caesars?
- 85. What is the point in the orbit of the moon at which it is furthest from the earth?
- 86. Of what country are Bosnia and Herzegovina provinces?

- 87. What is the faculty of making happy and unexpected discoveries by chance?
- 88. What was the pen-name of Marie Louise de la Ramée?
- 89. From what city did Rudyard Kipling's Kim set forth on his adventures?
- 90. What poetical name did Shelley give to Keats in his elegy on the death of the latter?
- 91. What adjective is applied to a will made orally and not in writing?

- 92. In what country would you be most likely to eat moussaka?
- 93. What philosopher was married to Xantippe?
- 94. What is the principal currency unit of China?
- 95. What prime minister of George III pursued a foreign policy which is said to have lost Great Britain her American colonies?
- 96. What is the international car registration letter for Spain?

#### Accounting Curiosities

by R. ROBERT, A.C.I.S.

VERY profession, of course, has its museum pieces; its time-hallowed customs, traditions, and rituals. Medicine and the law have them in every category and guard them zealously. In the case of accountancy, a younger profession, survivals from the past are fewer in number and of less picturesque variety. Yet they are there, and as time goes on will attract increasing attention.

#### The Tally

Take, for example, that interesting relic – the wooden tally, one of the earliest of all accounting aids. It is, of course, only a development of the notched stick; yet in medieval England its use by the tax collector, national and local, reached extraordinary proportions. Tallies were usually made from hazel wood, being usually not more than eight or nine inches long.

The cutting procedure was as follows: a cut the breadth of a thumb was fiso; a cut the breadth of a little finger was  $f_{120}$ ; the cut for  $f_{11}$  was of the 'thickness of a grain of ripe barley'; that for a shilling the merest notch, 'a little wood being removed;' a plain cut represented the sum of one penny. When the notching was complete the tally was split down two-thirds of its length – the notches in the two segments being, of course, identical. In essence, the tally was a receipt - the debtor receiving one part (the 'foil'), and the creditor the other part (the stock). So long as most of the population was unable to read or write, the device served a useful purpose. Tradition and vested interests, however, kept it going well into the nineteenth century.

There are at least two places in London where the interested reader may inspect tallies. A few of the more usual kind are displayed in the Public Record Office, Chancery Lane; others may be seen in the museum of the Bank of England, and are of astonishing size. The largest measures eight feet.

#### **Early Adding Machine**

How many people are aware of the long pedigree behind the accounting machines in their offices? Even accountants tend to think of them as specifically modern inventions dating back, at the most, to the time of Burroughs – i.e. some seventy years. In fact, man's endeavours to mechanize arithmetic are almost as old as civilization; witness, for example, that ingenious mechanism, still in use in Soviet Russia and Japan, the abacus. This is believed to have originated in the Near East at least 2,000 years ago.

But the abacus, it will be objected, was hardly a machine as that term is understood today. Yet even here, surprises are in store, as anyone visiting the South Kensington Science Museum will find. There, in a special gallery, may be seen calculators, recognizable ancestors of our present machines, going back to Charles Dickens's day – and beyond. Burroughs, who in 1892 produced the first authentic adding-cum-recording machine, is naturally represented there. So, too, are Charles Babbage (1792–1871), who has good claims to be regarded as father of the modern computer; Matthieu Hahn, J. H. Müller, two eighteenth-century inventors, and many others.

The star exhibit, however, is a compact, portable apparatus which looks rather like a Swiss musical box and is full of clockmaker's wheels and cogs. This is a replica of the world's first calculating machine (the original is in the

Conservatoire des Arts et Métiers, Paris) and must be regarded as the prototype on which nearly all the others are based. The inventor – Blaise Pascal, famous French philosopher and scientist – built the machine, which could both add and subtract, in 1642!

#### Rare Books

Over the centuries a great mass of literature has accumulated on the subject of accounting. Many of the old books are inevitably concerned with the art of double-entry book-keeping, and some have become highly-prized collector's pieces.

The first, of course, was Luca Pacioli's Summa de Aritmetica – a work published in Venice as far back as 1494 – which contained a section devoted to book-keeping. Pacioli was no innovator; he learnt his subject in the market-place from the merchants who had practised double entry for at least 150 years. But the book was an important one and attracted attention not only in Italy but abroad. Many translations appeared – in Germany, Holland, France, Britain – often without acknowledgement of any kind.

Periodically, as at the Guildhall Exhibition held in 1952 in connection with the Sixth International Congress on Accounting, some of these old books on book-keeping make a welcome, if all too brief, appearance. A copy of Pacioli's Summa de Aritmetica dominated that particular occasion. Beautifully printed on hand-made paper, it appeared as fresh as on the day it left the presses. Also on view were works by Johann Gottleib, printed in Nürnberg in 1531, a German treatise on double entry, the French Le Trésor de Tenir Livres des Comptes à l'Italienne, and miscellaneous books by authors of Dutch, Spanish and other nationalities.

The first English book based on Pacioli, A Profitable Treatyce, appeared as far back as 1543. The author was Hugh Oldcastle, a London schoolmaster, and the work has a strange history. Printed by John Gough, one of the earliest English printers, shortly after the author's death, it had within fifty years become extremely rare. Nearly a century later, in 1779, a solitary copy, perhaps the last of the edition, was offered for sale at an auction. Even that disappeared and today A Profitable Treatyce is no more than a legend – kept alive because another teacher of book-keeping had it reprinted.

This reissue, dated 1588, by John Mellis, has managed to survive. Copies of it may be seen in the British Museum, and in the library of The Institute of Chartered Accountants in England and Wales, under the title: A briefe instruction

and maner how to keep Bookes of Accompts after the order of Debitor and Creditor. Mellis, in a preface acknowledges that the book – the first of a long line of English primers and manuals – is merely Oldcastle 'renewed and revised'. The original, of course, is what we would like to see, and the flame of hope still flickers against its turning up one day.

#### **Rhymes and Prayers**

Our forbears of the seventeenth and eighteenth centuries had some difficulty in mastering the new techniques of double entry due, at least in part, to the lack of competent teachers. The journal in those days played a far more important role than it does today. All transactions went through the journal and the problem facing the student was not only which accounts to debit and credit, but how to frame the journal entries. Teachers and textbooks followed the method of making the aspirant book-keeper and 'accomptant' memorize a long list of rules. To make things easier, these rules were often embodied in short doggerel verses. John Peele, book-keeper to Christ's Hospital during the reign of Elizabeth I, was a pioneer in this respect.

Now for what may be termed a book-keeping 'ritual'. It was once the invariable practice for account books to have prefaces of a religious nature. Charles Lamb, who earned his living as an 'accomptant', refers to this old custom in one of his essays. He speaks, in South Sea House, of enormous ledgers – 'with fantastic flourishes, and decorative rubric interlacings . . . and pious sentences at the beginning . . .'.

An example is provided by Sir Thomas Gresham, whose day book, opened on April 26th, 1546, has a dedication containing the phrase 'Please God to give me profit and prosperity and to defend me from evil and damage. Amen'.

One of the first teachers to advocate abolition of the custom of invoking the blessing of the Almighty on commercial transactions (as well as of the mnemonic jingles) was Simon Stevin, of Bruges (1548–1620), mathematician, scientist, financial expert, and author of a treatise on bookkeeping in the 'Italian style'.

Stevin does not appear to have been prompted by motives of an anti-religious nature. Rather, his aim was to rationalize book-keeping procedures, to bring them up to date and make them more efficient. God, he probably thought, would automatically be on the side of the merchant who was just in his dealings, and kept true and accurate accounts!

# The Accounting Profession and the European Common Market

We are indebted to the Editor of The Canadian Chartered Accountant for permission to reproduce the following article from the November issue of that journal

With Britain's possible forthcoming entry into the European Common Market, leaders of accounting thought in Scotland, England, Belgium, France, Germany and Holland were asked to give their appraisal of what lies ahead for the profession. Here are their answers to eight specific questions recently put to them by the Editor of The Canadian Chartered Accountant. To avoid confusion, the answers from Mr Alexander McKellar, of The Institute of Chartered Accountants of

Scotland, to questions I, 2 and 7 are presented first, because these questions differed slightly from those submitted to representatives of other European Institutes. Mr McKellar has pointed out that his answers to the questionnaire express his personal views and are not necessarily indicative of his Institute's attitude and he refers only to the position as it affects Scotland. No reply has been forthcoming from The Institute of Chartered Accountants in England and Wales.<sup>1</sup>

Now that Britain has applied for membership in the European Common Market, what would you say is the most vital task before the profession today?

McKellar: If Britain should join the Common Market, an immediate task for the accountant, whether as independent professional adviser or as holding an executive position, would be to make himself familiar with the differing conditions in which trading is carried on in the various countries of Europe. Particular attention would require to be given to such matters as restrictive practices (including quota arrangements), to governmental subsidies and supports in various forms, and to problems which might arise either through the breaking down or the entire elimination of tariff walls both by Britain and by the other countries of the Common Market. There could also be quite considerable problems affecting the employment of labour, as it is understood that on the Continent there are far fewer trade unions than in Britain, and questions involving demarcation lines do not loom so large as they do here.

Has the profession begun planning for the day when Britain becomes a member of the E.C.M. and, if so, how does it go about creating a new framework to meet the changing conditions?

McKellar: This question pre-supposes that a new framework is necessary, and this is not necessarily admitted. I think it is true to say that members of our Institute in general have not given serious consideration to the effects of Britain joining the Common Market. The Institute has, however, had this matter very much in mind for some time, and it is a very proper service for its members that it should do so. The extent to which preparations will be required must inevitably depend on the speed with which integration takes place, and it is not thought that any specific programme can be laid down beforehand. It is

felt, however, that in Scotland the close relationship which exists between the practising accountant and his clients, where he is, to a large extent, guide, philosopher and friend, will ensure that the requisite professional advice will be forthcoming to help industry in Scotland to meet the challenge of new trading conditions.

Company law in Britain differs from company law in European countries. What effect will this have on accountants in the various countries involved?

McKellar: In general, it may be said that the law moves much more slowly than does accountancy, and that whereas the laws of each country have been drawn up to meet the particular circumstances within that country, the majority of accountancy practices are of universal application. Even if it is ultimately found to be desirable, the unification of the laws throughout various countries would, therefore, seem very much to be a matter for the distant future. Pending that time it is suggested that where an accountant in one country is required to give professional advice in another country, he would require to equip himself with at least some knowledge of laws relating to companies and to taxation in the latter country.

The questionnaire follows as it was submitted to the other European Institutes with answers from Mr H. C. Treffers (Nederlands Institut van Accountants), Monsieur Joseph Colleye (Collège National Des Experts Comptables De Belgique), Mr E. Archavlis (Société des Experts Comptables Français), Dr W. Dieterich (Institut Der Wirtschaftsprüfer in Deutschland e.v.). Mr McKellar's answers to the balance of the questionnaire are also included here.

<sup>&</sup>lt;sup>1</sup> See statement from Sir Thomas Robson, M.B.E., M.A., F.C.A., at page 818.

1. With the formation of the E.C.M., what would you say is the most vital task, before the profession today?

**Treffers:** The most vital task before the profession today is to ensure that the forced pursuit of uniformity does not result in a lowering of standards in countries where, until now, they have been maintained at a high level.

An important responsibility of the profession in Europe will be raising the level to an acceptable height in countries where it is now considered to be too low. It will even be necessary in several countries to establish the fact that the accountant's essential function is to certify published financial statements.

**Colleye:** The Common Market, in its final stages, is inconceivable without the free circulation of people, services and capital.

Articles 52 to 66 of the Treaty of Rome call for the gradual removal of restrictions of establishing and presenting services in the interior of the Community for nationals of a member State wishing to establish themselves or practice on the territory of another member State.

The programmes of liberation and co-ordination which are implied in the Treaty of Rome pose many problems of a complex and delicate nature because of the disparity which prevails between one country and another in conditions of entry and practice of the profession, in the study and granting of diplomas in practical education, in membership in a public or private organization, in ethics, etc. These problems can only be resolved satisfactorily by meetings between representatives of the E.E.C. and qualified representatives of the profession.

Under the auspices of the L'Union Européenne des Experts Comptables, Economiques et Financiers (U.E.C.) a study group was formed in 1958 made up of professional accountants of the European Economic Community (E.E.C.). This had, as its objective, the consideration of methods of implementing the clauses of the Treaty of Rome the proposals for liberalization and co-ordination affecting the professional accountant and the economic and financial adviser, etc.

It cannot be denied that carrying out the liberalization foreseen in the Treaty of Rome will require much more careful collaboration between the professional accountants of the six countries belonging to the E.E.C.

Archavlis: The vital task for professional accountants within the framework of the Common Market appears to me to be, first, to define and examine the activities of the profession.

Dieterich: Although professional work all over the world has become more important in recent years, there will undoubtedly be entanglements within the European area which may decisively influence the professional position of the accountant. His most important task will be to improve his knowledge of languages as well as the legal status and professional

practices of the Common Market members. The younger members of the profession will have to acquire experience abroad both in practice and committee work as they have existed for a long time within the framework of the U.E.C. The days have gone when the profession operated mainly on a national basis.

2. Has the profession in your country begun planning for the day when Britain may become a member of the E.C.M. and, if so, what fresh problems does it create?

**Treffers:** Great Britain's joining the E.C.M. creates no other problem than those already in existence for the accounting profession in the E.C.M.

Colleye: The Belgian professional organization of accountants was inspired by that of Great Britain. In 1960, the National College undertook to bring together the presidents of the British and U.E.C. associations in Brussels.

From the discussions on that occasion and those which took place at the congress in Zürich (September 1961) resulted the first effective collaboration of the British Institutes of Chartered Accountants with those of the Common Market countries. This is evidenced by the organization of an important conference of European accountants in Edinburgh for September 1963.

The Belgians hope that this collaboration can be continued and developed in a permanent way within the U.E.C. organization.

Archavlis: I do not know if the Belgian profession has any projects in mind relating to the eventual association of Great Britain to the Common Market. For the time being, the French profession has none because the matter has just come to the fore.

Dieterich: If Great Britain joins the European Common Market, the existing problems of the accounting profession will only change inasmuch as the liberalization will then expand to include another country firmly rooted in professional tradition and having recognized subsidiaries of accounting firms all over the world. But there need not be fear of competition; on the contrary, expansion of the E.C.M. is also welcomed in the professional field. Exchange of thought, however, will become more difficult because, up to now, two languages - French and German - have sufficed to serve the group of six, and Britain's entry would necessitate the addition of another language. The language problems concerning Great Britain will be more significant, as the number of Britons having so far shown an interest in acquiring a knowledge of other European languages is still very

3. Should there be some kind of 'supreme authority' on accounting to give decisions of universal application on accounting principles and auditing standards?

#### ins ACCOUNTANT

McKellar: It should be said at once that in Scotland there is an extensive dislike of hard and fast rules with which the profession must comply. This attitude may be due, in part, to the fact that accountancy developed as a profession in Scotland at a much earlier time than in other countries, and it may be that the experience gained over these years has warned against too rigid an approach to accountancy problems. It is recognized, however, that in certain countries the profession has developed on different lines which have led to the emergence of certain maxims to which it is considered everyone should have regard without necessarily being required to accept them without qualification.

As indicated, however, Scotland's preference is for a free exchange of views both within the profession in Scotland and with representatives of leading accountancy organizations throughout the world. This is evidenced by the interest which Scotland has taken in the past in International Congresses of Accounting and by the fact that it is taking a leading part in the organization of the first Congress of European accountants which is to be held in Edinburgh in

September 1963.

Treffers: In general, and also nationally, I think it very undesirable that a 'supreme authority' should get power 'to give decisions of universal application on accounting principles and auditing standards'.

As to accounting principles, neither business nor the profession would have sufficient influence over the 'universal application'. Besides, there would be great danger of rigidity and formalism. If the necessity for any 'authority' in this field should be felt it would seem best to restrict its stipulations to the requirement that the accounting principles applied are clearly described in financial statements. As regards the auditing standards, the objections mentioned above apply to an even greater extent. The choice of auditing procedures can only lie with the profession itself.

Apart from the objections of principle, the establishment of a 'supreme authority' within the E.C.M. would also be impossible owing to the great variety in professional concepts, in auditing standards and even in understanding of the fundamental task of the profession with regard to financial statements. There are several European countries in which it is not considered to be the principal task of the accountant to certify published financial statements.

College: In the many European conferences of professional accountants, the emphasis has been on unification of methods of auditing and standardization of accounting systems. The U.E.C. have already put out a manual on accounting research and hope to present a European accounting plan to the Congress in Vienna in 1964.

The movement toward uniformity is evident everywhere in Europe and the problems which it implies should be studied by an organization of international professional accountants.

Archavlis: In my view, a 'supreme authority' on accounting to give decisions of universal application on accounting principles and auditing standards already exists: that is actually the present rule of the principal committees of the European Association of Professional Accountants. They have already been working on these problems. Monographs have appeared. It will be sufficient if the British delegation associates itself with this work to give them the necessary relevance.

Dieterich: We do not consider that a so-called 'superior authority' in the accounting field is desirable. The professional principles within the individual partner countries of the Common Market are based partly on law and partly on union regulations. These individual ties cannot and should not be disturbed as a European Common Market is tied in with the economic and tax laws of the various countries, but this should not lead to an unappreciation of national requirements. It is essential that information be gathered on the legal and technical professional level in the individual countries and all efforts must be concentrated on meeting the various conditions. However, professional autonomy in various countries will not be affected by this.

4. It is recognized that the practice of accounting and auditing is different in certain respects in the United Kingdom from that in European countries. What steps need to be taken to deal with this situation? What sacrifices, if any, might be entailed?

McKellar: In attempting an answer to this question one has to bear in mind the essential difference between accountancy and auditing. The subject of accountancy covers decisions as to the records to be kept, the method of keeping these records (i.e. bookkeeping), the preparation of statements to show trading results for specified periods, and financial statements as at specific dates, the interpretation of these statements and the drawing of conclusions from them. It is apparent, therefore, that depending on differing types of industry and commerce, differing methods of conducting such units and differing sizes of individual units, there must be correspondingly differing systems of accounting. In other words, the business unit determines the kind of accounting system which it requires, and it is not thought that the provision of the necessary specialist advice will provide difficulty to the profession in Scotland.

As opposed to the provision of accountancy advice, which is essentially a constructive function, the functions of the auditor are, to a considerable extent, critical in that the emphasis is on verification of the position brought out in accounting statements. In Scotland, auditing techniques have been developing down the years and must continue to do so to meet changing conditions. There has been increasingly an insistence on the independence of the auditor, and while there are no statutory provisions as regards

businesses in private ownership (whether by individuals or partnership) there are statutory regulations affecting the audit of the accounts of companies, and these form by far the largest part of British industry and commerce. There are also audit regulations relating to the accounts of nationalized industries, local government authorities, building societies, friendly societies and many other organizations.

Entry by Britain into the Common Market could, as envisaged in the answer to Question 1 above, lead to an increased demand for accountancy services. In relation to auditing, there are at present statutory requirements for the audit of the accounts of virtually every type of organization apart from privately-owned concerns, and it is not thought that entry into the Common Market would affect this position. The term 'sacrifice' would not therefore seem to be appropriate to the profession in Scotland.

Treffers: This problem does not only occur between the E.C.M. countries and the United Kingdom, but also between the E.C.M. countries themselves. Further, it may be pointed out that there will presumably be no uniformity in the application of accounting principles in any individual country. The intensification of international contacts and the internationalization of business life will be the media through which a very gradual improvement may be effected. As to auditing, it will be possible to achieve, in the long run, a generally acceptable level by regular international contacts between the professional organizations, by exchange of ideas and experiences and under the influence of the expected internationalization of business life.

Colleye: It should be possible to bring about uniformity through an international organization of professional accountants. The Edinburgh Conference in 1963 will have on its agenda methods of accounting research and, in consequence, a study of the necessity for international standardization of them.

Archavlis: As soon as the British delegation has joined those of Germany, Belgium, France, the Netherlands, Italy and Luxemburg, it will be up to the committees of the European Association to determine what measures should be taken to deal with the disparities in accounting methods and of auditing procedures between the United Kingdom and these other European countries. The European Association includes, also, the sister associations of Austria, Spain, Portugal and Switzerland.

Dieterich: Every country differs in its accounting and auditing practices. Great Britain also has her peculiarities and various differences exist compared to the German chartered accountant, though there is little variation in basic technical matters and ethics. It may be that greater emphasis is placed on the formal audit and annual financial statements in Great Britain than in Germany, but the German

chartered accountant, on the other hand, places more emphasis on the material audit and the profit and loss statement. What is needed are permanent expert committees from whose work everyone will benefit. As a modest contribution the pioneer work of the U.E.C. expert commissions is readily available.

#### 5. How long do you think it will take to establish a new system or revisions in accounting philosophy?

McKellar: The answer to this question lies within the comments made in reply to the four preceding questions. It is not thought that there is any necessity for a new system for the provision of accountancy advice in Scotland, and changes, if any, in accountancy thought will derive from changes in the conditions under which business is carried on.

Treffers: Accounting philosophy is closely connected with the mentality of the population and with the way in which business life is organized as to financial affairs. A growing closer together of the various philosophies will only be possible over a long period.

Colleye: It is difficult to foresee exactly how long it will take for this standardization because this depends on the enthusiasm with which the studies are carried out. If it were possible to obtain the maximum goodwill from the countries participating in it, this standardization should be accomplished in five or six years.

Archavlis: It has already taken ten years for the U.E.C. to establish its present plans for standardization of accounting research. The future work of its committees will be able to take advantage of what has already been accomplished. I estimate that three years will be required for the necessary co-ordination (the time between two European Conferences), beginning when the British delegation and the European Six have established contact.

Dieterich: No matter how soon customs duties are abolished, it will still be difficult to clarify the provisions of the Treaty of Rome regarding the liberalization of the law governing the establishment of companies and commercial transactions. The problems of the accounting profession are quite varied compared to those of other professions, and it must not be overlooked that numerous regulations in national law are affected by the work of the Brussels authorities. Nevertheless, it was established that the liberalization of the accounting profession in view of its importance in our economy, should be treated with priority and be finalized by the end of 1965. However, in so short a time it is impossible to cope with all questions connected with the standardization of technical examinations, the adjustment of future examinations with a view to a greater uniformity of requirements and, finally, the unavoidable introduction of additional examinations. These additional examinations should be introduced for situations

where particularly important tasks in the interests of the State and the economy are entrusted to the accounting profession and where the knowledge of national law and national professional practice must be proved.

#### 6. What are some of the basic issues with which the profession has to deal?

McKellar: It is difficult to visualize all the issues that will arise, but they will certainly include the question whether assets should be amortized by reference to historic cost or to replacement cost.

Furthermore, in view of the possible 'harmonization' of legislation in the fields of, *inter alia*, taxation, company law, monopolies and re-sale price maintenance, it may well be that the profession will have to adjust its present thinking on many subjects.

**Treffers:** One basic issue is the adjustment of professional education to the requirements of the moment so that accountants can offer their clients sufficient service, e.g. in respect of management auditing, systems, etc. These subjects should be parts of the normal programme of examinations.

Another is arousing sufficient interest in the study of accounting and the professions so that the accountant's offices can obtain an adequate supply of staff.

Colleye: There is no particular difficulty in Belgium.

**Archavlis:** The only basic difficulty which, it seems to me, must be taken into account is vocabulary. I believe that this is our first task.

Dieterich: The chartered accountant is not experiencing any particular difficulties in connection with his work within the European Common Market. His superior technical knowledge, confirmed by a special examination upon completion of his studies, proves that the standard of the German chartered accountant compares favourably with that in neighbouring countries.

#### 7. Company law differs in practically every European country. What effect will this have on accountants in the various countries concerned?

Treffers: No serious effect. Accountants will have to reckon with the existing laws. In the case of important differences, the accountant will not be able to perform an audit in another country without having acquired beforehand sufficient working knowledge of company law in the country concerned. This will often lead to a preference to have audits performed by accountants of the country in question, provided that the national level of the profession is adequate.

Colleye: It goes without saying that in the more or less distant future a European type of company will be created. European jurists have already proposed the legal basis for such a type of company.

While they are waiting for this, professional

accountants will have to conform to the legislative requirements which exist in the countries of the Common Market.

Archavlis: Company law already differs between the countries of the Six. The entry of Great Britain will only add an additional element to this disparity. I do not think, however, that the problem should be exaggerated. Other professions, lawyers for example, are now working towards a solution of judicial problems. Auditing techniques will have to evolve along with solutions of the legal questions. It is the task of our committees to prepare and follow this evolution.

Dieterich: Company law is governed by different regulations in the individual countries. Deviations also exist in the professional field regarding valuation regulations. Within the European Common Market, these have special significance for Great Britain and Germany, whereas elsewhere the respective regulations are of less importance. In this respect, professionals working abroad at the present time must of necessity become thoroughly acquainted with the legal status beyond boundaries, thus enabling them efficiently to carry out the professional work entrusted to them. So far as the auditing of annual financial statements of corporations, this is legally regulated and only carried out by chartered accountants or firms of chartered accountants, and in Germany, we are planning additional examinations that foreign colleagues will have to undergo. In the long run, however, even the most conservative experts will surely support the development of a European company law, for only in this way will the economy be given the legal scope and security for an expansion beyond boundaries. There is no doubt that in this development as well as in the tax field there are enormous difficulties and possibly decades will pass before its fulfilment.

## 8. Is there likely to be much interchange of accounting personnel in handling assignments between one country and another and how will this affect educational and training requirements?

McKellar: This question can perhaps be answered by the following three brief statements:

- (a) It is thought that the handling of assignments between one country and another is much more likely to give rise to an interchange of accounting views rather than of accounting personnel.
- (b) Apprentices in each country within the Common Market are not likely to be much affected in the immediate future.
- (c) In making arrangements for the education of apprentices, however, regard will have to be had at an early date to the integration of trading activities within the various countries, and
- apprentices will require to be made aware of the

differences which at present exist, of the changes which are taking place, and of the likely ultimate pattern of business throughout the Common Market.

Treffers: What is said under the answer to question 7 is applicable here too. It is not to be expected that there will be much interchange of personnel. It will be necessary, for instance, that the accountant who certifies the financial statement of a parent concern satisfies himself that the foreign accountants of the subsidiary enterprises have performed their audits in a way which he considers to be acceptable. Personal contact and examination of the files and of the auditing standards applied will be necessary in this connection.

Colleye: The interpenetration of firms within the Common Market and the provisions of the Treaty of Rome leading to free establishment and payment throughout for services will bring about a transfer of accounting personnel and probably the merging of associations between professional accountants of different countries. Already, feelers have been put out by different firms of accountants to establish such collaboration. The British Institutes are also engaged in discussions with Belgian accountants to the same end.

Naturally, in order to make this collaboration effective and to bring about such a transfer of personnel, improvements will have to be made in the education of the accountant and his personnel. The idea of the European diploma has already been rejected by French accountants. We believe, however, that the educational programmes will have to be reviewed during the next few years. Furthermore, it should be possible to achieve standards for on-the-job training in many countries of the Common Market.

Archavlis: The impact of liberating interchange of personnel in the services contemplated in the Treaty of Rome will naturally be an important function of the people who move; some practitioners will move more easily or more willingly into one country than into another. The question of training accounting personnel is already being considered by the Committee on Professional Education of the European Association. This has centralized training programmes and instituted a European competition which gave prizes for the first time in Zürich in September 1961. I believe, moreover, that the conferences, such as those which we had in Zürich last year, and in New York this year, and those to be held in Edinburgh in 1963, and in Vienna in 1964, are bound to strengthen the bonds which unite our members throughout the world.

Dieterich: Already many young Germans working in the accounting field want to take up work abroad in order to get acquainted with the technical language, the professional practices and the basic laws of the neighbouring countries. Similarly, we are frequently approached by friendly foreign organizations with regard to assisting their junior professionals. This exchange is still modest. But when today's youth, equipped with a more intensive knowledge of languages already acquired in school, begin entering professional practice, these exchanges will increase. Therefore, professional organizations should do their utmost to support this exchange of junior professionals. From this, many opportunities in the form of partnerships will result. Incidentally, a new German professional law gives the Federal Minister of Economics authority over the vocational training of juniors, and in this connection stress will be laid on the practice of training abroad.

#### Views of Sir Thomas Robson, M.B.E., M.A., F.C.A.

from the standpoint of

#### The Institute of Chartered Accountants in England and Wales

In connection with the comment regarding The Institute of Chartered Accountants in England and Wales, in the preamble to the foregoing article, we understand from the Institute that the Editor of The Canadian Chartered Accountant was informed that the questions posed by him were thought to deal with matters of great importance at the present time, and that as these matters are so big and complex the Institute felt that they could not be dealt with adequately by means of short answers. In order, however, to make clear that the Institute has a live, constructive and important interest in European affairs, Sir Thomas Robson has contributed the following notes.

The future of the accountancy profession depends upon the development and improvement of professional standards and of the accounting principles underlying those standards. At present in the countries of Europe there are widely differing standards and concepts in the profession and in the educational and training requirements. The advent of the European Common Market has served to emphasize the long-standing need to bring about greater uniformity of standards and concepts. This can be done only by exchanges of information and experience and it is not a process that can be hurried. It is, however, a process that can be greatly hindered by any form of restriction on the practice of the profession in so far as the restriction is irrelevant to the competence and integrity of the individual accountant.

Taking the world as a whole there are far too many

such restrictions based on matters such as nationality, place of residence or association in partnership. Where such restrictions exist in countries which are or become members of the Common Market, their removal will have to be achieved in order to comply with the liberalization requirements imposed under the Treaty of Rome.

The position in the United Kingdom is already in accord with the principles underlying this aspect of the Treaty of Rome. It is also in accord with the view which has been repeatedly expressed by the Council of The Institute of Chartered Accountants in England and Wales since long before the Treaty of Rome. This view is that the ideal arrangement is reciprocity, in all parts of the world, of the right to practise under the professional designation which the individual accountant has obtained by training, examination and experience, and there should be no restriction on the right to enter into partnership arrangements with properly qualified accountants whatever may be their country of residence.

Anyone, of any nationality, race, colour or creed, can qualify for membership of The Institute of Chartered Accountants in England and Wales by coming to the United Kingdom and satisfying the Institute's training and examination requirements. Having qualified he is not subject to any restriction, by the Institute or by United Kingdom law, which would prevent him from practising anywhere in the world or from entering into partnership with whomsoever he may choose. Because that has been the situation throughout the whole of the Institute's history, since its incorporation by Royal Charter in 1880, its members are to be found in all parts of the free world and, through partnership arrangements, many of them have facilities for exchange of information and experience and the ability to draw on the best standards developed in various countries. These facilities are greatly to the benefit of the profession and its clients. Any restriction which tends to prevent accountants from providing their services in any part of the world cannot in the long run be otherwise than detrimental to the profession and, indeed, to the economy of the country imposing the restric-

It is sometimes wrongly thought that the United Kingdom is itself restrictive because the Institute has no reciprocal arrangements whereby its membership can be obtained by members of overseas accountancy bodies. It cannot therefore be emphasized too strongly or too often that although there are no such reciprocal membership arrangements there is nothing to prevent an overseas accountant from practising in the United Kingdom. Moreover, in relation to the only restriction of general importance on the work which an accountant is permitted to do (namely, the provisions of the Companies Act, 1948, concerning qualification for appointment as auditors of public and non-exempt private companies) the Act specifically empowers the Board of Trade to authorize for such appointments accountants who have obtained suitable qualifications outside the United Kingdom. This power is readily exercised. Over six hundred accountants with overseas qualifications have been so authorized. The Board of Trade is concerned only with the qualification held by the individual who wishes to be authorized; neither nationality, race, colour, place of residence, nor partnership association, is a relevant consideration.

This is a well-tried system and the Institute believes that it is right. It avoids all the problems inherent in any attempt to provide for reciprocal interchange of qualifications and it also has the merit of permitting the accountant to practise under the designation which he has acquired in his own country so that those who use his services are aware of the qualification he holds. This is what underlies the Institute's inability to enter into reciprocal membership arrangements. The Institute takes the view that persons using the services of a chartered accountant are entitled to assume that he has acquired that title by satisfying the training and examination

requirements for that qualification.

Turning now to the professional work on which accountants are engaged, they are clearly capable of exerting considerable influence on the business world. For example, the Companies Act, 1948, gave statutory force to many of the Recommendations on Accounting Principles issued by the Council of The Institute of Chartered Accountants in England and Wales. Those Recommendations were themselves the outcome of good practice developed by chartered accountants and adopted by companies in advance of any statutory requirements. This is a process which must be continued and it will be of special importance in relation to the changes in company law, taxation and other legislation which are bound to take place in the European countries, including the United Kingdom, as a result of the Common Market. These changes will take time and will not be achieved successfully except by exchanges of information and experience. Nor can the process be hurried. The matters involved are largely those for which the right evolutionary process is, first, the development of sound principles, then their general acceptance in responsible business quarters, and finally, their blessing by statutory enforcement. This is a difficult enough process for one country alone. The task of achieving this kind of development throughout the world on broadly comparable standards is a task of enormous magnitude towards which the international congresses are making their contribution. The forthcoming European Congress of Accountants to be held in Edinburgh in 1963 is a further step in this direction.

The Institute of Chartered Accountants in England and Wales has a responsible part to play in these matters because of its long experience, the high standards which have been developed in the United Kingdom on the basis of the disclosure of a true and fair view in the annual accounts, and because of the unparalleled extent to which its members have spread themselves throughout the world.

#### Weekly Notes

#### SECURITY OF EMPLOYMENT

THE Contracts of Employment Bill to give greater security to manual and clerical workers was published last week. The Government hope to have it enacted by the spring of 1963 but its effects are not likely to be felt before the spring of 1964. The Bill does not affect workers in Northern Ireland.

The main provisions of the Bill are as follows. First, both employer and worker must give at least two weeks' notice of termination of employment if a worker has been two years in his job. After five years the minimum notice is four weeks. Secondly, workers will be guaranteed minimum pay during notice, usually at a rate not less than the average weekly earnings over the previous six months. Thirdly, strikers will forfeit their rights under the Bill if they stop work without giving notice. For a worker with two years' service or more, strike notice must be fourteen days. The same warning will be required from those with less service but who have a contract laying down a fortnight's notice. Where a worker has a contract laying down notice between a week and a fortnight, he must give a week's notice before striking. Thus only those with contracts giving a short period of notice can stage lightning strikes and retain their record of uninterrupted

The other main part of the Bill lays down that an employer must give permanent workers a written statement or contract setting out the main terms of employment. Failure to comply makes him liable for a fine of £20 for each worker and in certain circumstances it may go up to £100.

Thus after having the matter under consideration since 1947 the Government has decided to present legislation. It seems likely that workers in some industries will be more benefited than others and it is doubtful if it will have much effect on lightning strikes. As to whether it increases or decreases mobility of labour remains to be seen. The Bill as published is a very modest start towards a national policy of improved compensation for redundancies in employment.

#### STIFFENING ON THE E.C.M.

RECENTLY the Chancellor of the Exchequer said that this country wished to join the European Common Market but 'we have all said from time to time that it is not a question of disaster if we don't'. He, therefore, went some way to endorse the speech given by Mr Erroll, President of the Board of Trade,

over the week-end when he said that it would not be an irremediable disaster if this country did not join the E.C.M. The Government is, therefore, at least giving the impression that its attitude to the E.C.M. negotiations is not going to soften. Doubtless this is partly intended for the benefit of the negotiators and partly for the electorate, although a recent motion tabled by fifty Conservative M.P.s about the alternative to the E.C.M. indicated stiffening in the party's views since the party conference.

Once again this week the negotiations at Brussels have stuck on the question of agricultural subsidies. A spokesman of the West German Government last week indicated that West Germany was prepared to see a reduction in the price of wheat but there has been no constructive reaction as yet from the French who have an important vested interest in high wheat prices.

In matters of this kind, the impetus in the negotiations is all important. There are indications that opinion in this country is becoming concerned that food prices might increase by as much as 10 per cent overall if the United Kingdom joins the E.C.M. There is general agreement that the short-term effect of this country's adherence to it might be unpleasant despite long-term advantages. The longer the delay at Brussels the bigger will seem the short-term difficulties and adjustments. There is a time limit on all this and it is clear that a war of nerves is developing as all parties knowingly approach the deadline. The communiqué following the meeting between Mr Macmillan and President de Gaulle last week-end showed little weakening as yet on either side.

#### NIC'S FIRST TASK

National Incomes Commission could suggest that the Government has given it an easy first case upon which to cut its teeth. The introduction early last October of the forty-hour working week for plumbers in the Scottish building industry was followed within a few weeks by its extension to all building workers. Inevitably, the claim has now been put before the civil engineering industry in Scotland, whose rates and conditions for labour are based upon national agreements extending to the rest of Britain. Hence, were this industry to grant this concession the repercussions for labour costs throughout British industry generally would be serious.

It is only a year since the working week of building labour south of the border was reduced from forty-four to forty-two hours; a further reduction along the lines of the Scots agreement would lift building costs substantially. This would mean that industry would be faced by higher costs for new factory space, higher rents for offices and, above all, rents of new housing accommodation would have to be increased. The inflationary potential of such increases, let alone the inevitable demand for a forty-hour working week

throughout all branches of British industry, would be

What is at stake is the competitive capacity of British industry which, during the past year or so, has at least enjoyed relative stability of costs and thereby seen its exports become more competitive. The manner in which NIC grasps this particular nettle will be indicative of the prospects for price stability in the British economy.

#### NEW MEMBER APPOINTED

PROFESSOR R. C. TRESS, Professor of Political Economy at Bristol University since 1951, has been appointed an additional member of NIC. Professor Tress, who is aged 47, was previously Reader in Public Finance at the University of London, and during the Second World War acted as an economic adviser in the Cabinet Secretariat. He will serve as a part-time member of the Commission.

It has also been announced that Mr L. C. Hawkins, C.B.E., F.C.A., whose appointment to the Commission was referred to in *The Accountant* of November 10th. is to be a full-time member of the Commission instead of a part-time member. The deputy chairman of the Commission, Professor H. S. Kirkaldy, C.B.E., Professor of Industrial Relations at Cambridge University, who is at present serving as a part-time member will also become a full-time member after May 1963.

#### POOR EXPORTS IN NOVEMBER

IN November this country's external trade position deteriorated. The trade gap widened from £44 million to £56 million but this turn for the worse did not have much effect on the foreign exchange market when the figures were announced last week.

The main reason for the fall was a drop of  $f_{32}$ million in the export figures which, seasonally adjusted at  $f_{304}$  million, were the lowest since January 1962. Imports were down by £18 million and were at their lowest for five months with a figure of £375 million.

There is every indication that exports have begun to level off. There is some consolation in the possibility that imports have been doing the same thing. This has been partly due to the excellence of the harvest in this country which has reduced cereal imports and the end of payment for ships imported from Holland in October. There are indications, however, that the modest increase in industrial production is beginning to have effect on stocks and this is bound, in turn, to effect the level of imports.

An interesting feature of exports has been the sustained level of trade with the sterling area and the European Free Trade Association. In contrast, there has been no increase in exports to the European Common Market since the end of July. There is no disposition, as yet, however, to think that the lull in exports to the European Common Market is more than temporary.

#### TAX RELIEF ON AMERICAN DIVIDENDS

PLEA to British investors, especially those in Athe higher tax brackets, to be more double tax relief minded, is contained in an interesting and useful little booklet which has been compiled by an oldestablished firm of New York stockbrokers having a branch office in London. Its title is Double taxation relief on United States common shares for the private British investor, and it has two purposes. Large sums of money are lost every year by British investors owning American equities, because they do not appreciate the importance of claiming double tax relief or do not know how to claim it.

The first purpose of the booklet is therefore to give some general guidance and this it strikingly achieves; it would be a hard task to explain the subject more lucidly. The second purpose is to suggest to British investors in the higher tax brackets who require income as well as capital appreciation that they place a portion of their funds in United States equities in order to benefit from double tax relief; i.e. that double tax relief should be an element in their investment policy. This suggestion is backed up by some interesting and illuminating figures.

The booklet concludes with two warnings. The first is that one must keep a sense of proportion; double tax relief should not overshadow consideration of the intrinsic quality of a share proposed to be purchased. The second is that double tax relief cannot be expected to turn exiguous net yields into really generous returns. To us these two warnings serve to emphasize the restraint with which the main topic of the booklet is presented, and to emphasize its value.

#### REPORTS ON EUROPE

IF there is any one argument for future European co-operation it is the undoubted success of the post-war O.E.E.C., now known as the Organization for Economic Co-operation and Development. The flood of publications from this quarter on all aspects of the economic and social life of the member countries has reached the stage where it has been decided to publish a bi-monthly magazine entitled The O.E.C.D. Observer<sup>1</sup> to disseminate the essence of the vast flow of information on European affairs produced by the O.E.C.D. The first issue, dated November 15th, is devoted in the main to articles about the organization itself, but there are also articles on the roles of education and research in stimulating economic growth, as well as one on the future of the small firm in industry.

Employers may also be interested in a new pamphlet from H.M. Stationery Office entitled The Common Market in Action (price 6d net) which provides a brief account of the working of the E.E.C. constitution and the economy suitable for general distribution to their workpeople.

#### This is My Life . . .

by An Industrious Accountant

#### CHAPTER 151

THERE was quite a display of enthusiasm around the boardroom table recently. The chairman had completed his memoirs at last; he had sent each of us a signed copy of the first typed version; more important, it was a really good effort. He was proud of his family name and the thriving business that had grown to prosperity under its protection. His heart had gone into his writing. After it's published in six months' time, he plans to decide definitely on his retirement date.

Six generations of his ancestors had guided our rise to success. They had faced and outfought laissez faire and Kruger, Kaiser Wilhelm and the hungry twenties, the depression and Hitler's war. They had survived the atrocities of a hundred years of Machiavellian politicians whom tact forbids me to name, though the chairman named them with some unparliamentary adjectives. Greatest achievement of all, they had survived Dorian.

The significance of Dorian lay in the faded brown photograph over the mantelpiece. It showed two handsome young men in Edwardian dress. One was serious, with deep-set eyes; that was Harry, the chairman's grandfather, who in stress and heartache had fought back from the verge of bankruptcy. The other, wavy-haired and laughing, was Dorian, grandfather's cousin.

They had found Harry bloody and dazed on the floor one morning. Dorian, whom he had caught redhanded rifling the safe, had struck him down with a heavy brass paperweight and fled with the contents. He had never been traced, and Harry had shouldered the burden unflinchingly. Prematurely aged, distraught with worries, living at fever pitch, he had slaved to win through to final success, before slumping down, dead of brain-fever, over that very table round which we now sat.

'Noblesse oblige,' said the chairman. 'It's the best who pay dearest.' He had devoted a chapter to his grandfather's great struggle and his eyes shone proudly. A nation of shopkeepers had built an industrial empire; his family had played its part. Their portraits looked down on us. In cravats and good broadcloth, in the khaki of Colenso and Mons and Normandy, in morning dress or in lounge suit, they lined the walls. 'Never a black sheep but Dorian,' said our chief, 'Good men all.'

There was surely an element of wishful thinking in his judgement, I reflected. While their faces had been composed in appropriately noble or pensive lines before being immortalized for posterity, their thoughts were not for us to decipher. Especially when dundrearies or Kitchener moustaches masked the revealing shapes of mouth and chin. Two of our present directors, for long rivals for succession to the chairman's mantle, were looking positively saintly as they listened to him. (As both are known to have had occasional lapses from perfection, their expressions were possibly deceptive. I hope history doesn't repeat itself.)

Just then an urgent message came from the construction engineer in charge of our rebuilding asking could the directors please come at once. In some surprise they trooped down to join him in the dusty rubble of a demolished showroom, long disused, at the base of the new wing. The workmen were clustered excitedly around some broken crimson panelling disclosed by the removal of an inner wall. They'd found something. From behind a crumbling panel protruded a skeleton hand. The forgotten priest's hole held the huddled remains of a man.

We stood around, directors, staff, builders, musing quietly on the ancient tragedy. Beside mouldering papers in tattered remnants of clothing someone's dry bones had lain hidden for years. Had it been one of our own employees, a customer, a private enemy? What was the secret? Who had walled up the niche? The chairman was agog. Mentally, he was drafting another chapter to his memoirs; a skeleton didn't rank with a family ghost for drama, naturally, but still the mystery was tantalizing.

The managing director, down on one knee, lifted the yellowed skull gently. The sight of its shattered base was curiously shocking. With tightened lips he felt again in the shadows . . . blackened coins, rags, a corroded pen . . . a gold watch, its glass smashed.

I think that we all felt a premonitory, nameless, chill as with deft fingers and a borrowed penknife, he prised open the double back casing of the watch. For a spasmodic moment his hand clenched as if to hide it, and his jaw dropped. Above him the chairman was suddenly white. But with rigid chin and straightened back he stretched out a hand that showed no tremor, and his voice didn't falter as he read the inscription inside the tarnished gold cover: "To Dorian, on his twenty-first birthday."

No one spoke. We knew now who had rifled the old steel safe, who had swung the heavy brass paperweight. We sensed why Harry had aged so rapidly, with the furies of guilt and remorse racking him night and day, with his murdered cousin's blood tainting his dividends. The chairman handed back the watch carefully.

"That chapter about Harry's shock-tactics needs some revision, apparently,' he said quietly. 'I must trace poor Dorian's relations immediately, before I resign at next month's board meeting.'

#### Reviews

#### The Development of the British Economy 1914–1950

by Sidney Pollard. (Edward Arnold (Publishers) Ltd, London. 30s net.)

This is a serious and substantial piece of writing, well documented and well put together, covering the most important era in British economic and social development. Dr Pollard does not weary his readers with a long chronological account of events, rather he seeks to show the evolution of modern society through the growth of the Welfare State, a paternalistic Government in economic affairs, the rise and fall of staple industries and the struggle for full employment.

Intended primarily for the undergraduate in history and economics, it will certainly interest many whose lives have spanned in whole or in part the events of these years and who wish to see those years in perspective. This book deserves a wide readership and the publishers are to be congratulated on its excellent production at so modest a price.

#### The Preparation of the Accounts of Trustees and Liquidators

by W. J. FAIRBAIRN, C.A.(S.A.), F.S.A.A. (Juta & Co Ltd, Cape Town. R2.85.)

The number of useful books illustrating accounting methods, other than at a very elementary level, is distressingly few. For this, if for no other reason, Professor Fairbairn's book is most welcome.

As the title suggests, it deals with the accounts of trustees in bankruptcy, liquidators and executors of insolvent estates. The illustrations are both extensive and detailed and are preceded by a careful exposition of the relevant provisions of the law. There are also a number of obviously well thought out examples which are keyed to the text.

Although this must, without doubt, be a satisfactory addition to any accounting library, its use to readers in the United Kingdom will be rather restricted by the fact that the book is keyed to South African law (Professor Fairbairn is Professor of Accounting and Auditing at the University of Natal). Although the laws of the two countries are not entirely dissimilar, there are sufficient differences to render the book unsuitable for the student in Britain and somewhat confusing to the British practitioner.

Marginal legal differences, together with unfamiliar currencies and jargon, are a barrier to the wider circulation of any number of useful books written in the various English-speaking countries. It is a pity that adaptations are not made of selected works (the conversion into, say, British usage could often be quite easily effected) with a view to enlarging the number of books available to practitioners and students.

#### Lindley on the Law of Partnership

Twelfth edition by ERNEST H. SCAMELL, LL.M., Barrister-at-law. (Sweet & Maxwell Ltd, London. £,10 net.)

Lindley is now over one hundred years old, eleven years having passed since the eleventh edition was published. Besides bringing the work up to date, Mr Scamell has made many improvements. In particular he has added a further part headed 'Taxation in relation to partnerships', covering twenty-four pages. It consists of two chapters, one on income tax and the other on estate duty.

Partnership shares have presented some baffling problems in relation to estate duty, and the book goes very thoroughly into them. The chapter on income tax explains such matters as basis of assessment, apportionment of the tax, cessations and partnership changes, and the tests which the Revenue imposes in order to decide whether a partnership exists or not. The editor makes good use of income tax cases in his discussion of the general aspects of this and other topics.

Despite the modest disclaimer in the preface, the new editor worthily upholds the esteem in which Lindley is held in Lincoln's Inn and elsewhere. The publishers have improved the appearance of the book and its printing. The new Lindley may not answer all the questions about partnership law, though this reviewer is unable to think of any which are not covered.

#### The Limits of Business Administration and Responsibility

by G. Prys Williams, M.B.E., B.COM., F.I.S. (Pall Mall Press Ltd, Dunmow, Essex. 30s net.)

Written by a university teacher in statistics and economics who has spent much of his life in business, this book, sponsored by the Christian Economic and Social Research Foundation, is quite unusual.

It does not, as the title might suggest, deal with the conventional topics in treatises on management, but discusses instead the broader, one might say philosophic, questions. The author is concerned, for example, with the public image of big business, the very real problem of ensuring an efficient link between the board and executive management so that controlling power is efficiently and equitably exercised, and the responsibilities of industry to shareholders and the Government. There is much of interest in this book, but some readers may find its message conveyed at rather too great a length.

#### Investments

Third edition by George W. Dowrie, Ph.D., Douglas R. Fuller, Ph.D., and Francis J. Calkins, Ph.D. (John Wiley & Sons Ltd, London. 72s net.)

This is a standard American text by authors who combine academic with practical qualifications. It is intended primarily for college undergraduates taking

the highly-specialized and often very good courses in business training, as well as those working in financial institutions who wish to broaden their horizons.

Its content is conventional, discussing the nature and practice of investment, financial statements and their interpretation, and the various investment guides and criteria evolved to minimize losses and maximize gains. From the viewpoint of the prospective British reader, this book suffers from the fact that it is based upon American law and practice, but on the other hand, it is an excellent exposition of a subject which is as important in the United Kingdom as across the Atlantic.

For those concerned with investment, there is much to be said for looking at the subject through the eyes of their American counterparts.

#### SHORTER NOTICES

A Theory of Accounting to Investors, by George J. Staubus. (California University Press; London: Cambridge University Press. 32s net.) This American study by a University don is not intended so much for the average practitioner immersed in his day-to-day problems, as for the fellow academic or accountant with an interest in the wider functions of accounting reports, or economists seeking to integrate accountancy with their own subject. The latter will find that Mr Staubus has much of interest to say on the nature of the accounts required by the investor and not least upon the problems involved in trying to meet those needs.

THE COMPLETE GUIDE TO PERSONAL INVESTMENT, by P. J. Naish. (Evans Brothers Ltd, London. 30s net.) This is primarily a book for the man who has saved his first few hundred pounds of free capital and is contemplating a plunge into Throgmorton Street. It discusses the various types of share and investment as well as summarizing the leaders in the main markets, and provides clear and simple accounts of the basis of modern published accounts and other activities such as take-over bids and investment techniques. Bank managers and accountants could recommend this book to prospective investors among their clients.

# Finance and Commerce

#### Overloaded System

UR reprint this week features the accounts of Associated British Foods Ltd for the year to March 31st, 1962 – which may or may not present a 'true and fair view'. Mr W. Garfield Weston, the chairman, explains that this is an unfortunate result of a fast rate of expansion.

A.B.F. has wide interests in milling and bakeries (Sunblest bread), in grocery and in other directions associated with the 'table'. The retail grocery division which includes Coopers' Stores, Joseph Burton, the Fine Fare supermarkets, and others, is handled through Howardsgate Holdings Ltd and the annual report explains that 'considerable overloading of the accounting system' has been caused by 'swift expansion in our retail grocery business'.

Dealing with this point and with the decline in Howardsgate profits, the chairman says: 'We are attempting to do in a few years in this company what has taken the supermarket companies in North America forty years of trial, error and heartbreak to accomplish. These figures reflect the cost of opening the unprecedented number of eighty supermarkets during the year. But', he adds, 'the directors believe that this price in terms of fall in present profit . . . is a small price indeed to pay for the future prosperity of the company.'

#### Auditors' Report

In the course of this expansion, 'exacting demands were made on the accounting side of the business' and this, says Mr Weston, led to a number of difficulties which were more severe than was appreciated

Chartered Accountants.

THOMSON MELINTOCK & CO.

at the time. When it was found impossible to prepare accounts as at March 31st, 1962, that would satisfy the Howar gate auditors, the directors decided not to delay further the preparation of the group accounts and they asked for the Howardsgate accounts to be completed 'fully realizing that their auditors could only give a qualified report'. The A.B.F. directors' report says the amount of profits thus subject to qualification is 'relatively small' and the effect on total group profits should not be emphasized.

The report of the auditors of Associated British is included in the reprint. Note 2, to which the auditors refer, brings forward to Associated view a note in the Howardsgate accounts which is also included in the reprint. This refers to the 'accounting difficulties' connected with 'the increased volume of transactions and the allocation thereof between the individual companies in the (Howardsgate)

Group'.

These difficulties have still to be overcome and adjustments may be necessary in creditors and stocks which 'may have a material effect on the amount shown as profit for the year and the provisions for taxation thereon'. The figures in question can be seen in Note 2.

#### Votes

Mr Weston also touches on a very topical point in this age of supermarkets. 'It has been said', he remarks, 'that the big supermarket chains have an unfair advantage over the independent trader by reason of their greater buying power.' He asserts, however, that through the A.B.F. wholesale 'Cash and Carry' stores, the group is 'doing more for the private and independent grocer than any other organization in the country' for the independent grocer can through them buy 'all his supplies on just as favourable terms as can the multiples, and with no strings attached to his freedom'.

Associated British, Mr Weston also records, was the first company to give votes to non-voting share-holders without any question of

# ASSOCIATED BRITISH FOODS LIMITED

CONSOLIDATED PROFIT AND LOSS ACCOUNT

THE YEAR ENDED 31st MARCH, 1962

# TO THE MEMBERS OF ASSOCIATED BRITISH FOODS LIMITED

REPORT OF THE AUDITORS

WE have audited the books and accounts of the company for the year ended 31st March, 1962, and have obtained all the information and explanations that we considered necessary. Proper sooks of account have been kept and the balance sheet on page [826] is in agreement therewith.

The said balance sheet gives the information required by the Companies Act, 1948, and in our opinion gives a true and fair view of the state of the company's affairs as at 31st March, 1962.

We have examined the audited accounts of the company's subsidiaries, some of which have been audited by other professional firms. The auditors of Howardsgate Holdings Limited, reporting on the consolidated accounts of the Howardsgate group, stated that in the circumstances indicated in note 2 (which appears on page [827]) adequate accounting records for that group were not maintained and that they were not able to obtained the information and explanations necessary to confirm the amounts included in the group balance sheet for stock and for creditors. They were, therefore, unable to state that in their opinion the consolidated accounts of the Howardsgate group gave a true and fair view of the state of affairs as at 31st March, 1962, and of the results for the year ended

The consolidated balance sheet on page [326] and the consolidated profit and loss account [opposite] have been prepared in accordance with the provisions of the said Act from the audited accounts of the company and its subsidiaries. Subject to the comment above in respect of the Howards-gate group, these consolidated accounts give, in our opinion, a true and fair view of the state of affairs, as at 31st March, 1962, and of the profit for the year ended on that date, of the company and the enhalted as a sinale independent.

2th November, 1962,

APPLICATION OF PROFITS

compensation being given to the voting shareholders for loss of their entrenched rights.

This matter of 'votes for all' is one of the leading questions of the day in the compar, world. Mecca, for instance, following a share-holder's representation at their last annual meeting, is understood to have voting rights under consideration. But Mecca shares, with votes, stand in the market at 55s, and without votes at 34s. Some compensation to the present voters seems necessary.

How to compensate might well be a point for discussion among accountants.

#### **Property Values**

THESE are days when the rising value of property is a matter of nation-wide concern and one can sense what was in the mind of the shareholder who asked a question on property values at the annual meeting of Claude Rye Ltd, the motor agency. The consolidated balance sheet at June 30th, 1962, shows freehold and leasehold properties at a cost of £216,731, less £15,100 for total depreciation, leaving the net figure at £201,631.

What were the separate figures for freeholds and the leaseholds? the shareholder wanted to know, and When was the last valuation? It is not always possible to satisfy at once every query at a company meeting and such was the case in this instance. The separate figures were not available. It transpired, however, that there had been a recent valuation and that it showed values considerably over cost. Which left the shareholder to interpret 'considerably' as he might.

Shareholders have every right to ask questions like this and published accounts – or notes with them – should be drafted so as to anticipate them. It may not be an appropriate time for any particular company to incorporate current values into its balance sheet, but it obviously adds to the value of a balance sheet if the facts of a valuation are given in a note to the item. And we have suggested before that the valuation for fire insurance purposes is better than nothing.

	Precived from holding company Pensions to past executive directors	7,000	39,000

Depreciation:
The group changed its method of calculating depreciation from the beginning of the year. Under the new method the charge for the year is £4,626,000: under the previous method the charge would have been £5,120,000.

### HOWARDSGATE GROUP

4

The following note formed part of the accounts of Howardsgate Holdings Ltd, and its subsidiary

companies (the Howardsgate group). "As a result of the rapid enlargement of the group during the year accounting difficulties were experienced in dealing with the increased volume of transactions and the allocation thereof between the individual companies in the group.
These difficulties have not yet been overcome but steps have been taken towards that end.
While the annexed accounts have been prepared according to the best information at present
wailable to the directors, adjustments may therefore become necessary in the light of further

information with respect to:

(a) 'trade creditors, less payments on account and deposits with suppliers' shown at £5,698,670

(b) stocks totalinites, [41.84,400 of certain subsidiaries. It is total distributions as an excessary they may have a material effect on the amount shown as profit for the year and the provisions for taxidion thereon.

The profits included in the consolidated profit and loss account in respect of the Howardsgate group are as follows:

19/0961	1,420,000	6863,000	-
1961/62	1,287,000	£529,000

	: :	: :	
	: :	:	
	: :	:	
	: :	:	
•	Group profit	Profit before taxation	

### TAXATION

United Kingdom taxation has been provided on all profits earned up to the date of the accounts. No provision has been made for United Kingdom taxation on profits of overseas subsidiaries not remitted to this country.

The charge for the year has been computed after deducting investment allowances, the benefit of which is £892,000 (1961 £597,000) and crediting £143,000 (1961 credit of £118,000) for taxation equalisation provisions.

With the balance of £393,000 brought forward from last year and the credit of £143,000, the total equalisation provisions included in future taxation amount to £250,000.

## DEBENTURES AND LOANS:

æ

Some of the group's assets have been charged as security for the debentures and loans.

## DEFERRED CAPITAL PAYMENTS:

o;

Deferred capital payments which arise from the acquisition of certain subsidiary companies are, by agreements, payable by instalments over periods of 1-8 years. FIXED ASSETS:

₫

Land and buildings are shown at the amount of professional valuations as at 1st April, 1956, or at the dates of acquisition in the case of subsidiaries subsequently acquired, plus additions at cost and less depreciation from the dates of valuation or later addition. Other fixed assets are shown at cost less depreciation.

- There are commitments for capital expenditure by the company and its subsidiaries to the extent of approximately £5,500,000, for which no provision has been made in these accounts. ≓ ᅼ
  - Trade investments include £536,000 in respect of an investment in a company which is a subsidiary company within the meaning of the Companies Act, 1948, but since the group does not have voting control and does not participate in the management of the company, the investment has been treated in the accounts as a trade investment.
- The accounts of certain home and overseas subsidiaries have been made up to dates other than 31st March, 1962. In the case of home subsidiaries the conditions of trading make it undesirable to adopt the holding company's accounting date.

⋍

£1,783,000

Assets and liabilities abroad have been converted into sterling at the official rates of exchange at 31st March, 1962. ₹

### CITY NOTES

THE middle week of a Christmas three-week account is not the best of times at which to attempt to gauge the temper of the stock-market but there is, amongst leading London stockbrokers, a tendency to view the equity prospect with markedly less optimism than was displayed two months back when share prices began to rally.

Most brokers are now taking the view that more concrete evidence of industrial and economic recovery is needed before any further improvement in equity prices can be justified. There is scope, it is admitted, in individual shares under special influences and circumstances; but the prospect of the equity market as a whole is not considered to be particularly inspiring.

A number of company chairman, particularly in the engineering industry, have said that there has so far been little if any indication of better business conditions and that it may be late spring before there is any reflection of Government economic re-expansion policies in terms of new orders. If that proves to be the case then in such companies the prospect of higher earnings is bleak.

The equity market can and does advance on sentiment but sentiment needs reinforcement by fact if the advance is to be maintained. Lack of evidence of industrial recovery is currently checking the market and, with new issues providing severe competition, prices of established shares are slipping back.

### Internal Control with a Computer

SIR, - Referring to the recent article (November 3rd issue) and correspondence (November 17th issue) discussing the redundancy or parity checking feature of computer hardware, it is important to realize that this checking applies to data transfers only.

There are, however, other data manipulations

occurring within a processor which are not subject to parity checking. Translation of card code to machine code, and translation of machine code to card code are not checked. The arithmetic operations are not readily susceptible to this form of check. Perhaps most important of all, no parity check is made of the translation of internally stored instructions into bit patterns used to initiate and control the operations of computers.

Since parity checking is usually, therefore, confined to data transfers and is not applied to the other equally important data manipulations, the question may well be asked, Why is it used at all? The answer lies in the design of specific memories and their characteristics.

In the never-ending quest for higher speeds at lower costs, competitive pressures force engineers to operate memories at nearly their maximum speed capacity, allowing little safety margin. Also, as

memories grow in size to hundreds of thousands of bits, an increase in 'cross talk' and distortion of signal wave form occurs with consequent decrease in reliability. The possibility of unreliable operation are prevails under these circumstances frequently makes redundancy checks desirable, if not necessary.

It should be noted that parity checking may ease the pain of unreliable operation but it provides no cure for it. To quote Dr Shennum, of Bell Telephone Laboratories, in describing the lack of redundancy checking in the design philosophy of the "Telstar' satellite: 'In my opinion, redundancy is merely a crutch . . . can create problems in itself. If it is a good system with high reliability, it is better off without redundancy.'

I mention the above points not to confuse your readers, but rather to plead for a common-sense approach to data processing by the accountant.

In particular, this approach should be completely free from an unhealthy and often dangerous fascination with remote technical characteristics of specific items of hardware.

Yours faithfully, T. E. HOOLEY, F.C.A., A.C.W.A.

Montreal, Canada.

### Tax Relief on Pension Fund Payments

SIR, – I wish to draw the attention of your readers to the following statement of XY Co Ltd and in particular the item pension fund reserve. I would respectfully ask them to express their views on my argument, and if there is any case law on the subject I should be indebted to them if the case could be quoted.

				£
Trading profit		• • •		300,000
Deduct Depreciation				50,000
Profits tax				30,000
Income tax	• •	• •	• •	85,000
Net profit				135,000
Add balance brought	forv	vard		65,000
Available				200,000
Proposed appropriation	s:			
General reserve				65,000
Pension fund reserve	• •			15,000
Dividends (net):				
Preference shares				5,000
Ordinary shares				55,000
Balance carried forward	ĺ	• •	••	£60,000

It will be noted that the amount appropriated to

pension fund reserve (later voted by the shareholders in general meeting) is out of net profits.

This reserve was made to enable the company to make to the trustees of the pension fund, payments which may or may not receive tax relief.

Subsequently the legal agreement between the company and the trustees and the rule alterations implementing the arrangement were approved by the Inland Revenue and the first of the annual instalments of the payment made.

In consequence the Inland Revenue, on the understanding that the payment shall be made in ten annual instalments, directed that, under section 379 of the Finance Act of 1952, tax relief would be allowed on each of the instalments as and when they became due.

My point is that the tax relief ought to revert to the pension fund reserve and not be used to reduce the annual taxation amount of those years.

In other words the resolution 'that £15,000 shall be placed to pension fund reserve' really was, by implication, the provision being made out of *taxed* profits, 'that £15,000 shall be placed to pension fund reserve *together* with any tax relief which may be obtained in respect of the payment'.

My argument for this is that the shareholders who passed the resolution had suffered income tax and profits tax at the time of the allocation and it was not their intention that subsequent shareholders should benefit by any tax relief which might arise out of the payment.

Yours faithfully,

A. J. HARRIS.

Shelton, Stoke-on-Trent.

### **Examination Fees**

SIR, – My fellow articled clerks must be at least a little disappointed at seeing the revised examination fees of the Institute of Chartered Accountants in your issue of November 17th. I do not wish to disagree with the raising of these fees, as I have not seen accounts relating to the expenses of holding examinations, but I object most strongly to the fee of £6 6s for the obtaining of a 'certificate of exemption from Preliminary examination'. Apparently all the work involved in supplying this item is the mere inspection of one's School Certificate and the printing of a letter acknowledging exemption.

Surely it will only discourage school leavers from becoming articled clerks on being confronted with this first expense at the commencement of a penurious five years of articled service.

Yours faithfully,

J. H. REYNOLDS.

Nantgaredig, Carmarthen.

### Taxation (

A full report of the case summarized in this column will be published, with a Note on the Judgment, in the 'Annotated Tax Cases'.

### Wickwar v. Berry

In the High Court of Justice (Chancery Division) November 7th, 1962

(Before Mr Justice Ungoed-Thomas)

Income tax - Payment for purposes of technical education - Farmer - Sons at agricultural institute -Whether fees paid were for purposes of technical education - Income Tax Act, 1952, sections 137 (a), (b), 140, 212.

The respondent, a farmer, employed two of his sons full-time in his farming business. Later they went to the Institute of Agriculture and there took a full-time certificated course in agriculture. The Institute of Agriculture was an approved technical college for the purposes of section 140 of the Income Tax Act, 1952. During the holidays the sons worke full-time on the farm at normal wages.

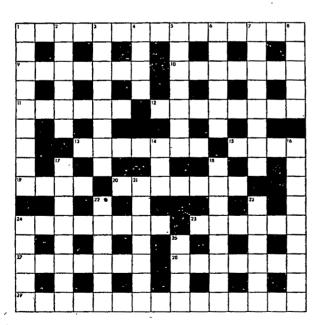

There was no evidence as to whether the fees paid by the respondent were earmarked for the maintenance of the educational courses provided by the Institute, or whether they were used for the general purposes of the Institute, but the Special Commissioners inferred that the latter was the case.

The respondent contended that the fees paid by him were deductible as expenses of his farming business. It was contended on behalf of the appellant that the respondent made a commercial return for the fees he paid and that therefore they were not deductible for tax purposes. The Special Commissi sioners decided in favour of the respondent.

Held: the payments were for the purposes of technical education, and were deductible in computing the amount of the Case I assessment on the respondent.

### CROSSWORD for CHRISTMAS

Compiled by Kenneth Trickett, F.C.A.

### **CLUES ACROSS**

- 1. Presents an odd style of vest for visiting (5, 5, 5)
- 9. Increase the Leeds registration people are in at (7).
- 10. Book the amount set aside (7).
- 11. Fair C.A. gets confused here (6),
- 12. Kind of interest defined in section 273, Income Tax Act, 1952 (8).

- 13. This may be mitigated under section 500, Income Tax Act, 1952 (7).
- 15. Customary tax in the north (4).
- 19. Government regulation (4).
- 20. Project to raid a bank (5, 2).
- 24. Enacted laws can make us attest (8).
- 25. Removal to a higher Court is attractive (6).
- 27. Confidential kind of company (7). 28. Not accurate in former legislation (7).
- 29. Privilege of executor to wreck the ore freight train (5, 2, 8).

### **CLUES DOWN**

- 1. Conveyor containing two letters as surety (9).
- 2. Illustration to calculate the amount (6).
- 3. Addresses, after dinner perhaps (8).
- 4. Characteristic paper money turns the school upsidedown (4).
- Serious art seen in the form of token money (7).
- 6. Secured legally, not contingent (6).
- 7. Disagreement in cost accounting or statistical theory
- 8. Accountants often balance on this newspaper (5).
- 14. One follows the French for Romanian monetary units (3).
- 16. It produces sets of figures, and some typewriters have it (9).
- 17. Vindicating the bankers' method of settlement (8).
- 18. Bid to smash a bus open results in writ commanding attendance in Court (8).
- 21. Legal expression of that slight alteration to the roof (7).
- 22. Directed in projection taking an oath (6).
- 23. Possibly tie and keep in custody (6).24. An excellent name for an old tax (5).
- 26. An excellent 13 (4).

### NOTTINGHAM CHARTERED ACCOUNTANT STUDENTS' DINNER

### IMPORTANCE OF OUTSIDE INTERESTS

Students should take care to have interests outside their studies, said Mr B. W. Sutherland, F.C.A., at the annual dinner of The Nottingham Chartered Accountant Students' Society at the George Hotel, Nottingham, on December 12th.

Mr Sutherland, a Midlands hockey enthusiast, was commenting on the fact that two county hockey players had received Howitt Prizes for examination success in recent years. They were Richard Turton, T Nottingham, and Chris Rainsford, of Derby, who had both played for their respective county teams.

'I think it is most important that students should develop other interests outside their studies' he said. "Too much concentrated study can be very dangerous,"

Mr Sutherland, who was responding to the toast of 'The Guests', recalled how for two years he had been secretary of the Nottingham Society. "They were among the happiest years of my life and gave me a great deal of pleasure', he commented.

He urged all students to take an active interest in their society. If they did, they would get a great deal out of it and make friends who would stand them in good stead for the rest of their lives.

### **High Standing**

The toast of 'The Institute of Chartered Accountants in England and Wales' was proposed by Canon B. W. Woodhams, B.A., L.TH., Vicar of St Jude's Church, Nottingham. He said that he regarded the entrustment to him of the toast as a very high privilege. "The Institute has such a high standing in public life that it is obviously a great honour to be able to propose this toast,' he declared.

At the same time, Canon Woodhams confessed surprise at the fact that he should be chosen for the task. "The calling in of the Church usually means that you are at the end of everything,' he said amid laughter.

He was also surprised because all parsons, himself included, knew nothing whatsoever about accountancy or mathematics.

'It is entrusted to us in our work to get the money in. Once the money is in it is our ambition to hand it over to some person like you to look after it for us.

The Canon recalled that when he was working in the East End of London the people there had never heard of a chartered accountant.

There, they employed as their treasurer a man who was a lock keeper on the Grand Union Canal. 'He would present his accounts on the back of a Thames Conservancy Poster,' he said.

Canon Woodhams said that now he was in Nottingham the church accounts were beautifully produced and printed, but he regretted that accounts were not set out in a more understandable form. 'Average folk cannot understand them,' he added, 'and yet do not query them because of the integrity of your profession.'

The toast was responded to by Mr J. A. Jackson, F.C.A., Vice-Chairman of the Examination Committee of the Institute.

Of the Examination Committee, Mr Jackson said he wished to assure all students that they had no secrets. 'We are conducting a most popular examination,' he quipped.

Mr Jackson recalled that it had been said that if anyone dropped into a meeting of the Examination Committee they might well suppose they had joined a benevolent association.

'I can assure you that you have nothing to fear from us,' he said. 'We do everything to take the bugs out of it (the examination). It is you who put them in.

### 'Most Accountants Overworked'

The toast of "The Nottingham Chartered Accountant Students' Society' was proposed by Alderman J. Llewellyn Davies, F.R.C.S., J.P., Deputy Lord Mayor of Nottingham.

In the course of an amusing speech he told his audience that most chartered accountants he had known seemed to be overworked. 'But', he added, 'I have never been able to audit their private accounts to see if their fees were commensurate with the amount of work they put in.'

Alderman Davies said that he looked forward to the day when accountants would be able to feed a mass of figures into a computer and sit back until the answers

The toast was responded to by Mr R. N. E. Clarke, Secretary of the Nottingham Students' Society.

He said that it had been an extremely busy year for students in Nottingham. He thanked all those who had helped the Society and mentioned in particular the Nottingham and District Technical College which had arranged pre-examination lectures and a valuable introductory course.

The toast of 'The Guests' was proposed by Mr H. B. Bradfield, M.C., F.C.A., Vice-President of the Nottingham Students' Society.

### **Presentation of Howitt Prizes**

Mr K. A. Buxton, President of The Nottingham Society of Chartered Accountants, presented the Howitt Prizes to Mr W. Bates, and Mr E. S. Rainsford. Mr Bates obtained first place in the order of merit in the Final examination in November 1961. Mr Rainsford received his award for the May 1962 examination. He was also described as one of the prime movers in the formation of the Derby Students' Society.

### Notes and Notices

### PROFESSIONAL NOTICE

MESSRS A. J. CONNELLY & Co announce that Mr ANTHONY NETTLESHIP HUNT, A.C.A., has been admitted to partnership with effect from August 1st, 1962. The style of the firm remains unchanged.

### Appointment

Mr R. W. Collin, F.C.A., has been appointed chief accountant of the North Western Division of the National Coal Board.

### **OBITUARY**

### Sir Gerard d'Erlanger, C.B.E., F.C.A.

It is with regret that we record the death on December 15th at the age of 56, of Sir Gerard d'Erlanger, C.B.E., F.C.A., former chairman of British European Airways and British Overseas Airways Corporation.

Son of Baron Emile Beaumont d'Erlanger, Sir Gerard was educated at Eton, and in 1930 was admitted a member of The Institute of Chartered Accountants in England and Wales; his training for the profession was intended to fit him for his family's banking business.

Sir Gerard had a long-standing interest in aviation going back to 1928 when he first learned to fly. He became a director of Hillman Airways in 1935, and when Imperial Airways merged in 1939 he was appointed a director of the new concern, B.O.A.C. in 1940.

At the beginning of the Second World War, Sir Gerard formed the Air Transport Auxiliary, of which he was appointed its commandant until the end of the war. Under his leadership A.T.A. was responsible for ferrying 350,000 aircraft to operational squadrons. When A.T.A. was wound up he was appointed director in charge of B.E.A. on its formation in 1946 and became its chairman a year later. He had a difficult time in shaping the new corporation and had to be content with using war-time aircraft for the European services. In 1949 he resigned his post, but in 1956—again at a difficult period—was appointed chairman of B.O.A.C. on a part-time basis when the corporation was undergoing a period of heavy financial loss and industrial unrest. Sir Gerard did not seek renewal of his appointment when it expired in 1960.

Vice-chairman of his family's merchant banking business of Erlangers Ltd, he joined the board of the Philip Hill Investment Trust on the merger of Erlangers with Philip Hill, Higginson & Co Ltd. He was also chairman of the City and International Trust Ltd, the Moorgate Investment Co Ltd and deputy-chairman of the Provident Mutual Life Association Ltd. A member of the Air Transport Advisory Council from 1952–55 he served as chairman in 1954. He was knighted in 1958.

### Mr Stewart Cole, F.C.A.

We have learned with regret of the death in a London hospital on December 9th of Mr Stewart Cole, F.C.A., vice-chairman of Associated Fisheries Ltd. He was 88. Mr Cole was admitted an associate of The Institute of Chartered Accountants in England and Wales in 1898 and thus had been a member for sixty-four years.

He was one of the original three directors of Associated Fisheries when the company was formed in 1929 and for two years was chairman after the death of the founder, Mr W. A. Bennett, in 1959. He had been a lifelong friend of Mr Bennett having been associated with him from the earliest days through the firm of Cole, Dickin & Hills, Chartered Accountants, of London, which he founded.

Mr John Bennett, managing director of Associated Fisheries Ltd, in a tribute to Mr Cole, said: 'He was a fine and lovable man and a great friend of my family. He had a courage and spirit which brough him safely through the serious operation he had undergo recently, but the later complications were too much for a man of his age. He maintained his interest in, and work for the company right to the day of his illness. He was one of our pioneer builders and we shall all miss him sadly'.

### IN PARLIAMENT Share Transfers: Duty

Mr W. CLARK asked the Chancellor of the Exchequer what would be the cost to the Exchequer if stamp duty on shares etc., was reduced from 2 per cent to 1 per cent; if it was abolished on all transactions where the transfer amount did not exceed £100; and if it was abolished altogether.

Mr Barber: The cost of reducing the duty on share transfers from 2 per cent to 1 per cent would be nearly £25 million in a full year and the cost of abolishing it would be nearly £50 million. It is not possible to estimate the cost of abolishing the duty on all transactions where the consideration did not exceed £100 since there would be no effective means of ensuring that the relief was confined to bona fide small transactions.

Hansard, Dec. 11th, 1962. Written Answers. Col. 55.

### Income Tax: P.A.Y.È.

Mr W. CLARK asked the Chancellor of the Exchequer what was the product from P.A.Y.E. for the last five years separately to March 31st, 1962.

Mr BARBER: The total tax deducted under P.A.Y.E. during the Income Tax years ending on April 5th is given below in £ million:

1957-58	 				956·8
1958-59	 				1,025.7
1959-60	 	• •	• •	• •	1,051.0
1960∹61	 		• •		1,245.4

The figure for 1961-62 is not yet available but it is estimated at about  $f_{11,385}$  million.

Hansard, Dec. 11th, 1962. Written Answers. Col. 56.

### War Loan

Mrs Braddock asked the Chancellor of the Exchequer (1) what is the total amount of money loaned to Her Majesty's Government in respect of 3½ per cent War

Loan; how many private persons hold 3½ per cent War Loan stock; and how many of them are men aged 60 years or over, and women aged 55 years or over;

(2) what would be the cost to the Exchequer of redeeming at par all 32 per cent War Loan stock at Spresent held by men aged 60 years or more and women aged 55 years or more.

Mr DU CANN: £1,909 million nominal of 3½ per cent War Loan is now outstanding. There are about eight hundred thousand accounts, but information is not available as to the number or size of holdings of private persons in general or of particular age groups.

Hansard, Dec. 13th, 1962. Written Answers. Col. 93.

### **Purchase Tax**

Mr Millan asked the Chancellor of the Exchequer if he will state the yield of purchase tax for the year 1961-62; and how much was yielded by each of the various rates of tax.

Mr DU CANN: The yield of the purchase tax in 1961-62 was £521 million, made up as follows:

	Rai	:e							lield* million
5		cent						.~	67
121	"	**	٠				•		41
25	,,	,,	٠						174
50	,,	,,	٠		•				239
									521

\*Inclusive of the 10 per cent special surcharge from July 26th, 1961.

Hansard, Dec. 13th, 1962. Written Answers. Col. 94.

### THE DUBLIN SOCIETY OF CHARTERED ACCOUNTANTS

A wide variety of meetings has been arranged by The Dublin Society of Chartered Accountants for the New Year, the first of which will take place in January (on a date to be announced) when Sir Ian Maclennan, K.C.M.G., British Ambassador to Ireland, will address a luncheon meeting of the Society. Further meetings are as follows:

February 6th: Luncheon meeting 'Public speaking for business men.' Speaker: Mr Laurie Duffy (President, Dublin Toastmasters' Club).

February 15th: Annual dance, The Gresham Hotel. February 20th: Mr Garret Fitzgerald, Economist Intelli-

gence Unit in Ireland. March 20th: 'Modern accounting developments in

U.S.A. Speaker: Mr B. Maynard, F.C.A. March (date to be arranged): 'Membership of E.E.C. legal and taxation considerations', by a representative of 'Irish Council of the European Movement'.

May 3rd: Annual dinner. (Industrial and Administrative Group.)

May 4th: Annual general meeting of The Institute of Chartered Accountants in Ireland.

May 24th - 27th: Institute's golf meeting - Rosses Point. June 19th - 20th: Institute's Seventy-fifth Anniversary Celebrations.

June (date to be announced): Society's annual general meeting.

### Students' Group

The following meetings are among those which have been arranged by the Students' Group:

January 17th: 'Students' tax problems,' by Mr Norman

February 9th: Rugby match v. London Students (home).

March 14th: 'The Companies Bill 1962,' by Mr M. Abd
El-Motaal, M.COM., A.C.A., Lecturer in Accounting, Trinity College, Dublin.

April 2nd: 'Examination technique,' by Mr T. P.

Crowley, A.C.A.

All the above meetings will be held at Jury's Hotel, College Green, Dublin.

### SOUTHEND CHARTERED ACCOUNTANTS Fifteenth Annual Dinner

Despite the bad weather and heavy fog twenty-nine members of the Southend-on-Sea Chartered Accountants' Group entertained fifty-three guests and sixteen articled clerks at the Group's fifteenth annual dinner held at the Middleton Hotel, Southend-on-Sea, on December 6th. Mr S. Porter, F.C.A., Chairman of the Group, presided.

The principal guests were the Mayor of Southend, Alderman O. A. Moss, J.P., and Mr J. A. Allen, F.C.A., a member of the committee of the London and District Society of Chartered Accountants. Other guests present included the President of the Southend-on-Sea and District Chamber of Trade, the President of the local branch of The Law Society and persons prominent in the professional and business life of the town.

### LEEDS STUDENTS' MAGAZINE

The Chartered Accountant Students' Society of Leeds have introduced a new magazine for members entitled Tick. It replaces their previous venture in this field -Equilibrium – started in the spring of this year.

Extending to nineteen pages, Tick includes the Parker Report recommendations as well as some pertinent comment on them. There is also an interesting article by Professor David Solomons, B.COM., F.C.A., Professor of Accounting in the Wharton School of Finance and Commerce, Pennsylvania, and formerly Professor of Accounting at Bristol University, on 'What is accounting like over there?' Details of lecture courses and a member's self-examination after four years of articles as to why he entered the profession, help make up the varied reading in this attractively produced magazine which is to be published quarterly.

### ANNOTATED TAX CASES

Edited by Peter Rees, of the Inner Temple, Barrister-at-law

Published frequently, Reports of Income Tax, Surtax, Profits Tax, E.P.T., Estate Duty and Stamp Duty Cases decided in the Courts of England and Scotland. The reports contain lucid summaries of the cases and full reports of the judgments, together with explanatory notes on the decisions.

já,

### 1962 and After

YO year in the lengthening history of the profession which includes an International Congress of Accountants can be considered wholly uneventful but, this apart, nothing untoward happened during 1962 to the rank and file of accountants to disturb the even tenor of their way. The Congress was a great occasion not only socially but as an opportunity to make a quinquennial valuation of the strength and standing of the profession at large. In the closing address, Mr J. C. STEWART, C.A., President of The Institute of Chartered Accountants of Scotland, must have accurately reflected what was in the minds of many of the delegates when he said that accountants must become more conscious that it is the future that matters even more than the past; and that, as well as remaining reliable and impartial, the profession must improve the means of communicating information and must continually develop new conventions in order to present essential economic facts and factors to owners and management.

Although to some extent the New York Congress overshadowed the more domestic gatherings of the various professional bodies in 1962, these took place without any apparent diminution of enthusiasm. The Association of Certified and Corporate Accountants got off to an early start with a week-end school at Cambridge at the end of March. The Institute of Cost and Works Accountants migrated to Harrogate in May for its annual conference and meeting, and The Institute of Chartered Accountants in England and Wales, as is now its custom, held one summer course at Cambridge in July and another at Oxford in September. Between these two events. The Institute of Chartered Accountants of Scotland celebrated its tenth summer school at St Andrews. The quality of the papers given at these meetings can be adequately assessed from the selection which was subsequently reprinted in these pages. The quantity of goodwill engendered cannot be so easily measured but it was certainly considerable, all the more so because at the Scottish Institute school at St Andrews and the second English Institute course at Oxford, representatives from overseas accountancy bodies en route for New York were present as guests.

In our review of 1961, we suggested that accountants in industry had been working at full throttle preparing, in many instances, for the possible challenge, exhilarating but exacting, of the Common Market. At that time, the entry of the United Kingdom into the European community seemed imminent. Whatever happens now, however, international competition will inevitably become increasingly intensified and the sharpening of management and operational techniques to a razor-edged standard of efficiency must always be a condition precedent to the continuing prosperity of any country whether within the Rome Treaty or not. It should not be necessary to emphasize here how much accountants, in practice as well as in industry, can contribute to this sharpening process.

The outstanding publication of the year, as far as the profession is concerned, was the Report of the Company Law Committee. The committee which had Lord JENKINS as its chairman and Sir WILLIAM LAWSON, C.B.E., B.A., F.C.A., and Mr WILLIAM WATSON, C.A., among its thirteen other members, expressed the opinion that the 1948 Companies Act had 'on the whole worked well in practice' but that there was always room for 'improvements of substance'. It followed up these generalizations by making about three hundred and fifty recommendations. Not all of these, naturally, were of equal importance and many were elaborations of one particular principle. One of the major suggestions was that the distinction between exempt and non-exempt private companies should be abolished with the consequence that all companies would have to lodge annually with the Registrar of Companies copies of their accounts. The information to be disclosed in these accounts, however, would be modified in the case of concerns which were not, in effect, public companies or subsidiaries of public companies. Another important recommendation was that section 195 of the current Companies Act should be altered so that everyone beneficially owning 10 per cent or more of the equity capital of a limited company would have to disclose their interest.

The Jenkins • Committee also considered whether banks and discount, shipping and insurance companies should still be exempt from complying with all the existing requirements of the Eighth Schedule of the Act. It was agreed unanimously that insurance companies should continue to be excused but that the privilege should be withdrawn from shipping companies. As regards banks and discount companies, the majority view was that the exemption should still apply. It is expected that as a result of the committee's findings, a new Companies Act may be promulgated. This will be of major importance to the financial and commercial

world as well as to the accountancy profession.

Two other publications, both emanating from the Council of The Institute of Chartered Accountants in England and Wales, to make interesting and instructive reading in 1962 were the second of the series of statements on auditing, entitled 'Stock-in-trade and work in progress'. and issued in March; and 'Terms used in published accounts of limited companies', which appeared in May. The value of such statements lies principally in their clarity of expression and definition. No young auditor, for example, verifying stock-in-trade should go astray if, as well as studying the basic guidance given by the Council, he uses the initiative which his practical professional training should have developed in him. A feature of the statement on the terminology of published company accounts was that the Council made positive suggestions as to the words and phrases it preferred. In comparable surveys made annually by the American and Canadian Institutes, while tables are given of the terms most in favour, no 'official' opinions as to what might be the most suitable are expressed.

In 1950 – the recollection, although it appears to be harking a long way back in a review of the year now ending, is relevant - Professor W. T. BAXTER, B.COM., C.A., edited an excellent anthology called Studies in Accounting. A new edition of the book was published earlier this year as Studies in Accounting Theory and, while commenting on it in these columns, we remarked that the main change of emphasis in the revised contents was that relatively less space was devoted to the purely historical aspects of accounting and much more to considerations of improvements in techniques, to accounting as an instrument of managerial control and to the increased responsibilities which the accountant was being called upon to assume in our modern society. This forward-looking attitude - which, incidentally, coincides exactly with that adopted by Mr STEWART in his Congress address - might be said to typify the present aims of the profession. Next year, Edinburgh will be the setting for the first ever Congress of European Accountants. This would seem to be a splendid chance to reaffirm the message of the International Congress that, as well as measuring the past, accountants are actively preparing with the aid of modern techniques now at their command to anticipate the future.

### Builders' 'Remainders' and 'Investments'

by A BARRISTER-AT-LAW

The difference between a capital profit and an income profit is often balanced on a knife-edge. A particularly difficult problem sometimes arises in connection with builders' 'remainders' and other houses unsold in the normal course of business. In this article the writer discusses a number of decisions which illustrate the tests to be applied in determining the nature of profits on sale.

THE problem under discussion is complicated at the outset by the different categories of builders. A man may carry on the trade or business of a builder without possessing a single house as an investment; or he may hold numerous houses for investment in addition to building houses for sale. He may be a speculative builder, or he may build houses under contract for others. A company may have trading objects only, or investment powers only, or both. In any event, the objects clause of a company's memorandum of association merely sets out the company's intention at the date of incorporation. What the company actually does may be something rather different. A company with trading as its principal object may carry on business as a property-holding company; a company with investment as its main object may confine its attention to building and selling houses. The true nature of a business may only become apparent after a lapse of time which enables evidence as to the scope of its operations to be accumulated (F.P.H. Finance Trust Ltd v. C.I.R. (23 A.T.C 147; 26 T.C. 131)).

In this connection, it is not always appreciated to what extent resolutions of the directors of a company affecting the treatment of properties in the accounts, or otherwise for the purposes of the company, may be relevant to a finding of fact by the Appeal Commissioners as to whether properties are fixed assets or trading assets. And the same observation applies to correspondence and interviews with the Inspector of Taxes regarding the character of the properties in question and the nature of profits from sales. All goes on the inspector's file and helps to build up a picture for the future. Hence the importance, at the earliest possible date, of close attention to all matters which may later provide evidence for a determination of fact by the Commissioners, should the case go that far. For as a general rule, a determination of fact will not be upset on appeal, even though the Appellate Court might itself have come to a different conclusion on the same facts

(Edwards v. Bairstow and Harrison (34 A.T.C. 198; 36 T.C. 220)).

### **Unincorporated Builders**

If an individual carries on a trade of dealing in land and also holds properties as investments, it is clearly necessary to distinguish between the properties held as investments and those which form part of the stock-in-trade of the business (Hudson v. Wrightson (13 A.T.C. 382; 26 T.C. 55)). But unless the precautions referred to above are observed, this distinction may be difficult to maintain, especially where the taxpayer is a speculative builder, as in Sharples v. Rees (19 A.T.C 212; 23 T.C. 361), where it was unsuccess-. fully contended that land bought and sold by the builder had been purchased for his personal use. On the other hand, there is nothing to prevent a builder holding houses as investments, as in Bradshaw v. Blunden (35 A.T.C. 109; 36 T.C. 397), where a builder retained houses which he had built, as investments, on transferring his business; to a company. And this is so even though the purchasing company is practically wholly owned by the builder himself, for the reason that even a 'one-man company' is a separate legal entity (Salomon v. Salomon & Co ([1897] A.C. 22)).

A somewhat similar case to Bradshaw v. Blunden is Seaward Brothers v. Varty (41 A.T.C. 64) where a firm consisting of two brothers carried on business as building contractors. When there was no contract work available, the firm built houses on sites which it owned. In 1949 the building contractors' business was transferred to a company which had been incorporated by the taxpayers. At that date 123 houses had been built on the firm's land but all of them were retained by the two brothers. Between 1949 and 1958 twenty-two houses and three building plots were sold and the Revenue raised assessments in respect of the resulting profits.

The Special Commissioners decided that the houses and plots sold were part of the trading stock of a composite business carried on by the

firm; that after the transfer of the contracting business to the company those properties remained trading stock of a part of the business retained by the firm, and that the surpluses arising on the sales were assessable under Case I of Schedule D.

The Court reversed the Commissioners' findings. It said there was nothing inherently impossible in excepting certain assets out of a sale, and that was what the firm had done. Its main activity was the execution of contract work which distinguished it from a speculative builder, and that made an important difference. The cessation provisions of the Income Tax Acts were applied to the building business following the sale, and the houses were normally let, rather than sold, as they fell vacant. That and the period over which sales took place, and the limited number of sales, marked the houses as investments.

It does not follow, however, because houses are treated by the Revenue as investments for particular years, that they are bound to be so treated in subsequent years. Treatment by the Revenue is not irrevocable, and if circumstances change, e.g. if there are frequent or numerous sales, or if events show that the original basis of treatment was wrong, the Revenue is free to revise the position. Thus, in Rellim Ltd v. Vise (30 A.T.C. 105; 32 T.C. 259) the taxpayer company had power to hold land and property as investments and also to deal in them by purchasing and selling with a view to making a profit. For some years the company was treated as an investment company and was allowed relief in respect of management expenses; but when it sold two houses, thirteen acres of land and a small farm it was assessed to tax on the profits, and the assessment was upheld by the Court.

But there may be good reason for selling investment property, in which event the profits are not taxable, as in West v. Phillips (37 A.T.C. 270; 38 T.C. 203), where the taxpayer was indebted to his bankers, owed large sums to building societies and had substantial arrears of income tax and surtax. In that case it was held that there were compelling reasons for the sale of 406 investment houses and that the sale did not convert the houses into stock-in-trade of the builder.

### Companies

Broadly speaking, a private investor is less liable to tax on realized profits from the sale of property than a builder; a builder less liable than a company, and an investment company less liable than a trading company. If a company is to escape

liability to tax, it would seem that its objects must empower it to invest, but that even if they do so, the company by its conduct may nevertheless be held to carry on a trade.

In Granville Building Co Ltd v. Oxby (33 A.T.C. 144; 35 T.C. 244) the company built two houses on an estate, the rest of which it had developed and sold. On completion the houses, which were let and not offered for sale, were treated as stock-in-trade in the company's accounts. Two months later the directors of the company resolved that houses on hand at the earlier date should be treated as investments at the values shown in the last balance sheet, and they subsequently appeared in the balance sheet as capital assets. Eight years later one of the houses was sold to the sitting tenant and it was held that 🦂 the company was rightly assessed to tax on the resulting profit. Harman, J. (as he then was), said there was no true parallel between a trading company and a private individual, and he underlined, in the case of a company, the importance of its memorandum of association. The taxpayer company had no power to invest in property except out of surplus capital, and at the date when the house was erected the company was indebted to its bankers.

In another case – James Hobson & Sons Ltd v. Newall (36 A.T.C. 239; 37 T.C. 609) – the memorandum of association was also determining factor. The company's objects empowered it to carry on the business of builders, and to purchase, lease or otherwise acquire real or leasehold property for business purposes or for investment and re-sale. It was thus not empowered to build houses for investment. The company built houses to let, and it also retained builders' 'remainders' for letting purposes. Further, it bought land, on which were two houses, for the erection of a garage for the company's purposes. After the Second World War the company sold houses of which it obtained vacant possession. It was held that the builders' 'remainders', the houses built to let and also the two houses on the land bought for the company's purposes, formed part of the company's stock-in-trade.

In Forest Side Properties (Chingford) Ltd v. Pearce (40 A.T.C. 155) the objects of the company were to enter into an agreement to buy twenty-four maisonnettes and one house from the two directors and shareholders of the company; to purchase land, houses and other property; to create, sell, and dispose of freehold and leasehold ground-rents; to manage land, buildings and other property and to supply services to tenants.

On some date the directors of the company passed a resolution (which was minuted) expressing the intention of the company to hold property as an investment. During the war no property was sold, but later it became the policy of the company to consider propositions for the disposal of the properties on long leases and to pay sitting tenants to give up possession. Some twenty maisonnettes were sold at a profit but no other properties were bought or sold.

The two directors of the company were builders, and the General Commissioners found that the company had purchased the maisonnettes and the single house as stock-in-trade. They also found that the intention to hold the properties as an investment, as expressed in the minute of the company, was put on record with the taxation position in mind and was not intended to obtain when circumstances changed. The Court of Appeal approved the Commissioners' findings.

In Lucy & Sunderland Ltd v. Hunt (40 A.T.C. 446) the taxpayer company, which was a timber company, held a majority shareholding in a building company and a number of other investments. In 1940 the building company ceased to trade and the houses which it had on hand were transferred in its balance sheet from stock-in-trade to fixed assets. They were let to tenants and the company received the rents. In 1945 the taxpayer company did not wish its subsidiary company to resume its building business which had been interrupted by the war, but in order to help the managing director of the subsidiary company to start in business himself at a time when he could not obtain a licence to build, it sold to him its shares in the building company and bought from that company its unsold houses and building plots.

The taxpayer company had power under its articles to carry on the trade of builders, but it simply received the rents from the houses which it had purchased from the building company. Following offers for the plots and some of the houses, it sold all but six houses over a period of ten years at a profit.

On the view that the motive of the taxpayer company in taking over the houses was to help the managing director of the building company, rather than to dispose of the houses at a profit, Cross, J., allowed an appeal by the taxpayer company against an assessment to tax on its profits from sales. He applied Glasgow Heritable Trust Ltd v. C.I.R. (33 A.T.C. 145; 35 T.C. 212) and held that though the houses might still have been stock-in-trade of the building

company had it realized them, that was not a relevant consideration in deciding whether or not the houses became trading stock in the hands of the taxpayer company.

### Ground-rents and Rent-charges

Sometimes a builder or developer sells houses subject to a rent-charge or grants a long lease for a single premium subject to a ground-rent. When this is done the tax procedure differs according to the method adopted. The owner of freehold land who leases the land subject to the payment of a ground-rent (and thus retains the freehold reversionary estate) brings the ground-rent into his accounts at cost or market value (whichever is the less) in accordance with normal accountancy practice and is not taxable on the capital value of the ground-rents (less cost) until they are sold (B. G. Utting & Co Ltd v. Hughes (19 A.T.C. 53; 23 T.C. 174)). Similarly, where a lessee grants an underlease at an improved ground-rent, tax is not exigible until the improved ground-rent is sold (Heather v. A. Redfern & Sons Ltd (23 A.T.C. 71; 26 T.C. 119)). Meanwhile, tax is payable in each case on an annual value basis only. Hence, groundrents are preferable from the tax standpoint to rent-charges, since in the latter case the realizable value of the rent-charges has to be brought into the trading account, even though the rent-charges are retained rather than sold (John Emery & Sons v. C.I.R. (15 A.T.C. 241; 20 T.C. 213)). When ground-rents are sold they will be taxable (if at all) on the whole of the proceeds of sale, less cost, expenses of sale, etc. Whether the proceeds of sale will in fact be taxable depends upon whether the ground-rents are held as investments which are changed, or whether they are stock-in-trade.

In Scotland it is apparently not uncommon for houses built to be retained by the developer and for feu-duties (corresponding more or less to ground-rents in England), with which the land and houses are burdened, to be sold to a purchaser. In Furtado v. Cardonald Feuing Co Ltd ([1962] T.R. 275) the taxpayer company bought a vacant piece of land for £898 and built twenty-four houses on it. It burdened the land and houses with feu-duties yielding £114 per annum, which it sold for £3,135. The Revenue assessed the company to tax in respect of the difference between £898 and £3,135, viz. £2,237, spread over a period. The Court of Session held that the basis of assessment was incorrect and not surprisingly so. But the case was an old one (heard as long ago as 1906) which has only recently been reported as being likely to be of value in

connection with the computation of short-term capital gains.

In the later case of McMillanv. C.I.R. (21 A.T.C. 177; 24 T.C. 417), it was held that where a house is sold for a lump sum and a feu-duty payable by the purchaser, the cost (which was the question in issue in the earlier case) is to be computed as that proportion of the total expenditure in acquiring the land, developing it and erecting houses on it, which the lump sum bears to the total amount made up of the selling value of the

feu-duty at the date of its creation and the lump sum.

The position generally is now further complicated by the provisions contained in Chapter II of the Finance Act, 1962, relating to short-term capital gains, and by sections 23 and 24 of the Act, which relate to sales of building land by persons associated with builders and sales of land by land-owning companies, respectively, but these provisions are outside the scope of the present article.

### Introduction of P.A.Y.E.

As already noted in these columns, proposals have been published relating to the introduction of a P.A.Y.E. system of taxation in South Africa. The necessary legislation will be considered by Parliament during the forthcoming session.

In order to assist in the smooth change over to a P.A.Y.E. system, which will probably be introduced in two months' time, the Joint Council of the Societies of Chartered Accountants of South Africa has produced a memorandum for the information not only of the profession, but also the public in general. This book deals with taxation during the transitional period (July 1st, 1962 – February 28th, 1963); employees' tax; the provisional taxpayer (speaking generally, the non-salaried person and companies excluding gold-mining companies) and other proposed consequential amendments to the South African Income Tax Act.

The memorandum includes twenty-eight practical examples on the application of the proposals to companies, individuals, employees and employers, as well as specimens of the official forms which will be required to be completed.

It will be noted that, probably because of the much smaller number of taxpayers involved, the South African Government has decided to make the system applicable to both salaried and non-salaried taxpayers (with some minor exceptions) and companies, and the system has many other differences when compared with that in use in the United Kingdom. For example, the number of tables to be used in calculating deductions for employees is comparatively small and the elaborate method of aggregating earnings and tax deducted is not presently provided for.

Copies of the memorandum may be obtained from the Secretary of the Joint Council, P.O. Box 2995, Johannesburg, price 10s, post free.

### First Chair of Costing

ACHAIR of costing, which we believe to be the first, has been established in South Africa at the University of Potschefstroom and the Council of the University has appointed Dr A. J. E. Sorgdrager, M.COM., B.A., A.C.W.A., as the first holder of the chair.

Dr Sorgdrager was born in Djakarta and went to South Africa at the age of 16. During the Second World War he served in the Netherlands Army and took part in the invasion of Normandy where he was wounded. As a result of his wounds he was discharged and served with the Netherlands Ministry of Education in the United Kingdom until the cessation of hostilities. On his return to South Africa he became a citizen of that country. He becam a member of The Institute of Cost and Works Accountants in 1952.

### Accounting Practices for Reporting to Management

WRITING in the N.A.A. Bulletin (National Association of Accountants) recently Dr Charles T. Horngren, C.P.A., Associate Professor of Accounting at the Graduate School of Business, University of Chicago, examined in a masterly survey the needs of accounting for management's decisionmaking purposes. He suggests that managerial economists, operations researchers, and statistical decision theorists have made more progress than accountants in attempting to formulate general quantitative approaches to special decisions. Management accountants need to keep abreast of the growing body of knowledge and standards concerning the decision-making process. He instances the general superiority of discounted cash flow approaches in capital budgeting decisions as gaining increasing acknowledgment.

Dr Horngren develops the theme of relevant costing, stressing that relevant costs for decisions are ex-

pected future costs that will differ under alternatives. He urges that accounting reports should be designed to highlight the relevant data approach. Thus the income statement should be designed to facilitate its possible use for many purposes, with more than the single income figure of the conventional statement. He exemplifies this with a model income statement by segments, defining a segment as any line of activity or sub-division of the business for which separate determination of costs and sales is wanted. For each division he arrives successively at (1) contribution margin (sales less variable manufacturing cost and variable selling and administrative costs), (2) performance margin (after deducting fixed expenses directly identifiable with divisions), (3) segment margin (after deducting other fixed costs allocable to the segments), and (4) net income before income taxes (after deducting joint fixed costs not otherwise allocable).

In conclusion Dr Horngren stresses the need, with regard to long-range planning and special decisions, for an approach looking to the future and de-emphasizing historical revenues and costs. The conflict between the purposes and methods of conventional and management accounting must be fully recognized.

### **INDIA**

### **New President of Indian Institute**

SHRI P. BRAHMAYYA, has been elected President of The Indian Institute of Chartered Accountants for the year 1962-63. The new Vice-President is Mr R. C. Cooper.

### OVERSEAS TAX DEVELOPMENTS

The following notes, prepared by the Foreign Section of the Inland Revenue Library and reproduced by permission of the Board, supplement or amend the information in *Income Taxes in the Commonwealth* or *Income Taxes outside the Commonwealth*.

### Federation of Rhodesia and Nyasaland

The 1962 Budget Proposals in respect of income are contained in the Taxes Charging Act and the Income Tax Amendment (No. 2) Act, 1962.

The Taxes Charging Act includes the following:

Rates of tax. No change except that the lower rate of tax for private companies (5s 5d) will apply to the first £50,000 of income, with provisions for aggregation of companies under the same control.

Tax rebates. The total income tax rebates, excluding that for blind persons, are not to exceed £250 for married and £215 for single persons.

The rebate for insurance premiums is 3s per £ for the first £120 and 1s 6d thereafter, maximum rebate £27. Employees' contributions to approved pension funds in excess of the admissible amount can qualify for this rebate.

The special rebate is raised from 10s to £1.

Dividends. The present system of grossing-up is being dropped. Dividends will not be included in income for income tax purposes, but will be included net for supertax purposes. Persons, other than companies, ordinarily resident in the Federation will receive an *investment credit* on all dividends which were grossed-up under the previous provisions.

This credit is computed at 11s in the £ on the net dividend for married persons whose rateable income does not exceed £800 and single persons whose rateable income does not exceed £405; rateable income is the taxable income, including current loss but not a loss brought forward, plus the net dividends. For incomes above these figures the rate per £ of the credit reduces by 1d for each £25 for married or £15 for single persons that the rateable income exceeds £800 or £405 as the case may be, ceasing at £4,100 for married and £2,385 for single persons.

Where the credit exceeds the income tax and supertax payable, the difference, plus 20 per cent of the difference, is refunded subject to a maximum refund of  $\mathcal{L}_{1,000}$ . Where the tax exceeds the credit, the credit, up to a maximum of  $\mathcal{L}_{1,000}$  and without any percentage increase, is deducted from the tax payable. Certain exempt bodies, such as local authorities, nonprofit societies, building societies, statutory authorities and charities, receive the full credit without limit and without percentage increase. Where there is no rateable income, for instance as a result of current loss, the credit is refunded plus 20 per cent, maximum  $\mathcal{L}_{1,000}$ . Territorial surcharges are to be calculated on the net tax after deduction of investment credit.

The Amendment (No. 2) Act contains a number of technical amendments and the following most important points:

Benefits in kind. Certain payments on the taking up or termination of employment are now specifically taxable, as also are certain payments by employers towards the cost of journeys not connected with business. Except in the case of accommodation, the value of the benefit is the cost to the employer.

Exempt interest. The present exemption of interest received by persons neither ordinarily resident nor carrying on business in the Federation is from April 1st, 1963 to be restricted to certain types of interest only.

Mining. An allowance is introduced for expenditure, up to £100,000 in a year, on prospecting work for the

purpose of acquiring rights to mine.

Payment of tax. A taxpayer may be required to pay provisional tax, based on his own estimate, in advance of the formal notice of assessment; such tax is payable in two instalments during the year following the period of assessment, and overdue payments or underestimates of tax are liable to interest as unpaid tax.

### Tanganyika

The provisions of the Personal Tax Ordinance have been extended to single women. The law has also been amended to aggregate the incomes of husband and wife for purposes of the tax.

### The Need for Special Reports

by IAN T. MORROW, C.A., F.C.W.A.

ALMOST every writer and speaker on the subject of the contribution made by the accountant in industry describes well-developed and well-organized systems producing efficiently at regular intervals reports and statistics which provide management with all the information they can reasonably expect to have to enable them to run their business successfully. In most industrial and commercial organizations this is a pipe-dream and far from the truth, due largely to the inability of any system to anticipate all the information management requires.

To fulfil management's requirements, demands, in large measure, special ad hoc reports on various phases of the company's operations. It is on these ad hoc reports, rather than on the regular reports, that many of the most important managerial and policy decisions are made. Because of their importance to management, the effectiveness of an accounting department is often judged, not by the speed and accuracy of the regular reports, but by the speed and accuracy of the ad hoc reports demanded. It is neither practicable nor wise to produce regularly all the reports that might be required by management. To do so would make the cost of accounting uneconomic and the very weight of reports would mean that a large proportion would not be used. Knowing that management will need these special ad hoc reports, the practical solution is so to organize the basic data that it is possible with the minimum of effort and time to produce special reports.

Normally, the special report has to be in much greater detail than the routine report and covers a much narrower field. In fact, with the trend towards short and concise reports there is a danger that the act of compression may hide in average figures extremes of good and bad performance, and the good accountant will be checking constantly the details behind the summaries to make sure that misleading data is not being presented.

No matter how well-planned and organized the accounting system is, and how skilled the individuals in the department may be, there are bound to be occasions when the enthusiasm of management for detailed information outruns their common sense and the cost of getting the information exceeds any value it may have. When things are as bad as this, management either has to make do with what it already has or resort to guess-work or judgment.

In times of change or crisis the demands for special reports will be much greater than when things, alas-

A paper presented at the recent Eighth International Congress of Accountants in New York

only too seldom, are proceeding according to or better than plan. Many of these special reports will not be accounting reports at all, some will be a mixture of accounting information and other information, and some will contain accounting information only. Reports may cover economic forecasts, forecasts of product demands, the effect of price changes, technical advances, etc. The practice is often for the non-accounting reports to go direct to management and not to be seen by the accountant at all, with the result that they may contain misstatements which could have been rectified had they been checked by the accountant. It is a vexed question as to whether all reports should be routed through the accountant or whether a proportion should go direct to management. On balance, experience seems to indicate that it is better, provided the management accounting team justifies its name, for all the reports to be scrutinized by the accountant before being presented to manage-

The summary which follows, giving the kind of special reports which are asked for by management, is culled from personal experience largely in the United Kingdom; the experience of others may be quite different and the practice in other countries may vary. Some of the reports described as special reports may be, in the opinion of others, routine, and it may be that the list is too short and there are many more to be added.

Mr Ian T. Morrow, C.A., F.C.W.A., the author of this International Congress paper, is managing director of U.K. Optical Holdings Ltd. He is a member of The Institute of Chartered Accountants of Scotland and a Past President and a member of the Council of The Institute of Cost and Works Accountants.

The reports may be summarized or grouped thus:

### Internal

- (1) analysis of costs;
- (2) analysis of profits;
- (3) predictions or forecasts;
- (4) analysis of the effectiveness of reports.

### External

- (1) competitors' performance;
- (2) market research;
- (3) economic data.

### Internal

- (1) Analysis of costs normally takes the form of a Metailed analysis of a narrow range of the costs of production or overheads, comparing the result either with past figures, budgets, or what can be gleaned of competitors' figures.
- (2) Analysis of profits discloses the net profit contributed by different products and the gross or marginal profit contributed to the company's fixed cost and profit.
- (3) The above two groups deal with current and past actual results, the third group, predictions or forecasts, deals with the future. The normal quarterly, half-yearly and annual budgets are so infrequent as to be regarded as special reports. In addition to the normal budget reports, forecasts will be required when new products are being launched or when capital expenditure is being considered, or when circumstances have changed so widely as to make the assumptions on which existing forecasts or budgets are based wholly false.
- (4) Management from time to time requires to be satisfied that the very considerable expenditure incurred in obtaining a regular flow of reports is justified and that effective use is being made of these reports. The obvious question to ask is 'Do they produce effective action, or do they prevent ineffective or dangerous action?'

### External

- (1) Management is perennially interested in competitors' performance, either in profits earned or their share of the market, their pricing policy, etc.
- (2) From time to time the state of the market must be surveyed and analysed. This comes under the general heading of market research.
- (3) Economic factors and Government action or inaction at any time, but more particularly in this day and age, affect greatly a company's operation, and a study of these determines whether a company can hope to expand in the near future, or should plan for contraction, and whether current results are due more to fortuitous economic factors than to management.

What follows is a more detailed consideration of the types of reports called for by management.

### **Analysis of Costs**

It is a maxim that any expenditure will grow more than its usefulness justifies if it is not kept either under constant check or from time to time rigorously and ruthlessly reviewed and investigated. Management must at all times be on the look out for means of either reducing costs or avoiding increases in costs, or, through changes in external circumstances, such as shrinkage of the market or competitive pressures, it may have to make sudden cuts in costs to enable the company to survive.

### **Direct Costs**

Direct labour and direct material are normally under tight routine control, but even here special investigations from time to time reveal slacknesses and waste. In dealing with direct costs the accountant usually requires the assistance of other departments with technical knowledge who can express views as to whether cuts envisaged can be carried out without affecting the quality of the product.

One of the large hidden costs lies in the underutilization of production facilities. In the production standards there will often be built in allowances which are no longer applicable and are excessive, resulting in a high theoretical usage but in practice a low 'true producing time'. When these facts are pointed out by the accountant, organization changes can be made which will increase the true use of the facilities.

It is often possible to use different grades of raw material without affecting the quality of the final product. From time to time the reasons and the cost of using a particular grade should be examined.

### Cost of Wages and Incentive Schemes

It is part of the hallowed tradition that an incentive scheme means a higher productivity than day work, and in many instances this is undoubtedly true, but like every generalization it should be thoroughly tested from time to time. It involves considerable recording and costly wage offices. An incentive scheme may have outlived its usefulness and in spite of all the elaborate recordings, time study, etc., the company is really on a day work basis, and if this is recognized, and provided lower management is sufficiently good to see that the tempo is kept going, then the elaborate piecework system may be abolished with corresponding reductions in cost.

### **Overheads**

It is in the field of overheads that opinions differ as to the value of the expenditure. Every company has a history of expenditure increasing rapidly in times of boom and of the inevitable and unpleasant cuts when the boom is over or when it is decided that a company's expenditure has outrun any likely increase in income. Sweeping arbitrary cuts are to be avoided as these can be disastrous to the morale of the company. Such reductions are indiscriminate, reducing the efficient as well as the inefficient, and very often causing considerable unrest in the staff with the result that many of the good people leave to get other jobs before they too come under the axe. Staff generally will put up with cuts which they know are justified, provided they do not happen too often, but they will not tolerate for long arbitrary cuts at the whim of top management. Nevertheless, it is part of the normal growth pattern of a healthy company that some bloodletting should occur from time to time. Professor Parkinson has demonstrated what happens if this is not done.

Each item of overhead expenditure has to be considered in detail and an appraisal made as to whether it is justified and reasons given either for its continuance or for its being cut out. It is common for these reports to state the overheads quantitatively rather than in money figures, i.e. number of people involved, or, in the case of communications, number of telephone calls, cables, telexes, etc.

No matter how carefully the investigation is conducted and the report drafted it will not be possible to get unanimous acceptance of the report's findings. This is due to the great difficulty in arriving at the value of services such as accounting in relation to what they cost. Management, obviously, has to make its own judgment on the validity of the reports.

Important though these investigations are, little data is being published. Many more comparisons between firms should be made. It is difficult to find a reason for this paucity of published information. It may be that management is sensitive on the subject and does not wish to admit to having got into the state of having swollen overheads, or possibly because the reports contain a large amount of opinion which might be challenged and made to look ridiculous if it were public knowledge.

### Cost of Keeping Stock

The cost of keeping stock is one of the great unknowns in company expenditure. It is both difficult to assess and difficult to decide what are reasonable costs of keeping stock. What is certain is that the cost of keeping stock is high. Various estimates of cost have been published, varying from 6 per cent to 25 per cent.

It is always easy to assess the cost of not having stock and this, along with other factors, helps to create vested interest in large stocks. Many reasons are advanced to justify larger stocks than are truly necessary — the pressure for quick deliveries, the avoidance of constant detailed checking of the inventory, the economies to be derived from large orders, and the claim that without large stocks it is not possible to give long runs to the factory to enable production costs to be kept to a minimum. All these reasons are valid provided a balance is maintained.

It is fairly easy to arrive at the cost of stock contro!, accommodation, staff and the interest on the investment. These, however, are minor compared with the losses that occur through surpluses, obsolesence, deterioration and pilferage. There is no other way of quantifying these losses except by detailed periodical investigation.

This is a field in which much research is required. Each industry and company must decide for itself what risks of stock losses it is prepared to take, or compelled to take, and use its best endeavours to keep within this figure.

### Cost of Paperwork

In the evolution of control in a company, forms and returns are designed to give detailed and meticulous information to enable action to be taken, but the preparation of these forms, and often the printing and filing of them, is an expensive business, and no matter how cherished or hallowed by tradition particular returns may be they must be studied to see if they give a positive answer to the questions 'Are they worth while?' 'Do they pay?'

It is equally true that in practically every wellorganized company a not inconsiderable part of the paperwork has outlived its usefulness and only exists because it has become a habit. In fact it is surprising the number of returns and forms that are prepared of which the higher management is not aware. Just as it is part of the perpetual audit system that a section of the stores is studied and checked every month, then a part of the paperwork set-up should also be checked and studied. Much detailed information which was necessary at one time to get some control on relatively small items of expenditure comes, in time, to cost more than any possible loss through control being absent. This applies very often to small items in the stores either for use in the shop or for use in the service departments.

It is surprising to find on investigation how many ad hoc special reports become part of the regular reporting system because no one has the responsibility of stopping them after their purpose is served. Apart from the money wasted in preparing returns and reports not used or required, staff morale suffers through people doing work which they know will only result in more paper to be filed with no action taken.

### **Cost of Quality**

Maintaining a specified quality can be an expensive business. The need for the standard of quality and the means taken to ensure it should be questioned from time to time. It is obvious that when a new product is introduced a company, jealous of its reputation and taking every step to reduce to the minimum troubles in the field, will set up comprehensive inspection and quality control. During the running in of the new tooling and during the time when the staff are becoming familiar with the

product it is essential to spend heavily on quality control, but within a period which will vary with the product some of the inspection procedures and quality standards become superfluous and could be eliminated. Unfortunately, original inspection and quality standards are often allowed to run on for years after the necessity for them has disappeared.

It is not for the accountant to set inspection and quality standards, but it is possible for him to suggest to management that a reduction in operational inspection, with a consequent higher percentage of rejects at final inspection, would be justified by the saving of inspection costs and the speeding up of production processes.

It is often found that the standard of quality of the product is above that of competitors, and above what is commercially demanded by the market, and that the company derives little or no benefit from this igher standard, customers not recognizing that the product is better than the competitors' and better than is commercially necessary. A slight lowering of quality standards may have quite spectacular effects on the cost of production by increasing the proportion of acceptable production.

Insistence on low scrap percentage can become an expensive fetish not justified when analysed in detail. Production may be speeded up, tooling simplified and inspection costs cut if scrap is allowed to find a higher level. In the long run it may mean using less skilled labour.

On the other hand, excessive scrap adds greatly to the cost of production and can price a product out of the market. The balance is constantly changing and must be continuously reviewed.

### Cost of Sales

The cost of obtaining orders and of moving the products from the production line to the ultimate consumer are expenses which often show the greatest variation between one industry and another, and between one country and another. They are compounded of competition, geography and the customs of the trade - many trades spoil the customers by giving excessive and expensive service. Nevertheless, as production costs decrease, selling and distribution costs represent a growing part of the final cost, and as such have to be studied. There is a temptation when a large production unit has been built up to spend lavishly on selling and distribution in the hope of keeping up the volume necessary to run the production unit efficiently and cheaply. On the other hand, a company may be losing sales through not spending enough on advertising, representatives and other forms of order-getting. For example, a company may whave too many products and ask a salesman in one area to devote himself to selling all these products, with the net result that some are pursued and others are neglected.

The direct sales expenses are the cost of advertising, the cost of the representatives, special exhibitions and special promotional expenses such as free gifts or discounts. These items must be analysed in detail by geographical districts, by products, or even by customers.

Certain products which are no longer profitable are retained because certain customers like to continue to have the product, usually expecting to pay a price which is well below the cost. The justification for this or any other special favour practice can only be a large volume of profitable business.

The selling costs are another item that it is difficult for the accountant to evaluate accurately, but in the end judgment and opinion will decide whether the costs should be increased or decreased in given circumstances.

Indirect costs of sales are the costs of stock, aftersales service, replacements under guarantee, transport and obsolete stock. These items are more susceptible to analysis and investigation and in certain instances can be studied as though they were a factory expense.

A particular item worthy of study is transport. Are the goods packed in such a way as to obtain the best rates? Is the company's own transport more effective or less effective than public transport?

The fact that it is difficult to find a means of measuring what sales expenditure ought to be should not deter management and the accountant from periodically making a detailed study of the nature of the expenditure.

### Cost of Research, Design and Development

This is a field in which the accountant's voice is less welcome than in any other. Industry is being constantly exhorted to increase its research and many companies have succumbed to the propaganda and have engaged highly-qualified scientists to do research, without any clear policy but in the hope that some miraculous product would turn up. Research and development should at least be brought into the context of what the company can afford and what the company expects to get for it, and, human nature being what it is, there is just as likely to be waste and extravagance in the research and development section as in any other, and a periodical check on what is being spent and what is being got for it is both salutary, corrective and necessary.

### Cost of Communications

Although communication becomes more efficient, the costs of communicating are steadily rising. Expensive forms of communication, such as cables and telephones, are often used when a simple letter would suffice. This applies equally to communications with customers, suppliers or internal departments. As the the use of telephone, telexes and cables increases, so does the number of staff required to handle both the paper and the instruments. Apart from investigating whether the facilities are being abused, it is obvious

that it is worth while investigating whether they are being used to an economical extent or merely being built up to deal with exceptional peak loads.

### **Analysis of Profits**

The final figure on the profit and loss account in most companies is often a summation of large profits, break evens, and losses from many different products. A great deal of work has been done in recent years on direct costing and marginal costing. These techniques applied to profit analysis show the contribution the different products are making to overheads and profit and often reveal a quite different picture from the summary of net profits and losses which is struck after a large amount of arbitrary apportionment of expenses has been undertaken. Such analyses enable management to decide what is the lowest price they can accept to get high volume, or alternatively, how much money they can afford to spend to increase the volume and still increase the net profit. Comparison of the contribution and profitability of the different products can lead to changes in policy of manufacturing, distribution and development.

These are sophisticated techniques and can be dangerous if not used properly. They are not, for example, a good guide towards price fixing.

More interest is being taken than ever before in the profitability on the capital employed, and analysis of the capital employed by different products and the profit earned by that capital will give management an excellent picture of the company's operations and will separate the true profit-makers from the others.

### **Predictions or Forecasts**

Most companies have a well-thought-out and well-recognized routine for preparing budget plans and these, today, are common, but nevertheless, from time to time it is necessary for policy reasons or because of changed circumstances to make special forecasts. For example, when spending on new capital or instituting a new product it is necessary to forecast the market, the selling price, the cost price and thus the profits and the amount of capital that will be absorbed, or, if it is decided to withdraw a product, forecasts have to be made of the reduction in investment, the idle plant that the company might be left with, and the effect on the company's other sales and general position in the market.

### Competitors' Performance

### Interfirm Comparisons

Some progress has been made on this subject in Great Britain through the use of the Centre for Interfirm Comparison set up by the British, Institute of Management.

It is worth stating that the more information that

companies voluntarily give, provided they all do it, the better for the industry, and there is less likelihood of major decisions being taken which will lead to disaster. The practice of publishing information varies widely by countries and it is true to say that generally the United States lead in the information required from public companies.

### **Market Research**

Market research is becoming almost a necessity to industrial companies, but in many industries it is difficult to get precise data and inevitably a large amount of opinion and judgment has to be brought in. This is not normally among the functions of the controller or management accountant's department but again, as has been stated throughout this paper, if he is brought into it he can be a valuable correction to the more optimistic views of some others. Today, all businesses are affected by the political climate or the general economic situation and the accountant, in most companies where they cannot afford a special economist, has to keep at his finger-tips the general economic situation and the economic data that will affect the performance of the market in which his company is interested. This can change rapidly and it is unnecessary to state that the great problem is to know whether a rapid change is a permanent one, a long-term one or merely temporary. Most managements take the view that most changes are temporary in the hope that they will not have to change long-term plans. On the other hand, many companies have been exceedingly successful because they correctly anticipated that a change in the economic climate was a permanent one and they took advantage of it accordingly.

### Conclusion

It is suggested that there is scope for considerable research by the accounting profession on the techniques of special investigations and reports, and on the role that the accountant should play. Experience indicates that even if the report is mainly technical and outside the scope of the accountant's knowledge, many mistakes can be avoided if it is checked over by the management accountant.

Interfirm comparisons have been mentioned only briefly because they are technically and politically difficult to achieve and it is also difficult for management to bring themselves to reveal information to their competitors. Nevertheless, a wider exchange of information in industry would improve the economic performance and would assist in the avoidance of mistakes.

In the modern age a great deal more accurate detailed information can be presented to management; the problem is to be selective so that the reports produced will initiate policy and action and will not merely be filed for future reference.

LEIG

### Weekly Notes

### SALARY SURVEY

A SURVEY of salary scales, recently completed by Associated Industrial Consultants from over five hundred returns submitted by companies throughout the United Kingdom, shows that the ages of chief accountants in the participating companies run from 26 to 70; the most populated age bracket, accounting for 21 per cent of the total, being 35-40. Salaries were shown to rise rapidly up to 39, at which stage some men, earning about £2,500 a year, choose to go into general management. Another exodus appears to take place at around the age of 57, when men earning about £2,800 per annum have the opportunity of taking up board appointments.

So far as median salaries of chief accountants and of company secretaries are concerned, these rise from £2,000 per annum in firms where the annual turnover is between £1-£3 million, to £3,825 in companies where the turnover is in excess of £20 million per

annum.

To judge by the report, there is not such a wide differential so far as the salaries of sales managers are concerned. For instance, their salaries are comparatively high, being about £2,000 a year at 30 and rising to £3,350 at 52 or 53.

Works managers on the other hand are considered to be most valuable at about 50. But their salaries have remained virtually static during the past few years, mainly because the emphasis has been on

increasing sales rather than production.

Apart from London and south-east England, over the executive field as a whole, salaries in the south are shown to be lower than those in the north.

### CONTINENTAL COMPANY DIRECTORY

LAST year, the enterprising publishers of Who Owns Whom issued a continental edition listing parent companies and their subsidiaries in France, Italy and Western Germany. The volume contained 9,000 entries and ran to 274 pages. The new edition for 1962-63, now available, has 23,000 entries and 630 pages. The reason for this expansion is twofold. Not only is there a 50 per cent increase in the coverage of the countries represented in the previous edition but Belgium, Luxembourg, Holland and those United States companies which have associated or subsidiary companies in continental Western Europe are also included. The directory thus caters

now for all six members of the European Common Market. Looking ahead as always, the publishers hope to add Austria, Switzerland and the Scandinavian countries to the growing list in next year's edition.

The pattern of the book follows the same style as before. Each country has two sections – one showing subsidiaries and associates in alphabetical order with their parent companies or senior associates alongside, and one showing parent companies in alphabetical order with their associates and subsidiaries listed underneath. It might make for easier reference if sections and countries could be made more readily identifiable by means of tabs or colours but this is a refinement which will no doubt be adopted when the directory ceases so visibly to grow and settles down to a consistent size. There can be no doubt about its present usefulness and the more comprehensive it becomes the greater will be its indispensability.

### PROTECTION OF DEPOSITORS BILL DEBATE

LAST week, clause I of the Protection of Depositors Bill was the subject of a heated debate in standing committee. An Opposition amendment, if carried, would have made it an offence within clause I to put the depositors' money to a use not stated to him when he made the deposit.

The Minister of State resisted the amendment and said that the accounting regulations to be made by the Board of Trade under the Bill would contain a requirement that the company taking deposits must show in its accounts the nature of its business. This was not well received. It was pointed out that deposits were normally made for less than twelve months and the time lag between making the deposit and seeing a note of a change in the company's business would be so long as to make the regulation useless.

There was another proposed amendment which would have made it illegal for a company to change its business without the consent of the depositors. The Government's objection to this was that it would stifle initiative. Finally the Minister said he would consider an amendment which would require the company to notify its depositors of any change in the business.

### STEEL AT THE YEAR-END

ACCORDING to the November figures for steel output the industry as a whole was operating at that time at a weekly rate of production equivalent to about only 70 per cent of its capacity. This was 7½ per cent lower than October (the best month of 1962 so far) and 5 per cent lower than that for a year earlier. There is, in consequence, little hope that total output for 1962 will exceed 20.5 million tons. This figure will compare with over twenty-two million tons in 1961 and the record figure of 24.3 million tons in 1960.

There was a gloomy crop of announcements and

<sup>&</sup>lt;sup>1</sup> Who Owns Whom. Continental edition, 1962-63. (O. W. Roskill & Co (Reports) Ltd, London. £7 post free.) ●

rumours to go with it. Stewarts and Lloyds Ltd have announced that because of the downward revision of estimates of future demand for iron and steel, the £18.5 million scheme to increase iron-making capacity at Corby has been deferred for a limited period. This was followed up by reports that owing to the drop in the demand for pig-iron, especially in the hematite section, a number of iron-making plants may shortly close. Output of pig-iron is being affected not only by reduced production of iron castings but by the greater use of scrap metal.

The recent surprising announcement that Stewarts

and Lloyds had approached the Whitehead Iron and Steel Co (a re-rolling concern with assets of £8.4 million) has set people thinking about the possibility of further rationalization in the steel industry. There have been few mergers in the steel industry for a long time although a certain amount of reshuffling has taken place during the denationalization process. The past year has been one of the most disappointing in the steel industry for the last twenty-five years and when the steel industry goes into the doldrums it is apt to think about rationalization.

### This is My Life . . .

by An Industrious Accountant

CHAPTER 152

WITH the New Year almost upon us, it seems time for stocktaking. Not the bustle of paperwork and listing and calculating that is progressing in the office outside, but my personal balance sheet and forward forecast. I'll leave my personal profit and loss account alone for a while, so far as last year is concerned; if there are too many blunders loading it down, they'll mark the pitfalls to avoid next year.

Interestingly enough for a harassed chief accountant, the work aspect has on the whole been very good. After years in your job, when you know your figures so well that discrepancies stick out like sore thumbs, the obvious mistakes are automatically avoided. A first-class accounts staff, alert and argumentative, are quick off the mark to keep one in line. In confidence, of course, they know their jobs better than I do and are usually a couple of jumps ahead of me. I have to strain to keep up with them, sometimes.

On the whole, I think there is no doubt that human nature is basically helpful. More than once our auditors' shrewd comments and courteous suggestions have masked the blunt fact that my operations have been below par. I slipped up in one approach to the Inspector of Taxes and that gentleman promptly telephoned me to discuss the point, suggesting generously that I might like to review paragraph four in the light of that 1957 case. Our bank manager, of course, is a tower of strength. His guidance on my credit-transfer report to the board, as I realized later, was largely responsible for what merit it had.

The real problem lies in the personal approach to one's colleagues, a work aspect too little understood. I am conscious that here I have probably transgressed too often. *Mea culpa*.

There was that time I noticed a clumsiness in one of our office procedures, where a revised arrangement would save a couple of man-days weekly. The office manager was rather slow to appreciate my point, or indeed to co-operate, I thought. 'Leave it be for a while,' he said testily. 'It's worked well enough that way for years now; what's the hurry?' I was rather caustic with him. I didn't remember his wife's long illness, his worried, sleepless nights. Mea culpa.

Or that time when our internal auditor brought along a bright suggestion for a change in our control system, involving him in more direct contact with the receipt of purchases in the transport section. I formed the uncharitable impression that he was empirebuilding, looking for independence and autonomy, weakening my own authority. So I was curt with him and picked holes in his scheme. Inexcusably, I made holes in his initiative, too, and in his self-esteem (and probably in his opinion of me). Mea culpa.

This behaviour probably derives from the outlook so easily developed by an auditor in his job of checking other men's work. He learns a critical approach, which is good; he also runs the risk of criticizing stingingly, which is bad. If he has a quick mind his personality is enhanced; he must beware of having a quick tongue, which can be a curse if misused. Between the two extremes, between his responsibility to be true to his salt in seeking improvement, and his moral duty to others to do-as-you-would-be-done-by, lies the golden mean. To learn to inspire is the key.

I like particularly that sentiment of old Benjamin Franklin, writer, scientist and diplomat: 'I made it a rule to forbear all direct contradiction to the sentiments of others, and all positive assertion of my own... when another asserted something that I thought an error, 'I denied myself the pleasure of contradicting him abruptly, and of showing immediately some absurdity in his proposition.'

That fixes my resolution for 1963. I hope it lasts.

### Finance and Commerce

### Never Again

MUCH has been learned from the track with mis-recent past, and I am satisfied that such misrades as have been made will not be repeated.' So spoke Col Sir Stanley Bell, chairman of The Astley Industrial Trust, at the company's twenty-seventh annual general meeting in Manchester in November. A section of the accounts for the year to June 30th last provide this week's reprint.

The company is a leading institution in hirepurchase finance for motor vehicles and the chairman's observation refers, of course, to the almost unbelievable happenings in car hire-purchase that followed the removal of controls in 1959. If the full story of the bubble that burst is ever written, one fears it may seem too far-fetched to be true.

In his statement with the accounts, Sir Stanley reminds shareholders of his earlier warning that 'current profits may be needed to provide adequate reserve against bad and doubtful debts stemming from agreements entered into during 1959-61'. This proved to be the case and in consultation with the company's auditors, the board - 'in the light of the hardening position against recovery of doubtful debts'-considered it was increasingly necessary to make even fuller provision in respect of all defaulting accounts.

### **Doubtful Debts**

In the context of the dismal picture of depression in second-hand values, and the abnormal number of repossessions experienced by finance houses, Sir Stanley refers to the difficulties in the collection of defaulting accounts through the Courts which 'has made a substantial impact on the value of those accounts'. The same events, he says, 'have had a serious effect on traders and losses have been experienced through their inability to meet their commitments'.

The chairman's statement was written before the November reduction in car purchase tax from 45 to 25 per cent and the effect of the reduction on secondhand values may deepen the meaning of Sir Stanley's

At the company's annual meeting he was able to state that in the first four months of the current year,

trading had been on a satisfactory and profitable basis. He was confident that the directors would be able to submit a much more acceptable report next year subject to unforeseen or adverse conditions.

### 'And Surplus'

HAT does 'and surplus' mean when it is part of 'future taxation'. The point occurs in the accounts of J. Hepworth & Son Ltd, the tailors, for the year to August 31st, 1962. The description appears in the company's own balance sheet but not in the consolidation which bears reference to Note 2. Note 2 runs: 'Future taxation includes the liability for the year 1963-64 and surplus in respect of the parent and subsidiary companies.'

It is possibly a minor matter. Odd queries can be involved in future tax computations and give rise to a feeling that it is better to be a little bit on the right side than the wrong. But to those who have known the areas of doubt in company balance sheets of the past - and have played no small part in urging their elimination - reference to 'and surplus' brings back memories. One recalls the 'credit balances' which sometimes went with 'creditors' but were not necessarily of the same character as creditors.

The chairman of Hepworths, Mr R. E. Chadwick, draws attention to a problem facing property owners of which much more should be heard. He refers to 'comprehensive development areas'. There is only limited experience of these at present, but public interest in town improvement and development is bound to result in more being propounded.

### Freehold v. Leasehold

What happens under these comprehensive schemes, Mr Chadwick points out, is that properties are compulsorily acquired by local authorities and handed to developers to replan. Reports from other quarters than Hepworths suggest that large-scale developers, by gaining local authority support, obtain what would otherwise prove expensive development business.

Mr Chadwick maintains that if nothing is done, traders tend to lose freeholds and to be offered leaseholds with frequent rent reviews instead; while the developer acquires something in the nature of a monopoly. He urges traders to combine to ensure that such schemes are not unduly monopolistic or grandiose, and that the dispossessed freeholders be offered freeholds or, at least, long leases at fixed rents. And, he adds, published profits of most store groups would look very different if they had to pay developers' rents for all their premises.

Incidentally, Hepworths is distinguished by having one of the comparatively few women members of the English Institute as its secretary, Miss A. C. Norton, F.C.A. Can it be that feminine caution is responsible for 'and surplus' in the future tax provision?

### **Property Values**

ANOTHER view on property values was recently provided in a statement from Marco Refrigerators to its shareholders and creditors. This company faced liquidation. Certain interests in Jersey were prepared to take it over and inject new business into it. They made an offer to the creditors which, if accepted, would have paved the way to a reconstruction of capital. Time was running short; the bank was not prepared to continue supporting the company indefinitely.

Then Work Simplification Ltd stepped in, but according to Mr E. G. Batt, the chairman, failed to put forward any firm proposals and refused to give the name of the principals. With this intervention, however, some creditors rejected the offer; others just waited. And as Mr Batt pointed out, the delay 'severely jeopardized the interests of creditors and shareholders as the financial life-blood of the

company is fast ebbing away'.

Mr Batt explained that the bank had not agreed a figure for the value of the freehold factory which was

its security and he understood it would not do so until the outcome of the offer to creditors was known.

But Messrs Fuller Horsey, Sons & Cassell who had valued the factory as a going concern last January at £170,000 were putting the value under 'forced sate in a liquidation' conditions at 'not less than £140,000'. Which is a reminder that valuers can value, but the final test of values is what a buyer will give under the particular circumstances.

### **New Capital Issues**

STATISTICS compiled by the Midland Bank show that the amount of 'new money' raised in the United Kingdom in November was £25.7 million. This brought the total for the first eleven months of 1962 to £561.2 million, which compares with £587.8 million in the corresponding period of 1961. Among the issues included in the total for November were those for The Royal Bank of Scotland (£6.9 million), Mecca Ltd (£4.2 million) and Redland Holdings Ltd (£2.9 million).

### CITY NOTES

In the investment world there is, this year, a marked lack of enthusiasm for the magical quality of New Year. December 31st and January 1st are merely two consecutive days, but the magic is in the fact that one is the last day of an old year and the other the first of the new, when hope's eternal spring usually turns into a gusher.

But not apparently this year. There is an uncomfortable feeling that, although the economic taps have been turned on, 'the main' has been turned off for so long that the pipes have rusted. If there is no force of water, turning on the tap achieves little. The Chancellor, it is thought, will have to see to the main in 1963. Stock-market conditions up to the end of the year hardly suggested an investment view that the mains water will flow particularly strongly, at least in the first half of 1963.

There have been hints of 'novel methods' to be introduced, but a traditional method – a reduction in Bank rate – seems the most likely first move in the New Year. One of the mistakes of the 1958–59 credit free-for-all was the maintenance of Bank rate at 4 per cent throughout that period. If credit is to be free, it should also be cheap.

Lifting of bank lending restrictions and the release of special deposits have so far had only marginal effect on the volume of bank lending. There is still much to be done before business and stock-market confidence is likely to be fully restored.

### Tax Relief on Pension Fund Payments

December 22nd issue) the shareholders at the time be pension fund reserve was created did not suffer, fund being retained within the business. Tax haf is due under section 379 when the expenditure is made by the company and is no different from that available in respect of any other item of allowable expense. It is considered, therefore, that such tax relief would not normally relate back to the time the fund was created out of profits.

However, the resolution creating the fund in this case provides that, in addition to the fixed appropriation of £5,000, there is to be placed to the reserve 'any tax relief which may be obtained in respect of the payment'. Obviously the tax relief cannot be added to the fund but a sum equal thereto could be appropriated out of future profits if this is the desire of the members.

Yours faithfully, PENSION FUND.

### Training of Articled Pupils

SIR, – We were interested to read in your issue of December 8th, Messrs Whitehill, Marsh, Jackson & Co's letter of approval of the new full-time course for newly-joined articled clerks.

We would also like to express our appreciation of the great personal trouble that has been taken by the City of London College to make the course suitable for its purposes. From the time when we first approached the College with a request for such a course we have been most impressed by the care and the enthusiasm they have shown in devising a course that is both useful and of educational value.

The course at present lasts six weeks in all in two spells of three weeks with an interval of three weeks in between: three weeks in college, three weeks back in the office and then the second period of three weeks in the college. Each morning there are three lectures on the four subjects: accounts, auditing, income tax and law, and in the afternoons tutorials and study periods.

Twelve of our pupils who enrolled for the first two courses beginning in September and October included Oxbridge graduates and Bachelors of Commerce who had taken a university course recognized by the Institute. A graduate who had studied accounting for three years at a university naturally found some of the initial accounting rather elementary; but on the other subjects he found much that had not been covered in his university course and affirms that many of the lectures were at a comparable level and gave a new outlook on the subjects. All the pupils realized the benefit they had derived through being expected, during the second half of the course, to give papers lasting ten to twenty minutes on various aspects of the four subjects.

The reports of our articled clerks agree that before starting the City of London College course it is an advantage to have begun a preliminary correspondence course. On the other hand it is also, we think, equally true to say that before starting practical work on audits, it is a great advantage to have been to the City of London College. Based on our initial experiences we shall for the present aim at enrolling our articled clerks fairly early in their first year, but will advise them to get in some reading and study beforehand.

Yours faithfully,
PANNELL, CREWDSON & HARDY.

London EC2.

### Traveller's Car Allowance

SIR, – I would appreciate the views of readers on the following: on behalf of a client, a commercial traveller providing his own car, I submitted a claim for expenses and annual allowance on the car. A fixed sum is contributed by the employer to help with the expenses. The figures are as follows: expenses  $\pounds$ 216; annual allowance claimed  $\pounds$ 260; contribution by the employer  $\pounds$ 260. The Inspector says that as the employer's contribution exceeds the running costs, the capital allowance is restricted to the extent that the cost of wear and tear is covered by the computation of the capital allowance.

Using the basis of  $12\frac{1}{2}$  per cent of the capital cost of the car, says the Inspector, the computation is 9 per cent  $\times 12\frac{1}{2}$  per cent  $\times 6912$  equals 674, which is fully covered by the employer's contribution and he regrets that no allowance is due. Frankly I do not understand this, can anyone explain?

Yours faithfully,

T. STONE.

Westcliff-on-Sea.

[If the employer's contribution of £260 is intended to cover all the running costs and wear and tear of the car in respect of its business use, the employee will have to show that the expenses of running plus capital allowances exceed that sum if an additional measure of relief is to be obtained. The amount applicable to private running must be excluded.

The calculation set out in the final paragraph of our correspondent's letter is normally used by the Revenue in order to compute a director's benefit where a car is provided by a company for his use. It would seem to have no application in a case of this kind. – *Editor*.]

A monthly feature designed to keep readers - whether in practice or in commerce - abreast of the latest developments in the field of office equipment.

### Account Card Tray and Stand

WELL-DESIGNED accessories play a significant part in increasing the efficiency of accounting machine operators. A new ledger card tray and stand by Kalamazoo are planned to allow each operator to adjust conditions to suit her own exact requirements.

The stand, which holds one or two trays, is adjustable for height and has castors which are locked firmly into

Kalamazoo Ledger Card Tray and Stand

position by using a brake. An unusual feature is the projecting front legs which allow the operator to pull the tray up really close to the machine – an important factor in avoiding eye-strain.

The tray (in two sizes) has a 40 per cent higher capacity than its predecessors. Designed to maintain a perfect 'V' during work, it has a clip which, at the touch of a finger, compresses the cards into a solid pack for storage. Both side rails of the tray can be dropped to allow offsetting of cards and, whether raised or lowered, snap firmly into position.

Price: from £20 2s 6d.

Kalamazoo Ltd, Northfield, Birmingham 31.

### **Factory Intercom System**

DESIGNED specifically for noisy areas like factories and workshops is a new intercom system in the *Centrum* series. Like other systems by this maker, it uses no telephones, is all-loudspeaking, and provides two-way speech without manual switching.

The heavy-duty industrial master station is water-

### New Offi

proof and unbreakable. It can be linked to others of its kind or to the maker's office intercom instruments.

Making a call is simple: the user presses two of the twelve digit buttons (watertight, and plastic-covered), according to the number of the extension he want; and speaks. Incoming calls are signalled both audib! and visibly.

Speech is clearly reproduced, even in very nor conditions, the makers say, because the instrument fitted with a special noise-damping microphone. The master unit, which contains no active components straightful as valves or transistors, is said to be virtually unaffectiby temperature variations either in or out of descriptions.

Centrum Electronics Ltd, Terminal House, Gros venor Gardens, London SW1.

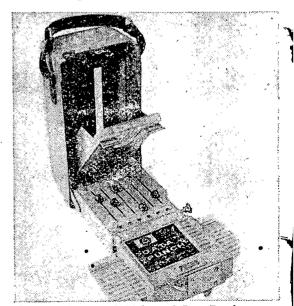

### Portable Data Punch

TO electric power (battery or otherwise) is required ror a new data buch. Designed to slip into a pocket, it weighs barely 2½ lb. and is about the size of a shorthand notebook. It punches rectangular holes in eighty- or fifty-one-column tabulating das or multiple-part card sets.

There are two basic models, one for punching only, the other for punching and printing. Either punches up to six digits at a time in any one card field.

To record data, the operator sets the figures or sliding knobs, checks them visually, locates the locks the figures in, and lightly presses a lever safety devices prevent figures being wrongly entered and, if desired, a final check can be made by placing the completed card over the panel of field figures provided on the front of the punch.

The card is positioned with a locating pin when data

Addressograph-Multigraph Data Punch

### uipment

re to be entered into one or two fixed card fields; a other cases, with a multiple card gauge fitted with a small sliding magnifying glass and fixed paper strip.

Designed for on-the-spot data recording, the punch tovides a means of making tabulator cards without necessity for verification.

Price: from £65.

Addressograph-Multigraph Ltd, Maylands Avenue, Smel Hempstead, Herts.

### Spirit Master Maker

the N interesting new machine, the Ditto Masterfax theorovides a clean, inexpensive method for making randuplicator masters direct from ordinary originals. This versatile device can also prepare offset masters, take ordinary photocopies or laminate plastic film to document surfaces.

The process is activated by heat. To make a spirit master from, say, an original containing print and line drawings, the operator merely places the original, along with a special type of carbon and a retaining envelope into the machine, closes the lid and sets a suitable exposure time by calibrating a dial. This action converts the original itself into a master. Alternatively, a separate master can be made by using an intermediate process on the same machine.

Time taken to prepare a spirit or offset master in this way is usually about fifteen seconds; cost, a few pence.

E. N. Mason & Sons Ltd, Arclight Works, Colchester, Essex.

### **Projection Teleprinter**

CREATLY magnified images of messages are Jautomatically displayed on a translucent screen by a modified version of the Seventy-Five teleprinter. This machine should be especially useful in noisy areas where even loudspeakers may fail effectively to enertate the din.

The teleprinter, which can be hooked up to receive hessages from a conventional page printing model, see a cellophane roll 5 in. wide and has a specially ondensed typeface. As soon as the message is received, he machine back-projects the text to the display screen. Screen size may vary, according to individual needs. But the makers suggest that 3 ft by 2 ft is a useful size.

But the makers suggest that 3 ft by 2 ft is a useful size. This requires a 5 ft 'throw' and provides 10:1 magnification.

Price: about £1,000 without screen.

Creed & Co, Telegraph House, Croydon, Surrey.

### Typist's Collator

ASSEMBLING paper and carbon for typing is a job which consumes a surprising amount of time hich might otherwise be productive. The new lette, a neat little desk-top collator, has been signed to do this job semi-automatically.

The device is a three-compartment Box mounted on sase which holds it sloped conveniently towards the er. To dispense one sheet of paper and/or carbon in the three compartments simultaneously, the

typist merely taps a bar. When making multiple copies, she depresses the bar again, this time ignoring the letterheaded paper, which drops back into place again.

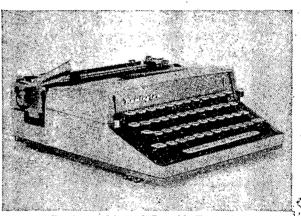

Price: with three stations, £8 8s. Price not yet fixed for five-station model.

Mailing & Mechanization Ltd, 72 Fleet Street, London EC4.

### **Portable Typewriter**

ALMOST all the facilities available o a full-size typewriter are incorporated into *Monarch*, a new portable in the medium-price range. Machines of this kind are being used increasingly by secretaries, who prefer the more elegant appearance of a small model and like its portability.

Monarch has, in addition to good looks, a number of sternly practical features. New among these are a tabulator with an automatic set and clear action, set by a single lever; and keyboard touch adjustment via a regulator set by the typist herself. Others include

Remington Monarch Portable Typewriter

visible margin stops operated from the front of the machine; a card and writing line scale for positioning cards, envelopes and documents; and a paper support.

The machine can use a two-colour ribbon and will cut stencils. It has the full complement of eighty-six characters. Weight (including black, zip-up travelling case) is 15 lb.; size, 12½ in. by 13½ in. by 4¾ in.; colour green with grey front panel.

Price: £31.

Remington Rand Ltd, Remington House, Holborn Viaduct, London EC1.

### **Heat Process Photocopy Paper**

NEW from Copycat is *Copytherm*, a paper for use with heat process copiers. Said to be permanently white, non-curling, easy to handle and non-pressure-sensitive, the paper also has a higher heat tolerance than usual.

Copycat Ltd, Greycoat Place, London SW1.

### **Pullman Business Machines Ltd**

Pullman Business Machines Ltd wish to refute a rumour which is said to be circulating to the effect that their machine or any part of it is manufactured behind the Iron Curtain. The Pullman Dictating Machine is manufactured in Denmark and the Pullman Centralized Systems are manufactured entirely within the United Kingdom.

Cost of original car Capital allowances on

### For Students

### TAXATION

### Capital Allowances for Motor-cars

In respect of privately used motor-cars new limitations on capital allowances are imposed by sections 23-27 of the Finance Act, 1961, and these apply for 1961-62 onwards. The new restrictions which apply only to expenditure incurred after April 16th, 1961, are as follows:

- (a) The amount on which capital allowances will be given for a motor-car is limited to £2,000. Where the expenditure exceeds £2,000, any balancing allowance or balancing charge arising on sale etc. shall be computed as if the amount received were reduced in the proportion which £2,000 bears to the cost of the car.
- (b) In arriving at the optional capital allowances on replacement, expenditure in excess of £2,000 is ignored and the sale price of the original motorcar is deemed to be reduced to the ratio that £2,000 bears to its full cost.
- (c) Where a car is hired for the purposes of a trade or profession, the deduction from profit in respect of the hire charges is to be reduced to the ratio that £2,000 bears to the full retail price of the car at the time when the contract was made.
- (d) In the case of a motor-car acquired under a hirepurchase contract (the retail price being in excess of £2,000), payments under the contract are to be apportioned between capital and revenue expenditure in the proportion of the cash price to the balance of the hire-purchase price. If the hire-purchase contract is not completed, then any payments made under it are to be treated as payments for hire (subject to the limitation in (c) above) and capital allowances are not to be given in respect of such payments.

It should be noted that the above provisions do not apply where the vehicle is provided for the purpose of hire to members of the public or for the purpose of carrying passengers in the course of a trade of that nature.

Illustration

(a) During the year ended December 31st, 1961, a company which makes its accounts up to that date incurs, after April 16th, expenditure of £4,320 on a new car to be used for private purposes. In 1963 the car bought in 1961 is sold for £1,080 and is replaced by a new car at cost

### MERCANTILE LAW Title to Goods

T is a general rule of law, as well as a metter elementary common sense, that a man have her goods to which he has no title cannot pass a title to third party by way of gift or sale. But, like orbit general rules, this, too, admits of certain exceptions

An obvious example lies in the ordinary law of agency. An agent acting in the normal course of h duties can pass a good title to goods which belone his principal. Another example also occurs in the information of agency and concerns factors. If, in the information of his business, a factor has goods in his with the consent of the true owner then he good title to an innocent third party when the owner has given him permission to dis goods.

A third occasion where the rule does n found in the Sale of Goods Act. Where a p selling goods continues to have possession o or documents of title to them, the delivery of by him of the goods, or documents of title chaser in good faith, without notice of the sale, will confer a good title. Conversely,

56 VICTORIA STREET, LONDON, SWI

Telephone: Victoria 2002 (3 lines

REVALUATION OF

WORKS, FACTORIES, PLANT & MACHINERY, Etc.

person, having bought or agreed to buy goods, obtains, with the seller's consent, possession of the goods or documents of title then the transfer of the goods or locuments of title to a purchaser in good faith will confer a good title. This will apply, inter alia, to the seller sends the bill of lading to the buyer in advance of the goods. The buyer may then, by virtue of his cossession of the bill of lading, under a contract to buy, sell the goods to a third party and thereby defeat the seller's right to stoppage in transitu.

Note that in all cases so far mentioned the person attempting to pass the title has possession of the goods or documents of title with consent of the true owner. No protection would be afforded where the goods

were stolen.

Finally, there is the general point of law that a person with a voidable title to goods has a good title, which he can pass on to an innocent third party, until that title is avoided by the rightful owner; whereas a person who has a void title (e.g. one obtained under a void, as opposed to a voidable, contract) has no title and therefore nothing to transfer. If he attempts to transfer the goods, the true owner may recover them.

An exception of a kind occurs in infants' contracts. A contract which offends against the Infants Relief Act is void. Even so, an infant obtaining goods under such a contract is not considered to have a void title for he may validly transfer those goods to a third party who is acting in good faith. The exception probably arises from the fact that the Act was passed to protect the infant and not the other contracting party.

### Notes and Notices

### THE ACCOUNTANT

### Index to Vol. CXLVII: July-December 1962

The general index to this volume – July to December 1962, Vol. CXLVII – will be published with the issue dated January 5th, 1963.

The parts of this volume should therefore not be sent for binding until the index has been added.

### PROFESSIONAL NOTICES

Messrs Farrow, Bersey, Gain, Vincent & Co, Chartered Accountants, of 53 New Broad Street, London EC2, announce with regret the retirement on Recember 31st, 1962, of Mr Arnold L. Bersey, F.C.A., had has been a partner in this firm and one of its predecessor firms for more than fifty years. They also announce that they are taking into partnership on January 1st, 1963, Mr John W. Hawkes, F.C.A., Mr Patrick C. Hogan, F.C.A., and Mr Philip N. Grindell, M.A., A.C.A., all of whom have been on the staff of the firm for a number of years.

MESSRS NEWTON, ARMSTRONG & Co, Chartered Accountants, of 11 Grocers' Hall Court, London EC2, almounce that Mr Graham Laidler Fox is retiring from the partnership as at December 31st, 1962.

### Appointments

In R. A. W. Caine, F.C.A., has been appointed a director of Kirkstall Forge Engineering Ltd with effect from January 1st, 1963.

Mr C. E. M. Hardie, O.B.E., F.C.A., chairman of Thomas Preston Ltd, has been appointed a director of Melbray Group Ltd.

Sir Julian Pode, F.C.A., chairman of the Steel Company of Wales Ltd, has been reappointed President of the British Iron and Steel Federation for a second year.

### THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

### **Taxation and Research Committee**

The 125th meeting of the Committee was held at the Institute on Thursday, December 13th, 1962, at 2 p.m.

Present: Mr S. M. Duncan (in the chair); Messrs F. W. Allaway, G. R. Appleyard, G. L. Aspell, T.D., D. G. Bee, R. P. Brown, K. A. Buxton, J. Cartner, K. P. Chapman, D.S.C., L. H. Clark, P. G. Craven, T.D., W. F. Edwards, C. R. P. Goodwin, S. R. Harding, A. P. Hughes, G. N. Hunter, H. Kirton, T.D., S. Kitchen, J. W. Margetts, A. G. Martin, B. A. Maynard, G. M. Metcalf, S. A. Middleton, G. P. Morgan-Jones, F. L. Moulding, E. J. Newman, R. D. Pearce, J. Perfect, T. B. Pritchard, A. H. Proud, D. W. Robertson, C. Romer-Lee, B. G. Rose, H. G. Sergeant, H. C. Shaw, W. Shuttleworth, L. R. Turner, D. C. Urry and G. Wadwell (thirty-nine members) with Messrs A. R. English, R. O. A. Keel, J. F. Taylor, G. H. Vieler and G. S. Warburg, and the Acting Secretary and Assistant Secretary to the Committee.

### Sub-committees

Reports of progress were received in connection with twenty matters, and nominations were made in respect of a proposed new sub-committee.

### Future Meetings

The next meeting of the Committee was fixed for Thursday, February 14th, 1963. Further meetings in 1963 were provisionally fixed for:

Tuesday, April 9th, 1963.

Thursday, June 13th, 1963.

Tuesday, September 17th, 1963.

Thursday, October 10th, 1963.

Thursday, December 12th, 1963.
